WEEKLY NEWSPAPER

AND

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, JANUARY 4, 1896

WHOLE NO. 206.

NEW YEAR'S DAY HONOURS.

STAR OF INDIA.

Knight Grand Commander.

His Excellency the Right Honourable Beilby, Baron Wenlock, G.C.B., Governor of the Presidency of Fort St. George.

Knights Commanders.

The Honourable Lieutenant-General Sir Henry Brackenbury, K.C.B., Royal Artillery, Member of the Council of the Governor-General.

Thakur Sahib Mansinghji Sursinghji, Chief of Palitana, in Kathiawar.

Companions.

Major-General Montagu Gilbert Gerard, C.B., Indian Staff Corps, Commandant of the Central India Horse, and lately in charge of the British Section of the Pamir Delimitation Commission.

Lieutenant-Colonel David William Keith Barr, Indian Staff Corps, Resident of the 1st Class and Agent to the Governor-General in Central India.

Denzil Charles Jelf Ibbetson, Esquire, Indian Civil Service, Second Financial Commissioner of the Punjab, and Officiating Secretary to the Government of India in the Department of Revenue and Agriculture.

The Honourable Mr. James John Digges LaTouche, Indian Civil Service, Chief Secretary to the Government of the North-Western Provinces and Oudh, and Member of the Council of the Lieutenant-Governor for making Laws and Regulations.

Arthur Upton Fanshawe, Esquire, Indian Civil Service, Director General of the Post Office of India.

INDIAN EMPIRE.

Knight Grand Commander.

Sir Alfred Comyns Lyall, K.C.B., K.C.I.E., Member of the Council of Her Majesty's Secretary of State for India.

Knights Commanders.

Major-General Thomas Dennehy, C.I.E., Indian Staff Corps (Retired), Extra Groom-in-Waiting to Her Majesty the Queen, Empress of India.

Nawab Sikandar Jang Ikbāl ud-Daulah Iktidar-ul-Mulk Vikar-ul-Umara Bahadur, Minister to His Highness the Nizam of Hyderabad.

Companions.

The Honourable Mr. James Grose, Indian Civil Service, Member of the Council of the Governor of Fort St. George.

The Honourable Mr. Patrick Playfair, President of the Calcutta Chamber of Commerce, and an Additional Member of the Council of the Governor-General for making Laws and Regulations.

Rana Dalip Singh, Chief of Raghāt, in the Punjab.

Frederick John Johnstone, Esquire, Chief Engineer of the 1st Class and Secretary to the Government of Bengal in the Public Works Department.

Colonel Richmond Irvine Crawford, Indian Staff Corps, late Collector and Magistrate of Karachi.

Charles Falkiner MacCartie, Esquire, Indian Civil Service, Private Secretary to the Governor of Fort St. George.

Richard Morris Dane, Esquire, Indian Civil Service, Deputy Secretary to the Government of India in the Department of Finance and Commerce.

Surgeon-Lieutenant-Colonel Samuel Haslett Browne, M.D., Indian Medical Service (Bengal), Principal and Professor of Medicine Lahore Medical College.

Doctor Rash Behari Ghosh, Pleader of the High Court of Judicature in Bengal.

Vaman Abaji Modak, late of the Education Department Bombay.

Frank Henry Cook, Esquire, of the Firm of Messrs. Thomas Cook and Sons.

MILITARY DEPARTMENT.

Viceroy's Personal Staff.

Honorary Surgeon.

Surgeon-Colonel Thomas Maunsell, Army Medical Staff.

VOLUNTEER OFFICERS' DECORATION.

East Indian Railway Volunteer Rifle Corps.

Lieutenant-Colonel (Honorary Colonel) Noble St. Leger Carter, retired.

Great Indian Peninsula Railway Volunteer Rifle Corps.

Honorary Colonel George Alfred Barnett, C.I.E.

North-Western Railway Volunteer Rifle Corps.

Captain (Honorary Major) Adam Clark.

Captain Henry Masters Cardew.

FOREIGN DEPARTMENT.

Maharaja.

Raja Vikrama Deo of Jeypore in the Vizagapatam District in the Madras Presidency.

Raja Gobind Lal Roy Bahadur, Zamindar of Rangpur, in the Bengal Presidency.

Raja Bahadur.

Raja Shashi Shakharewar Roy, Zamindar of Tahirpur, in the Rajshahi district in the Bengal Presidency.

Nawab Bahadur.

Nawab Vilayat Ali Khan, C.I.E., of Patna, in the Bengal Presidency.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9, SOUTHAMPTON BUILDING, HOLBORN, LONDON.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Raja.

Thakur Kamal Narya Singh, Chief of the Feudatory State of Khairagarh in the Central Provinces.

Rani.

Sri Aukicham Achayamma Garu of Vizagapatam.

Dewan Bahadur.

Rao Bahadur Rednam Dharma Rao Nayudu, Deputy Commissioner of Salt and Abkari Revenue in the Madras Presidency.

Dewan Ram Nath, late District Judge in the Punjab.

Rai Bahadur Sodhi Hukm Singh, Vice-President of the Regency Council of the Bikanir State in Rajputana.

Shams-ul-Ulama.

Maulvi Zulfiqar Ali, late Superintendent of the Chittagong Medressa, in the Bengal Presidency.

Khan Bahadur.

Kasim Haji Mitha, of Bombav.

Saiyid Amir Ali, retired Extra Assistant Commissioner in the Punjab.

Abd-ur-Rahman, 2nd Magistrate and Treasury Officer of the Bangalore Civil and Military Station.

Shaikh Taj-ud-Din Husain, Senior Hospital Assistant, Subordinate Medical Department, Bengal.

Khandkhar Fazl-i-Rabbi, Dewan to the Nawab Bahadur of Murshidabad in the Bengal Presidency.

Munshi Hamid-uz-Zafar Khan, Deputy Collector in the North-Western Provinces and Oudh and Vice-President of the Council of the Rampur State in the North-Western Provinces.

Khan Sahib Shaikh Amir Baksh, Senior Hospital Assistant, His Excellency the Viceroy's Dispensary.

Karam Dad, Subadar in the Kalat State Troops.

Shams-ud-Din Khan, Subadar-Major of the Reserve Battalion, Upper-Burma Military Police.

Rao Bahadur.

Suru Vijayaraghavulu Das Nayadu, Supervisor and temporary Sub-Engineer, in the Public Works Department, Madras Presidency.

Mutlur Adinarayana Ayya, Deputy Commissioner of Revenue Settlement, in the Madras Presidency.

Shesho Krishna Mudkavi, retired Mamlatdar in the Bombay Presidency.

Tukaram Ramdin, retired Inspector of Police in the Bombay Presidency.

Narayan Meghji Lokhande, Proprietor and Editor of the "Din-bandhu" newspaper in the Bombay Presidency.

Balabhai Mancharam, Native Assistant to the Agent to the Governor-General at Baroda.

Bhargo Rao, Extra Assistant Commissioner, in the Central Provinces.

Balkrishna Kashinath Joshi, Assistant Commissioner in Berar.

Rai Bahadur.

Lala Sagar Chand, Inspector of Schools in the Punjab.

Lala Karm Chand, Honorary Magistrate of Amritsar in the Punjab.

Lala Madan Gopal, Barrister-at-Law, Lahore.

Jenarden Singh, Senior Hospital Assistant, Subordinate Medical Department, Madras.

Rai Sahib Mungal Sein, Deputy Examiner, Public Works Department.

Babu Ram Okhoy Chatterjea, late a Deputy Magistrate and Deputy Collector in the Bengal Presidency.

Babu Sarat Chunder Das, C.I.E., Tibetan Translator to Government.

Lala Nathu Mal, Banker of Khurja in the Bulandshahr District, in the North-Western Provinces.

Munshi Raghunandan Prasad, Member of the Municipal Board, Benares, in the North-Western Provinces.

Munshi Dhiraj Lal, landholder in Bulandshahr and Muttra, Ali-garh, in the North-Western Provinces.

Lala Gursaran Das, retired Deputy Collector, Saharanpur, in the North Western Provinces.

Vinayak Jageshwar Buti, of Nigpur, in the Central Provinces.

Ram Singh, Subadar-Major, Chin Hills Battalion, Upper Military Police.

Sardar Bahadur.

Sardar Hira Singh, Extra Assistant Conservator of Forests in Ajmere-Merwara.

Khan Sahib.

Bapunia Shermia, member of the Dholka Municipality and Honorary Magistrate in the Ahmedabad District in the Bombay Presidency.

Makhdum Karm Husain, Honorary Magistrate, Muzaffargarh District, in the Punjab.

Cowasji Hatti Daru, of Seoni, in the Central Provinces.

Khuda Baksh, Jamadar in the Berbera and Bulhar Police on the Somali Coast.

Rao Sahib.

Vishvanath Keshav Joglekar, Vice-President of the Taluka Board of Karagji in the Dharwar District in the Bombay Presidency.

Rai Sahib.

Babu Nava Krishna Rai, a retired Inspector of Police in the Bengal Presidency.

Kanshi Singh, Sub-Overseer, Military Works Department.

Babu Amar Nath, officer in charge of arrangements for European visitors to Kashmir.

Lala Bishen Das, Wazir-i-Wazarat of Ladakh.

Tbue gaung ngwe Da ya Min.

Maung Shwe O, Inspector of Police, Burma.

Abmudan gaung Taseik ya Min.

Maung Pe (t), Extra Assistant Commissioner, Burma.

Kyet tbue zaung Salwe ya Min.

Saw Naw Maing Sawbwa of South Hsen Wi.

In the London list of New Year honours the following appointments appear :—

Peerages.

Sir Frederick Leighton and Mr. Henry Hicks Gibbs.

Privy Councillor.

Sir Richard Temple.

Baronets.

Surgeon-General Arnott, Surgeon-General Joseph Fayrer, and Mr. William Coddington, Member of Parliament.

Knights.

Howard Vincent, and Justices Farran and Bayley.

Knight Commander of the Bath.

H. H. Johnston, Commissioner of Nyassaland.

Poet Laureate.

Alfred Austin has been appointed Poet Laureate.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials, will be sent post free on application.

brought before
No. 39, Victoria

WEEKLYANA.

WITH the New Year we begin a new volume—volume XV—of *Reis and Rayyet*. We make no new promises, we propose no new programme, we announce no new arrangements, we offer no prizes, we make no show, but mean to continue on the old lines laid down by our great Chief, the late Dr. Sambhu Chunder Mookerjee. We cannot do better than open our present number with New Year's Honours. However earned, they are welcome to the recipients and their friends and may lead to charity and charitableness.

THERE was the usual Proclamation Parade on the first day of the year. But the Viceroy could not attend. It was no merry Christmas to him. Nor did New Year dawn happy to him. He still lies on a sick bed. The State Dinner at Government House has been put off and the State Ball indefinitely postponed. Lord Elgin's progress towards recovery is very slow.

WHILE shooting on Sir Edward Lawson's estate at Hall Barn, Bucks, the Prince of Wales met with an accident. The birds were plentiful and strong on the wing, with a strong wind blowing. As the Prince fired at a bird directly above him, some grains of unconsumed powder were blown into his right eye. The pain was very great, which was relieved by hot fomentations procured by Dr. Kennedy of Beaconsfield, who also applied cocaine to deaden the sensibility.

SHETLAND and Iceland are to be joined by a cable, Great Britain, Denmark and Iceland jointly guaranteeing interest on the capital for the purpose.

THE Elliott Prize for Scientific Research will be given this year to any native of Bengal, including any Eurasian or domiciled European residing in Bengal, for the best essay, giving the results of original research or investigation in any branch. Physical Science, composed during the current year.

IN the last M. A. Examination of the Calcutta University, 84 candidates passed successfully. Thus—

English I, 4; II, 14; III, 16, total	34
Sanskrit I, 1; II, 4	5
Arabic II	1
History, II, 1; III, 1	2
Mental and Moral Science I, 3; II, 3; III, 5	11
Mathematics I, 3; II, 3; III, 3	9
Natural and Physical Science:		
A. Chemistry II, 2; III, 6	8
C. Physics I, 3; II, 8; III, 2	13
F. Geology II	1

The institutions which sent up most of these are the Presidency College, F. C. Institution and Duff College, General Assembly's Institution, Dacca College, Sanskrit College, Hislop College, Hughli College, and City College. Of the 84, 21 are Private Students and 3 Teachers.

THE Calcutta Electric Lighting Act, 1895, passed by the Lieutenant-Governor of Bengal in Council, received the assent of His Honour on the 17th August, 1895, and the assent of the Viceroy and Governor-General on the 19th December 1895, and having been published in the *Calcutta Gazette* of the 1st of January 1896, came into operation from that date. The Act applies to the whole of municipal Calcutta.

MR. Charles Edward Buckland, C.I.E., Secretary to the Government of Bengal, General, Revenue and Statistical Departments, has been re-appointed a member of the Bengal Legislative Council.

MR. F. F. Handley, Officiating Additional District and Sessions Judge, 24-Parganas and Hooghly, Kumar Gopendra Krishna Deb, Officiating District and Sessions Judge, Nadia, and Mr. A. F. Steinberg, Officiating District and Sessions Judge, Rungpur, have been confirmed in their respective appointments.

RAJA Jyoti Prasad Garga of Mysural has received the thanks of the

Lieutenant-Governor, for the offer of a donation of Rs. 4,000 for the establishment of a dispensary at Gewankhally and of an annual payment of Rs. 300 for its maintenance. The District Board will contribute Rs. 600 per annum towards the support of the institution.

PROFESSOR Richard is before the public again—not by his exhibition of marvellous cures, but for exhibition of temper and unruly treatment of patients. He has descended from the theatrical platform to the Police dock—to answer a charge of abusive language, assault and criminal intimidation. Mr. Cranenburgh, on behalf of E. Calder, has obtained a summons from the Chief Magistrate against the Electric Doctor. The *Statesman*, which has always been ahead of the Calcutta press in publishing the Professor's prominence, reports:—

"Mr. Cranenburgh stated that the name of the Professor was Richard Guismardo, *alias* Richard Morross *alias* Albert Richard, M. E., of 17, Chowringhee. His client had for several years been in the employ of Messrs. Dignam, Robinson and Spakes, who had to dispense with his services in consequence of his suffering from phthisis, but they from time to time made him compassionate allowances. On the 30th December last, Calder called on the Professor, with the object of consulting him as to his sickness. He explained to him that he would have come long ago to be treated, but he had been influenced by what he had been told and read in several papers, particularly *Electricity*, a respectable London weekly, in its issue of November 1st, 1895. Mr. Calder suggested that if there were any truth in the allegations made, it would add greatly to the Professor's reputation and to his income if he refuted them. Mr. Cranenburgh here read the paragraphs referred to, and, continuing, said that the Professor on being then asked what he would charge, and to make a concession in consequence of Mr. Calder's circumstances, replied that his charge was Rs. 1,000. Mr. Calder offered Rs. 100, whereupon the Professor flew into a great rage and struck Calder a blow on the chest, which, Mr. Cranenburgh submitted, was a brutal attack on a man suffering from a chest complaint. The Professor then kicked Calder, and shouting 'kick him out,' 'kick him out,' had him ejected, threatening at the same time to assault him with a horse-whip."

A SUIT—Rajlakshmi Debi *vs.* the Secretary of State and others—is being heard by Mr. Justice Ameer Ali, in the Original Side of the High Court which shews how the Income-Tax Act is worked. One Purna Chunder Shaw deceased owning 8, Hara Chunder Mullick's Lane, but residing elsewhere, having neglected payment of Rs. 20, the income-tax, was fined by the Collector an equal amount. On application, the fine was remitted and Rs. 20, the amount of the tax, paid. Shaw, secure in his mind that there was no State demand on him, transferred, in December 1882, the said premises and other properties to his religious preceptor, the husband of the plaintiff, for religious and other purposes. Before a year had elapsed, the donor and the donee were surprised to find, that the house, valued by the plaintiff at Rs. 30,000, had been sold by the Collector of the 24-Parganas for Rs. 2,600 for certain costs payable to the Collector of Income Tax, Calcutta. The plaintiff seeks to set aside the sale on grounds of irregularity, under-value, &c.

The preliminary objection of the Advocate General that the suit cannot lie against the Secretary of State, in the absence of notice of suit, was over-ruled by the Judge.

Mr. Woodroffe, on behalf of the plaintiff, has raised several inconvenient questions for the Government to answer. Among others, he contends that no more than double the tax was claimable and that no sum by way of costs was recoverable under the Act.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

THERE are symptoms of decided rapprochement between Turkey and Russia. The proposal of the British sympathisers with the Armenians that Russia should undertake to pacify Armenia is not favoured in St. Petersburg. The Sultan has despatched Arif Pasha to St. Petersburg with costly presents for the Czar. It is rumoured that he is entrusted with a special mission.

All the Powers are urging the Porte for lenient treatment to the Zeitun insurgents, who are taking refuge in the mountains. The Porte has instructed the Governor of Zeitun that the inhabitants who were not actually engaged in the insurrection are not to be molested.

Numerous arrests of Turks have been made at Constantinople, including three Government clerks, who are charged with organising a demonstration against the present régime.

THE year is heralded with British reverses in the Dark Continent. There are persistent rumours at Johannesburg of a secret arming of the Uitlanders. President Kruger has returned from the country. It is stated that he is fully alive to the gravity of the situation, and is taking the necessary steps to meet the storm. If it comes, General Joubert will be summoned to Pretoria. The foreigners at Johannesburg are much divided. The Germans and Americans side with the Government against the National Union of the Transvaal British Society. The situation is growing acute, and many ladies and children are leaving the Rand. It is expected that several of the leading mines will be shut down at once. The burghers have been warned that they must be ready for active service, and mercantile associations have organised a town bodyguard to preserve order, but will take no active part in any civil war or rebellion. The Germans have selected a committee to arrange a plan of action. The French and German Press are strongly anti-English on the Transvaal question. The German press encourage President Kruger to resist the demands of the Uitlanders, whom they call adventurers and goldgrubbers. In response to the appeal of the leading inhabitants of Johannesburg, Dr. Jameson, the British South Africa Company's administrator at Mashonaland, with seven hundred Chartered police, crossed the border and marched to Johannesburg. It is rumoured that General Joubert, with a force of Boers, marched to intercept him.

Mr. Chamberlain, Secretary of State for the Colonies, cabled to Dr. Jameson to return, and also to President Kruger, demanding that he would do his utmost to prevent hostility, offering the assistance of England to effect a peaceful solution of the difficulty. The *Daily News* considers Dr. Jameson's action highly reprehensible. The *Times* suspends its judgment but states that if the fears expressed in the Uitlanders' appeal are justified, then the British people will approve of his conduct. Referring to President Kruger's reported appeal to the French and German Consuls, the *Times* declares that Great Britain will not endure any foreign intervention in the Transvaal, nor suffer anarchy there.

Dr. Jameson duly received his orders to return, but persisted in ignoring them.

Fighting began at four o'clock on Wednesday morning. Dr. Jameson was driven from several positions he had taken up and had to surrender.

The despatch he sent while fighting was proceeding says that the Boers had taken twenty-two wounded prisoners, including three officers, besides twenty unwounded prisoners.

Mr. Chamberlain has telegraphed to Pretoria, asking that generous treatment may be shown to the wounded and the prisoners.

Sir Hercules Robinson is going to Pretoria at once.

The German Emperor has telegraphed to the President Kruger, warmly congratulating him on his success in repelling armed invaders, and preserving the independence of the Transvaal.

The London papers, in discussing the Johannesburg disaster, deplore Dr. Jameson's action, but hope that President Kruger will nevertheless redress the reasonable grievances of the Uitlanders.

The French papers are exultant over the defeat of Jameson's force by the Boers, and declare that France, Germany and Russia united will protect the rights of the Transvaal.

THE American House of Representatives considered a Bond Bill empowering Secretary Carlisle to issue three per cent. bonds, and passed a short term Bill, by one hundred and sixty-nine against one hundred and thirty-six.

NEGOTIATIONS between Great Britain and France are proceeding regarding Hurrar and the Mekong, and it is understood that France is very desirous of an *entente* on all pending questions.

THE revenue returns of Great Britain show an increase for the past nine months of six million three hundred and ninety thousand pounds, of which stamps contribute four millions and-a-quarter. The Budget will show a surplus of nearly five millions.

A MEMORIAL for Government to favour the Kafirs of the Hindoo Koosh is being signed by a number of English and foreign scholars and learned and philanthropic societies.

THE French Chamber of Deputies has voted a Madagascar credit of seventeen million francs.

IN a speech from the throne, the Mikado stated that foreign relations of Japan are growing more intimate. And yet he stated that measures would be adopted for increasing the defences of the Empire.

THE results of the University elections for Fellowship are,

1. Dr. Suresh Prasad Sarbadhikary,
2. Babu Yatindra Nath Roy Chowdry,
3. Babu Lal Behary Mitter.

The first comes in as a matter of course, for there was one medical degree-holder to be recommended and Sarbadhikary had no competitor. The scion of the Taki House had been longest in the field and been well supported. The remaining successful candidate is the son of the Hon'ble Esan Chunder Mitter and knows how to fight an election.

THE *Tribune* of Lahore reports :—

"The Maharaj Rana of Jhallawar was invested with full authority last year in June, and has since been exercising the powers conferred on him. Lately, the Political Officer, Captain Gordon, has been trying to constitute himself into a court of appeal, and to interfere with the Chief's proceedings. In last October Captain Gordon wrote a letter to the Maharaj Rana questioning some of his decisions. The Maharaj Rana has sent a spirited reply, in the course of which he says :—'I am not aware whether you are competent to hear appeals against my decisions in any way, and to write for staying such orders as have been already issued by me. I do not see there is any such condition in the Jhallawar Treaty or in the Viceroy's *Kharita* dated June 1894. If you have been, however, authorised to that effect, I shall be obliged if you would kindly send a copy of such orders to me before the Christmas holidays.'

The Rana is tempting fate by his "spirited reply." Matters must have gone too far between him and the Political to elicit such a retort. The Rana not only openly resents the interference with his powers but also prescribes the time for production of the representative's authority to dictate. The Chief may be within his rights. Their exercise is, however, not always palatable to Residents, and sometimes brings disgrace with subsequent curtailment of even the show of authority.

AGAIN,

"A story is abroad that Sir Dennis Fitzpatrick, while out riding in the morning the other day, saw a number of Christmas *dalis*, evidently intended for some officials, being carried through the streets. He stopped his horse and told the men that no *dalis* should be presented to any officer and they had better take the things back. As happens with such stories we are not told whether His Honor's advice was followed or not. The men were merely carriers and had their masters' orders. In another province a European officer once told us in the course of conversation that he was not at all desirous of accepting presents or *dalis*, but sometimes ~~he~~ had no choice. He mentioned a personal experience that he had had. He was in charge of a sub-division and was out in camp during the winter. One morning a man brought him a lamb, saying that it was a present from his master, a zemindar in the neighbourhood. The officer said that he did not mind buying the lamb at a fair price but would on no account accept it as a gift. 'Sahib,' replied the man, 'my master does not sell lambs, and I have no authority to sell this one. If I were to take it back to him, he would not let me off with a whole skin.' The man then quietly tied the lamb to a tent-peg, and bowing to the officer, said :—'Now you may do with it what you like.' And without waiting for the usual *bukshish*, or further parley, he made a clean bolt of it, and was out of sight in a few moments. 'What would you have me to do?' asked the officer. 'If I had let the lamb loose, it might have been stolen, or what would have been worse for the man who had brought it to me, it would have found its way back home. There was nothing left for it but to keep the lamb.'

So there is no help but to accept the *dali*, any rules to the contrary.

English criminal jurisprudence recognises no offence in the giving and

and wines and pre-
tensions in the case
but in India when

THERE are no less than 13 candidates for the Vice-Chairmanship of the Calcutta Corporation. When a post is advertised, any body seems competent to reply. Broadly speaking, there are 5 Europeans, 7 Hindus, and 1 Mahomedan. Formerly the place was reserved for Europeans, but it has been given for several years to natives, and there seems no disposition to re-open it to European. The election will, therefore, be confined to the Hindus and the Mussulman. Of these 8, the most talked about, that is, who have canvassed most, are the 1 Mahomedan and 3 Bengalis,—Moulvi Budruddin Haider, Registrar, Bench of Honorary Presidency Magistrates; Babu Nigendra Nath Sircar, Head Assistant, Revenue Department, Bengal Secretariat; Baboo Nilamber Mookerjee, late Chief Judge and Finance Minister of the Kashmir State, and Baboo Charoo Chunder Mitter, son of the late Baboo Nilcomul Mitter of Bandipur and Allahabad. It is to be regretted that, from the beginning, a race question has been sought to be made of the election. Some well-meaning Europeans have taken up the Mahomedan by the hand, while others have declared themselves for the Secretariat man, otherwise styled the official candidate, who is supposed to have at his back some of the Secretaries of the Local Government with which rests the ultimate sanction of the appointment. Baboo Charoo Chunder is a host in himself—Pleader, Zemindar in the districts of Hooghly and the 24-Parganas, Municipal Commissioner of the Allahabad Board, Vice Chairman of the Allahabad municipality, Honourable member of the Legislative Council of the N.-W. P. and Oudh, Auditor for Banks and Joint-Stock Companies, and what not besides. According to one account, he has the appointment in his pocket, with Rs. 1,300 as special pay for special qualifications, such as his genius for assessments. The remaining candidate is the only one who has high university distinctions. He has besides seen the highest and most responsible service in one of the most important border Native States, where he himself introduced municipal administration. He retired on a pension equal to the pay of the post he seeks, which if he had been permitted to draw, would have placed him above the humiliating position he now finds himself in. A question has been asked why Baboo Nilamber left the Kashmir service? We will let the British Resident, Sir Oliver St. John, answer it. Babu Nilamber "quitted the Maharaja's service sooner than connive at peculation he was powerless to prevent." We will not believe the rumour that the Secretariat man has been pitted against the Kashmir ex-official in pursuance of the policy which keeps Baboo Nilamber out of his sanctioned annuity. If the Secretaries of the Bengal Government be indiscreet, the Commissioners have a duty to perform—to themselves and the ratepayers in general, by appointing the best of the baker's dozen, unmoved by other considerations than the good of the municipality.

The other candidates are Babu Kali Kumar Roy, M. A., B. L., Pleader; Mr. Alfred McCabe Dallas, L. M., L. R. C. P., Medical Officer to the Haffrey Valley Planters' Association; Captain Andrew Hearsay; Mr. W. L. Joakim; Mr. John Hague; Babu Amrita Lal Dey, B.A., B.L., Professor, Maharaja's College, Jeypore; Mr. W. J. Owers, Hyderabad, Deccan; Babu Jy Gobind Shome, M.A., B.L., Pleader, High Court; Brindaban Misra, Lucknow.

THE Blotting Pad and Diary for 1896 of the Scottish Union and National Insurance Company is welcome indeed. It is neatly done up and contains 2 pages for memoranda, 12 pages for diary for all the days of the year and a sheet almanac. Of course you have also the principal facts concerning the Company—when it was founded, the amount of its capital, the number of shareholders, the amount of the invested Funds, the number of policies issued, the amount of the existing policies with the number of lives insured. You are at first introduced to the first Governor of the Company, Sir Walter Scott, Bart. whose portrait is given on the cover.

THE Mohun Mela, started last year as an opposition shop to the Fancy Fair from which a certain class is excluded, was repeated this year under altered management. The original projectors were not allowed any hand, though they could not be kept out altogether. The Flower Show at the Seven Tanks having been discontinued, the Industrial Associationists utilized the new Fair for their own purposes and resolved to purge it of all impurity. An attempt was made to have their Exhibition opened on the Mela grounds by the Viceroy. But it was not to be. His Excellency was advised that he could not be present. So the Show was opened by Dr. Watt, Government Reporter on Economic Products. A few Bengalis and

Europeans with a large number of Hindustanis were present. On the arrival of Dr. Watt, the band played "Welcome," and then a song, not patriotic as mentioned in the programme, was sung. After this, was read a short history of the Industrial Association, by the Secretary. Rai Parbati Sankar Chauthuri followed, deploring the lost industries, and invited the wealthy of the community to join them for revival of their past glory. It was the day for the display of patriotism all round. A short poem in Bengali was then recited, but it failed to produce the desired effect.

The master of the ceremony, Dr. Watt, expatiated on the utility of such exhibitions of Indian products. The indigenous arts and manufactures should be kept up, he advised, but how so desirable an end could be achieved, was not explained. The failure in the production of cotton fabrics, he ascribed to the great extension of trade in jute and tea. Jute, at least, is highly remunerative to the grower, the capital needed being comparatively small. Bengal abounds in iron ore, yet little is done for extraction of that highly useful metal. He spoke of international exhibitions as mistakes, for they are often injurious. The products of one country may be supplanted by successful imitations in another. In the last London exhibition, a Hindu idol had been shown to him, manufactured in England as an imitation of the stone ones made in India. He recommended inter-provincial exhibitions to be held in Calcutta, Bombay, and other principal cities of India.

In moving the vote of thanks, Dr. Sircar pointed out that international exhibitions are, no doubt, injurious to weak nations, but it is difficult to oppose them. When taking place in Europe, Indian products cannot fail to be exhibited. The difficulty may be remedied by cultivation of science side by side with art. It is art backed by science that has made the European nations what they are. Indian arts, unbacked by science, will not be able to compete in any market. Knowing and doing are two things. Knowing is science and doing is art. They must be combined to achieve success. Doing cannot be successful unless you know well what to do and how to do.

Rai Bahadur Kunai Lal Dey seconded the vote of thanks. Dr. Watt, in replying, observed that he meant art with science, not art alone. His object was the preservation of indigenous high arts.

Three cheers were then given by the assembly to the Queen-Empress and the band played "God save the Queen."

Various entertainments were provided for the spectators, such as *Femle baul*, *Jatra*, magic, dramatic performances, concerts, gymnastics, marionettes, and fireworks.

Compared to the exhibitions held at Dum Dum during the Flower Show, the last Industrial Show cannot be pronounced a successful attempt. There were wanting horticultural and agricultural products. Among the indigenous manufactures, which were many, the following are worthy of mention: K. C. Bose's cornflower, barley and biscuits; Gonsalves & Co.'s photoengraves; Kisin Ariff Brother's silk cloths, North West Soap Co.'s soaps; cloth manufactures from the Elgin Mills; K. C. Das's padlocks, and matches from Indian and Bengal Match factories.

ONE of the recipients of the New Year's Honours, of 1895, Rai Bahadur Hiri Krishna Mizumdar, of Islampur, in the Murshidabad District, has not survived his investiture. He died, at Berhampore, of apoplexy, on the 18th of December, at the age of 39. He was making himself a name, under the patronage of Mr. Kennedy, the District Magistrate, who attended the funeral. Mrs. Kennedy, who was a mother to the deceased, paid a visit of condolence to the ladies of his family. The rise of Mr. Mizumdar was remarkable. The school that he founded at Islampur and which continues to be a blessing to the locality, brought him to the notice of Government. He was made an Honorary Magistrate and given independent powers; he was a member of the District Board and Chairman of the Sadr Local Board. His literary activity was on a par with his ambition in other directions. In 1882, he published in Bengali the first volume of a History of India, treating of the Vedic period. It is dedicated to Dr. Rajendra-lala Mitra.

THE last (September) number of the *National Magazine* is not uninteresting. The first paper, "An Indian Pears," by Mr. F. H. Skrine, describes in detail the manufacture of soap by a branch of the North West Soap Company at Garden Reach. It seems that until 1880, India, although producing in abundance the principal substances used in the preparation, was content to depend on Europe for her supply of soap. In that year the North West Soap

Company founded a small factory at Meerut. It grew and prospered, and in 1883 it obtained the only gold medal awarded to the Indian soap at the Calcutta Exhibition. Ten years later, the Directors, finding the demand outstrip the supply, extended their operations to Calcutta, securing for a song several acres of land enclosed by a high wall with a large house within it. It was the residence of a Mussalman nobleman connected with the ex-King of Oudh's Court. Mr. Skrine's description of the several processes is not burdened with technical words and expressions. It cannot, therefore, fail to interest the general reader. The Company have begun well, but it will take long to perfect their article. They sell tablets in imitation of Pears' and their cheapness may hereafter drive out from the Indian market, his which, we understand, falls short of the demand. Soap like wine improves by keeping. Fresh from the manufactory, it lacks many of the properties for which it is valued. The Indian imitation, though much cheaper, cannot approach the original in colour, transparency, flavour and durability or resistance to water. The scented ones smell too strong and are disagreeable, and instead of cleansing the skin impart to it a sticky matter that has to be washed off with care. The second article in the magazine, "England and the Mediterranean," by R. C. B., is a valuable contribution to the discussion, carried on in England on the desirability of strengthening the British Navy. The possessions of England are separated from each other by great distances. One fleet or two, however large, cannot defend the whole Empire. The writer wishes to point out that if England is not to run the risk of being beaten in a conflict, she should do what her neighbours are doing, that is, add to the strength of her navy. The paper is a well-written one, and makes out a case for the increase of naval expenditure. "Kings and Beards" is a short essay by Sirat Chandra Mitra, M. A., B. L., containing curious information. "Ceremonial Love in Bengal" by D. N. Neogi, B. A., sustains the interest excited by the previous instalments under the same head. The paper on "Raja Sir Dinkar Rao, Knight" is extremely short. A detailed account of his life is wanted. The great statesman is still alive. Information, however, that is now available, will be lost a few years hence. A biographical volume, replete with interest and throwing a flood of light on the administration of the Mahratta States, may be produced with the aid of the Raja. "The Continental Ladies' Letter from Paris," though short, gives some interesting information regarding French manners, dress, and cookery. The Sonnet by C. L. Alexander praises muster. The notices of books are generally neat. We see that Babu Nobin Chandra Sen's latest poem, "Amitabha," is characterised as deficient in fire and pathos. The reviewer notices the blunders that we were the first to point out in the Sanskrit quotations with which the preface is garnished. The hope is expressed that the blemishes will be removed in a second edition. A bad poem, however, cannot be made good by mere revision.

REIS & RAYYET.

Saturday, January 4, 1896.

THE OLD YEAR.

ANOTHER year has been numbered with the past. The events, as far as humanity is concerned, have been the same or nearly the same in character as those of its predecessors. There have been births and deaths, joy and sorrow, in every land. There has been progress in many directions as a falling back in some. The optimist has his budget of facts for congratulating himself upon the extension he believes in of human happiness. The pessimist has his tale of wrong and evil for laying on some sombre touches on the gloomy picture he is in the habit of frightening himself with. The philosopher, without yielding to joy and sorrow, may wait for taking stock and reflection on the causes and consequences of events

cannot but be temporary in their effects. Man's concerns for the most part are endowed with such a principle of elasticity that their expansion and not repression is inevitable. Nor was there anything among the occurrences of 1895 which can be said to have seriously interfered with the operation of that inexorable law.

The year 1895 opened with the attention of the civilised world directed to events developing themselves in the far East. Japan, though inferior to China in territorial extension, had declared war against her continental neighbour. The resources of the latter were generally believed to be inexhaustible. The year 1894 closed with symptoms plainly indicating that the beginning of the end had come. By February, the war was nearly over. That which had scarcely been expected, came to pass. China was beaten at all points, and before April was at an end, a treaty of peace was concluded under which China had to pay a heavy sum as war-indemnity to the victor. The contest proved the measure of progress achieved by Japan and the retrogression of China in consequence, as is believed, of official corruption all round. That China was able to meet the enormous indemnity exacted from her, speaks well for her solvency and the elasticity of her resources. One feature of the war could not fail to be marked. Japan was not allowed to reap the full benefit of her success in arms. The European Powers intervened, some directly and some indirectly. Among others, Russia in particular was opposed to the extension of Japanese influence on the Asiatic continent. Perhaps, after all, the result has not been undesirable. China laid helplessly low at the feet of Japan, without anybody coming forward to mitigate the severity of Japan's demands, would certainly have been a piteous spectacle.

The election of a new President of the French Republic, with the administrative changes that followed it, formed another important event in the political world. In the affairs of France, the expedition against Madagascar must also receive prominence. It was a war of civilisation with all its deadly resources against semi-barbarism still depending on means, many of which are entirely primitive, for both attack and defence. The result, therefore, could not be otherwise. The success of France was assured. It was delayed by various circumstances, chief amongst which was disease. But the check sustained by the French arms proved temporary. The anticipations of the invaders were at last realised, and the influence of France is now supreme in that large island furnishing an excellent half-way station in the old highway of most of the European nations to India round the Cape.

In a chronicle of 1895 prominence must be given to the affairs of Turkey. Without precise knowledge of the causes that led to the atrocities committed against the Christian population of Armenia, the indignation of the whole civilised world was roused against "the unspeakable Turk." Pressure was brought to bear upon the Sultan to put his house in order. The Sultan, as usual, cowering under such action of the foreign Powers, adopted the policy of shuffling as the only means of avoiding the worry. Even when assurances were given, it is not always easy and the United game of fright-ssion, but the casure of the

importance of ambassadorial notes, several or joint. At one time the situation became really alarming and a war with the Turk became almost imminent. Happily, the clouds in the political horizon melted away. So far as England is concerned with a Turkophil party in power, the chances of complications in this quarter no longer exist.

To us in India no event of the past year could be fraught with greater interest than the change of administration in England. At the general election that followed the dissolution of Parliament, the Liberal party lost seat after seat, while the Conservatives won success quite unexpected. Irish Home Rule and the reform of the Upper Chamber constituted the chief cry of the Liberals. The maintenance of both the Union and the Lords intact was the cry of the other side. The country pronounced unmistakably on both these questions. It is true the Conservative majority was swelled by that portion of the Liberals which has won the name of Unionists, but the latter, with their strong views on Irish Home Rule and the Upper Chamber, could not possibly stand apart or with Lord Rosebery's followers on such an occasion. The Liberals, while acknowledging their defeat so far as the results of the general election were concerned, did not allow that the country was against them. Their defeat was due, they maintained, to the defective system of representation in vogue. For all that, their power crumbled away and their opponents formed a sort of coalition ministry that is still working with a smoothness that could not be readily predicted. The Liberal defeat deprived Mr. Dadabhoi Naroji of his seat, while another Indian gentleman, unknown before, Mr. Bhowmagri, entered the House of Commons. Of abilities greatly inferior to those of Mr. Naroji, the new Indian member's capacity for evil could not be great. But it should be admitted that since his entrance into the lower House, he has done nothing to justify the alarm felt by the friends of progress in India.

In India too the past year saw a war about whose utility opinion is still divided. Information was received of a small British garrison shut up within an insignificant fort far beyond the frontiers of India. What had led the men there few people knew before hearing of their perilous situation. British prestige required their rescue at any cost. Accordingly, the expedition to Chitral was ordered. The Indian army, it was seen, is in a state of high efficiency. The forces were moved with a promptitude that was certainly admirable. The difficulties that inanimate Nature presented were surmounted with an alacrity that spoke highly of both the men and officers employed in the campaign. There was fighting along nearly the whole line of the march, and in some places even severe fighting. But nothing could daunt the prowess of the soldiers engaged in the expedition. If one officer or corps acquired greater distinction than another, it was due to the accident of situation and time. Chitral was relieved, British prestige was maintained. The usual shower of honours took place. The Indian tax-payer had to bear the burthen. All the characteristics of frontier war were noticeable in the Chitral campaign. Apart, however, from the gallantry of the troops and the cost of the expedition, about which opinion cannot be divided, when people came to enquire about what led a British officer with a body of men to such an out-of-the-way little place as Chitral, the story was unfolded, for the first time of a little political game in furtherance of

what has been called the forward policy as a means for repelling Russia from the Indian possessions of Britain. The war was undertaken by one party. The settlement of the question, however, depended upon the will of another which had come to power by the time the campaign was over. The Liberals had resolved to withdraw from Chitral, content with maintaining a show of supremacy over its affairs. The Conservatives, however, resolved to retain Chitral for its strategical importance in a war with Russia. It is a ticklish question, and whatever may be the views of the future historian of India, the retention of that mountain fort with the way to it from India kept clear by a chain of military posts, is regarded by the party in power as a great triumph of Imperial policy.

Next to war, the affairs of peace demand attention. Indian finances, chiefly through fall in exchange, had reached a stage when the re-imposition of the cotton-duties became an imperious necessity. With the cry of Free trade, Manchester resumed her organised agitation against those duties. A counter-vailing tax was imposed on the produce of the Indian Mills so that no pretence might be left for the cry that the Indian industry was protected at the expense of Manchester. It has been difficult, however, to appease the Moloch of Manchester. The Custom House figures have abundantly established the fact that the consumption of Manchester goods in India has suffered no decrease since the re-imposition of the duties. There has even been an increase, so that the fears entertained by Manchester have not been at all realised. The duties have really fallen on the Indian consumer. As an indirect tax whose collection is easy and which is not felt as a burthen by the people of India, it has every recommendation in its favour. Unhappily, Manchester is still harping on it as a standing grievance or a menace to her interests. From the weight which Manchester has in the lower House of Parliament, there can be little doubt that its success is certain in the long run. No Secretary of State will be able to resist long the demands of Cottonopolis. India, however, should be thankful to Lord George Hamilton for postponing the evil day.

In the department of legislation, the principal measures of general interest were the Bill relating to the amendment of the Cantonment Act, that to Pilgrim Ships and, lastly, that to the Police. The first of these excited the needless indignation of the medical officers of Government. They maintained that they were so upright and conscientious as to be incapable of breaking the law in a particular direction. The provision about the punishment of persons like them on the supposition of their infringing the line of duty, was taken as a flagrant insult. Bentham had long ago noticed and effectually disposed of the fallacy lurking behind such an argument. For all that, the pressure that was brought to bear upon the Government of India was too much. The Pilgrim Ships Bill, introduced at the instance of the Secretary of State for India, in accordance with certain views adopted at the Paris Conference, provoked opposition from the Mahomedan community. The Government of India had, from the beginning, felt the error of the position. The complaints of the Mussalmans were listened to with a good grace, and a rupture between them and the Government was avoided. The Police Bill had a very objectionable scope. It was opposed with learning and vigour in the Council

by the Hon'ble Perozeshah Mehta. Unable to reply to his arguments, his observations were taken by more than one official member as an attack on the Indian Civil Service. No case had been made out for the grant of larger powers to the Executive. On the other hand, solid reasons were urged against such grant. For all that, the official members, by their solid votes, carried the measure. The result is that the most grievous penalties in the form of fines may now be imposed by executive determination on any subject of the Crown whatever his connection with an area within which there has been a disturbance. The great principle of civilised criminal jurisprudence, that no man should be punished without his fault being proved according to known rules of evidence and before judges trained to apply those rules and competent to weigh probabilities and draw inferences, was openly violated. Abuse of power, it was urged, by members of the Civil Service, is not to be presumed. We have it on the authority of Sir Charles Elliott that they are all, all honourable men, conscientiously striving to do their duties, Mr. Levinge at Sylhet and Mr. Wheeler in the North West probably unexcepted. Civil liberty was put back by half a century. There may be condemnation and punishment without the grant of an opportunity for defence.

There were changes in the *personnel* of some of the local administrations. Early in the year, Lord Harris was succeeded in the Government of Bombay by Lord Sandhurst. In Madras also, Lord Wenlock, by his retirement, made room for Sir Arthur Havelock from Ceylon. In the North West Provinces, Sir Antony MacDonnell took the reins of Government from the hands of the Senior member of the local Council who had been acting after Sir Charles Crosthwaite. In Bengal, during the last month of the year, Sir Charles Elliott, after his full five years, made over charge to Sir Alexander Mackenzie. Sir Charles Elliott was, no doubt, an able ruler, but the sort of ability he had, operated as a positive disqualification for the rule of a law-governed Province like Bengal. His latest apologist observes that he had, throughout his term, "worthily upheld the national prestige." As a matter of fact, even this is his severest condemnation. He was a Civil ruler in one of the oldest Provinces of the British empire in the East, where, through spread of education, the people have become accustomed to the ways of constitutional Government. One can conceive of Sir Charles Elliott's upholding British prestige in a province like Assam by punishing the hill chiefs still steeped in barbarity and committing raids into British territory in utter ignorance of British might. We are unable to understand what shocks British prestige ever received in Bengal during Sir Charles' rule and how it became necessary to uphold outraged prestige. Were acquittals of accused persons, when the evidence against them was weak, shocks to British prestige? Probably, however, reference is made to Sir Charles Elliott's policy of screening official offenders from public exposure. But of this, hereafter.

The Viceroy's tour was another noted event of the old year. Lord Elgin saw the principal cities and towns of the empire. He was received everywhere with honours due to his high position and

that should be evoked on both sides on occasions such as these. But they were passing clouds in a welkin otherwise sunny and cheerful throughout.

The last days of the year witnessed the eleventh session of the Indian National Congress held at the historic capital of the Mahratta empire, with the Hon'ble Surendra Nath Bannerjee in the chair. His address covers 65 long columns of lead and travels over the entire ground of Congress politics.

There were many deaths among prominent men in India and other countries in 1895. France mourns for one of her greatest scholars, *viz.*, M. Birthelemy St. Hilaire. India mourns the loss of Mr. Justice Mathuswamy Iyer. Bengal also has sustained some irreparable losses, chief amongst which are the deaths of Dinobandhu Nyayaratna and Kaviraj Gunga Prasad Sen.

WANTED: SEPARATION OF JUDICIAL AND EXECUTIVE FUNCTIONS.

MR. MANOMOHAN GHOSE TO AN ENGLISH INTERVIEWER.

"I have collected the opinions of several eminent Anglo-Indian authorities, ranging over a period of nearly forty years, condemning this system and advocating separation. Only recently, in a debate in the House of Lords, over the Maimansingh case, both Lord Kimberley, then Secretary of State, as well as Lord Cross, his predecessor, expressed the opinion that it was exceedingly desirable, in the interests of justice, to separate the two functions. But no step, I regret to say, has been seriously taken to effect this separation. Lord Kimberley remarked that financial considerations prevented the Government from introducing this much-needed reform. I am sorry that I do not appreciate the force of this objection. As my friend, Mr. Romesh Chunder Dutt, C.I.E., of the Bengal Civil Service, now Commissioner of the Orissa Division, has shown, the reform could be carried out without costing an additional rupee to the State. Although Lord Kimberley had been advised that Sir Richard Garth was wrong in stating that the principal ground of objection to this reform was an apprehension on the part of executive officers in India that their prestige would suffer by it, I cannot help saying that, on the contrary, I am convinced, from what I have seen, heard, and read, that Sir Richard Garth was perfectly right in his assertion, and that the financial objection is merely put forward in the present embarrassed state of Indian finances in order to shelve the question."

"Except in the Presidency towns of Calcutta, Madras, and Bombay, where there are Presidency Magistrates, somewhat analogous in position to your Police Magistrates in London, all petty criminal cases are tried by three classes of magistrates in India, known as the first, second, and third class magistrates. All these magistrates in a district are subordinate to the District Magistrate, who is the chief executive officer of the district, and who hears appeals from the decisions of second and third-class magistrates only. Appeals, where they are admissible, from decisions of first-class magistrates, including those of the District Magistrate himself, lie to the District Judge, who is subordinate only to the High Court. As regards the power of these magistrates, I ought to tell you that the first-class magistrate is competent to award a sentence of two years' rigorous imprisonment (what you call 'hard labour') and a fine of Rs. 1,000; a second-class magistrate is empowered to inflict six months' rigorous imprisonment and a fine of Rs. 200; and a third-class magistrate can inflict one month's imprisonment and a fine of Rs. 50. It is the District Magistrate who determines, according to the schedule of

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1895-96.)

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., on Tuesday, the 7th Inst., at 6 to 8 P.M. *Subjects*: Histology—Kidney; Physiology—Alimentation.

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 8th Inst., at 6 P.M. *Subject*: Photometry.

Lecture by Dr. Mahendra Lal Sircar, Thursday, the 9th Inst. at 5 P.M. *Subject*: Electro-magnetism.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for Botany.

offences in the code of criminal procedure, to which class of magistrate any given case is to be made over. As regards the more heinous cases, which, by the Code of criminal procedure, cannot be tried by magistrates, they are committed to the Court of Sessions of the district, where the Sessions Judge tries the case with the aid of two assessors whose opinions he may or may not follow, or with the aid of a jury whose verdict prevails unless the Judge differs from it and thinks fit to refer the case, for the orders of the High Court. The assessors are, in each case, selected by the Judge himself from a list prepared by the Magistrate of the district and by the Judge. The jury are selected by lot out of those summoned to attend on a particular day. The Sessions Judge otherwise called the District Judge, in all trials has the power of sentencing the accused to transportation for life, or to death. But in the latter case the sentence has to be confirmed by the High Court. I ought to add that the High Court has power to call up and revise the record 'of all criminal' cases, whether the sentence passed is appealable or not, and this power of revision by the High Court is a most important and salutary one, and the very existence of it, even though seldom exercised, except on questions of law, has a wholesome effect upon the entire judiciary of the country."

"There has been for some time past in Bengal a tendency to force the Judiciary to decide criminal cases according to the preconceived ideas of Executive, and this tendency, I am sorry to find, has gone so far as to lead the Local Government to assert the right of criticising the judgments even of the Judges of the High Court, who are in no way subordinate to the Local Government. As regards the Judges and the Magistrates in the interior, attempts have been made in various ways in recent years to put pressure upon them to make their decisions accord with the views entertained by the Executive. The Executive are naturally anxious that no slur should be cast upon the police by Judges and Magistrates and, with that view, of late years, the Executive officers in Bengal have had recourse to various methods, all tending to interfere with the judicial independence of Judges and Magistrates."

I.—THE SUBORDINATE MAGISTRATES.

"In the olden days the Executive were in the habit of loyally accepting the decisions of judicial tribunals. But within the last twenty years there has been a manifest tendency to put pressure upon our judicial tribunals to decide cases in accordance with the wishes of the Executive. This pressure is frequently put in an indirect way. Judges and magistrates have to look up to the Executive for promotion and preferment, and if their decisions are subjected to criticism by the Executive, such as the magistrate of the district, the Commissioner of the division, or an under-secretary to the Government, it must impair the feeling of independence which every judicial officer ought to possess. This is not, however, the only way in which the judicial independence of our officers is threatened. A Deputy-Magistrate has to depend entirely upon the District Magistrate for his promotion. The District Magistrate combines in himself executive and judicial functions. In his Executive capacity—often on an *ex parte* hearing—he comes to the conclusion, for example, that a certain person is obstructive and ought to be criminally punished, should an opportunity for punishing him offer itself. Such an opportunity may, in Bengal, occur at any moment. When a case does occur in which that unfortunate man is involved, the District Magistrate will probably, for fear of an application to the High Court for a transfer from his file, or for the purpose of showing apparent impartiality, refrain from trying it himself, but will make it over to a subordinate Deputy-Magistrate with an expression of opinion—more frequently verbal than in writing—that the man ought to be convicted. The Deputy-Magistrate, who is naturally anxious to be in the good books of the District Magistrate, has not often the courage to acquit the man, even if he should judicially come to the conclusion that the man ought to be acquitted. I remember a case in which I moved for a transfer of a criminal case from a Deputy-Magistrate's file, on the ground that the District Magistrate had written a letter to his deputy suggesting that the *maximum* sentence should be given to the prisoner. I secured the transfer because my client was lucky enough to have obtained a copy of the letter. Such instances are, I believe, of almost daily occurrence, but many of them do not see the light of day; and if the suggestions or instructions are verbal, they cannot be proved."

"Many Deputy-Magistrates who are my personal friends have frequently complained that they are subject to this kind of interference, and that they have had quietly to submit to it. Whenever I have succeeded in exposing a District Magistrate who has acted in this way, it has been said on his behalf—sometimes even by High Court judges from the bench—that this was inevitable by reason of the combination of judicial and executive functions in the person of the magistrate. I know of many instances in which what are called demt-official 'chits' in India have been sent by the District Magistrate during the progress of a case to a subordinate magistrate engaged in trying it, telling him how to proceed in matters which are purely judicial."

"I mean slips of paper sent officially by

privately, and these do not form part of the case, and are not made accessible to the Appellate Court or known instances in which District Magistrates have the right to give any advice they think proper to magistrates engaged in trying cases. In one instance a covenanted English magistrate openly told me that he would consult the District Magistrate, who was the prosecutor in the case, as to a particular matter which was called upon to decide judicially. This is a gross violation of simplicity, and apparently without even knowing it, in any way objectionable to be advised by a superior officer in a case. This is how, ordinarily, the independence of magistrates is interfered with. The practice has existed, so far as the subordinate magistrates are concerned, for the last thirty years. The Commissioner of the Division is a purely executive officer above the District Magistrate, and exercises the right of censuring magistrates for judicial work."

"I remember a well-known case in which the District Magistrate showed me an autograph private letter, written by the Commissioner of the Division, in which the latter expressed his approbation of a particular judgement which had been delivered, and in which he further went on to say that in consequence of that judgement the Lieutenant-Magistrate's future promotion for a Deputy-Magistrate showed me the letter with a view to stopping it, and begged me not to make any use of it, adding that I am. The Government treats me in this way. The Government has, on revision, been affirmed by the High Court. In the state of things must, I fear, continue so long as the Commissioner of the district continues to exercise revisional powers over subordinate magistrates. The Officer, who is in constant private and official communication with the Superintendent of Police, is often influenced by *ex parte* representations and reports of the Superintendent of Police, who hears the evidence with the case, form an opinion the other way. The Commissioner of the district who has, under these circumstances, to resist the temptation of surrendering his own judgement to the official superior whose approbation it is his duty to seek."

"I can give you from my own experience many instances which have come under my notice; but I will select one case, which occurred during the administration of the Lieutenant-Governor of Bengal, Sir Charles Elliott. The extent to which even the Government of Bengal has gone in a few years ago I was called upon to defend a man who had been charged by the police with the execution of their duty. They had, on the ground, complained against the police for having grossly assaulted them without any cause. The case brought before me was heard by a magistrate in whose court I was able to show that the charge preferred by the police was supported by fabricated evidence. Before the magistrate delivered his judgment, the policeman who was the plaintiff came to me and confessed to me that he had put up to prefer a false charge by his superior. He said that he was extremely sorry for what he had done, and begged me to withdraw the counter-charge which he had brought against him. I told him that I could not do what to do in such a matter, but that he should seek the advice of his official superiors. He and his official superior came to me, and expressed their readiness to accept the responsibility for what the police had done. Acting under my advice, I withdrew the charge against the police on record by the policeman concerned. But before this, the magistrate acquitted my clients and declared that the case was proved false. Shortly afterwards, the head of the police, knowing nothing of the confession and the apology of the offending policeman, made a report against the case to the Government, and prayed that the case against the policeman be re-opened, as the magistrate had improperly acquitted the policeman. The Government of Bengal found it impossible to do so in any way, although it had the power under the law to do so. The acquittal to the High Court. But instead of doing so, the only way the law allowed, a Secretary to the Government of Bengal came and expressed to him the grave dissatisfaction of the Lieutenant-Governor for the judgment he had given. The magistrate declared that he had acted to the best of his ability according to the evidence, the Secretary, I remember, said to him: 'You ought to have thrown the responsibility of the case on the Appellate Court!' My authority for this is the magistrate himself. Recently, a circular has been issued to some magistrates—I believe, with the full signature of Sir Charles Elliott—in which subordinate magistrates are requested to comment adversely in their judgments upon the police concerned in any case, but to report the case to the Lieutenant-Governor. I need hardly add that this amounts to a direct interference with the independence of subordinate magistrates."

ALLAN'S ANTI-FAT

A Wonderful Medicine.

BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness,

Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are invaluable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical: it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box. 2s. 6d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.

After paying the expenses of the publication the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October, 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal. 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring of the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rare that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahmin of the Brahmins—a conservation of the best of his inheritance that wins respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same oriented sympathies, and trained like him in Western learning. If Bengali had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatically in English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one unkind word, either offending the youth or depressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth having and reading. —*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unimpaired by ostentation and egotism unspoiled by harshness. —*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or life-like portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing mastery of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the farthest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, and some misrepresentation, to quicken the "semblance of life" into living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, screw-winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with mind-setting mechanism, second-hand, for Doctors, ornamental, bond dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hapurid Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." X Dr. H. Moore of Royal Artillery from Poona says:—"I sold it for Rs. 16. X Pte. W. Hopkins of Sussex Regt. from Dindon says:—"I have sold it for Rs. 20. X Mr. T. B. Scott of Punt Opera Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0 Mr. G. Smith, Salt Inspector from Sinduria, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purnidhat says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. X Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Pertussis, Diabetes, &c., including diseases brought on by irregularities of kind, Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH.

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Broad St. TORONTO, Canada. *Scientific American*.

CONTEMPORARY POETRY.

THE BLADE OF FRIHOF.

A LEGEND OF NORWAY.

TOSTIG was Lord of Norway,
In ages long gone by,
And Frihof was his armourer,
And well his craft could ply ;
He forged his swords so trenchant,
They cut through plate and mail,
Nor 'gainst their edge did steel-clad head
Or tempered shield avail.
Olaf, the King of Denmark,
Sailed on the stormy sea ;
He saw the land of Norway
Wide-spreading on his lee.
He steered his galley thither ;
And as he leapt on land,
He met the King of Norway,
With all his warrior band.
" A boon ! a boon ! brave Tostig,"
Olaf the King did say,
" Let there be peace between us,
For ever from this day.
Why should the Bear of Norway
For ever strive in fight
With Denmark's ' Royal Raven ?'
Our troth then let us plight,
And let us swear alliance ;
Your ships shall sail with mine :
There's booty in the stormy sea,—
Half of our gain be thine."
" So be it," quoth bold Tostig,
" And now, Sir King, I pray,
Come to our royal palace,
And rest thee there, the day.
What ho, there, vassals, clear the road,
King Olaf comes in state ;
Our friendship shall be lasting,
Tho' its coming has been late.
Ho ! butlers, bring our wine ;
Ho ! pantlers, spread our royal board ;
In peace a Danish King has come,
The first of all his line."
They sat, and passed the goblet round,
And talked and laughed in glee,
And thrice they drank the warrior king,
Who'd crossed the stormy sea.
They talked of war, and weapons ;
" Hold there," quoth Norway's Lord ;
" Hast seen our Frihof's workmanship ?
Here, vassals, bring our sword ;

'Twill cut through steel and iron,
Nor helm nor plated mail
Against its point and trenchant edge
Will prove of aught avail."
Loud laughed the King of Denmark ;
His laugh was loud and long :
" Thy sword, perhaps, is sharp and keen,
But Denmark's mail is strong.
Ho Sixurt, hither, speak, I pray,
If thou canst harness make,
On which King Tostig's battle blade
Shall vainly strike and break ?"
Sixurt, the Danish armourer,
Spoke with a bitter sneer :
" For Danish mail from Norway blade
We've little cause to fear.
The war between our nations
Has been both fierce and long,
But Norway blade has ever found
That Danish mail was strong."
" A wager," cried King Tostig ;
" I'll back my Frihof's blade
Against the stoutest harness
Your smith has ever made."
" Agreed, agreed," cried Olaf
" I'll lay my golden chain,
That Frihof's blade shall smite the links
Of Sixurt's mail in vain."
" Come forth before the Castle ;
What need for further talk :
And if I lose," quoth Norway's Lord,
" Take thou my choicest hawk.
Ho Frihof, bring our sword along ;
Ho Sixurt, bring thy mail ;
We'll see if Denmark's iron links,
Or Norway's blade, prevail."
They went into the meadows,
Before the castle wall,
And loud the King of Norway
On Frihof's name did call :
" Come forth, come forth, my Frihof,
And with thy trenchant blade
Cleave, hack, and hew the strongest mail
That Danish skill has made.
Ho Sixurt, bring thy mail and helm ;
Suspend them from yon tree ;
And whether's best, the Norway blade,
Or Danish helm, we'll see."
But Sixurt turned him to his Lord :
" A boon ! a boon !" he cried ;
" I fain would show King Tostig how
The wager to decide.
I'll don my helm and coat of mail,
And bide stout Frihof's stroke :

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

No Norway blade, however keen,
My harness ever broke."
"So be it," quoth King Olaf,
"Come, don the helm and mail,
And see if Danish workmanship
'Fore Norway steel will fail."
Quickly he donned the harness ;
Sat on a fallen tree ;
A ring was marked about him,
That all around might see.
Then Frihof raised the glittering blade :
It whistled through the air—
And a cold shiver chilled the blood
Of all the warriors there.
Swift fell the glittering weapon,
Yet none its course could trace,
But Sixurt seemed to sit unharmed,
A sneer upon his face.
"Now strike again," quoth Sixurt,
"It is not worth the pain,"
Quoth Frihof calmly, "Shake thyself ;"
He shook—and fell in twain.

G. E. C.

WEEKLYANA.

WHEN the news of the betrothal of Princess Maud and the reception of Khama at Windsor reached the Cape, a local paper, unconscious of the incongruous juxtaposition, published the two items with the following headline—ROYAL BETROTHAL—KHAMA AND THE QUEEN.

THE House of Lords has decided that a firm having their office in London and working for gain in America are liable to the English income-tax. The San Paulo (Brazilian) Railway Company having been assessed for the tax objected to pay the whole demand, in that the portion of the profits which was brought over to England could alone be taxed and that the portion left at Brazil was not chargeable. The argument on the other side is that the profits are earned by men working from England and consequently all the profits are taxable. The Lord Chancellor, who moved the rejection of the appeal, said the persons who worked the railway by their brain and skill from England were the real traders, and it did not matter how far distant the place where the work carried out was situated. Lord Watson observed that the persons carrying out the work in Brazil were in no sense traders but merely servants. Lords Shand and Davey concurring, the appeal was dismissed with costs. The Indian Act is more lenient. At any rate, it has been interpreted less harshly. If the decision of the Lords were known in this country earlier, probably the Hon'ble P. Mehta would not have been allowed to escape for his earnings in Junagad.

MRS. Jones, daughter of a former vicar of Llanrug, a small village in Carnarvonshire, Wales, has brought herself into prominence by her will. She first married one Welborne, a wealthy merchant in the West Indies. On his death, she returned to Llanrug, sold her estate and retired to her own farm in Penraeth, Anglesey, where she worked as an ordinary farm servant—grooming the horses, cleaning the stables and feeding the cows. She also took another mate in a farm labourer, Edward Jones. Mrs. Jones died recently after making a will by which she wished to be buried in her hunting suit, her shoes and carriages to be burnt on the day of the funeral, all her six horses, varying in value from 60*l.* to 80*l.* a head, to be shot on the day following. We may very well believe the injunctions were strictly carried out, for on these conditions she left the remainder of her property—personal and real—valued at 90,000*l.* to her "dear husband."

BLONDIN, the famous tight-rope walker, a widower, aged 72, has led to the altar Miss James, a barmaid, no more than 25 years of age. The marriage is the result of the devoted nursing of the maid of the Station Hotel at Blackpool, where Blondin was carried after he had sprained his back at a performance. The pain was very great and the barmaid left her ordinary duties to attend to him and nursed

him very cleverly and skilfully. After recovery, Blondin invited his nurse to his house at Little Ealing and then, a few months after, to his Niagara House, when they were married unknown to his two sons and three daughters. The honeymoon was put back, for Blondin immediately left for Glasgow to carry out an engagement at the exhibition.

CYRIL Hewlett Dutta, a Guy's Hospital student in London, who had been in custody for some weeks on a charge of murdering Rose English in Soho, has been released. Mr. George Brown had found the body of the woman shot through the heart, and Dutta lying by her side with two bullet wounds in his chest. Mr. Pepper, the post mortem examiner, and his assistant Mr. Bond were in favour of the murder theory, while Mr. Brown was of opinion that it was a case of suicide. He was supported by Dr. J. Dawson.

ON New Year's day, at Rangoon, Sir Frederick Fryer unveiled the statue of Her Majesty. It cost Rs. 20,000 and is the gift of Messrs. Balthazar, the auctioneers.

WE take the following account of the Lushai expedition from the *Englishman*. Writing from Fort Aijal on the 4th January, its own correspondent reports :—

"The concentration of the Aijal, Langleh, and Falam columns on Kairuma's village was successfully effected, in exact accord with previous arrangements, on Christmas Day. No opposition was offered by the Lushais, but the village was found to be deserted and all live stock and property of every description had been removed from the village. The Chiefs met the Political Officer at Fort Aijal on arrival, and they were ordered to surrender eighty guns by the evening of the 29th December, and were further informed that if these demands were not complied with the village would be burnt, and parties sent out to bring in or destroy grain and live stock, of which Kairuma was said to have a large quantity. As only 53 guns had been brought in by the time fixed, Kairuma's village, with the exception of the part occupied by the troops, was burned on Monday morning, December 30th, by the Aijal column, and a large quantity of gram, metmas, and pigs brought in from the village jhooms and surrounding jungle. A camp of the Lushais was surprised by one foraging party, but they fled without firing a shot. Similar action was taken by the Superintendent, South Lushai Hills, with regard to Jaduna's village. No opposition was met with. Pending further attempts to get in the balance of the guns, operations against Kairuma's have been suspended for three days. By a successful night march on New Year's eve the Superintendent, South Lushai Hills, effected the capture of Jacola, the Jacopa, the Lushai Chief, who made the attack upon Mr. Murray's party five years ago. The disposition of the troops at present is 300 rifles and one mountain gun under Captain Loch in Kairuma's village ; in Jaduna, 220 rifles with two mountain guns, composed of the Falam and Lungleh columns. The Falam column was able to bring mules besides coolie transport. The other two columns had coolies only. The weather has been mild and cold. The health of the force is very good except for a few cases of mumps and pneumonia, a sepoy and a coolie having died of the latter. Kairuma's village is situated on a ridge at an altitude of 4,200 feet. The surrounding jungle is composed mostly of oak trees, with bamboos lower down the hills. There is little or no game in the jungle, and the river at this time of year seems to contain no fish, the weather being too cold in the hills."

Jacopa was surprised and captured in an outlying hamlet. He tried to give the slip but failed. Chief Kaplehya was able to make his escape. It is civilized warfare to disarm an enemy and fight or burn his country. It was more patriotic in the Russian Emperor to burn his own city to stay the success of Napoleon.

MRS. Le Mesurier, wife of the Englishman turned Mahomedan in Ceylon, writes to the *Ceylon Independent* :

"There has been much said about Mr. Le Mesurier in the press lately, and you have also made much mention of what you call 'his new wife.' I have hitherto not paid much attention to this public farce, but I think it is time, in justice to myself and three children, to ask you to refrain from styling Miss Carnac as 'Mrs. Le Mesurier,' as I am, unfortunately, the only legal Mrs. Le Mesurier in Ceylon, and Miss Carnac can never be so styled. Even should the question about the legality of her present position be satisfactorily settled, she even then could only be Mrs. Abdul Hamid, under which name Mr. Le Mesurier took her to him, so that I must ask you in future to style her by the name of Mrs. Abdul Hamid, as later on complications might arise which might involve great annoyance, such as correspondence being wrongly delivered."

IN December last, 46,989 persons visited the Indian Museum or at an average of 2,039 for the 23 public days.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address. THOMAS KEMPE, VICTORIA CHAMBERS 9, SOUTHAMPTON BUILDING, HOLBORN, LONDON.

MR. H. L. Bell, Barrister-at-Law, has been Gazetted substantively *pro tempore* Registrar and Chief Ministerial Officer of the Calcutta Court of Small Causes with powers of a Judge to try suits not exceeding in value Rs 20. They are all, all Barristers-at-law in that Court, which, we trust, will prove a Court of justice as well.

GYNLA VON BENKE, a bailiff of the Calcutta Small Cause Court, has, for the third time, filed his schedule, with liabilities amounting to Rs. 19,000. At the Insolvent Court, on Saturday last, he applied for *ad interim* protection. The Official Assignee remarked that "he had understood that bailiffs of Small Cause Courts made large fortunes, but here he was afraid the insolvency was due to rain-gambling." The illegal gratification in either case hinted at by the Official Assignee cannot be a disqualification. Bailiffs are free, with the knowledge of the judges, to make their fortunes, and gamblers, with the acquiescence of Government, to make or mar their fortunes. Thus legalized, the offences can hardly be punished by the Insolvent Commissioner, however justly disposed.

At the same Court, dividends were declared *in re* Charles Stuart, Ramsamul Punnalal and Ram Kissen, and supplementary ones *in re* Haji Noor Mahomed Jackeriah and Chotalal Sewpersad, and leave was given to pay the clerks and servants *in re* Ambrose Summers. Dr. J. Bowles Daly has been allowed to amend his schedule.

ON the complaint of the Official Assignee that insolvents rarely filed their books of account in his office without pressure from the Court, Mr. Justice Ameer Ali as Insolvent Commissioner declared that he would refuse all petitions for insolvency unaccompanied by books of accounts. The books must be put into the Official Assignee's hands simultaneously with the filing of the petition.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE fighting between Dr. Jameson's force and the Boers took place at Krugersdorp, and lasted eight hours. Dr. Jameson thrice attacked the strong position held by the Boers, who were fifteen hundred strong. The Boers lost four killed and a few wounded. Dr. Jameson was out-numbered by the enemy and his men were starved, some of them having been without food for three days. Their horses were also in a state of exhaustion. Dr. Jameson was not wounded. Another telegram says that Dr. Jameson's force fought for thirty-six hours against the Boers, who outnumbered them six times over, and were provided with artillery. Dr. Jameson reached within six miles of Johannesburg, and only yielded because his men were starving, and had no help from the Uitlanders.

Reuter's special correspondent has interviewed Dr. Jameson in Pretoria Jail. The Doctor states that he failed in his object because the Johannesburgers never sent him the help which they had promised, and on which he relied, and that they even allowed fresh supplies of ammunition to be sent out to the Boers while his own was exhausted. The Boers admit that their position, when Jameson attacked them, was impregnable. The Boers were entirely sheltered, while Jameson's force ascended an exposed slope under a galling fire. The Uitlanders in Johannesburg ascribe their inaction to the royal proclamation issued by Sir H. Robinson ordering them to remain quiet.

The English papers regard the telegram from the Emperor William to President Kruger as most unfriendly towards Great Britain and as greatly increasing the gravity of the situation, besides signifying that Germany recognises the independence of the Transvaal. They also take it as an additional proof of the complete isolation of Great Britain. The German press are jubilant over the defeat of Dr. Jameson's force, and in unmeasured terms vituperate the colonial policy of Great Britain. A subscription for the wounded Boers has been opened in Germany, and one hundred thousand marks have already been subscribed in Hamburg. The leading French papers are decidedly veering round in favour of England. It is believed that Germany has for some time past been maturing schemes to arrest the progress of British ascendancy in South Africa.

Sir Hercules Robinson transmitted the telegram received from the British Agent at Pretoria, who visited President Kruger, conveying the assurance of the Reform Committee at Johannesburg that they would maintain order. President Kruger in reply said that the Boers would not molest the population provided they were peaceful.

Mr. Chamberlain, on Jan. 4, received a South African deputation headed by Sir Donald Currie, asking that Sir Hercules Robinson be instructed to secure protection for British residents at Johannesburg, and that the Government should maintain British and Colonial interests in that quarter. Mr. Chamberlain, in reply, said that the Government sympathised with the grievances of the Uitlanders, and hope that their friendly advice to the Transvaal Government will be heard. The British Government, he said, adhered completely to the convention of 1884. The day before Mr. Chamberlain had telegraphed to President Kruger that he relied on his clemency to spare the prisoners, and adding that Mr. Cecil Rhodes denied a current rumour that a force was assembling at Bulawayo. President Kruger replied that the prisoners who had not been shot would be judged according to the traditions of the Republic, and added that his confidence in Mr. Rhodes was so shaken that his denial respecting the assembling of a force at Bulawayo was received with extreme caution. He further added that he hoped that Great Britain and Sir Hercules Robinson would prevent any further incursions into Boer territory. Mr. Chamberlain in reply to this said he had sent an Imperial officer to Bulawayo to prevent the assembling of any force, and declaring that Great Britain would uphold the Convention of 1884.

A despatch from Johannesburg, dated the 31st ultimo, states that Mr. Leonard, Chairman of the Committee of the National Union, had formed a provisional Government to preserve order and protect the town against the Boers, pending a settlement with President Kruger. Numbers of men have enlisted, and been armed. Nine hundred men from the Simmer and Jack mines guard the approaches to the town.

President Kruger, replying to a deputation at Pretoria, announced the abolition of the duties on food stuffs, and promised to support the franchise, to grant equal subsidies to all schools, and the solution of the labour difficulty if law and order were respected.

The Johannesburg Reform Committee have laid down their arms, and are confiding their interests to Sir Hercules Robinson, who is at Pretoria.

Sir Hercules Robinson telegraphs to Mr. Chamberlain that the Uitlanders at Johannesburg yielded unconditionally in the afternoon of the 7th Jan. and also gave up their arms. A later telegram says that the Boers are malcontent and slow to deliver up their arms. President Kruger has demanded the complete delivery of all their arms before the evening of the 10th inst, failing which all defaulters will render themselves amenable to the law.

President Kruger has intimated his intention of delivering Dr. Jameson and the other prisoners to Sir H. Robinson on the Natal Border. The magnanimity of President Kruger in dealing with his prisoners is generally recognized throughout Great Britain. Mr. Chamberlain has telegraphed to Sir Hercules Robinson to give the following message to President Kruger: "I have received the Queen's command to acquaint you that Her Majesty has heard with satisfaction that you have decided to hand over prisoners to her Government. This act will redound to your credit, and conduce to the peace of South Africa, and to that harmonious co-operation between the British and Dutch races, which is necessary to its future development and prosperity." It is stated at Pretoria that President Kruger has evidence that the whole affair of Dr. Jameson's raid was a plot to annex the Transvaal Republic. This report is inconsistent with the previous one about the delivery of the Doctor and the other prisoners.

Sir Hercules Robinson adds that he is satisfied that the crisis is over and that no danger of further hostilities need be apprehended.

The latest news from Pretoria states that the Transvaal Government demands the expulsion of Mr. Cecil Rhodes and Dr. Jameson from Africa, and also an enormous indemnity from the British South Africa Company.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

THE Sultan has agreed to the Consuls at Aleppo mediating at Zeitun and arranging for the surrender of insurgents.

MR. Cecil Rhodes has resigned the Cape Premiership, and Sir James Gordon Sprigg succeeds him.

LAEST advises regarding the Ashanti Expedition state that Sir F. Scott has arrived at Essiaman, and that a spy had arrived in camp reporting that a Chief had left Kumasi with peace proposals from King Prempeh.

THE United States Government has issued a new loan of a hundred million dollars.

THE British Government have ordered the immediate commission of an additional flying squadron of six warships to a Naval force going to Delagoa Bay. It is also stated that the British troops in South Africa are to be reinforced.

AN earthquake in the Persian province of Azerbaigan has killed eleven hundred inhabitants and destroyed one thousand houses.

THE Viceroy is not yet convalescent, though recovering slowly. There is a rumour that owing to the illness Lord Elgin will resign and return home. The *Englishman* contradicts the rumour as without foundation.

A DELEGATE to the Poona Congress corrects us from Poona City, saying "your criticism on the surmise of the Editor of *India* was quite unwarranted, because one Humid Ali and Mr. Sayami of Bombay were first requested and they declined." We must confess we were misled by the President of the Congress. He mentioned the name of only one Bengali gentleman who had refused the honour on account of his ill health. If the Honourable Chairman omitted to name the Mahomedans, the wrath of our correspondent should fall on him and not on us.

THE Hooghly Magistrate having pronounced against the action of the Nadia Magistrate in the matter of the Ranaghat Petroleum depôt, the Chairman of the Ranaghat municipality has issued licenses to both Messrs. Graham for their newly constructed petroleum oil tank at the railway station and Mr. Anghoy Kumar Ghose for his petroleum depôt opposite the station. Who is responsible for the damages caused to Mr. Ghose from suspension of business due to non-issue of license?

At a meeting of the English Church Union, held on Dec. 17, in Kennington, the Duke of Newcastle presiding, on the motion of Canon Knox Little, they unanimously resolved to petition the bishops "to take immediate and effectual steps to put a stop to the scandal resulting from the blessing of the Church being given by individual clergymen to the marriages of divorced persons, contrary to the law of the Church of England, to the contempt of all ecclesiastical discipline, and to the grievous injury of Christian morality." So long as courts decree divorce and adultery is no penal offence, it is vain to attempt a reform of the kind. If the divorced are free to marry, how can you prevent a second marriage? Does the resolution include remarriage of the same persons?

WE read in the *Tribune*:

"Only a few months ago the Honorary Magistrates of Lahore were before the public in connection with their readiness to convict on charges of obstruction of the public road brought by the police against shopkeepers. On appeal one conviction, representative of a whole class of convictions, was held to be illegal and was quashed. In Municipal prosecutions some of the Honorary Magistrates are equally wise. Before the same bench of Honorary Magistrates (M. Mohd. Amir Khan and Sirdar Mian Singh), who had fined a shopkeeper illegally on a frivolous charge of obstructing the road two other men were convicted and fined under Section 169 of Act XX of 1890. On appeal to the District Judge, Lahore, he found that the conviction was bad against a ruling of the Chief Court, and of course reversed it. We have repeatedly suggested that the files in the District Court should be examined with a view of finding out the very large number of illegal convictions by Honorary Magistrates and that these obsolete courts should be replaced by a Town Magistrate. As a rule the work of Honorary Magistrates is a shame and a scandal to the administration of justice."

Are the Lahore Honorary Magistrates so bad as they are represent-

ed? Or are they only typical of the class in other cities? Is our contemporary sure that stipendiary Magistrates are not sometimes worse? An examination of their files will discover systematic illegal convictions. In petty offences, when the accused are poor, there is generally such danger. Lahore is not exceptionally cursed.

WE have received a copy of the judgment in *Jogender Chunder Mukerjee vs. Priya Nath Mallick* and another delivered by the 1st Subordinate Judge of the 24-Pergs., on the 6th January last. The suit is against one of the prominent members of the Calcutta Corporation or rather its added area and seeks for refund of a sum of Rs. 200 and cancellation of a note of hand for Rs. 800 and of a letter assigning a share in a lighting contract of the Corporation in favour of the second defendant—all these being extorted by threat by the defendants. The suit is dismissed with costs. The Sub Judge finds that there is no cause of action against Baboo Priya Nath. He remarks "it appears to me that the object of making the defendant No. 1 a party to the suit is more to throw dirt on him than to avoid the alleged contract as against him; and I am afraid party spirit was at the bottom which influenced this line of action." Again, "So far as this case goes, I am bound to observe that the accusations damaging enough to the reputation of the defendant No. 1 in his public capacity as a Municipal Commissioner, are wholly groundless and are, I am afraid, the outcome of malice." We have no space for the entire judgment which completely vindicates, in the present transaction, the public character of Baboo Priyanath, who seems more sinned against than sinning.

RAJENDRA NATH, sentenced to 2 years' imprisonment for putting in a forged document to have an appeal admitted beyond time, was called upon to show cause why he should not be struck off the rolls. Sir John Edge, the Chief Justice of the Allahabad High Court, for himself and brother Justices Knox, Blair, Banerji, Burkitt and Aikman, delivered judgment thus:

"It is always an unpleasant duty for Judges, some of whom have been at the Bar themselves, to have to deal with a member of the Bar who has been guilty of practices which are inconsistent with honourable conduct in the profession. On the other hand, it is absolutely necessary for the protection of the public, for the protection of the members of the Bar themselves, and for the protection of Courts of Justice, that advocates or vakils who stoop, for corrupt or other motives, to make use of a forged document in order to deceive a Court of Justice, should be severely dealt with. Gentlemen of the Bar should so conduct themselves that their word may be accepted by the Bench and by their brother legal practitioners. Life on the Bench and life on the Bar would be irksome in the extreme if a Judge or a brother legal practitioner had to probe and ascertain the correctness of every statement made from the Bar. What Babu Rajendra Nath did was this: he attempted to deceive this Court by representing that the appeal was in time, though he knew that it was timebarred. If he had succeeded, and if the forgery had not been detected, it is possible that he might have deprived the proposed respondents to the appeal of the benefit of the decree in the Court below—a decree which, by reason of the time allowed for appeal having expired, had become final and conclusive in their favour. This offence which Babu Rajendra Nath committed was not an offence committed by an ignorant man or by a new practitioner unaccustomed to the examination of documents. Nor was it committed in the hurry of the moment, and without due consideration. It was a deliberate offence and not simply an oversight. What was done was done with knowledge and not in ignorance, and we cannot regard the offence as anything but a grave one. A man who has committed such an offence as this is not in our opinion fit to be allowed to continue in the practice of an honourable profession. Not only are the Judges and the legal profession interested in seeing that dishonourable men are not entitled to practise, but it is absolutely necessary for the protection of litigants that men who can stoop to the commission of such an offence as this should not be entitled to appear as advocates or vakils in Courts of Justice. We have come to the conclusion that Babu Rajendra Nath has proved himself unfit to continue in the ranks of an honourable profession. We remove his name from the Roll of Vakils, and we cancel his certificate."

Honourable words these. But what is the effect of the order? Rajendra Nath is doubly punished for his sin. He not only suffers imprisonment for what he has done, but is also debarred from further taking to the profession in the practice of which he committed the offence. He must learn a new trade to live by. The full Court is no doubt swayed by excellent motives in the interest of an honourable profession. At the same time, it seems to us, it would have been more in order if the matter were taken up when, released from jail, Rajendranath came to practise again as a Vakil. At the last hearing he himself could not be present. The appeal of his counsel to have the present matter examined on its own merits, independent of the conviction, was not allowed. There was

unwillingness in the court to re-open the question of fraud for which he had been called upon to answer a second time. The call, therefore, to shew cause may seem unmeaning. The Chief Justice was for every justice to the condemned. He suggested from the bench a possible line of defence.

"The Chief Justice: we think our ruling gave you a very considerable loophole. There is fraud and fraud. If it were that this thing was done in a hurry, although the man had fraudulent intent—that he had fraudulent intent we cannot doubt—we might alter our notions of the case. I can't explain to you more. It is not my business to instruct advocates.

Mr. Porter did not reply.

The Chief Justice: Supposing the facts were that this thing was put suddenly before your client, and that your client, knowing it was a false document, in the hurry of the moment made use of it; that would be a rather different position from the position of a vakil who had leisurely and deliberately made up his mind to use a forged document, who had planned the whole campaign, who had calmly determined to run the document through, and if he failed, to fall back upon an affidavit.

Mr. Porter pointed out that the only materials available for defence were those contained in the accused's own statement in the Lower Court and in the evidence of the accused clerk. These were already before their Lordships.

The Chief Justice: Supposing I were thrown into this case to argue it, I should plead probably, that this gentleman was very much pressed with business; that this was a thing which had to be done in a great hurry; and that although he knew that the document was a false one, without carefully considering his position of the nature of the offence he made use of it. That is how I should argue the case, if there was any foundation for such an argument. But there does not appear to be any foundation for it in this case, because you don't make use of this argument.

Mr. Porter. There is considerable foundation for it, my Lord.

The Chief Justice: I do not wish to suggest to you a line of defence. I only show you what *might* be set up under our ruling. Take a case of murder. You would never think of saying that necessarily the accused must be hanged. You would try to show under what circumstances he had acted, most favourably to him, so as to get perhaps a sentence of transportation for life instead of sentence of death.

Mr. Porter repeated that the real defence of Rajendra Nath was that he had never intended to do otherwise than enter the appeal on the strength of an affidavit.

The Chief Justice referred to facts in the case which unquestionably belied this defence.

Mr. Porter: Then it is impossible, my lords, to put the case higher than this: that my client recognised the possibility of this alteration being fraudulently made, but put it in, nevertheless, because the hurry of the moment was pressing; and that he intended all along to file an affidavit. He had no distinct belief that the alteration was a forgery; he took up a position of what I might call agnosticism towards it and declined to act upon it. "I will file my affidavit tomorrow," he thought, and in the meantime—

The Chief Justice (interposing):—and in the meantime I will prepare an affidavit in which I do not state the cause of the delay as my client stated it to me."

The order of expulsion followed as a matter of course. Sir John Edge thinks that life on the bench would be irksome if it were necessary to examine every statement made from the bar. If the state wished for could exist, bench life would be very easy and litigation and administration of justice much less expensive, one counsel would do for both sides and the Judge's work be much lightened. The ingenuity of a counsel consists in the narration of facts, in making the truth assume a different shape, and fiction appear as fact. If the liberty were taken away, advocacy would cease as an art. Judges, surely, should not be misled. It is also as much the duty of the Judge to see that he is not led astray. An advocate misleading a Judge certainly commits wrong. But is the Judge who depends entirely on counsel not to be blamed?

IN another case, in which a Pleader practising in the District Court at Aligarh was cited under section 14 of Act XVIII, 1879 for misconduct, Sir John Edge delivered himself thus:—

"This pleader undoubtedly put a wrong construction upon the arrangement between him and his client, and he ought to have forwarded the money recovered without pressure and without putting Messrs. Badham, Pile and Co. to any trouble. But we fail to see that he has been guilty of unprofessional conduct. He no doubt left himself open to a suit by Messrs. Badham, Pile and Co. to recover the money he had received on their behalf, but there is no suggestion of embezzlement, and we decline to interfere, believing that there is no reason for so doing. We think it right to say that complaints against advocates or vakils, or pleaders, or mukhtears ought not to be made by private correspondence to District Judges, High Court Judges, or any other judicial officers. For our part we pay no attention to such communications. Any person who considers himself aggrieved by the action of a legal practitioner has got the Courts open to him, and to the Courts he should go, in a regular manner, and not open correspondence with a judicial officer who may have to decide the case. He should proceed by motion in Court. We hope that in future District Judges will pay no attention to letters of this kind, except to send them

back if they think right to do so, and to inform the correspondent to proceed in due course by motion in Court. We discharge this rule."

A Pleader may not be guilty of an offence in retaining the money of his client. But if the Pleader cannot be made to make over the money except by a suit, it adds considerably to the proverbial law's delay and makes the lawyer's profession less honourable.

The two orders suggest the inference that legal practitioners are not to be easily proceeded against, but when found guilty, they must be done for for ever.

THE following will explain itself. To complete the information, we will only say that the appeal (without date) is prefaced by a portrait of the woman missionary, and a recommendation dated Kingston, Ohio, April 8, 1892, from Bishop Thoburn. The appeal concludes with an artistic representation, on the outer cover, of what the exhibitress calls "one of my Bengali women," whom she makes to cry "Oh! God, if there is a God, who will deliver us? Who will come to our rescue?" Then her rescuer asks "Friend, will you help-me answer this woman's prayer?"

THE RECOMMENDATION.

"I have much pleasure in commending Mrs. D. H. Lee to the kind notice of our people, and of the Christian public generally. Mrs. Lee was well known to me in India as a faithful and successful missionary. She returned to America on account of the illness of her husband, and since coming to this country, has done much to support the W. F. M. Society, and also the General Society. She is loyal to the Church and to both the Missionary Societies, and is every way worthy of public confidence.

J. M. THOBURN."

THE APPEAL.

"Vienna, Trumbull Co., Ohio.

Dear Friend:

It is indeed with a thankful heart that I again send unto you greetings. A good man of God has given us 15,000 dollars for the Bengali Mission fund we have been asking God for, until now we have almost 19,000 dollars of our 20,000 dollars. Praise the Lord!

We are now getting ready to go to this work and will leave as early next year as possible. Now we need a good substantial Mission building, and we are asking God for the money to build it.

May I ask you to help us in this? We need a three-storied house containing twenty rooms, costing about 300 dollars each. There will be living rooms for Zenana workers and teachers; a chapel and school rooms, dining and sitting rooms and our own family rooms—a study, where I trust many seeking ones shall have shown unto them the way to Heaven.

To any one giving or soliciting five dollars for any one of these rooms, I will send a photograph of a high caste Bengali woman—a splendid representation of the women among whom I work. Any church, young people's society or individual sending 300 dollars to build one of these rooms, shall have their name over the doorway, and the privilege of furnishing the room at its completion. Will you still continue to work and pray with me until we have all we need to thoroughly equip this new mission station among the people who know not God? If so, let me hear from you and join with me in thanksgiving to God for so wonderfully answering our prayers. Kindly hand the enclosed leaflets to friends, asking them to read them and help us, and receive their offerings and forward to me.

Please notice the change in our address. We expect to remain here until we leave for India, after which I hope to send you blessed tidings direct from the field. May God bless you for your part in this work.

Yours in His love,

(Mrs.) ADA LEE,

Vienna, Trumbull Co., O."

Who is the fair that is set to catch the prayerful?

ONLY last week we spoke of Sir Dinkar Rao. This week it is our melancholy duty to record the death of that celebrated Mahratta Brahman. He was one of the few Indian statesmen who were given the opportunity to shew their mettle and whose names will long survive them. Sir Dinkar Rao, K. C. S. I., Raja Mushir-i-Khas Bahadur, was born in 1819 and was therefore 77 years of age when he breathed his last. Neither Rangu Charlu, nor Sir Salar Jung, nor Maharaja Jung Bahadur, nor Sir T. Madhav Rao attained Sir Dinkar's longevity. The first three died while in harness. Sir Tanjore lived some years after retirement, Mr. A. Sashiah Sastri still lives but he is not yet 70. Sir Tanjore was not idle in retirement. He published his thoughts, on the subjects of the day, in newspapers, from week to week. Mr. Sashiah Sastri is engaged in his autobiography. Sir Dinkar's was complete rest. Only on one occasion he came out of the obscurity of private life when he was appointed one of the Commissioners for the trial of the Gaikwar Mulharao.

Raja Dinkar Rao was appointed Minister of the Gwalior State, where he made his mark, in 1851, when the late Maharaja Jijaji Rao Scindia was still a minor, and he steered the vessel of State clear through the troubled waters of the Sepoy Mutiny. After having

been substantially rewarded by the British Government with an estate in the Benares District, he transferred his services to Dholepur, where he became Superintendent of that State. In 1861, when Lord Canning enlarged his Legislative Council, Sir Dinkar was invited to it. The late Maharaja Mahendra Singh of Patiala was also one of the Councillors of the Empire, and he refused to sit with the servant of a brother Chief. The Maharaja was therefore given a higher or raised seat to distinguish it from the Raja's. The Raja's term in the Council expiring on the 16th of January, 1864, the Government of India handsomely acknowledged his valuable services as an Additional Member. At the Delhi Imperial Assemblage he received his Indian title which, in 1884, was made hereditary in his family. Previously, in 1866, he had been exalted to the Knighthood of the Star of India.

THE Special Meeting of the Municipal Commissioners, on Thursday, for the appointment of their Vice-Chairman, was one of the largest, only six Commissioners, one of them a candidate himself, being absent, chiefly through illness or absence from Calcutta, though more than one left their sick bed to vote at the election. The outside public also attended in large numbers, shewing their interest in the matter and in the selection of a proper man. Unlike similar meetings, it was very orderly and there was no heartless dissection of the applicants. That was, in a great measure, due to the temper of the Chairman who asked the Commissioners not to leave their seats and who has no relish for personalities in discussion. The advertisements of that morning, on behalf of one of the candidates, offering a reward of Rs. 500 for detection of the delinquent circulating ugly reports about him, and threatening prosecution of such as may defame him, had presumably a salutary effect on the Commissioners. As was anticipated only 4 out of the 13 applicants were accepted. Babus Kalinath Mitter and Norendra Nath Sen first declared themselves in favour of Babu Nogendra Nath Sircar. The Mitter proposer, as a good neighbour, pointed to the Sircar candidate's respectability as the son of his father, and for his ability referred to his services under Government which have been many times acknowledged. Forgetting for the moment that Mr. Sircar was the official candidate, the Sen seconder who has cried himself hoarse against official interference in matters of this kind, was charmed by the fascination of his nominee's young years—for he was the youngest of all the candidates who had stated their ages. Dr. Sanders proposed and the Hon'ble Prince Sir Jehan Kadr seconded the name of Moulvi Budruddin Haider. The Doctor preferred him because he was a Mahomedan, for there are few Mahomedan employees in the Corporation and there ought to be no taxation without representation. It is difficult to understand the man of science unless it be that he had in his mind the common name by which the municipal office is known—the tax office. Even then the meaning is farfetched. The princely seconder was more commonsensible. He was not for race but thought the Moulvi the best of the lot. The next in order was Babu Nilambar Mukerji who had the support of Babu Joygobind Law, the ex-Sheriff, and Mr. J. G. Apcar, the Clerk of the Crown. Mr. Law recommended Mr. Mukerji for his academic distinction, his past valuable services to the Kashmir State and the high certificates of character granted him by the British Residents, while Mr. Apcar did a glowing testimony to the worth and popularity of the ex-Kashmir official as he had found them during his visits to that State. He admitted that he was a friend but his opinion of the man was not his own alone but of others who have known him. The last to come and the first to drop was Babu Charoo Chunder Mitter. He was fortunate in a European proposer Mr. Longley who, however, had very little to say in his favour, while the seconder Mr. N. C. Bural was significantly silent.

At the first ballot, Mr. Mitter won 13, Mr. Sircar 15, Mr. Mukerji 20 and Mr. Hudar 21 votes. Mr. Mitter being thus eliminated, there was a second voting, when Mr. Sircar gained 4 more and Mr. Mukerji 9, Mr. Haider remaining fixed at 21. The third contest lay between Moulvi Budruddin Haider and Babu Nilambar Mukerji. The second result showed how the wind blew. At the third and last ballot, of the 19 Commissioners set free by the second elimination, 10 went over to Mr. Mukerji and 9 to Mr. Haider. Babu Nilambar Mukerji, M.A., B.L., having thus obtained an absolute majority of votes, was, on the motion of the Chairman, seconded

by the Vice-Chairman, elected. He was undoubtedly the most eligible of all the candidates, and his election has given general satisfaction. Next morning, his deserved success was the talk of the town. Letters and visits of congratulations from friends, acquaintances and strangers were many. Never before was Calcutta so stirred by the election of a Vice-Chairman or expressed greater satisfaction at the result. Nor is the feeling confined to Calcutta. Messages of joy have been received from Kashmir, Lahore, Bombay and the Bengal mofussil stations. The first distant telegram came from the Maharaja of Kashmir. He may well feel proud at his old servant being accepted as Deputy Lord Mayor of Calcutta. By his education, long experience of business of kinds, his knowledge of finance, of law, of municipal administration and of men, with no rough exterior, with no bad temper and with commanding presence, Babu Nilambar seems well fitted to maintain the dignity of the place for which he has been chosen. We do not know whether any Mahomedan voted for him. Led by Dr. Sanders if all the Mussulmans made a common cause for their own co-religionist, they have no reason to be dissatisfied with the result of the election. Babu Nilambar, though a Hindu, has seen service in responsible positions in a Hindu State with a preponderance of Mahomedan population. He is familiar with their manners and ways and is not unmindful of their aspirations. His name is still an object of admiration in Kashmir, for he gave the Maharaja's rayyets much relief. If the Mussulmans of that State could love the Bengali Brahman, what reason is there to suppose that he will not be liked by the Mussulmans of Calcutta? Babu Nilambar is the most Mahomedan of the Hindu candidates proposed.

Baboo Gopal Lal Mitter makes over charge in a week or ten days, by which time the sanction of the Local Government to Baboo Nilambar Mukerji's appointment is expected by the Chairman. At his request, the Vice-Chairman elect was present at to-day's meeting of the General Committee, and will regularly attend the office from Monday to learn its ways.

REIS & RAYYET.

Saturday, January 11, 1896.

PUNISHMENT AND PRESTIGE.

PUNISHMENT may be viewed either as a retribution that overtakes the transgressor, or as a wholesome check on him and as an example to others. Regarded as a retribution, punishment may be looked upon as another form of human vengeance. Your hands are burnt when thrust into a blazing fire. The consequence here is direct and inevitable. The forces of Nature are blind in their operation. The laws regulating them never forget or forgive. The most pious man, when any part of his body is brought into contact with fire, never escapes the pains caused by burning. Even ignorance is never excused by Nature. The child is burnt as cruelly by a live charcoal as the man fully conversant with the properties of heat. Imprisonment, however, or fine, for a transgression of the laws of man, stands on a different footing. The transgression may or may not be followed by the infliction. It is so followed only when it becomes known to those in society who are armed with power. The exercise of power for inflicting pain on one that has caused pain to another, however necessary for the existence of society, is at best a vengeance that society exacts for the injury it has sustained. It is true that vengeance is exacted under known forms, and its measure is regulated not by the individual injured but by others capable of acting without prejudice and passion. Still its character remains unchanged. As such, punishment must be looked upon as founded upon passion—the passion of wrath, or, say, of self-preservation. On either view, punishment can scarcely be said to proceed from a motive that may be called high or noble. Fortunately, besides being an exaction of vengeance, it helps to correct the wrong-

doer and make him a better individual. It is true that, as a means of correction, poverty induced by fines, or the loss of freedom imposed by a residence in the jail, or stripes inflicted with the cat, are very ungentle compared with the instructions of a loving teacher. But such instructions to depraved natures, may not be attended with success. Nor can society stake its best interests upon chance. Hence the necessity of the policeman and the jail-warder instead of the schoolmaster and the clergyman.

After all, when to the corrective element of punishment is added its deterrent effects all round, the justification becomes complete for the infliction of pain by man on man. Finding its usefulness, the part it plays in the preservation of society, the poet-legists of ancient India personified punishment as *Danda*, especially created by the Grandsire of the universe for restraining all creatures within their limits. Armed with a bright sword, a heavy bludgeon, lances and javelins, darts of sorts, and with diverse other offensive weapons, *Danda* was created by a fiat of the Grandsire's will and, on his asking for a residence, was assigned the hand of the king or his representatives. Invested with immortal existence, that great Being, the helper of kings in their rule and the terror of all who feel a disposition to outstep the bounds of righteousness and duty, stalks on earth, righting wrongs and inspiring dread.

Such is the rationale of punishment, and such one of the earliest myths relating to it. As human nature is constituted, the necessity can never be obviated of punishments for restraining it within the limits of duty. So universal is the disposition to transgress those limits that it is not the robber or the forger only that needs correction. Those in authority over others, those charged with punishing the robber and the forger,—they themselves require the chastening rod when they fail in their duty. The more powerful the transgressor, the greater the necessity of correction with promptitude and severity. A Magistrate or Judge that misconducts himself in his high position, deserves to be stripped of his authority or otherwise corrected. An immunity from punishment would be the death of all government. The escape of a forger after the fabrication of a cheque that has been the means of despoiling a bank of thousands of rupees, or that of a burglar after he has cleared a house of all its plate and valuables, is not, after all, so grave a calamity to society as the escape from chastisement of a Judge who has, for a bribe, favoured such escape. As a servant of the State, the Magistrate or the Judge exists for bringing offenders to justice. His prime function is to protect the innocent by preventing wrongdoing. He does this as much by the punishment of the wrong-doer as by the example of his own rectitude. The Magistrate that inflicts heavy fines for misbehaviour in the streets under the influence of drink, wastes his energy, if he similarly misbe-

haves himself. The Judge who reads a grave lecture in a prosecution for adultery and orders the highest sentence provided by the law, fails to inspire people with a just abhorrence of the crime, if he himself lives openly with another man's wife. The gravest censures hurled by a Divisional Commissioner or Provincial Governor against official impecuniosity and borrowing are so much empty breath, if the censurer himself applies for loans and accepts them from his subordinates. Those, therefore, that are set in watch over others, themselves need watching. Their transgressions should be promptly noticed and punished. Nothing is more effective for an efficient administration than the unerring certainty and swiftness with which offenders in authority are brought to book.

There can be no question, again, that punishment derives force from publicity. Whatever the depravity of an offender, the wholesome influence of opinion is never lost upon him. Man cannot live apart like the lower animals. By his very nature he gravitates towards fellowmen. Their sway over him is almost complete. The highway robber bows to the opinion of his comrades and desists from acts held in abhorrence by them. Punishment, when backed by public opinion, is efficacious. Unbacked by it, it loses its force. A Christian missionary going to jail for preaching Christ, glories in the punishment he undergoes. Supported by his own conscience, he feels besides that, instead of being condemned, he will be applauded or admired by all Christians. Ridley and Latimer, condemned to the stake, did not once feel that they were dying a shameful death. On the other hand, many a man, after a crime, has laid violent hands on himself, not to escape the terrors of the jail but the obloquy of society. To divorce punishment, therefore, from the force of opinion cannot be an act of wisdom. The infliction of the gravest punishment in secret would deprive it of its essential character, especially if unattended with physical pain or pecuniary mulct. Condemn a man to pass every night for a whole year in a cell, under prison discipline, unknown to all except a few turnkeys and the Jail Superintendent and half-a-dozen people in the Home Secretary's Office, he will take the punishment as a slight inconvenience, especially if you permit him at day time to discharge the duties of some honourable office with sufficient emoluments. Make the condemnation public, and the man will run away from society and be viewless.

These observations apply with peculiar force to public officers in a country like India. We do not say that Indian Judges and Magistrates commit every offence known to the law, although there have been men among them who have been proved guilty of peculation, corruption and other offences, and been cashiered. There are many honourable men in the Civil Service actuated by a strong desire to distinguish themselves by uprightness of conduct and conscientious discharge of duty. For all that, they are not above errors of judgment. Moral turpitude may not be attributable to anyone, but faults of the head may not be rare. Vigour beyond the law may be exhibited by many with the most honourable intentions. A Krikwood for forcibly subjecting a modest girl to a medical examination, a Phillips humiliating the head of local society by obliging him to stand in the criminal dock for no offence, and a Radice acting in defiance of all law in consequence of

The Indian Association for the Cultivation of Science.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., on Tuesday, the 14th Inst., at 6 to 8 P.M. Subjects: Histology—Lungs; Physiology—Alimentation.

Lecture by Bahu Ram Chandra Datta, F.C.S., on Wednesday, the 15th Inst., at 4-15 P.M., Subject: Blowpipe Exercise.

Lecture by Bahu Rajendra Nath Chatterjee, M.A., on Wednesday, the 15th Inst., at 6 P.M. Subject: Photometry (concluded). Reflection of Light—its laws and application.

Lecture by Dr. Mahendra Lal Sircar, on Thursday, the 16th Inst., at 5 P.M. Subject: Electro-magnetism concluded.

Lecture by Bahu Ram Chandra Datta, F.C.S., on Friday, the 17th Inst., at 4-15 P.M. Subject: Lead and Silver Salts.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

January 11, 1896.

his inability to control himself, are not exactly few and far between. These are faults and even grave faults in administrative officers. The necessity, therefore, is never obviated of administering censures and rebukes and sometimes of ordering stoppage of promotion and imposition of fines in the form of suspension of pay and allowances. Privately administered, a censure loses its force. Even pecuniary mulcts fall lightly if imposed with the knowledge of only the Accountant-General. A whispered censure is, after all, no censure. Deprived of publicity, it is shorn of its punitive element. From the circumstances of his position, a civil servant is far removed from the influence of wholesome or healthy opinion. He resides among people with whom he does not mix. He is a stranger in the place where he lives. He is a solitary being in the midst of a teeming population. Emancipated from the criticism of equals, of friends and acquaintances of his own colour and creed, he is not subjected to the criticism of men that surround him. Under the circumstances, he owns no check save that of his official superiors. That check, when it takes the form of unpleasant counsels whispered to him through the post in an official despatch, has no terrors for him. Publicity, therefore, is more desirable in his case than in that of others. The argument derived from loss of prestige is absolutely worthless. Individual prestige may be hurt, but the prestige of British rule is enhanced. Being the oldest, Bengal is, again, the most advanced Province of British India. It has an Argus-eyed press so far as official peccancy is concerned. The apparent impunity of official offenders is truly destructive of that prestige which forms one of the most solid foundations of British empire in India. Compared to the prestige of British rule itself,—a prestige built up by justice and humanity—that of an individual administrator is a thing of little value. One of the wisest aphorisms uttered by Brougham is that it is not enough that administrations should be pure and uncorrupt; they should have also the reputation of purity and incorruptibility. The late Lieutenant-Governor of Bengal was entirely unmindful of this. Careful of the prestige of individual members of his Service, he was supremely negligent of the prestige of British rule. In whispering his displeasure to individual offenders, he forgot that he sacrificed the reputation for thorough rectitude of conduct of British rule. A brilliant member of the Indian Civil Service, he was a tyro in statesmanship.

EXPERIENCES OF A HADJI.

BY MOULVI ABDUL JUBBAR, KHAN BAHADUR.

As my experience in the holy Hedjaz differs materially from the description of the Hadj by non-Mahomedan travellers who have been there in disguise, I desire to say something about it. I believe that the sum of human happiness is greater in the Hedjaz than in countries which boast of modern civilization. I was nearly four months in Mecca, Medina and Jedda, and my impression is that the people in those places enjoy more inward peace than outward ease. They are no doubt comparatively poor, but poverty has not there its concomitant vices to such an extent as we see among the moneyless classes elsewhere. With the exception of the murder of the British Vice-Consul at Jedda I did not during my stay in that country see or hear of any atrocious crimes which in civilized localities the newspapers daily report. The late Vice-Consul was very unpopular with the Arab Bedouins, though I must say in justice to him that he was a great friend of the Indian pilgrims, and did much for their convenience and comfort. Rightly or wrongly the Arabs did not regard him as a Mussulman in the strict sense of the term. Of course the Bedouins are not innocent, but

I can say that they are not so bad as they are represented to be. There are among them, as among other nations, good and bad men. Though poor they are hospitable towards needy travellers.

At Rabuk, a little town between Jedda and Medina, I met a Punjabi Hafiz (one who has the Koran by heart). As he had no money to pay the hire of a camel to Medina, he made an attempt to go on foot in order to visit the tomb of the Prophet. When he reached Rabuk he found that he had over-estimated his physical power to accomplish a most tedious journey. A Bedouin took pity on him, sheltered and fed him at his house and offered to carry him to his destination on his own camel free of charge if he would only remain with him a few days and allow him to make the necessary arrangements for the journey. However, the Hafiz having seen my party halt at Rabuk asked me to take him to Medina. I gave him a seat on one of my camels to and back from that city. The above is only an instance of the hospitality of the Bedouin. The camel drivers are all Bedouins and are during the journey fed by their employers, but they invariably share with others whatever food is given to them. At one of the stages where sheep were procurable the leader of my caravan, a respectable young Bedouin, wished to be entertained with meat. I gave him the price of a couple of sheep. He brought and killed them, but when the meal was ready he not only invited the neighbouring Bedouins but asked some of our party to dinner.

Much of what we hear of the misdoing of the Bedouins is due to the conduct of travellers themselves. If the Bedouins are treated kindly and liberally they are as obedient as slaves. It is true that the road is sometimes unsafe owing to the broils among the different tribes of the Bedouins, or to any disagreement between them and the Sheriff of Mecca, but they try to leave the pilgrims alone. A careless traveller is sometimes robbed if he strolls to a distance from his party, but thieves there are in every country. In Arabia, however, theft in a house seldom occurs. During the days of the Hadj people lock the doors of their houses and go to the Arafat, about 18 miles from Mecca, and on their return after four days' absence find the locks intact and their property safe, notwithstanding the absence of regular watchmen in the streets of the city.

The Arabs, especially the inhabitants of Medina, are most polite and obliging. A citizen of Medina has a good word and brotherly feeling for everyone. The reverence of the Medinites for the Prophet is so profound that they scarcely talk aloud within the walls of the sacred city. One evening I forgot to take my prayer book to the Musjudun Nabi or the Prophet's Mosque and called out to my servant after the Indian fashion and told him to bring me the book. Immediately an Arab came up and whispered to me that I should remember that I was within the hearing of the Prophet, and should make no noise.

The Sultan's rule is much appreciated in the Hedjaz. Every evening at candle-light and every Friday prayers are offered in front of the sacred house for the health of His Imperial Majesty and for the success of his army, and the very enthusiastic manner in which the word Amen! is uttered by all present at the conclusion of the prayer shows that the people are ready to sacrifice their all to the service of the Sultan. I cannot therefore believe for a moment the recent telegram that 45,000 Arabs have risen against the Sultan. His Majesty Sultan Abdul Hamid Khan, the protector of the Muslim faith, and the guardian of the holy shrines, is known to have the good of his subjects at heart, and is always anxious about the welfare of the Mahomedans who visit his dominions on religious duties. The quarantine at Kamran has not the approval of the Sultan. The late Maulana Rahmatullah, a learned Indian Mahomedan, waited upon his Majesty and begged him for the abolition of the quarantine. In reply his Majesty told the Maulana to pray that His Majesty could abolish it. The Maulana's family still enjoys a State pension at Mecca. The Sultan's charity in the Hedjaz is almost unlimited. Not only do thousands of people get subsistence allowance at Mecca and Medina, but every morning cooked food is doled out to the poor.

As regards the Turkish officers and soldiers I must say that I do not believe that they are capable of the cruelties of which the Armenians accuse them. They are no doubt brave, but they cannot truly be charged with vandalism. On the contrary they are most amiable and polite. I visited His Excellency Halim Pasha, the highest official in the Hedjaz, and he showed great courtesy to me and expressed his wish to return my visit, but as I was a stranger and had no sort of furniture with me to give a proper reception to the Wali of Hedjaz, I begged him not to take the trouble of seeing me at my house. One evening he saw me in the sacred mosque at Mecca and kindly asked me to sit on his carpet and say my prayers with him. His Excellency Ahmad Rati Pasha, who succeeded Halim Pasha, and took over charge after I had left Mecca, furnished me with letters of introduction to the officers at Yambo and Medina, when he heard from a friend of mine that I was on my way to the latter city.

I saw the Turkish soldiers at Mecca, Medina, Jedda and Rabuk, and am in a position to say that their behaviour was excellent.

They were never seen to molest or ill-treat anybody. As a proof of their kind-heartedness I wish to mention the following incident : ---Two poor Indian women travelled on foot from Mecca to Jedda. At Hidda one of them came and informed me that her companion had been, owing to the fatigues of the journey, obliged to lie down on the sand under the burning sun. I was very anxious to save her life and despatched an Arab on a mule to fetch her to our place. The Arab returned and reported that a soldier saw her in her critical position, picked her up and removed her to his quarters. After sunset she was brought to us and she was very grateful to the soldiers for the kindness shown to her.

I believe the Hedjaz is the only country in the world where grog shops and women of ill-fame have no existence. There all women, rich and poor, move about with veils on, and the greatest respect is shown to them by the male passengers on the roads.---*The Englishman.*

“THE SOVEREIGN PRINCES OF INDIA AND THEIR RELATION TO THE EMPIRE.”

—RETROSPECT AND PROSPECT.—

By a Territorial Maharaja.

(From the forthcoming number of “*The Asiatic Quarterly Review.*”)

Delicate though it may sound that an Indian Prince should take the liberty of pronouncing his opinions on a matter that deeply concerns the royal sons of India, like the one under consideration, yet it may not be out of place, that one should unfold, at your instance, one's loyal opinions concerning this question of vital importance, on the authority of the past history of this country, maintained by the present circumstances that go to favour and strengthen our view.

In the halcyon days of Hindu Sovereignty, this land of Bharata enjoyed the blessings of a peaceful reign, the Court of Ayodhya, on the one hand, and the Court of Hastinapura, on the other hand, having acted as centres of political supremacy, binding the vassal sovereigns by the common tie of patriotism towards their mother land, and loyalty towards their sovereign, recognized as such, by divine right. From the glimpses of political history we can gather on the authority of our ancient Epics,---the Ramayana and the Mahabharata---we learn that every political act of great moment was before its execution proposed by the sovereign head and carried by the unanimous voice of the vassals (Samantha Rajas) and ministers, invited to advise and edify on such matters. The installation of Rama was proposed by the Emperor Dasaratha, when he desired to lead a retired life during his old age, relieving himself from the cares of sovereignty, and the assembled vassals and ministers carried the proposition unanimously. The War of the Mahabharata was another momentous Act of Politics that was brought about by the united voice of the subject sovereigns and vassals who were scattered about the length and breadth of this vast and glorious Empire constituting 56 Aryan Principalities. Still later when we come to the siege of Somnath, we find the Hindu Sovereigns assembled under a common banner, in the cause of their religion and country, to oppose Mahomed of Ghazni. These are then a few among the many leading points of evidence that go to establish that there must have existed in the Hindu Sovereignty, the germs of an Imperial Constitution, which might have developed well organized councils for political guidance, at one time or other, during the prehistoric sway of Hindu sovereigns over this vast Empire.

As a standing proof of this we have the system of feudal sovereignty that prevails up to date in Rajputana, which is nothing but the survival of the vassal system, in vogue in this ancient land in times prehistoric. Wherever the vassal system is in force, there we cannot but see a relation which necessitates mutual help and advice, in matters *politic*, a relation which in a form, rude or refined, indicates the germs of a political Constitution, similar, if not exactly corresponding, to the modern Imperial Constitution, the existence of which in this country is disputed by Mr. Lee Warner and Mr. Tupper, whose knowledge of the political traditions of this historic land does not go beyond the chaotic mass of “Treaties, Engagements, and Sanads.”

Centuries must have rolled on without tainting this holy relation between the Imperial Majesty of India and her Vassal Sovereigns, even before she was destined to fall a victim in the hands of murderous Tartars and other barbarous tribes that were long waiting to pounce on their coveted prey. The sovereign princes trembled at the sight of these desperate and dissolute marauders, the country being doomed to a condition of chaos and anarchy---a condition of things from which Rome, the Mistress of the World, herself had not escaped. These were no doubt dark days for India. But Providence never intended that she should be left in darkness through all eternity. When brighter days had dawned, when the Muhammadan invader ceased to be a mere plunderer of a foreign soil, but established himself permanently in the country, laying the foundation of the Muhammadan Empire, she saw the shadow of her former glory returning by

slow degrees, when Baber founded the Moghal Empire on the Indian soil and secured her safety by securing the friendship of the Rajput princes, a policy, which he and his successors found necessary for the prosperous growth of their Empire.

Akbar the Great, the most popular of the Moghal Emperors made the people and the Sovereign Princes of India realize her former glory, by expounding a healthy system of Laws and introducing a good many reforms which tended to secure the welfare of the people of his Empire. Akbar best recognized the importance of the policy pursued by his grandfather Baber and succeeded in bringing the sovereign princes of the land together on terms of friendship, in the interests of the vast Empire, which he knew he could not govern without the internal union and confidence that ought to subsist between the Emperor and his vassal princes. He, as Emperor, found out that Rajputana had the vassal system, a relic of ancient Hindu Imperial Constitution, in force; and proposed to the Rajput princes that he would become their Suzerain---i.e.,---their highest chieftain. When many of the princes assented to the proposal, a strong tie of attachment was created between them and the Sovereign-head.

At this point we may do well to examine into the actual relation that subsisted between the Emperor at Delhi and his vassal or feudatory Princes. This relation mainly rested on the right of the Emperor to demand from the vassal the payment, every year, of a certain sum of money, often nominal, as a tribute in token of his recognition of the authority of the Paramount Power of the land; and the vassal was, as a matter of fact, bound to place his person and his army at the disposal of the Emperor, whenever the safety of the Empire was endangered. In other respects the vassals enjoyed the entire confidence of the Sovereign-head and exercised independent powers over their kingdoms without being meddled with, in every matter that concerned the local administration, whether revenue, civil, or criminal. The greater the confidence placed in these princes, the greater was their attachment to the paramount power, and the more secure was the Empire. This relation between the princes of India and the Emperor, during the Middle-ages of India was not far different from the relation that subsisted between the Norman Kings of England and their vassal-lords, on the Conquest of England by William of Normandy, who introduced into England the Feudal system of the Continent, in a slightly modified form. The motto of the vassal princes of India has all along been to protect the Empire from foreign aggression and save it from ruin and downfall. The loyalty of the vassal-princes of this land is a thing unprecedented in the history of the world; and the same cannot be said of the relation between the Vassal Prince and the paramount authority of other countries, where the King may have reason to fear the power and influence of his vassal in the land.

The relation that at present subsists between the feudatory chiefs of this land and the Empire may not compare favourably with the one that subsisted between these bodies either during the Moghal regime or during the prehistoric sway of Hindu Sovereigns. The Sovereign Princes of our Empire are now bound to govern their states with the help of Residents stationed in their territories. In the majority of cases, the native princes are at the mercy of the Residents stationed in their capital and are moved as mere “puppets” in their hands, in spite of the fact that these Indian Princes are highly cultured and are capable of proving themselves eminent statesmen, if allowed to exercise their talents in the direction of administering their territories with much less restriction, without being watched every inch by the Resident stationed at the capital. The loyal Sovereign princes of India do ever hope to be enlisted into the confidence of the Imperial Majesty of the Indian Empire, and ever pray for the safety of the Empire, prepared, ever at the beck and call of the Paramount power, to place their persons, armies and resources at the disposal of the Superior Power for the safety of Her Majesty and the Empire. It will then be a source of much gratification to the Sovereign Princes of the land, and will be a certain testimony of the confidence the State places in these Princes, if Her Majesty is graciously pleased to allow such enlightened Sovereign Princes as H. H. The Gaikwar of Baroda to rule over their kingdoms with less restrictions from the Residents stationed at their capitals, and it is hoped that such a step will in the long run induce other Sovereign Princes to become more enlightened and better fitted to rule over their kingdoms and to serve in the Common Cause of the Empire whose prosperity is their watchword.

How far different from this was then the relation that subsisted between Akbar the Great and his subject Sovereigns? He pursued the healthy policy of conciliation towards the princes of this vast Empire and exalted the lesser nobility to high offices in the State. He succeeded in bringing into existence an effective political Constitution by which the whole Empire was placed in constant touch with every part of it. He brought about a political organization in which the Hindu tributary princes were placed on a par with the Moghal nobility as feudal Lords. With the aid of these princes Akbar succeeded in subjugating the Patan Kingdoms of Northern India. The Emperors of Delhi adopted in succession this noble

policy, invented by the founder of the Moghal Empire and developed by his grandson, the greatest of the Moghal Emperors. So long as this policy was pursued by the Moghal Emperors of Delhi, so long did the Empire stand free from danger and downfall. But Aurangzeb pursued a policy far different from that pursued by his ancestors towards the princes of his Empire. Actuated by religious fanaticism he kindled the inimical feelings of the Rajputs and other Hindu princes, by imposing on every infidel, an insulting tax called Jazia. This inhuman tax drove the subject races out of the Empire, and the Hindu Princes who had been the means of lending vitality to the Empire during the reigns of Akbar and his predecessors, became in turn the very instruments of ruin to Aurangzeb and his followers. The inevitable result of their receding from the sound policy of Akbar, induced by religious bigotry and actuated by sensuality, was certainly the breaking loose of the strong bond of union that kept the Empire firm and steady, finally ending in their degradation and the downfall of their Empire.

Just at this juncture, it has pleased Providence to entrust this land with its millions of inhabitants, to the care of a benevolent and God-fearing race of rulers—the English. The loyal and patriotic Princes of India have always welcomed the British Raj as a Godsend, have uniformly acted with a spirit of unswerving loyalty to the State, and have shown themselves conspicuous in standing firm under the benign banner of the Imperial Majesty of India. The History of the Mutiny of 1857 and the records of the E. I. Company previous to that event, are permeated with marked instances of their loyalty. What greater evidence of their present loyalty can be given than the one portrayed in the words of the well-known letter of the Nizam on the occasion of the Panjdeh Russian scare! The loyalty of the Princes and people of India to the Imperial Majesty is a household word!

What does this world-known loyalty indicate? What does this desire to make common cause of everything that may affect in the least their paramount sovereign, declare? Surely nothing but a filial right and a loyal claim to be restored to their lost prestige and glory; nothing but a longing to be redeemed from the thralldom of a bygone rule; nay, a confidence on the part of the many millions of India that England shall in the long run mete out to them their political salvation.

This hope, this longing and this confidence was not to go in vain. During the winter session of 1875-76, this country was honoured by the visit of His Royal Highness, the Prince of Wales, when this crowning gem of Britain's possessions paid her tribute of unflinching loyalty never before surpassed in the annals of British India. During this season of joy and festivity throughout the land, the princes of this vast empire felt that the day was not far off when they would have the good fortune of being incorporated into the Imperial Constitution of a glorious dynasty. Accordingly, the year 1877 has marked out a glorious epoch in the annals of the British Empire in the East. In that year, the relation that has subsisted between the sovereign princes of India and Her Imperial Majesty received a formal recognition, whereby some of the Sovereign Princes of India have accepted the title of "Councillor of the Empress." Herein was realized the hope of the far-sighted statesman, Lord Beaconsfield, during the Viceregal administration of an equally far-sighted statesman, Lord Lytton.

The Imperial Declaration at Delhi was, in the opinion of great statesmen, the dawn of a prosperous future for India. Lord Lytton has thereby originated the Imperial Council, and has entrusted it even in its infancy to the charge of the successive Secretaries of State for India and Viceroy, to be nurtured with due care. But, no sooner had Lord Lytton left the shores of India, than the lines of his imperial policy were relinquished; and the infant Council found itself at the mercy of uninterested nurses in whose hands it had to pass the critical age of childhood, though now and then presenting dangerous symptoms, under the weight of which it might decline and be lost. But India has no cause to despair of its prosperity under any circumstances, seeing that this infant Council has all along been under the care and guidance of a higher Power—Providence. Though the Imperial Council was helpless in the hands of its guardians, yet thanks be to the Secretaries of State for India and the Viceroy who had this vast Empire entrusted to their charge, for their good wishes towards the Sovereign Princes of India who are interested in the growth of this infant Council, for the liberal policy they have been all along pursuing towards them, under the auspices of Her Gracious Majesty, the Empress of India. The lapse of nearly two decades ever since Lord Lytton constituted this infant Council has not been entirely fruitless. For during this period the Sovereign Princes of India, such as H.H. The Gaikwar of Baroda, H.H. The late Maharajah of Mysore, H.H. The Maharajah of Travancore and many others have distinguished themselves, as portrayed in the words of a disinterested observer, the Earl of Meath,—“by their high culture and intellect, speaking English without the slightest affect, keenly alive to all that is passing in the world, and sincerely desirous of governing their territories both wisely and justly. Several of them have widened their minds by

travel, have visited Great Britain, been presented to their Empress, and have made themselves acquainted with other portions of the vast Empire, over which her rule extends.” This interval has been of immense good to the Princes of the land in preparing them for the noble and responsible call to serve Her Majesty, as Councillors, in the administration of this vast Empire, wherein is cast the lot of several millions of people, bound by the common tie of loyalty to the same Paramount Power, though differing from one another in respect of creed, custom and language.

It is therefore our individual opinion, as is the opinion of many impartial observers on Indian politics, that the time has already arrived for allowing the enlightened Native Princes of India to play an active part in the Imperial Council of Her Majesty, into which a few of them had the honour of being initiated as Her Majesty's Councillors, on the occasion of the Imperial Declaration at Delhi. It may so happen that some of the Native Princes may not all at once like to take part in the imperial Union, on the ground that their prestige as Sovereign Princes will become a thing of commonplace. But steps might be taken to have their prestige and power kept sacred and respected, if not enhanced and exalted. It is further our opinion that such a step will in the long run bring the Princes and people of India into a closer touch with the British Sovereign Power, and will certainly result in multiplying the welfare and contentment of the people of India, by bringing into united action the dormant powers of the Sovereign Princes of the soil, now confined within the narrow limits of their territories, to bear upon the Empire for their common weal.

THE WORLD RUNS AWAY FROM US.

THE other day we had a talk with a man who knew as little of the world around him as a baby. Yet he was a man of naturally fine intelligence. He had just been relieved from prison. Ten years ago he was incarcerated under a life sentence. Recently, however, circumstances had arisen which proved his innocence, and he obtained his freedom. But nothing seemed as before. He had been stationary while the world moved on. Many of his old friends were dead, and all were changed. A big slice of his career was lost, and worse than lost. Could he ever make it up? No, never. Besides, although he had committed no offence, the mere fact that he had been convicted of one, would always place him at a disadvantage.

Different as it is in all outward conditions long illness produces results which resembles those of enforced solitude. When confined to our homes by disease we are virtually out of the world. Friends may and do, pity us; but they do not lie down by our side and suffer with us. Ah! no. They go their own ways and leave us alone. In the midst of company we are still alone. Enjoyment, food, sleep, fresh air movement, work, &c.—those are for *them*, not for us. Alas! for the poor prisoner whose jailor is some relentless disease. Who shall open the iron doors and set *him* free?

“I never had any rest or pleasure.” So writes a man whose letter we have just finished reading.

“In the early part of 1888,” he says, “a strange feeling came over me. I felt heavy, drowsy, languid, and tired. Something appeared to be wrong with me, and I couldn't account for it. I had a foul taste in the mouth, my appetite failed, and what I did eat lay on me like a stone. Soon I became afraid to eat, as the act was always followed by pain and distress. Sometimes I had a sensation of choking in the throat as if I could not swallow. I was swollen, too, around the body, and got about with difficulty owing to increasing weakness.

“At the pit of my stomach was a hungry, craving sensation, as though I needed support from food; yet the little I took did not abate this feeling. My sleep was broken, and I awoke in the morning unrefreshed. For *four years* I continued in this wretched state before I found relief.”

This letter is signed by Mr. Charles H. Smith, of 19, New City Road, Glasgow, and dated February 15th, 1893.

Before we hear how he was at last delivered from the slavery of illness, let us listen to the words of a lady on the same theme: Mrs. Mary Ann Rusling, of Station Road, Misterton, near Gainsborough. In a brief note dated January 3rd, 1893, Mrs. Rusling says she suffered in a similar way for *over fifteen years*. Her hands and feet were cold and clammy, and she was pale and bloodless. She had pain in the left side and palpitation, and her breathing was short and hurried. No medicines availed to help her until two years ago. “At that time,” she says, “our minister, the late Rev. Mr. Watson, told me of Mother Seigel's Curative Syrup, and urged me to make a trial of it. I did so, and presently felt great relief. It was not long before the bad symptoms all left me, and I gradually got strong. I keep in good health, and have pleasure in making known to others the remedy which did so much for me.”

Mr. Smith was completely cured by the same remedy, and says had he known of it sooner he would have been saved years of misery.

The real ailment in both these cases was indigestion and dyspepsia, with its natural consequences. Throughout the civilised world its course is marked by a hundred forms of pain and suffering. Men and women are torn to pieces by it as vessels are by the rocks on which they are driven by tempests. So comprehensive and all-embracing is it that we may almost say that there is no other disease. It signifies life transformed into death, bread turned into poison. Watch for its earliest signs—especially the feeling of weariness, languor, and fatigue, which announce its approach. Prevention is better than cure.

But by the use of Mother Seigel's Curative Syrup, cure is always possible; and poor captives in the loathsome dungeons of illness are daily delivered as the hand of the good German nurse swings open the doors.

ALLAN'S ANTI-FAT

PURELY VEGETABLE. Perfectly Harmless. Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into Fat. Sold by Chemists. Send stamp for pamphlet.

Botanic Medicine Co.,
8, New Oxford-street,
London, W.C.

CAUTION!

IT having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (*viz.*, 4 annas, 8 annas or 9½d, 12 annas or 1s. 1½d. and Rs. 2 or 2s. 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes the prices have been obliterated and the boxes represented to be of higher value than they really are.

posal of the family of the deceased man of
letters.

Orders to be made to the Business Man-
ager, "*An Indian Journalist*," at the Bee
Press, 1, Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October,
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corfi,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengal journalist (Calcutta :
Thacker, Spink and Co.); nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindoo Patriot*, in its palmyest days
under Kristodas Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great qualiti-
es, his death from pneumonia in the early
spring in the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—*The Times*
of India, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journal-
ist becomes worthy of publication; it is more
rarely still that such a life comes to be written
by an Anglo-Indian and a member of the
Indian Civil Service. But, it has come to
pass that in the land of the Bengali Babus,
the life of at least one man among Indian
journalists has been considered worthy of
being written by an Englishman.—*The*
Madras Standard, (Madras) September 30,
1895.

The late Editor of *Reis and Rayyet* was a
profound student and an accomplished writer,
who has left his mark on Indian journalism.
In that he has found a Civilian like Mr.
Skrine to record the story of his life he is
more fortunate than the great Kristodas Pal
himself.—*The Tribune*, (Lahore) October 2,
1895.

For much of the biographical matter that
issues so freely from the press an apology is
needed. Had no biography of Dr. Mookerjee,
the Editor of *Reis and Rayyet*, appeared, an
explanation would have been looked for. A man
of his remarkable personality, who was easily
first among native Indian journalists, and in
many respects occupied a higher plane than
they did, and looked at public affairs from a
different point of view from theirs, could not
be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but presents the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental hold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Re. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Samkutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—A Corporal offered Rs. 30 for the very same watch. Gentleman's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government Medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications, made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

CALCUTTA, SATURDAY, JANUARY 18, 1896.

WHOLE NO. 208.

CONTEMPORARY POETRY.

"THE SURPRISE" AT WILDBAD.

From the German of Uhland, "BY BAR."

In fairest days of summer, when gently blows the breeze,
When blooming are the gardens, and verdant are the trees,
There rode from Gates of Stuttgart a hero proud and old,
Count Eberhard the Scornor, hight Rustle-beard the bold.*

Few of his gentle squires attend him on his way ;
He bears nor helm nor hauberk, nor seeks the bloody fray ;
He fain would ride to Wildbad, where warmly flows the spring
That health to ev'ry sick man, and youth to age doth bring.

He halts by Hirsau's Abbey, and enters at the shrine,
And while the organ pealeth, he quaffs the monk's cool wine ;
Then rides through verdant valleys, beneath the pine-trees' shade,
Where Enz a rushing pathway amid the rocks hath made.

At Wildbad, by the market, a stately house doth stand,
And for a sign it beareth a brightly gleaming brand ;
And there the Count alighting, right gladly turns to rest ;
And daily to the fountain resorts the knightly guest.

There all his garments doffing, he paused a while, and stood,
A pious prayer repeating, then plung'd him in the flood ;
Amid the rocky channel, he ever sought the spot
Where from its riven outlet the spring gush'd full and hot.

It was a stricken wild-boar that first the source betray'd :
The hunters found him bathing his wounds in forest glade,
And to the aged hero it seems a pastime good,
To lave his scar-seam'd body, and stretch him in the flood.

One day his youngest squire rush'd down in eager haste—
"Sir Count, a troop of horsemen the upper vale have passed ;
They carry heavy maces, their leader's scutcheon shows
A wild-boar from the forest and a red golden rose."

"My son, those are the 'Strikers,' whose blows fall heavily ;
'Tis Eberstein who leads them ;—my doublet give to me.
Full well I know that wild-boar and all his angry scorn,
Full well I know that red rose that bears so sharp a thorn."

Then came a simple herdsman, he came with breathless speed—
"Sir Count, the lower valley is thronged with knight and steed ;
Their Captain bears three axes ; his armour gleams so bright,
That, like the lightning flashing, it dazzles all the sight."

"It is Sir Wunnensteiner, the Gleaming Wolf by name—
Page, give me now my mantle,—I know his suit of flame ;
Right well his axes shatter, he bodes me little good ;
Now, bind my sword beside me—the Wolf he craves my blood.

* Count Eberhard of Wurtemberg, surnamed "the Scornor," and also "Rustle-beard" (1392.)

"A timid maid to startle, as in her bath she lay,
Might pass for merry banter, and harmless jocund play ;
But when his foes encompass an aged warrior bold,
They seek, if not his life-blood, a ransom rich in gold."

Then spoke that simple herdsman—"I know a secret road,
A rugged mountain pathway by man or steed untrod ;
There, where the wild goats clamber, beyond the foeman's wrath,
If you will swiftly follow, I'll lead you safely forth."

They clamber up the mountain through thickets dense and drear,
And often with his good sword the Count a path must clear ;
He ne'er before had tasted the bitterness of flight,*
And by the good bath strengthen'd, far rather would he fight.

But in the sultry noontide his strength was well nigh spent,
And toiling up and down hill, upon his sword he leant.
The herdsman saw with pity the aged hero's plight,
And gladly on his shoulders he raised the noble knight.

Then thought the aged "Scornor,"—It seemeth me right good,
To be thus gently carried by one of loyal blood ;
In trouble and in danger the people's truth shows bright,
So should we never trample on their good, ancient right.

And when in peace and safety to Stuttgart's halls he came,
He struck a goodly medal, to give his rescue fame ;
Full many shining pieces he gave the herdsman true,
And to the noble "Strikers," he scoffing sent a few.

And many stalwart masons he sent to Wildbad's spring,
And bade them round its waters a sturdy rampart fling
That so in future summers all sick and aged men,
By foemen unmolested, might bathe them young again.

—Indian Society.

WEEKLYANA.

LAST Saturday, the High Court Bar signified their satisfaction at the elevation to the Bench of one of themselves. There was a dinner to Mr. Justice Sile at the Dalhousie Institute, when covers were laid for eighty. The Advocate General proposed the health of the guest. The Great Eastern Hotel supplied the dinner and Mr. Lobo the music.

ON the 8th January, at the Albert Hall, the Keshubites, under the presidency of Babu Protap Chunder Mozundar, commemorated the ascension of their god incarnate. The shade of Keshub was present, as observed by the Chairman, to "raise its hand upon you all to bless and inspire this hall which was erected by his labour." Mr. Mozundar informed his audience that Keshub Chunder Sen very resolutely refused to be called a prophet. Yet to his followers he is no less.

* This and the three following lines are sculptured above the source at Wildbad, under the relievo which represents Count Eberhard's flight.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

For he communed with his God Who confirmed all his acts. In cases of doubt and difficulty, he appealed to Him direct. The greater the glory for the repudiation! "His whole nature," again, "was concentrated in one great impulse of love, flowing always towards God, flowing on all sides towards mankind." As an example of the latter, we believe, Mr. Mazumdar related:—

"After his death when the whole neighbourhood in which he lived was in mourning, and the great men of this town drove into his house one after the other to bear testimony to his many virtues, there came a Mahomedan gentleman who was very severely criticised. He squatted on the carpet spread for visitors, and bent down his head and said 'Keshub loved me,' 'Keshub loved me.' When he was told that it was no new thing with Keshub Chunder Sen, he said:—'You do not know I am a Mahomedan and many in this town amongst Hindus and educated are against me, but I was always assured when I looked upon his gracious countenance. I was always filled with joy when I heard the melody of his speech which was the soul of my soul. He loved this poor Mahomedan.'—*Indian Mirror*, January 14.

Mr. Mazumdar was free to admit that Keshub did not eat locust and wild honey like John the Baptist, he was a modern man and lived so in modern world, he worked for himself and his family. "True to his family, true to his country, true to the world, and true to his God. How many of you can say that? How many of all the religious leaders of the age can say that? Hence you see the singular uniqueness of his career. Those who looked at his externals, often found it difficult to realize that internally there was not the same passage 'I the Prophet'; he never took that name. And those who looked at the internals, thought, how a man, with all his fate, with all his renunciation, with all the undoubted asceticism and austerity could go through all the laborious exercises of the duties of a citizen, a householder and a man of the world." Wonder, indeed! The ragged Sanyasi spurns the world being in it. He is respected for his renunciation, for the hard life he leads. The new example of renunciation and love is more admired because of his worldliness joined to saintliness. The world has not grown so advanced as to allow the alloy. A saint may walk the earth but he is always above its affairs. A worldly saint is not the admired of all observers. Keshub was an uncommon phenomenon. The world is familiar with the spectacle of a sinner under the garb of a saint. Worldliness was his mask for saintliness.

**

THE life of Sir William Rattigan is very instructive and it has been very briefly told by Sir Dennis Fitzpatrick. The Lieutenant-Governor of the Punjab, as Chancellor, presided, on the 6th January at the fifteenth Convocation of the Punjab University. In conferring the Doctor of Laws degree on Sir W. H. Rattigan, the Chancellor said:—

"He and Sir W. Rattigan were Assistant Commissioners at Delhi in 1863, and even then Sir W. Rattigan was engaged studying law and languages. In 1866 he cut his connection with the Government and joined the Lahore Chief Court, then newly formed, and as a pleader; his practice grew remunerative, but Sir W. Rattigan aspired to be a barrister. It was a grand instance of courage, determination and self-reliance that although he had the responsibilities of a family he relinquished everything, went to England and was called to the bar. He returned to Lahore and found he was remembered by his clients and his practice grew larger than ever. In 1876 and 1877 he was the acknowledged leader of the Lahore bar, and the great feature which inspired public confidence was that he always had every fact and detail at his fingers' ends. A common idea is that anything like broad and systematic study of law is only necessary for those free from the trammels of practice. He remembered a distinguished English lawyer describe a jurist as a confounded fellow without briefs, and as a matter of fact practising advocates generally confined themselves to obtaining from text-books and reports such fragments of law as was necessary for the conduct of cases. But Sir W. Rattigan was never contented with that. He studied law in a broad, systematic way, and he had written books that were justly esteemed. He had devoted most attention to Indian Customary law and Roman or Civil law, as studied in Germany. When at home he accomplished a rare and wonderful feat for an Englishman. He went to a German University, presented himself for examination as a Doctor of Laws and although the examination was conducted in the German language not only passed but passed with high honours. The Government was naturally anxious to secure the services of a man of Sir W. Rattigan's stamp, but the responsibilities of a family prevented him from foregoing his large income from the bar. Thus Government lost his services as Judge but took the first opportunity to avail themselves of his services on the Governor-General's Council as representing the Punjab, on which he did excellent work. In 1887 Sir W. Rattigan was appointed as Vice-Chancellor of the University of the Punjab. There was a great deal that needed doing in the University, and Sir W. Rattigan applied himself to the discharge of the duties of his office with the energy which he brought to bear on everything he ever had undertaken. How he found time to discharge the duties of Vice-Chancellor he was quite unable to understand, but that he did so in a most able and efficient manner, was so well-known to all present that it was unnecessary to dwell upon it. Sir W. Rattigan had the advantage to have associated on the governing body several able and

distinguished men, but his colleagues all admitted that to him, far more than to any other individual among them, was due the credit of having brought the University to the pitch of efficiency it has attained and the high position it occupies. Sir W. Rattigan in fact became so indispensable to the University that he was no less than three times re-appointed. After alluding to the services rendered by Sir W. Rattigan to education among the Sikhs, the Lieutenant-Governor said it was not to be wondered at that the Queen should knight him or that the Punjab University should confer the degree of the highest rank on him."

The honor has not been too hastily conferred. It rather comes late. Sir William had long deserved it. But for Sir Dennis Fitzpatrick, it might be later in coming. Neither was he allowed to be as useful to the Legislative Council of India as he could wish. Sir William is thorough in what he does. That greatly accounts for his success in life.

We read in an upcountry paper:—

"The foundation-stone of a poor house established by Rani Sugat Kuer of Kherigarh, District Kheri, was laid recently by the Hon. Mr. G. Adams, Member of the Board of Revenue. The Rani presented an address to Mr. Adams in which she referred to the circumstances in which the estate was released from the management of the Court of Wards and transferred to her, since which she had effected an increase of Rs. 11,000 in the gross income. In her endeavour to improve the condition of her tenants she had started in 1894 a bank to enable them to borrow at a reasonable rate of interest, and the scheme was prospering. She was now carrying out another idea that she had cherished, which was to provide a poor house for the sick and poor on the estate. Mr. Adams in reply spoke favourably of the Agricultural Bank established by the Rani. There had been, he said, only one such bank in Oudh, that started by Seith Raghunbar Dyal, Talukdar of Moizuddinpur in Sitapur, and it was much to the credit of the Rani that she, a purdahnashin lady, had recognised the fact that such an institution must benefit the landlord as much as the tenants. He hoped that this example might be followed by other proprietors. Referring to the circumstances under which this estate was released by the Court of Wards, which was done while he was Commissioner of the Division, he said he then held the view that she probably would be able to manage it, and he was very gratified to find that she had more than justified his opinion; it was now one of the best managed estates in Oudh."

**

IN Bengal, various forms of oath had been recommended, discussed and tried till it was reduced as now to simple affirmation for Hindus and Mahomedans. The Christians swear by the bible, the Parsis by the Zendavesta and the Chinese by the breaking of a saucer. In Ceylon they are laying down the forms for the various nationalities. The oath for the Buddhists runs as follows:—"I declare as in the presence of Buddha, that I am unprejudiced; and if what I shall speak shall prove false, or if by colouring truth others shall be led astray, then may the three holy existences, Buddha, Dhamma and Sangha, in whose sight I now stand, together with the devotees of the twenty-two Firmaments, punish me and also my migrating soul. To a Chinese witness, a saucer is to be handed who kneeling down breaks it into fragments repeating—"I tell the truth and the whole truth—if not, as that saucer is broken, may my soul be broken like it." In the case of Parsee witnesses, a copy of the Zendavesta is to be handed to the witness, who has to place his hands on it and repeat the words of the oath after the officer administering it—"I swear that the evidence I shall give shall be the truth, by God, God Omnipresent, and God Omnipotent, the God Almighty."

These precautions may be good to keep a witness in the straight path. But the manner in which oaths are generally administered takes away half its sacredness. To the truthful, the administration is an annoyance, and, as a possible slur on his character, a grievance. To the untruthful, it is not always a corrector. The ignorant blindly follow the administrator without understanding the words or their import. Practically, therefore, the oath satisfies only the judge and he feels himself free to proceed against whom he considers a perjuring witness. Several oaths of office have been done away with, and there is a tendency to abolish more. As an aid to truth, the value of an oath is problematical.

**

MR. Charles Edward Smyth having resigned his seat, Mr. William Buckley Gladstone has been appointed a member of the Bengal Legislative Council.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S.W.

THE Hon'ble Sir H. T. Prinsep, Kt., a Judge of the Bengal High Court, has been granted leave for six months on urgent private affairs, from the 8th instant.

MR. T. W. Richardson has been confirmed as Registrar of the High Court, Appellate Side.

THE Paris correspondent of an English journal reports that a bishop, but only a bishop *in partibus*, without duties, was sentenced on the 26th of December to 13 months' imprisonment for connection with a swindling matrimonial agency. The agency was carried on by a man styling himself Trubert *de la chappelle*, and his mistress, a woman named Authier, assumed the title of Comtesse de Var. The Bishop, at the hearing, spoke for three hours, delivering what was half a sermon and half a trade, part of which was directed against the Bishop of Périgueux. He was then very much excited, but on being sentenced was quite unmoved. Trubert was condemned to two years' imprisonment, and the woman Authier was ordered to pay 4,000*fr.* damages to the persons defrauded, the two other delinquents being also held responsible for such payment.

Do the damages validate the marriages? The conviction invalidates them as being performed without authority. Possibly, the sums ordered are meant to repay what the victims had suffered in their pocket.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

TWENTY-TWO of the leaders of the rising in Johannesburg, including Colonel Rhodes, brother of Mr. Cecil Rhodes, Mr. Lionel Phillips, and Sir Drummond Dunbar, have been arrested on a charge of high treason. Four Rand reformers have been arrested at Cape Town on a charge of treason. The Uitlanders arrested include the managers of the principal firms connected with the Rand and five prominent Americans.

The London newspapers deprecate the arrests, and hope that the Boers will not carry matters too far. Sir Hercules Robinson has dismissed Dr. Jameson from the offices he held in Mashonaland and Bechuanaland. It is reported that the conference held between Sir Hercules Robinson and President Kruger was strained and difficult owing to the latter demanding the annexation of Tongaland by the Boer Republic, and the annulling of the convention of 1884. President Kruger has issued a conciliatory proclamation urging the Boers and the Uitlanders to forget and forgive their recent differences. Commandeering has been stopped in the Transvaal.

Mr. Cecil Rhodes, in a speech at Kimberley thanking the inhabitants for their cordial reception, said that his political career was not ended but was only now beginning. The *New York World* has despatched a telegram to Mr. Rhodes stating that it is impossible to refuse civil rights to the Uitlanders of the Transvaal, and that Great Britain is bound to resist German interference in South Africa. It urges an *entente* between Great Britain and America to secure the peace of the world.

At the request of the American Government Mr. Chamberlain has instructed Sir Hercules Robinson to protect the Americans arrested by the Boers in the same manner as British subjects. This is regarded as evidence of better relations between the British and American Governments.

The German Press is calmer in discussing the Transvaal question, and the tension is abating.

The Transvaal Volksraad has passed a resolution granting a large increase in the artillery of the Republic. A vote of thanks also has been passed to Sir Hercules Robinson and Sir Jacobus De Wet for their powerful and prompt support in averting bloodshed.

Mr. Chamberlain has telegraphed to Sir Hercules Robinson that he fears the arrests of the leading business men connected with the principal firms in the Rand will disorganize the industries of the country, and enquiring of what they are accused, and what are the penalties. The reply is that the prisoners at Pretoria, between fifty and sixty in number, are mostly Rand reformers. They are charged with treason. It is alleged that President Kruger has evidence of a

plot to seize the Transvaal. British Counsel will watch the trial of the prisoners in the High Court.

Sir Hercules Robinson and President Kruger have finally arranged that Dr. Jameson and his officers are to be conveyed as prisoners to England for trial, and that the men are to be handed over to the British Government to be dealt with as it deems fit.

Sir H. Robinson is now returning to the Cape from Pretoria.

Mr. Cecil Rhodes has started for England.

AN important discovery of diamonds is reported from Mullagine in North-West Australia.

THE *Westminster Gazette* states that Lord Salisbury informed the Cabinet, which met on Saturday, that more cordial relations have been established with France by the prompt settlement of some old disputes. This, the *Gazette* states, may be regarded as the first step towards a British rapprochement with Russia and France. The Anglo-French agreement in Siam was signed on Wednesday. By it the Mekong becomes the French boundary to the Chinese frontier. Great Britain and France undertake to refrain from any armed advance in the valley of the Menam, but the Siamese territory east and west thereof is excluded from this clause. Under it, the details of which have so far come from Paris, France obtains Mongsin and Battambang. The Buffer State has apparently been abandoned. The French Press declare that until the Egyptian question is settled, the relations between France and England cannot be materially altered, notwithstanding the Mekong agreement.

THE Governments of the Australian Colonies have jointly telegraphed to Lord Salisbury, congratulating him on the fearless measures he has taken in defence of the integrity of the Empire, and assuring him that Australia will loyally support England in her resolve to resent any foreign interference in matters of British and Colonial concern. Lord Salisbury has replied saying that nothing gives Government greater confidence to uphold the rights of the country than the approval and good-will of the great Colonies.

THE Foreign Consuls at Aleppo have started for Zaitun to negotiate or the surrender of insurgents. The Queen has sent an autograph letter to the Sultan.

A DINNER was given, on Jan. 15, at the Imperial Institute to Sir Joseph West Ridgway, the Governor elect of Ceylon. Lord Stanmore presided, and Lord Wolseley, Sir Arthur Birch, General Massey and many merchants and planters from Ceylon were present. Lord Wolseley in a speech, said that the army was never better prepared than at present to do whatever was required of it. Sir Joseph Ridgway made a long speech, in which he dwelt upon the importance of the strategic position of Ceylon, especially Colombo. He said that he would do his utmost to extend roads and railways in the island and to develop its industries. He would give special attention to irrigation and the promotion of commerce. As regards the defences of the Island, Sir Joseph said that it would be his endeavour to improve the Volunteer force, for he was of opinion that preparing for war was a guarantee of peace, and he hoped Ceylon would take her part.

MR. Balfour, speaking at Manchester, said that Great Britain maintained her control over the external relations of the Transvaal, and would admit of no foreign interference. He did not believe that the American peoples would permit war with Great Britain, but in the event of war Great Britain was never better prepared than at present. Regarding the Indian cotton duties, he said that their total abolition was impossible for financial reasons, but that Government had resolved that the duty should be so arranged that no protection whatever would be given to the Indian manager at the cost of his Lancashire brother. Free trade, he said, was aimed at.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9, SOUTHAMPTON BUILDING, HOLBORN, LONDON.

THE Vicerny is much better, but he has not been able to shake off the fever which is persistent.

THE European Maharani Florence of Patiala died at Patiala last Saturday. At Lahore, during Christmas, she had caught cold, which, being neglected, on her return to Patiala, took a dangerous turn and ended fatally. All Patiala wore a melancholy look, business was suspended, and shops closed. Headed by the Chief, men, women and children followed the dead body to the royal *Samadhi* not far from the city gate, where it was cremated. The Maharaja was all tears. His loyal brother bore him up.

SIR Alexander Mackenzie has consented to be the President of the Indian Association for the Cultivation of Science. The last President founded a scholarship for scientific research by the natives of India but would not directly do anything in his official capacity for the benefit of the institution. We hope for better days for the Association in the next five years.

THE Local Government has no objection to the appointment of Baboo Nilambar Mukerji, M.A., B.L., as Vice-Chairman of the Calcutta Corporation. We may, therefore, expect the sanction in the next *Gazette*, if it has not already been communicated to the Municipal office. It was doubted whether it was imperative under the law to *Gazette* the appointment, or would it not be sufficient to inform the Commissioners by letter of the decision of the Lieutenant-Governor. Following the old practice, the sanction will be *Gazetted*. We should think the practice a good one. When every rural sub-registrar or registrar under the Act for the voluntary registration of Mahomedan marriages and divorces, and Municipal Commissioners under the Calcutta and the Bengal Acts have the honour of the *Gazette*, it would be strange indeed if the Vice-Chairman of the Calcutta Corporation were left out.

AS a preliminary to the final absorption of the office of the Inspector-General of Registration in Bengal by that of the Land Records, the Head Assistant has been abolished and sent the way of the blue gem not of palest ray serene.

THE Ripon College stands first in the last B. L. Examination of the Calcutta University. The only student in the first Division is from that institution. It also heads the list in order of merit in the second Division, and altogether has passed the largest number, 63 out of the 145 successful candidates, in the two Divisions. The number from the City College is 33, while that from the Metropolitan Institution is still less, namely, 17. The other institutions with the numbers of passed candidates are: the Dacca College 9; the Behar National College, 5; the Morris College, Nagpur; the Hughli College; the Patna College; the Rajsahi College, each 3; and the Victoria College, Cooch Behar; the T. N. Jubilee College, Bhagalpur; the Raj Chandra College, Barrisal; the Berhampur College; the Ravenshaw College; and the Muir Central College, each, 1.

THE *Madura Mail* says:—

"An attempt at 'living death' similar to that of the Rangit Singh Yogi was made lately by a man of the Valaya caste who was previously known as Vellimalai and now under the pompous title of Malayandi Mavuna Samar. The news spread throughout the District a week before this date and a large concourse of people assembled in front of the Thirvappadiyar temple where he was to be buried alive. The man was sitting on a plank thrown over a pit dug for the purpose, surrounded on all sides by a large posse of police constables, and by eager spectators. The appointed hour came. The man appeared to be shivering from head to foot with fear or with enthusiasm and was breathing hard. He removed the plank and got down into the pit telling the spectators that his life would go out, rather he would go into *Samadi* unconsciously if he should sit in meditation at the bottom of the pit itself for half an hour. Then the police constables told him to get up. Immediately he got up saying that the time of his *Samadi* was miscalculated by him and that the site selected by him was not fortunate for it. Whether he was labouring under hallucination or not, the affair ended in a fiasco. The Police racked their brains to find out some Section in the Indian Penal Code under which he could be brought up, but, fortunately for the man, unsuccessfully."

The Hindu fakir alluded to allowed himself to be buried in a chest under ground at Lahore and brought again to life when disinterred at the end of forty days.

ALEXANDER DUFF is a great name. The Doctor was a power in India. He could make and unmake men and institutions. Great as a preacher and educationist, in political influence he was no less. Even after retirement, he retained the liveliest impressions of this country. His interest in it was unabated. His love of India and how he valued the friendship of Indians will appear from the following letter published for the first time. It is addressed to the late Baboo Khetter Mohun Chatterjee, who from a simple *Kerani* rose to be Assistant Civil Auditor, and acted as Auditor-General, now Comptroller-General. In 1861, he was sent in that capacity to the Punjab. There was opposition from the Local Government, for the Baboo was placed above the heads of Civilians. The protest elicited from the Government of India the reply that it knew better. The Local Government too came to know of the value of the Bengali, for it afterwards regretted his short stay. Lord Napier of Magdala had a high opinion of him. Recommending his grandson, Baboo Gopal Chunder Mookerjee, now a Deputy Collector in the Calcutta Collectorate, to Sir Richard Temple, then Lieutenant-Governor of Bengal, the Commander-in-Chief said that there was not one civil or military officer to whom Khetter Mohun had not rendered a service. The least that he had done was to assist them in drawing their pay and allowances—no small service, as we should think, when the present Code had not been framed.

"Potterdale by Pennt,
29th June, 1871.

My dear old Friend,—I am greatly in your debt as regards correspondence. But I entreat you not to measure my affection for you or my interest in your welfare and doings by the infrequency or scantiness of my communications. My feelings of affectionate regard for you, instead of diminishing, continue to increase with the lapse of time. You are now the oldest of my surviving native friends. And towards you I constantly look, in the chamber of my imagination and memory, with peculiar feelings, redolent of old and tender and endearing associations.

But my situation is really a difficult one. I have so often been the subject of ill-health in one form or other, that it has not been easy to drag through the discharge of necessary duties. And the amount of work that is constantly thrown upon me as a referee on Indian and other matters, and the amount of correspondence which this involves,—apart from my own more immediate duties—tend to consume my whole time and drain out my whole available strength.

I have no alternative, therefore, but to cast myself simply and unconditionally on the kind indulgence and forbearance of yourself and other friends, similarly circumstanced.

Do you, therefore, my dear friend, not give up writing to me as often as you possibly can; since I highly appreciate and value any communication from you.

Your last to me about your share in originating the Durand memorial was particularly gratifying to me, on many accounts.

It was so, inasmuch as you have long been the sole survivor of the *first five*, brought to me, about this time, 41 years ago, through the friendly influence of the never-to-be-forgotten and ever-to-be-lamented Raja Ram Mohan Roy.

It was so, additionally and very specially, as an evidence of the kindly and grateful feeling which a native of India is capable of cherishing towards a British gentleman—though a stranger and foreigner—who, in his dealings, has been kind, considerate and just, and as shewing to all British rulers wherein their real strength lies, and the secret of the power that may wed India to Britain. If every British man, or a majority of British men, acted towards the natives of India with the consideration and kindness, the impartiality and justice of a Durand, India would be bound to Britain, by ties, having in them a force verily more potent than if an army of half of British soldiers could be transported thither, to-morrow.

So, with some remarks of this kind, I sent your letter to Lady Durand, for her perusal; and in returning it, she expressed herself very highly gratified.

I lately noticed what pleased me very much—that our old friend Dukhina Runjun Mookerjee had been made a Raja Bahadur. Well, my own impression has long been, that few men have more richly deserved that title at the hands of British Rulers. From an early period he became persuaded that—whatever may be the issue to be ultimately desired—India's best, if not only, chance of enlightenment and elevation lay in strengthening and prolonging equitable British Rule. And

no man has laboured more strenuously and successfully in bringing rulers and the ruled into a condition of mutual understanding, harmony and good will. And now he has had one portion of his reward.

When you write again, do tell me about the state and doings of old friends and acquaintances; about the tendencies and movements of native society, the changes already in progress with their probable issues.

No information about these and other kindred subjects can come amiss to me. I like to be able to follow the career of old friends and to trace the changes and ongoings in native society.

What, for instance, is to be the issue of the educational cess scheme? What the prospect of vernacular education for the masses? How are all the graduates of the Calcutta University to be employed, if they took only to Government employ, or situations in mercantile or other offices? Are the educated native doctors spreading themselves over the country, and supporting themselves by their profession? Will not the law courts be soon overstocked with educated pleaders?

Anything connected with these and other themes will always be interesting to me.

And now, my dear friend, last of all, how fares it with the immortal soul? I know you too well, to suppose for a moment, that you will either misapprehend or misjudge my motives, in asking so solemn a question.

I am now several years beyond three score, and you cannot be very many years short of it.

Oh, the blessedness of having an assured hope for a never-ending eternity! I thank God, that, in spite of endless unworthiness and shortcomings, I can humbly cherish such hope; and you know how, and through whom, I am enabled to do so. Now, how is it with yourself? You will not think the more of me when I tell you that for years past you have been almost daily in my heart, in prayer at the throne of Grace.—Ever your affectionate friend, Alexander Duff."

The Duffs have always been distinguished for intellectual eminence and a profound sympathy with the people of India. Readers of this journal know the abilities for business shown by Mr. Pirie Duff, son of Dr. Alexander Duff, and his disposition towards the children of the soil while he was the head of Messrs. Mackenzie Lyall's Exchange in Calcutta. He has left India, and his son, who bears the name of his grandfather, is now working in our midst in the firm of Messrs. MacNeill and Co. He has all the amiable virtues of his father and grandfather.

REIS & RAYYET.

Saturday, January 18, 1896.

THE LATE LIEUTENANT-GOVERNOR AND THE SUB-MAGISTRACY.

A BAD imitation of Sir George Campbell, Sir Charles Elliott was not half as good as he. The activity of both was marvellous. Both wanted to crowd their reforms into the brief space of their terms. Whatever the value of their reforms, Sir George shewed genius and courage, while Sir Charles failed in both. With all his dislike for law, Sir George had a respect for it. Sir Charles was above all law. Both were furious against the Press, which they themselves drove into opposition. The one suggested their punishment, the other administered the cat himself. If Sir George wished to make the Magistrates all powerful, Sir Charles reduced the Deputies to dummies and recording machines. Hear now the Sorrows of the Deputies under the rule of Sir Charles Elliott.

I have read with much interest your two recent articles reviewing the general administration of the late Lieutenant-Governor and sharply criticising his general line of policy and some of his particular measures. Much of what you have said about that administration is correct and your analysis of his character as a ruler is not wrong. It is very difficult to defend his policy. The one aspect of

his rule which every honest and reasonable man must deplore, was that it entirely demoralized the sub-executive Service. The Deputy Magistrates never suffered so much, and their prestige and status were never lowered so much, as during the last 5 years. I believe that during Sir Charles Elliott's rule the number of officers of this class who were censured, whose promotion was stopped, and who were otherwise punished, was much larger than the number punished in the same way during the time of any previous Lieutenant-Governor. From the time of his taking over charge, he took it into his head that the Deputy Magistrates of this Province were a set of worthless, lazy, and incompetent officers who could not properly administer the criminal law, who unnecessarily delayed the trial of cases, and whose percentage of convictions was unsatisfactory. To show his earnestness he closely examined their records of cases, their registers, and returns. He spent much time in finding fault with the poor Deputies and proving that his estimate of their qualifications and capacity for judicial work was correct. I do not know of a single instance in which he examined the records of a Civilian or European Magistrate or found fault with him. This feeling of the late Lieutenant-Governor was echoed by all inexperienced Civilians and Police officers who look upon native Magistrates with disfavour. In a short time these two classes commenced to snub and insult the native Magistrates and openly interfere, to an alarming extent, with their judicial independence. Those who were honest and independent, heavily suffered in keeping up their independence as their opponents were backed by the Lieutenant-Governor. Others gave in, and suffered themselves to be made machines for convicting people at the bid of young District Magistrates and District Superintendents of Police. It is a fact that Deputy Magistrates were obliged to humour Inspectors of Police and even Court Inspectors. If an experienced Deputy carried out the instructions of the District Judge in any judicial matter,—instructions disliked by a boy Magistrate of 4 years' standing,—he was sent for and reprimanded. If he defended himself by saying that the Judge was his superior in judicial matters and that he could not but obey him, the reply was, "You need not be afraid of him. He cannot do you any harm. He cannot stop your promotion." To this wholesome counsel the unfortunate Deputy sometimes replied, saying,—“Sir, but there are Judges and Judges. I have seen some who brought District Magistrates of even 20 years' standing to trouble for disregard of orders.” A derisive smile at such timidity and foolishness of the Deputy settled the matter for the time. To descend to further particulars: an inexperi-

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.
(Session 1895-96.)

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F. C. S., on Wednesday, the 22nd Inst., at 4-15 P.M. Subject: Salts of Silver and Mercury.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., on Thursday, the 23rd Inst., at 6 to 8 P.M. Subjects: Histology—Large and small Intestines; Physiology—Alimentation.

Lecture by Dr. Mahendra Lal Sircar, on Thursday, the 23rd Inst., at 6 P.M. Subject: Volta-electric and Magneto-electric Induction.

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F. C. S., on Friday, the 24th Inst., at 4-15 P.M. Subject: Copper and Cadmium.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

January 18, 1896.

Honorary Secretary.

enced Magistrate recommended the prosecution of a man for a serious offence. The case had no leg to stand upon, but a young Magistrate is a youth of *zid*. The case was made over to an experienced Deputy who, after thorough enquiry, acquitted the accused, basing his decision on some important High Court rulings. After some days, the old Deputy met the Magistrate.

M.—What have you done with the case committed by Mr.—?

D.—I have acquitted the accused as the charge was not proved against him.

M.—How could you have acquitted him? It was a clear case and the accused ought to have been punished.

D.—If you read my judgment you will see my reasons for acquittal. I have quoted some High Court decisions.

M.—I never read those silly things and you should not have acted upon them.

D.—You may call them silly, but I think I am bound by them.

M.—You ought to try cases according to your common sense and not according to those rulings.

D.—Sir, I might not possess other qualifications, but my stock of that useful article never ran short, and all my superiors as well as the general public have given me credit for possessing it in abundance, but it cannot override the High Court precedents.

M.—I will look into the record.

D.—You are welcome to read it and pass such orders as you think proper.

Circulars were issued by certain divisional Commissioners, giving instructions contrary to the High Court rulings and fixing the limit of punishments in certain offences. At the time of inspection these points were carefully looked into. On the motion of Police officers of all grades, from District Superintendents down to Court Inspectors, cases were transferred from the files of Deputy Magistrates without assigning any cause.

For the above reasons, some of the most distinguished and experienced officers had to retire, although they were quite fit to serve Government longer and would have even obtained extension if they had asked for it. A reign of terror existed for the Deputies, and they did not know how to satisfy their conscience, as well as their superior officers.

In this great calamity which visited the Deputies, the only mitigating feature was the courtesy and consideration shown by the Chief Secretary to the members of the Provincial Service. They cannot forget it soon. He was always accessible to all classes and grades of officers. He never refused a personal appeal by any Deputy Magistrate. It did not matter if he was not able to redress their grievances in every case or grant the request. Mr. Cotton will be long remembered with feelings of gratitude by all Deputy Magistrates for this concession and indulgence. This is a fact which even his opponents cannot deny. The outside public cannot have a correct idea of the wheel within wheel in the machine of administration. It cannot know all that passes between the Chief Secretary and the Lieutenant-Governor. Had not, however, his Secretary pulled him back on several occasions with all his strength, who knows into how many more serious blunders Sir Charles Elliott would have fallen headlong, and what amount of more mischief he would have done to every branch of the administration? I believe Mr. Cotton has

not had independent charge of large districts or divisions, but I think it would be premature to speak of his administrative capacity. We should wait until he gets an opportunity.

I endorse every word of what Mr. M. M. Ghose has said in England and India regarding the separation of judicial and executive functions of officers. He has certainly made out a very strong case, and no one is so eminently fitted for the task as he. All Indians ought to be grateful to him for the service he has done by exposing the defects of the present system. Those defects undoubtedly reached their climax during the 5 years of Sir Charles Elliott's rule.

In his speech quoted by you, Sir Charles Elliott referred to the "high standard of evidence" which the native Deputies require for convicting accused persons. He did not explain what he meant by his high standard. Native Magistrates never require anything more than what the law of evidence prescribes. They certainly insist upon sufficient legal evidence and cannot decide cases according to the whims, or *zid*, or preconceived ideas of young Civilians and District Superintendents of Police. His idea seems to be that legal evidence is not of much use, and that Deputies and other Magistrates should decide cases according to their own "common sense" or the instructions of young District Magistrates, than whom, in Sir Charles' opinion, no men are better able to administer justice. Had the Deputy to obey only the Executive, his task would have become simpler and easier; but his misfortune is that he has to serve two masters. If he disregards the High Court precedents and the law of evidence, the District Judge and the High Court will surely come down upon him and report him to Government for incompetence and unfitness for judicial duties. Government will then be bound to punish him. If he disregards the informal and formal instructions of the Executive, he is put to immediate and serious trouble. I do not think any class of officers anywhere else occupy such an extremely anomalous position. They do not know how to get out of this difficulty, how to protect their independence and conscience. For these reasons, the Deputy Magistrates had little or no peace of mind during Sir Charles Elliott's rule. They did their work under the most discouraging circumstances and in a very bad frame of mind. Only those officers were less troubled who were under immediate superiors of sober judgment and averse to interference with subordinates. Under Sir Charles Elliott not a single Deputy Magistrate's merit was appreciated or his services rewarded with promotion as suggested by the Public Service Commission. In order to please the Mahomedan community, he gave a Mahomedan Deputy Magistrate (who is on extension) the post of Inspector-General of Registration. Again, Abdul Jubbar Khan Bahadur was allowed to officiate for some time as Presidency Magistrate. Except these sops to the Mahomedan community, no Deputy Magistrate was promoted to any of the high posts in the Provincial Service. A glance at the civil list of the N.-W. P. for the same period will show that nearly half a dozen men got appointments held by Civilians exclusively. They were taken from both branches of the Service, judicial and executive. The question arises,—Were the native members of the Provincial Service in the N.-W. P. a better qualified class of officers than their Bengal brethren? The Lieutenant-Governor of the North West Provinces would thus seem

to have entertained a better opinion of his officers of this class than Sir Charles Elliott did of his. It is hoped that under Sir A. Mackenzie, who has correct ideas about the reverence due to law and justice as administered in British courts, the Deputy Magistrates would be able to recover their character as judicial officers and breathe more freely.

Sir A. Mackenzie's resolution of doing some work, "raising as little dust as possible in the doing of it," marks him out for a ruler of stuff. British rule in India depends as much on the reputation it enjoys for the purity of its Courts, civil and criminal, as on the hundred thousand bayonets it can muster at a moment's notice.

SAILANA AND THE INSTALLATION AT SAILANA.

SAILANA is a Rajput State under the Malwa division of the Central India Agency. Its capital is 12 miles north west of Rutlam, and the Rutlam Godna and Rajputana Malwa Railway lines pass through its territory.

The Chiefs of Sailana are Rathones of the Jodhpore family. Ratan Singh, grandson of Maharaja Udai Singh of Marwar, who was, for his conspicuous bravery, rewarded by Emperor Shah Jehan with the assignment of 12 districts in Malwa, founded Rutlam after his name. He had hardly been settled in his new possession when he was summoned to march with Jeswant Singh of Marwar against the combined forces of Aurangzeb and Morad. A battle was fought at Fatchabad near Ujjain, where Ratan Singh, who was about 30 years old, fell with many thousands of his brother Rathones. His eldest son Ram Singh succeeded him. Ram Singh's son Kesheodas incurred the displeasure of Aurangzeb for having put to death one of the Mahomedan nobles, who was on his way to Mecca, and Rutlam was made *Khaba*. After a time, however, one of the surviving sons of Ratan Singh named Chhattersal won the Emperor's favours by taking an active part in the wars with Bejapore and Golkanda and by displaying great courage in them. Rutlam was in consequence restored to him. This took place in the beginning of the 18th century. Subsequently Chhattersal's son Hatt Singh was killed in the battle of Parnala in the Deccan. This event so overpowered him with grief that he turned an ascetic and lived at Ujjain, leaving his dominion to be managed by his son Kesri Singh. After his death, his sons Kesri Singh and Pratab Singh, and grandson Bairisal divided the Raj among themselves, Kesri Singh taking Rutlam, Pratab Singh, Raote (now Sailana) and Bairisal Dhamnode. Pratab Singh having no male issue, adopted Kesri Singh's son Jey Singh. Bairisal after a time went away to Jeypore leaving Dhamnode to be possessed by his uncle Kesri Singh. Pratab Singh demanded half of Dhamnode. Not getting it, he seized Kesri Singh and making away with him assumed the reigns of government of Rutlam in addition to his own possession of Raote. His adopted son Jey Singh fled away and after collecting some forces with the assistance of Lalgah marched upon Rutlam and at Sagode killed Pratab Singh. His elder brother Man Singh who was at the Imperial Court of Delhi was invited to Rutlam. Jey Singh advanced to meet him at Mandore and bringing him to Rutlam seated him on the *gadi*, he himself occupying his adoptive father Pratab Singh's *gadi* at Raote.

The seat of the Raj was subsequently changed from Raote to Sailana which still continues to be the capital town. It was in 1819 that an engagement between the Chief of Sailana and the Scindhia was mediated by Sir John Malcolm when Gwalior agreed never to interfere, in any way, in the internal administration of the State or its succession. Since then four Rajas have ruled the State, the last being Doole Singh who died in October last after a rule of nearly 45 years.

The small town of Sailana was all joy on the occasion of the installation in his father's place of the new Chief Raja Jeswant Singhji, by Colonel Barr, the Governor-General's Agent in Central India. At 11 A.M., a deputation consisting of two principal Sardars of the State waited on the Agent and accompanied him to the Durbar. Colonel Barr was received by the Minister and another Sardar while alighting from the carriage, and by the Chief at the steps leading to the Durbar room, when a salute of 13 guns was fired and a guard of honour presented arms. As the Agent entered the Hall the large gathering of Sardars, Jagirdars, and high officials of the State rose and remained standing until he took his seat on a richly covered State chair. After a time he announced in fluent Urdu that His Excellency the Viceroy and Governor-General of India had been pleased to sanction the recognition of Kuar Jeswant Singh as Chief of Sailana and called upon his subjects to obey his orders faithfully. He then conducted the Chief to the *masnad* under a salute of 11 guns. The presentation of *Khillet* and

pesb-kesh being over, Colonel Barr rose and spoke thus :--

"Raja Sahab,--In accordance with the orders of His Excellency the Viceroy, I have to-day in this Durbar installed you as Raja of Sailana as the acknowledged successor of His Highness the late Doole Singh and I have called upon the Sirdars, officials, and all the subjects of the Sailana State to acknowledge you as their Chief and to obey your orders faithfully.

I trust that you will be faithful to the trust now imposed upon you and that you will rule your State with loyalty to the British Government and with justice to your subjects, remembering always the responsibility of the important duties which you will exercise.

Your first efforts should be directed towards restoring the financial condition of the State and the payment of the debt with which it is unfortunately burdened. To do this you will have to use discretion and economy and it must be your endeavour to reduce expenses and to devise means for increasing the revenue.

I am glad to know that you have in my friend Khan Bahadur Khory a Minister who is able to give you good advice and to assist you in carrying out the reforms which are so much needed. I advise you to give him your full support and authority and to act on his advice.

In all matters you should consult the Political Agent and be guided by his counsel, and I am confident that Captain Pinhey will at all times be ready and willing to give you the advantage of his experience and knowledge and I can assure you that I shall always take the greatest interest in the affairs of Sailana and shall look forward with confidence to the best results.

I now offer you my hearty congratulation on your installation as the Raja of Sailana and wish you long life and all prosperity."

The Raja replied in the following words :--

"Colonel Barr and gentlemen,--

I rise to express my profound sense of gratitude to His Excellency the Viceroy and Governor-General of India for formally recognising me as the Chief of Sailana and to you Colonel Barr for taking all the trouble of coming over here to install me on behalf of the Paramount Power, on my father's *gadi*. Nothing gives me more pleasure and gratification than to notice two happy incidents of my life--the one being my admission into the Daly Rajcoomar College at Indore for English education about 16 years ago when Colonel Barr was there, and the other being the auspicious ceremony of to-day when Colonel Barr as the distinguished representative of the British Government in Central India, has so ably performed. In fact, it was Colonel Barr who offered his greetings when I began to learn the English alphabet and it is Colonel Barr who has to-day offered me his congratulations on my entering a new phase of responsibility. My best thanks are therefore due to you Colonel Barr for your cordial support and kind treatment. I must also gratefully acknowledge the moral support and friendly advice invariably given to me by the Political Authorities. I regret Colonel Gerard's inability to be present here to-day. But I am glad to find his absence compensated by the presence of our Political Agent (Captain Pinhey), who, though new in this Agency, is well-known in this part of the country.

I am extremely sorry for the death of my late lamented father. But the only consolation that I see is that we are all mortals and shall have to meet one day the same fate.

Although I am no novice in the administration of my State, yet, by assuming the reins of Government to-day I am not insensible of the grave responsibility I am accepting towards God and man. If the Chiefs have privileges and rights, we have to remember that they have also duties and obligations to discharge; if they can't understand the spirit of the age, then, we must not forget that the spirit of the age will not tolerate them. It is a general belief amongst us that a Raja is happier than his subjects, but my experience coincides with the opinion expressed by the Poet in this line 'Uneasy lies the head that wears a Crown.' However, I hope and pray that by the grace of God and by your kind assistance I shall rise equal to the occasion and do every thing in my power to make my people happy and contented. I know that before me lies a formidable task. The financial condition is hopelessly unsatisfactory and other departments of the State will claim my serious attention. But I will spare no pains to improve this condition and to introduce Revenue, Judicial, Currency and other reforms suitable to the requirements of the State. My country being much behind time, my efforts will be directed to gradually bring it to a level of progress and advancement with a view to keep pace with the time.

I am sorry God has not spared my kind Principal Mr. Mackay to see this occasion, and I feel very much the absence of Mr. Mathew here, under whom I have got my education. But one satisfaction for me to-day is that I see Khan Bahadur Khory, my former tutor, present here as my Dewan.

The Chiefs of Sailana are the Rathore branch of the Jodhpore family. They are traditionally famous for their loyalty to the Throne and, like my ancestors, I shall be ever ready to shed my blood and sacrifice my country in serving the Suzerain Power.

Before I sit down, allow me to thank you all for your kindly

gracing this occasion and doing me a pleasure which I shall never forget."

At 4 p.m., the Chief paid a formal visit to the Agent, Governor-General, when the usual formalities were observed. At the banquet, the Chief proposed the Queen's toast saying :---

"Colonel Barr, Ladies and Gentlemen,

It gives me very great pleasure to ask you to drink to the health of our most gracious Majesty the Queen-Empress of India. There is not a nook or corner in this vast and mighty Empire where prayers are not heard for Her Majesty's long life and prosperity. It reflects no small credit to England under the Queen that the 19th century closes with the survival of so many native States in India. No nation, ancient or modern, has undertaken the noble and glorious task of preserving to its allies their sovereign powers and of leading them to use their authority for the good of their principalities and for the common welfare of the Empire into which they have been admitted and in the defence of which they are ever ready to sacrifice their lives and their country. These Principalities have long ceased to be the blast furnaces into which the strong elements of Indian society were drawn before the advent of the British, and in place of a condition of society given up to anarchy and to the liability in every form of violence and oppression, we have now absolute peace and we enjoy the numerous benefits conferred by *Pax Britannica*. Mr. J. S. Mill was quite right when he declared his belief that the British Government of India was not only one of the purest intentions but one of the most beneficent in act ever known among mankind.

The downfall of the Portuguese in India was principally due to bigoted religious policy and to the rottenness of the whole fabric of their Government. The introduction of the Roman Law into the protected States of the Republic was the precursor of annexation. The love of the Britons to let different native States enjoy their own laws and systems has greatly contributed to the consolidation of this Empire. History affords few examples where a change in the political condition of a country has been attended with such an aggregate of increased happiness to its inhabitants, as we find under the just and benevolent rule of the Queen of England and Empress of India.

Let us, therefore, drink to her health and wish her a long, happy and prosperous life."

The toast having been drunk with due honours, Colonel Barr, in a few well chosen words, took the Chief's health. Colonel Barr's health was then proposed by the Raja, who said :---

"Colonel Barr, Ladies and Gentlemen, I am much obliged to you Colonel Barr for the kind manner in which you have proposed my health and to you Ladies and Gentlemen for having responded to it with equal kindness.

I have now another pleasant duty to perform this night and it is to ask you to join with me in drinking to the health of our distinguished and most popular Agent to the Governor General, I mean Colonel Barr. Colonel Barr has been so intimately connected with Central India that to know him is to know the history of Central India for the last 20 years. His knowledge of and acquaintance with the Chiefs and the people of Central India are quite unique. By the geniality of his disposition, by his tact, and never-failing courtesy, by his keen desire to maintain and uphold the integrity of Native States, by his kind and sympathetic support and advice to them all, and by his other sterling qualities which enable a man in this world to rise to the pinnacle of eminence, he has endeared himself to those that have come in contact with him in official as well as private capacity and has won the affection, esteem and admiration of all classes of people in Central India. All Central India resounded with the cries of joy when his appointment to hold the exalted office of Agent to the Governor General was announced, an office which will afford him wider sphere of usefulness and more opportunities to display his talents and to prove the warmth of his heart in safeguarding the interests of all concerned. He is one of those sons of England who, like Sir John Malcolm and Sir Henry Daly, have largely contributed to the consolidation of this mighty Empire.

The Political Authorities in Central India have a very onerous task before them, and it must be said to their credit that, although they on occasions get sufficient provocation for interference, yet, they, as a rule, exhibit tact and temper with such sagacity and forbearance as to cause as little friction as possible and which entitles them to the everlasting gratitude of the well-wishers of Native India. It is difficult for an outsider to realize and appreciate fully the value of their presence and good advice in a Native State, and it is no exaggeration to say that the cordial and friendly relations which subsist between the Chiefs and the Paramount Power, are largely due to the good work unostentatiously done by them.

I rejoice to see Mrs. Barr here and to take this opportunity of congratulating her on her complete recovery from her late illness. The news of her restoration to health has gladdened every one in Central India.

Ladies and Gentlemen, I hope you will join with me in drinking to Colonel and Mrs. Barr's health. May God give them health and happiness!"

The new Chief of Sailana is no novice in the post to which he has been called by the death of his father. He had been managing the State with the assistance of his tutor, the present Dewan, who sacrificed his immediate prospects to be of service to his appreciative pupil in his difficulty. In the three speeches which he made, the Raja shews that he is made of more than the ordinary stuff of our Princes. If he can go on as he has commenced, he will no doubt accomplish what he has promised. It was no empty praise either that he bestowed on Colonel Barr. He deserves all that has been said of him. Our Politicals, though friends, are usually a dread to our Princes. Colonel Barr is among the few of his class who are truly loved by their charge.

Letter to the Editor.

"A MUNICIPAL GRIEVANCE."

ITS REMOVAL MADE A GRIEVANCE OF.

Balasore, the 10th January, 1896.

SIR,--A telegram appeared in your esteemed paper of the 14th Dec. last, contradicting my letter published in yours of the 7th idem, under the head "A municipal grievance." The sender of the message "Public" "is sorry to find people that dare mislead Editors like yourself." Will "Public" kindly let us know if the following facts were true, and then say, if it was he himself or I who misled you?

In the middle of the year 1885 necessity being felt for a slaughter house, one Munshi Mohamud Abdus Samad was requested to make the necessary enquiries and to come to terms with the butchers as to the site. When he submitted his report, it was decided, by a majority of the Commissioners, that the slaughter house should be erected near the river side. But, all on a sudden and against the resolution of the Commissioners, a slaughter house was commenced in the vicinity of a Hindu village, in the centre of a populated part of the town, and by the side of a public road. When and how did "Public's" Subcommittee come into existence? What authority overruled the decision of the Commissioners? It is said, the then Sanitary Commissioner approved the site of the old slaughter house. Was he shown all the parts of the town, and given opportunity to choose between them?

However, the people living in the neighbourhood of the old slaughter house, appealed to the Municipal Board, who would not consent to give up the site, unless the petitioners guaranteed to build a slaughter house, within convenient distance of the butchers' quarter; the guarantee to be given with proper security and penalty within 2 weeks from the date of the order (30th January 1886) and the building to be completed by the 1st of the following April to the satisfaction of the Chairman. The result was as was expected. None of the ratepayers could give the guarantee within so short a time, taking upon himself the risk of the penalty, for the conditions were heavy.

So the slaughter house was smoothly built and established within hundred cubits of the dwelling houses of fifty respectable Bengali and Urya gentlemen. As if this was not enough, hide godowns were built close by. Complaints continued, when Baboo Raj Narayan Das, at the request of the neighbours and others, expressed, through a local newspaper, his willingness to bear the costs of a new slaughter house, if the old one were removed. The municipal Chairman, Raja Baikantonath De, clutched at the offer and expressed his thankfulness to the Baboo saying:—"I am very glad to see that you have made a generous promise to bear all the expenses of erecting a slaughter house in an 'out of the way place, where religious or sanitary considerations will not in any way be affected. I shall be more glad to have a letter addressed to me intimating your intention to that effect, so that, I may move the Commissioners at their next meeting to select a site, and carry out your generous purpose, as soon as practicable. It is superfluous to say this move of yours will be thankfully recognised not only by the Municipality, but by your Hindu neighbours, who had so long been complaining of the present site of the slaughter house."

Another Chairman of the Municipality, Dr. Williams, a Civil Surgeon, writes :—"I trust therefore that you will agree to give a slaughter house as desired which will be a lasting benefit to the community, and enable those who use it to be ever thankful to the donor, and also afford a deep sense of gratitude on the part of your co-religionists in having the present building removed from its obnoxious site."

"Public" says "• • • the Commissioners (the old body) agreed • • • to remove it and they also acquired land for the purpose."

The Notification in the *Calcutta Gazette* for acquisition of the land appeared long after the old body had ceased to be. Even if the offer originated in personal convenience, the public convenience it no less, and Babus Raj Narayan Das and Radha Charan Das are not to be condemned for what they have done, if not publicly shamed.

PUBLIC SENTIMENT.

THE KHALIFA QUESTION AND THE SULTAN OF TURKEY.

BY DR. G. W. LEITNER.

No one who has lived long in Turkey doubts that the old state of religious and local autonomies, when the milder precepts of the Koran or of the Bible could be appealed to to govern the actions of men, was better than the present centralisation imitated from European patterns in all their objectionable characteristics. It is the new wine that has been poured into old bottles that is answerable for the confusion leading to the Armenian explosion and to Muhammadan retaliation. For this, as also for trifling with the Khalifa question since the accession of the present Sultan, England, or rather English education, is mainly responsible in Turkey, as it is in India a solvent of beliefs, associations and existing restraints. In a list of terms of abuse, which I publish further on, attaching to various nations in Turkey, that of England is known as "Dinsiz" or "without religion," but the excellent American missionaries also, though both practical and scholarly, have much to answer for; they converted the Armenian, the traditional *factotum* and almost *alter ego* of the Turk, into a discontented subject, who has now brought on his head the cruel anger of his astonished patron. Under normal conditions, Turks or Kurds and Armenians are the best of men, whilst among Armenians the absence of crime and vice was traditionally proverbial. What has so changed the former, besides the effect of a subversive education on the latter? I maintain that it is the hysterical and contradictory conduct of England with regard to the Sultan as Khalifa and to our own Frankenstein, the Mahdi. Years ago I suggested to our Asiatic Society to consider the latter's pretensions from an academical standpoint, but a knowledge of Arabic, without which it is absurd to touch any Muhammadan question, is as rare in that Society as it is among our Statesmen or among the combatants for or against the Turks in the Press. I have studied in Muhammadan, Greek and Armenian Schools and I have subscribed for their respective houses of worship, but my very warmest sympathies are, perhaps, like those of a most observant writer in the *Times* from Constantinople, rather with the Muhammadans of the old School, among whom, in spite of their fanaticism when roused, can be found those God-fearing, honest, able and energetic men who alone could lead their country in reforms, real, because not dictated from without, and compatible alike with the spirit of progress and that of their faith. This the present Sultan saw only too well when, after a stormy youth, he threw himself into the arms of the U'lemá and if he has given more power than he should have done to the Palace clique, it is because the "liberal" Ministers of the now crippled Porte who had raised him to the Throne had driven his uncle Abdul Aziz to suicide, and had deposed, shortly after installing, his brother Murad V. Then only a palace creature was found faithful to outraged Majesty and in the last of many terrible scenes three Ministers were shot and the heroic Hussein Avni Pasha cut into pieces by his avenging hand. No wonder that Abdul Hamid, who is now 53 years old, trusts rather to himself, to his spies and to the development of the Khalifa idea, even if need be beyond its traditional limits, till it becomes a danger to himself and to England, than to State-functionaries or to Ambassadors, excepting that of Russia, which, whatever her ulterior objects, was ever-ready with her fleet in similar times of need to come to the Sultan's personal protection.

The portraits of the last and present Sultan, (to which I add that of the heir-presumptive, Muhammad Rishád, his younger brother by 2 years,) are taken from my series of pictures of the 35 Ottoman Sultans that have reigned, including the Conqueror "Ghazi" Osman I. who founded the present Dynasty at Brussa, where he is buried. He was born in the year of the Hegira 656 [1258 A.D.] or just about 656 lunar years ago! It was his 10th successor Salim II, who first claimed the title of Khalifa 261 years later, under circumstances the validity of which I hope to discuss in an early issue with reference to current events and to the growing agitation in the Muhammadan World. Suffice it at present to lay down the principles necessary for such a discussion and, with this view, to quote from a letter which appeared in the *Times* of 2nd January 1884:

"There was a time when the co-operation of the Sultan of Turkey and of his spiritual adviser, the Sheikh-ul-Islam, would have been welcomed by England in a religious war against Russia in Central Asia; there was another time when attempts were made to lower the prestige of the Sultan among the faithful in India and elsewhere by contesting his claim to the Khalifat (or to more correctly Khalifat), on the ground that he was not a descendant of the 'Prophet Mahomed,' and did not even belong to his tribe of the Koreish. Both advocates and opponents, whether European or Muhammadan scholars, did their cause an infinity of harm by unsettling the historical basis of the question, and by encouraging, in consequence, the growth of all sorts of heterodox notions in the Muhammadan world, which was before so susceptible to the influence of England.

"Dull, therefore, as any treatment of the subject away from current politics may be, I must beg for the indulgent consideration of the following aspect of a question which has been much obscured by both European and Muhammadan writers:

"In the domain of practical politics connected with 'the Eastern question' it does not matter whether the head or heads of Islam (for there have been, and can be, several at a time) can prove Koreish descent or investiture by a real Khalifa in past history, in order to claim the obedience of the Sunnis, who form the great majority of Muhammadans, so long as he carries out, in their opinion, the Divine law. The doctrine is distinctly laid down, though I have never seen it quoted by any of the writers on the subject, that a Khalifa may be a 'perfect Khalifa' or an 'imperfect Khalifa,' a difference which applies to other conditions men or monarchs, and which is certainly established in Muhammadan history. 'A perfect Khalifa' is merely the ideal of a viceregent of the prophet. He must be, in spite of his titular feminine termination, a man, of age, free from bodily and mental Dynas, learned, pious, just, a free man (not a slave, as in the case of some infirmities), and, of course, of Koreish descent; in fact, an admirable Crichton and a 'Defender of the Faith,' and yet he would not be a Khalifa at all unless he possessed the supreme qualification, that of having the power to enforce his commands, just as a man might be a good Christian without being a monarch, or might even be a Christian monarch without being a good Christian.

"Traditions are conflicting on the point of Koreish descent being essential to the Khilafat. As long as the Khalifas happened to be Koreishis, it was convenient to point out that the prophet had made them the ruling tribe 'even if only two persons remained in it.' Others alleged that he had predicted that there would be no perfect Khalifa thirty years after his death, and yet Koreishis ruled long after that period. He, at all events, nominated no successor of viceregent, and left his election to 'the assembly of the Faithful,' with the inevitable result that one party wanted both the prophet's mantle and the secular power to remain in the family, and the other party wished to get the power, at least, into the hands of 'the best man' to be appointed by themselves.

"The confusion between the infallible Imam or spiritual *antistes* of the Faithful and the fallible Khalifa or viceregent of the Moslems began with the earliest times of Islam, and led to the main division of Muhammadanism into the sects of Sunnis and Shi'ahs. The former are so-called because they are guided by 'rules and the consensus of the Faithful (ahl-Sunnat wa Jamá'at).' It follows from this that Sunnism is essentially a democratic theocracy, while Shi'ah belief 'follows' the hereditary descent of its spiritual chief from Muhammad, by Fatima and Ali, as the very essence of its existence. In most Muhammadan authorities, where the Khilafat is spoken of, the word 'Imám' is used, and in others it is implied. The confusion was welcome to the writers, because it saved their conscience and occasionally their necks, and because it slurred over a difficulty which, in my humble opinion, with every difference to the venerable commentators, the Koran and the practical attitude of Muhammadan States and nations, both now and in the past, towards the question of the Khilafat amply explain.

"All Sunnis are equal. They possess a continually living Muhammadan Church in 'the consensus of the assembly of the Faithful.' The Khalifa, if there be any, for which there is no absolute need, is the first among peers, so far as he possesses most power to carry out the Muhammadan law. Had the Sultans of Turkey not committed the mistake of subordinating the priesthood or judiciary (to which any Sunni may aspire) to the secular power, the presumed free opinion of his spiritual advisers would, indeed, have carried weight throughout the Sunni Muhammadan world, and would have made the Sultan an uncontested Khalifa. Even then, however, had he tried, beyond complimentary *quasi*-investitures of rulers of Yarrkand, Bokhara, Afghanistan, and other Muhammadan countries, to interfere in the slightest degree with their internal affairs, he would, with all respect to him as Khalifa, have been rightly confronted by the lawful opposition of the Sunni subjects of those 'Umrá-ul-mu'menín,' or 'Rulers of the Faithful,' unless, indeed, he had the power of enforcing his decree. If he has not that power coupled with the consensus of the Faithful, he is not the perfect Khalifa, at all events where it is so contested.

"The Grand Sharif of Mecca, with whom most regrettable, and once unnecessary, negotiations are, and have been, carried on, not only by the Sultan, is not a Khalifa, although this sacred personage is of the purest Koreish descent and has all the qualifications of a 'perfect Khalifa,' except the essential one of having an army under his command. 'An imperfect Khalifa,' however, is he who stands at the head of the Sunni world as a Muhammadan ruler, however deficient he may be in all the desirable qualifications, except the all-important one to which I have referred. Indeed, he may be a very wicked man, as may be gathered from the following passage in the Koran, when the angels expostulate

with God for creating man as his Khalifa---' Wilt thou create one as thy Khalifa who will do iniquity on earth and unjustly shed blood?'

"The Abbasside, Ummyade, and other Khalifas were of the bluest blood, and yet were scarcely perfect Khalifas. In short, by admitting the claim of the Sultan's Khilâfat, we do neither more nor less than is warranted by the consensus of the faithful of his persuasion, and we gain, as long as he has any power, the advantage of being in sympathy with the bulk of the 'orthodox' Muhammadan world, whereas by discussing pretensions with which we have no concern, and by confusing the 'Imâmat' (the spiritual headship of Islâm) with the *de facto* Khilâfat, we raise a storm of which a cloud is already on the horizon. The common sense of Sunnism is a safe and sufficient guide in this matter, if left to itself, as also the supposed kindred question of the 'Jihâd' or the holy war against infidels, on which more than one volume would have been unwritten had it been generally understood to mean merely 'an effort' which is only lawful, if almost certain of success; otherwise, as elsewhere, patriotism becomes flat rebellion.

"Far different is the case with Shiah. To them the Khalifa is a dead letter and the 'Imâm' a living being. The special sense of Imâm is that of spiritual head. Thus, in the Koran, God appoints Abraham, after testing his complete obedience, as an 'Imâm for Mankind' though he refuses to make the dignity hereditary since the offspring might not be free from sin, which Abraham, as an Imâm, by implication, was. It will be remembered that a similar guarantee was not required when man was created God's Khalifa, but, be that as it may, the hereditary descent of the Imâm is the special property of the Shiah persuasion. When the popular assembly at which the just claim of the chivalrous relative, and another 'light' of Mahomed, His Highness Ali, was rejected in favour of Muawiya, the consolation still remained to the lovers of justice, Adilias, as the Shiah are more properly called, that whoever had usurped the *de facto* secular dominion of the Mussulmans, the spiritual head, the Imâm, was still theirs, and would remain with them in his lineal descendants. They alone are the 'guides' (the root from which 'Mahdi' is formed) of nations in both secular and spiritual matters.

"Deprived of the former, the spiritual rule was handed down from father to son, until the twelfth and last Imâm, Muhammad Mahdi, who disappeared from earth (in 265 A.H. or in 878-79 A.D.) in order to return with the day of judgment. At all assemblies, however, of believing Shiah, the Imâm, the ruler of worlds, is invisibly present. The Magian basis of belief has never been entirely destroyed in Shiah Persia, and it is still the feeder of a vivid and artistic imagination in contrast to the monotony and practical sense of orthodox Sunnism, but for political purposes the fanaticism that can be evoked by the spread of the doctrine that the leadership of Islâm belongs to the Imâm, which is the inevitable result of denying the Khilâfat of the Sultan on the ground of his not being a Koreishi by descent, is far more dangerous than the voluntary subordination of Sunnis to the *fact accompli* of the Sultan as the Khalifa for the time being.

"Unfortunately, surrounded as the Sultans have been by flatterers or servile instruments of their will, and owing to an impulse from without which I can only vaguely indicate, the suicidal notion has gained a firm footing at the Sublime Porte that the Sultan is a sort of Muhammadan Pope, and more or less doubtful documents have been disinterred to show that the last Khalifa had in 1519, if I remember rightly, made over the Khilâfat to the Ottoman Sultan Salim, while on a visit to Constantinople. Even if this was not done under duress, it proves nothing, for the Khilâfat is not hereditary according to Sunni notions, and Sultan Salim was not elected, although, once in power as the chief, or a great chief of Sunnis, his claim, or that of his descendants, is sufficiently ratified by the simplicity of 'the consensus of the faithful,' beyond which it is unnecessary and unsafe to go. Equally unnecessary flirtations for a spiritual sanction of the claim to a perfect Khilâfatship have been carried on with the Sharif of Mecca and are now invoked, not so much against the Mahdi as against the growing agitation among the Arabs and other Muhammadans. That prelate would be more than human if he did not tacitly support a leaning in favour of the sanctity of Koreish descent. Indeed, the innumerable progeny of Sayyads, or descendants of the prophet among Sunni Muhammadans, have been more or less active propagators of the heresy of hereditary sanctity. Many educated Sunnis, especially those who enjoy Persian literature, profess or feel a secret 'affection for the House of Ali,' and indignation at the treatment it received by the Khalifa, whom the 'Jemâat' elected, while it is to be feared that many unscrupulous Shiah, who mistaking the doctrine of 'Taqqia' or denial of their faith which is, unfortunately, permitted to that sect in times of extreme danger and among fellow-Mussulmans only, pass themselves off as Sunnis in order to propagate the fanatical doctrine of the Mahdi."

This letter created some stir at the time, and I received the

thanks of the Porte,* through the Mussurus Pasha, whom I did not know personally. Our greatest Arabic Scholar, Sir William Muir, however, writing to me on the 21st September last, remarks as follows:

"I do not think that I could add anything to what I have already written in the last chapter of the 'Caliphate' on the Sultan's claim to be Caliph.

"I doubt if any of the Semitic races in their heart admit that a Turk could be a Caliph."

Turning to the work I find the following view, which I quote with the greatest respect for its eminent author, though I do not, from the standpoint of practical religious politics, agree with the theory of the Sultan's claim being an anachronism:

The Caliphate, page 590: "In virtue of Murawakkil's cession of his title (of Caliph), the Osmanly Sultans make pretension not only to the sovereignty of the Moslem world, but to the Caliphate itself---that is to the spiritual as well as political power held by the Successors of the Prophet. Were there no other bar, the Tartar blood which flows in their veins, would make the claim untenable. Even if their pedigree by some flattering fiction could be traced up to Corcishite stock, the claim would be but a fond anachronism. The Caliphate ended with the fall of Bagdad. The illusory resurrection by the Mamelukes was a lifeless show; the Osmanly Caliphate a dream."---*The Imperial and Asiatic Quarterly Review*.

THE WORLD RUNS AWAY FROM US.

THE other day we had a talk with a man who knew as little of the world around him as a baby. Yet he was a man of naturally fine intelligence. He had just been relieved from prison. Ten years ago he was incarcerated under a life sentence. Recently, however, circumstances had arisen which proved his innocence, and he obtained his freedom. But nothing seemed as before. He had been stationary while the world moved on. Many of his old friends were dead, and all were changed. A big slice of his career was lost, and worse than lost. Could he ever make it up? No, never. Besides, although he had committed no offence, the mere fact that he had been convicted of one, would always place him at a disadvantage.

Different as it is in all outward conditions long illness produces results which resembles those of enforced solitude. When confined to our homes by disease we are virtually out of the world. Friends may and do, pity us; but they do not lie down by our side and suffer with us. Ah! no. They go their own ways and leave us alone. In the midst of company we are still alone. Enjoyment, food, sleep, fresh air, movement, work, &c.---those are for *them*, not for us. Alas! for the poor prisoner whose jailor is some relentless disease. Who shall open the iron doors and set him free?

"I never had any rest or pleasure." So writes a man whose letter we have just finished reading.

"In the early part of 1883," he says, "a strange feeling came over me. I felt heavy, drowsy, languid, and tired. Something appeared to be wrong with me, and I couldn't account for it. I had a foul taste in the mouth, my appetite failed, and what I did eat lay on me like a stone. Soon I became afraid to eat, as the act was always followed by pain and distress. Sometimes I had a sensation of choking in the throat as if I could not swallow. I was swollen, too, around the body, and got about with difficulty owing to increasing weakness.

"At the pit of my stomach was a hungry, craving sensation, as though I needed support from food; yet the little I took did not abate this feeling. My sleep was broken, and I awoke in the morning unrefreshed. For four years I continued in this wretched state before I found relief."

This letter is signed by Mr. Charles H. Smith, of 19, New City Road, Glasgow, and dated February 15th, 1893.

Before we hear how he was at last delivered from the slavery of illness, let us listen to the words of a lady on the same theme: Mrs. Mary Ann Rusling, of Station Road, Misterton, near Gainsborough. In a brief note dated January 3rd, 1893, Mrs. Rusling says she suffered in a similar way for over fifteen years. Her hands and feet were cold and clammy, and she was pale and bloodless. She had pain in the left side and palpitation, and her breathing was short and hurried. No medicines availed to help her until two years ago. "At that time," she says, "our minister, the late Rev. Mr. Watson, told me of Mother Seigel's Curative Syrup, and urged me to make a trial of it. I did so, and presently felt great relief. It was not long before the bad symptoms all left me, and I gradually got strong. I keep in good health, and have pleasure in making known to others the remedy which did so much for me."

Mr. Smith was completely cured by the same remedy, and says had he known of it sooner he would have been saved years of misery.

The real ailment in both these cases was indigestion and dyspepsia, with its natural consequences. Throughout the civilised world its course is marked by a hundred forms of pain and suffering. Men and women are torn to pieces by it as vessels are by the rocks on which they are driven by tempests. So comprehensive and all-embracing is it that we may almost say that there is no other disease. It signifies life transformed into death, bread turned into poison. Watch for its earliest signs---especially the feeling of weariness, languor, and fatigue, which announce its approach. Prevention is better than cure.

But by the use of Mother Seigel's Curative Syrup, cure is always possible; and poor captives in the loathsome dungeons of illness are daily delivered as the hand of the good German nurse swings open the doors.

* This is not an immaterial detail, for the claim of the Sultan to the Khilâfatship has since assumed an extension and complexion which go considerably beyond what was admitted in 1888.

NOTICE.

List of Unclaimed Packages lying in the Custom House Wharf.

Vessels.	Marks & Nos.	Description of Packages.

ALLAN'S ANTI-FAT

A Wonderful Medicine.

BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite Shortness of Breath, Costiveness, Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are in valuable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

POSTSCRIPT.

After paying the expenses of the publication the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October, 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

Scientific American.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noise in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, A. H. S. Street, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

To be Majors.

Captain George Vero Kemball, Royal Artillery.
 Captain George John Younghusband, Indian Staff Corps.
 Captain Frederick Campbell, Indian Staff Corps.
 Captain Tom Evelyn O'Leary, Royal Irish Fusiliers.
 Captain Lionel Herbert, Indian Staff Corps.
 Captain James Gibbon Turner, Indian Staff Corps.
 Captain William John Bythell, Royal Engineers.

Rewards.—Order of British India.

The Governor-General in Council is pleased to sanction the admission to the Order of British India, as additional members on the Bengal list, of the under-mentioned Native Officers, in recognition of their services with the Chitral Relief Force :—

Rai Bahadur Dhanpat Rai, Superintendent of the Jaipur Imperial Service Transport Corps.

Pandit Suraj Pershad, Commandant of the Gwalior Imperial Service Transport Corps.

WEEKLYANA.

A NUMBER of Natives of India having been engaged and about to depart by sea out of British India, under agreements made with or on behalf of Her Majesty's Government to labour for hire in East Africa, on or in connection with the railway from Mombassa to or towards Lake Victoria Nyanza, now in course of construction, the Governor-General of India in Council has been pleased to exempt them from the provisions of the Indian Emigration Act (XXI of 1883). In other words, none of the provisions of the said Act shall apply to the said labourers or any of them. What then is to be their protection? Are they, bound hand and foot, to be consigned to the horrors of the Middle Passage and the Dark Continent?

**

THE new Fellows of the Calcutta University are :—

The Hon'ble Mr. Justice Sule, M.A.

Lieutenant-Colonel A. D. McArthur, R.E., Secretary to the Bengal Government, P. W. D., Irrigation and Marine branches.

Surgeon-Major J. B. Gibbons, M.D., Superintendent, Campbell Medical School and Professor of Medical Jurisprudence, Medical College, Calcutta.

Mr. W. H. Arden Wood, B.A., Principal, La Martiniere College, Calcutta.

Mr. E. M. Wheeler, M.A., Senior Tutor, Bishop's College, Calcutta.

Shams-ul-alam Atam Rahman, Superintendent, office of the Sanitary Commissioner with the Government of India.

Babu Suresh Prasad Surbadhuary, M.D.

Ra Jyotindra Nath Chaudhuri, M.A., B.L.

Babu Lal Behari Mitter, M.A., B.L.

The last three come in by election.

..

THE Central Institution, Calcutta, has been affiliated to the Calcutta University in Arts up to the B. A. standard.

**

THE morning papers report that a Mahomedan, while engaged in making fireworks, dropped a lighted cigarette from his mouth into a vessel of gun-powder, which exploded and burnt him severely.

The cigarette is the fashion of the day in Calcutta and has extended to the country. It is not confined to grown up men but is the favourite of young men andurchins. The hooka is at a discount. Even Mahomedans have begun to discard it in favour of the rolled leaf. This imitation of European civilization bodes no real progress. The hooka may be inconvenient, but it is more sober and less injurious.

**

PREPARATIONS are making for a grand military tournament at the maidan near the Ochterlony column. It will be on the lines of the Agricultural Hall, Islington, and held on February 5th, 6th, 7th and 8th, within an enclosure 400ft. by 200ft. capable of accommodating 5,000 spectators. Performances daily at 3.30 and 9 P. M., consisting of musical ride by 16th Lancers; silent ride, 3rd Bengal Cavalry; feats of horsemanship, 5th Bengal Cavalry; musical Artillery drive by 41st Field Battery, R.A.; gymnastic displays by Lucknow Gymnasium and 3rd B. C., Mountain battery display, and concluding each night with a spectacular display of all arms representing an attack on a fort.

THE rumour is contradicted that the Maharaja of Patiala will lead to the harem a sister of the just deceased Maharani Florence. The grief is too fresh for the second act.

**

SIR Charles Pritchard, the Public Works Minister, has resigned, on account of ill health.

**

THE next Law Member is Mr. Mackenzie D. E. S. Chalmers, County Court Judge, Birmingham. He was in the Indian Civil Service from 1869 to 1871, in the N.-W. P. It was hoped that an Indian in the person of Sir Griffith H. P. Evans would be tried, but it was not to be.

..

SIR Alexander Mackenzie has, in succession to Sir Charles Elliott, accepted the patronship of the India Club. The Club will celebrate the acceptance by an Evening Party.

ON the invitation of the Port Commissioners, Mr. Vernon Harcourt, an expert on English rivers, has arrived at Calcutta to report on the Hughli, and is busy with the enquiry. He is at present reading up the old reports, and will shortly go down the river on a tour of inspection in the company of Captain Poley to prepare his own.

THE public holidays of a year are usually Gzietted before its commencement. This time there is a departure, in the *Calcutta Gazette*, from the old practice. Though the notification is dated December last, it does not appear till the 22nd January following. How to account for the delay? The holidays for the current year have been fixed as under :

"Notification—No. 6205Mis. *The 9th December 1895.*—Under section 25 of Act XXVI of 1881, entitled 'The Negotiable Instruments Act, 1881,' the Lieutenant-Governor hereby declares the following days to be public holidays during the year 1896 :—

All Sundays.

January 1st	New Year's Day.
January 20th and 21st	Sri Pancham.
February 28th	Do jatra.
April 3rd	Good Friday.
" 4th	Easter Saturday.
" 11th	Chaitra Sankranti.
June 20th	Dasahara.
August 31st	Janmasami.
October 6th	Mahalaya.
" 13th, 14th, 15th, 16th and 21st, 22nd	Durg -Lakshmi Puja.
November 4th and 5th	Kali Puja.
" 13th and 14th	Jagadhatri Puja.
December 24th	Christmas Eve.
" 25th and 26th	Christmas Day and the day following.

The day which may be fixed by the Government of India for the observance of the Birthday of Her Majesty the Queen Empress of India shall also be a public holiday.

H. H. RISLEY.

Secy. to the Govt. of Bengal.

"Notification—No. 6206Mis. *The 9th December 1895.*—With reference to the above Notification, the Lieutenant Governor hereby notifies that on the following days during 1896, which are not declared to be 'public holidays,' the offices under the Government of Bengal and all Revenue and Magisterial Courts in Bengal, with the exception of the offices of Collector or Customs, Shipping Master, the Registrar of Assurances, Calcutta, the Collector of Stamp Revenue, Calcutta, the Stamping Department of the Office of the Superintendent of Stamps, Calcutta, and the Salt Rawana and Opium Sale Departments of the Board of Revenue, shall be closed :—

I.—Muhammadan Holidays.

Id-ul-fitr	On the 17th March, but if the moon be visible on the 15th March, on the 16th March.
Id-ul-zuha	On the 24th May (Sunday), but if the moon be not visible on the 14th May, on the 25th May.
Muhurram	On the 22nd and 23rd June, but if the moon be visible on the 12th June, then on the 21st (Sunday) and 22nd June.
Fatiha-dwazdaham	On the 22nd August, but if the moon be not visible on the 10th August, then on the 23rd August (Sunday).

II.—Hindu Holidays.

Durga-Lakshmi Puja	...	October 11th (Sunday), 12th, 17th, 18th (Sunday), 19th and 20th.
--------------------	-----	--

III.—Other Holidays.

The day preceding Christmas Eve	...	December 23rd.
The second day following Christmas Day	...	" 27th (Sunday).

H. H. RISLEY,

Secy. to the Govt. of Bengal.

The Governor-General in Council has also notified that the exception of the office of Issue of the Paper Currency Department and that of the Comptroller and Auditor General, the offices directly subordinate to the Government of India at Calcutta, will also be closed on the days not declared public holidays.

THE dates of the first three of the five Criminal Sessions for the year 1896 are :—

First Session	...	Wednesday	...	February 19.
Second Session	...	Wednesday	...	April 29.
Third Session	...	Wednesday	...	July 1.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

GENERAL Sir F. Scott has occupied Coomassie without opposition. The King Prempeh has agreed to the British demands and submitted to be publicly brought with some relatives to Cape Coast Castle pending the settlement of the indemnity he is to pay to the British. The troops are now returning to the coast. It is said that there is universal rejoicing among the natives at the result of the expedition.

FRANCE has agreed to a renewal of the British commercial treaty with Tunis, and Great Britain has agreed to mutually delimitate the boundaries of the Niger territory.

THE report current in London that a British ultimatum had been presented at Peking demanding the opening of the West River, is positively denied by the Foreign Office. Nothing in the nature of any ultimatum has been presented, the representations made by the British Minister regarding the opening of the ports on the West River being absolutely of a friendly character.

THE death of M. Floquet, the celebrated French politician, is announced.

GREAT fêtes are being held at Berlin in celebration of the twenty-fifth anniversary of the founding of the German Empire. The Emperor William, speaking at a grand banquet, on the 19th, emphasized the world-wide character of the Empire, and appealed to the nation to continue in the closest unity to enable the Government to protect Germans abroad if required.

THE Boer Commandant who captured Dr. Jameson addressed his men before dispersing them, and said they must not suppose that they had vanquished the British race. He urged them to foster good fellowship and co-operation, which would be for the welfare of the Republic.

MENREK has offered to treat for peace with the Italians. Advices from Abyssinia state that the position of the Italians at Makleh is most critical, and that the winter supply of the garrison is failing.

GREAT Britain and America have agreed each to appoint an arbitrator to settle the amount of the claim for the American seizures of Canadian sealers. In the event of their not being able to agree, the Swiss Government will appoint an umpire.

A RESOLUTION passed by the American Foreign Affairs Committee for extending the Monroe Doctrine has been reported to the Senate. Its effect is to place the smaller American Powers under the absolute subjection of the United States. The Resolution has been ill received, and is not likely to be passed by the Senate. The United States Government appears to be desirous of a speedy settlement with Great Britain. President Cleveland has pronounced the resolution mischievous and untimely.

PRESIDENT Cleveland's Commission of Enquiry into the Venezuelan boundary question has invited Venezuela and Great Britain to furnish evidence of their respective claims.

THE Japanese Minister in London, speaking at a banquet given by the Saddlers' Company, said that during the last eighteen months the Japanese had received material proof of the friendship of Great Britain, which country was the first to conclude a treaty with Japan,

receiving the latter into the comity of nations on an equal footing. Then, again, Great Britain did not join the combination obliging Japan to relinquish some of the fruits of her victory over China. The dominions of the Mikado and of Her Majesty the Queen did not adjoin anywhere, and no conflict was, therefore, likely on that score, but the time might come when Great Britain and Japan would have to defend their common interests.

At a banquet given at the Hotel Metropole, on January 21, to Lord Lamington, Governor elect of Queensland, Mr. Chamberlain made a speech in which he said that Great Britain had lately become isolated and was confronted, from quarters whence one might expect friendship and consideration, with suspicion and even hate. The British love of peace, he said, was regarded as a sign of weakness, and the prospect of their discomfiture was regarded with a satisfaction which could hardly be disguised, but it was shewn that, while they were resolved to fulfil their obligations, the British were equally determined to maintain the rights of the Empire, which was now secure in the strength of its own resources and the loyalty of its children. Mr. Chamberlain then said that the enthusiasm of Australia and Canada proved that British hearts beat in unison throughout the world.

In a despatch to Lord Dufferin, dated the 15th of January, Lord Salisbury explains that the main object of the new agreement is an engagement between France and Great Britain not to make any armed advance in the valley of Menam except in concert for the maintenance of the independence of Siam, and to give security to the tranquil development of trade in that region. Despatches that have passed between Lord Salisbury and Baron De Courcel, French Ambassador in London, declare their joint solicitude for the security and stability of Siam. The French press dislike the agreement.

A RUSSO-CHINESE bank has been formed at St. Petersburg. It will have branches in the chief cities of Europe and Asia.

THE Queen of Madagascar has signed a new treaty making the country virtually a French possession.

THE *Pall Mall Gazette* publishes a telegram from its Pera correspondent, stating that Russia and Turkey have concluded an offensive and defensive treaty. Nothing is known of such a treaty either at the Foreign Office or at the British Embassy at Constantinople.

THE latest advices from the Transvaal state that Johannesburg is still unsettled, a number of unemployed being the chief element of danger. Parties of men are daily leaving Johannesburg secretly, but it is not known whither they are going.

OFFICIAL reports state that the Armenians are reduced to a state of despair, and are burning Turkish villages.

A GLOOM has overcast the joy at the bloodless surrender of King Prempeh. Prince Henry of Battenberg, after leaving the Gold Coast on the 15th instant, in the cruiser *Blonde*, for Madeira, had a relapse of fever contracted in Ashanti and died at sea on the 20th. The body will be embalmed and brought over to England to be given a military burial at Windsor. Court mourning will be observed in India until the 5th of March. Ships in port will carry their flags at half-mast.

The Prince was born on October 5, 1858, married Princess Beatrice, the youngest daughter of our Queen-Empress, and made England his home. He died, like the Prince Imperial, in the service of the country of his adoption.

GOVERNMENT HOUSE is vacant. Not that the Exodus has commenced but the Viceroy is away to the Bay to cruise for his health. The fever which seized him on Christmas eve, brought on by chill, followed by affection of the liver, being persistent, Lord Elgin was advised to try sea breeze. Accompanied by Lady Elgin, Lady Elizabeth Bruce, Brigade-Surgeon Lieutenant-Colonel Franklin, and Captain Adam, Aid-de-Camp, he left Calcutta on Thursday by the *Warren Hastings*. It is expected that he will shake off the fever and return to Calcutta by the middle of next week.

Reis and Rayyet, how successful your biography of Dr. Mukerjee has proved to be, and what wide attention it has attracted. This is as it should be.

If I live till you get back to England, I hope to enjoy the pleasure of your personal acquaintance. Though shaken in health, I somehow still feel youngish; and it may be that I am to jog on a while longer.

Yours sincerely,
Fitzedward Hall."

REIS & RAYYET.

Saturday, January 25, 1896.

THE TITLED ARISTOCRACY IN INDIA.

THE honours' list of new year's day, as that of the Sovereign's birth-day, comes on us as a matter of course. It does not excite any emotion, save, perhaps, of sadness, not unmixed with a little vexation, at the thought that the selections are made upon a principle unintelligible to the outside world. These recurring opportunities are frequently lost, through absence of correct knowledge on the part of those with whom the selection rests, of achieving something tangible in the true interests of the Empire. From the manner in which they have come to be bestowed, titular distinctions have practically ceased to inspire any respect for their possessors. It is true a happy selection may now and then be noticed; but then the fact stands out in bold relief that for these very few approvable instances dozens occur that are not only not happy but are even mischievous. The consequence is that the deserving, instead of thinking themselves truly honoured, find themselves herded together with others whom they can scarcely regard as their equals. Among the host of Maharanis created by the British Government, who so deserving as Maharani Samamoi? The distinction, however, instead of being regarded by her and her advisers as ennobling, is taken as really bracketing her with others who can scarcely come up to her in liberality. The saying is current among the people of India that while the incessant downpour of rain-charged clouds does not produce any alteration in the condition of an oyster, a drop from the constellation Swāti begets a precious jewel within it. Maharani Samamoi is come to be taken as the constellation Swāti to most of the applicants that approach her for help. It is a downright injustice to suffer her to be still reckoned with others upon whom the same distinction has been conferred. Take also the title of Maharaja: who will not say that that high distinction has been lowered by being conferred on some that are not worthy of it? Heads of large landed families, who are almost territorial chiefs for the respect in which they are held by the whole country, are Maharajas. In formally conferring this distinction on them, the British Government has only

recognised the voice of the country. Burdwan and Krishnagar, speaking of Bengal, Doomraon and Durbhanga, Bettiah and Hutwa, in Behar, are centres of glorious traditions. Though Zemindars, they have each a territorial significance. These families can trace their descent to Mussalman times. The British Government, on its rise, found them already in existence. So extensive were the charities of Burdwan and Krishnagar that few Brahman families in the metropolitan districts of Bengal are regarded as respectable that cannot show the possession of at least some acres of land obtained in gift by an ancestor noted for learning or piety from those two great houses. The founder of the Sobhabazar family, in the early days of British ascendancy, rendered political services of an important kind. When the time came for rewarding him, he was made a Maharaja. It was the highest reward which the Government of the day could bestow on him. He was numbered with Burdwan and Krishnagar, Durbhanga and Doomraon. The property which he had acquired in the scramble that followed upon the extinction of the house of Ali Verdi, justified the distinction. The departure, in the case of Maharaja Nobokissen, was a wide one. Exceptional circumstances, however, justified it. He was a great figure in those days, known to the Court of Directors in London and intimately connected with those agents of the East India Company who brought about the great revolution in Bengal.

With the growth of the Empire, new ideas came to be entertained about a landed aristocracy. Conservatism is not an ingrained virtue or vice of the British people. Asiatic nations stand on birth and blood for respectability. Western nations rely on wealth and ability as the chief claims to honour and esteem. In their own country, which has an ancient aristocracy still enjoying many valuable privileges, they have always recruited it from the commonalty, the selections being invariably guided by merit and wealth. Under the influence of similar considerations, British statesmen in India readily recognised the ambition for aristocratic honours of successful men in different walks of life. It was felt that if the great houses in England, tracing their origin to the comrades in arms of William the Conqueror or to princes and kings of the Plantagenet and the Tudor lines, could tolerate the presence in their order of men whose eminence depended upon only personal merit and the acquisition of wealth, and submit to their lead and even sway, however galling in some cases as that of Thurlow for a time, the old landed families of India would have little reason to resent the bestowal of honours, to which as yet they only had a claim, upon new men pressed to the fore by merit and wealth. A breach having been effected in the barriers by the admission of a really able man who had succeeded in making himself serviceable to the rulers, no great difficulty was experienced in widening it and admitting men of lesser note as occasion arose. Nor, perhaps, all things considered, can serious objection be taken to the adoption of such ideas by rulers not cognisant of the depth of the sentiment cherished by the people of this country for birth and blood. Unfortunately, the result of that policy has been a fungus growth of Rajahs and Maharajahs all over the land. That growth has really been so rapid, especially within the last few years, that, as already said, the distinctions have lost much of their value, if not in the eyes of some

The Indian Association for the Cultivation of Science.

PRACTICAL CLASS in Chemistry under Bibu Ram Chandra Datta, F.C.S., on Monday, the 27th Inst., at 4-15 P.M. Subject: Bismuth, Arsenious and Arsenic Salts.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., on Tuesday, the 28th Inst., at 6 to 8 P.M. Subjects: Histology—Large and small Intestines; Physiology—Alimentation.

PRACTICAL CLASS in Chemistry under Bibu Ram Chandra Datta, F.C.S., on Wednesday, the 29th Inst., at 4-15 P.M. Subject: Salts of Antimony and Tin.

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 29th Inst., at 6 P.M. Subject: Reflection from Plane Mirrors.

Lecture by Babu Sumanadas Mukerjee, M.A., on Thursday, the 30th Inst., at 3 P.M. Subject: Analytical Conics. Trilinear Co-ordinates and their Metric Relations.

PRACTICAL CLASS in Chemistry under Bibu Ram Chandra Datta, F.C.S., on Friday, the 31st Inst., at 4-15 P.M. Subject: Aluminium, Chromium and Iron Salts.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

January 25, 1896.

of their possessors, at least in those of the people of the land.

The machinery by which titular distinctions are conferred, is not altogether satisfactory. As we had, on a late occasion, to remark, it is the District Collector that in his reports to the Divisional Commissioner, mentions names. The Commissioner exercises his power of selection and sends up a few names to the local Government. The latter makes a report to the Government of India. Practically, it is the Foreign Office that settles the matter. For all that, it is the Viceroy and his Private Secretary who are finally responsible. Both of them have very little personal knowledge of even the most eminent men recommended. The Viceroy is a British nobleman holding the helm of State for only five years. The Private Secretary also is very generally a griffin as unfamiliar with India and Indian names as his chief. Their absence of knowledge could very well be supplied in this direction by both the official and non-official members of Council. But the Council, not even the official members, are ever consulted on such occasions. As a matter of fact, therefore, it is the clever Secretaries of the several local Governments that really rule the roast. As pointed out by us on the occasion adverted to, those amongst them that possess some literary ability carry the day. It is, after all, a battle of sentences, for the Viceroy has to make up his mind from the written materials before him. Overwhelmed as the Provincial Governors and Lieutenants are with work of every description, they are glad to leave the recommendations, unless interest is excited by particular individuals, to their principal scribes in charge of departments. The only satisfactory feature in the existing arrangements is that neither Secretaries, nor Provincial chiefs, have any chance of knowing what the fate is of any particular recommendation till the actual appearance of the *Gazette Extraordinary*. Intrigue, therefore, is unable to penetrate beyond the regions of the Secretariat. Considering the facility there is of recommending undesirable names, it would be an evident improvement if at least the official members of the Government of India were taken into confidence. Nothing can be lost by consulting them. On the other hand, much may be gained from their personal knowledge which is sure to operate as a check upon Secretariat recommendations.

Examining the Indian list of new year's day, we find that out of 82 individuals who have become recipients of the honours showered by the Crown, 22 are Europeans and 60 Asiatics. Of these, 3 belong to Burma, the latest acquisition of Britain in the east. Of the remainder, 41 are Hindus, and 16 Mussulmans. All the Europeans have come in for the higher honours. The Asiatics, for the most part, have been recipients of the inferior honours. Only 8 Hindus and 2 Mussulmans are among those who have been admitted to the higher distinctions. Among these 10, occurs the name of a lady who has been made a Rani. The large number of Europeans honoured with the higher distinctions need create no surprise. They belong to the different services, Civil, Military, and Medical. Their merits become directly known to the Viceroy in connection with the discharge of their duties. Hindu and Mussalman officials do not belong to the higher ranks of service. As regards non-official Hindus and Mussulmans, their only chance is in the favourable notice that District Collectors may take of them. The best men among both Hindus and Mussulmans never,

or very seldom, approach the officials. Their chance, accordingly, is practically nil. No wonder, therefore, that many undesirable names are seen in the list, of both Hindus and Mussalms, particularly those that do not belong to the services.

One name that has come in for the high honour of Maharaja has caused considerable discontent. Considering, however, the efforts he had been making, and assured as he was of support from Mr. Secretary Cotton, his elevation should not be a matter of surprise. It is true, almost all our Calcutta institutions, almost all public movements, lack pecuniary support, the Furf being probably the only fungus that prospers in our midst. The bestowal, therefore, of such an honour on the individual in question, in the absence of a *quid pro quo*, cannot fail to be marked as a blunder, for an opportunity has been lost the like of which may not soon recur. But in these days of intrigue and Secretariat influence, even a small expenditure may be made to go a great way, if judiciously made. The new Maharaja, it is said, has given a local habitation to a little school named after a local Secretary. Of schools we have really too many at Calcutta. The time has fairly come when the Director of Public Instruction should have some power to suppress new schools, considering the mischief that is done to the cause of education by seminaries springing up all around us under the auspices of projectors prompted only by the desire of gain. Under the circumstances, the little school to which we refer would cause no inconvenience if it were to disappear. Nor has the building in which it is accommodated been granted unconditionally. Then, again, it is said that a provincial lieutenant was sumptuously fed by him and dazzled with the gold and silver brought out on the occasion. Lord Elgin, by enquiring into the case to which we refer, will, we are sure, gain abundant experience of how recommendations may be obtained from pliant Secretaries and provincial Governors by particular persons.

The C. I. E. conferred on Dr. Rish Behari Ghosh has been very tardy. If it is meant to honour his profession, he is the first to receive the distinction. As a member of the Legislatures, he comes very late. Babu Sarat Chandra Dass, already a C.I.E., has been made a Rai Bahadur. What does it mean? Is it an elevation or the contrary? As the Dewan of the Nawab of Murshidabad, Mr. Fazl Rabbi has well earned the distinction of Khan Bahadur. If the Nizamut had not been on its wane, he would have been much greater. The bit for Raja Sashisekharwar is recognition of his labours on the Guuja Commission. The Madras and the Bombay recipients do not provoke any comment. The Burmese distinctions for a time remain unintelligible to the people of India. Characterised as they are by monosyllables beginning and ending, for the most part, with double nasals, we hope they are acceptable to those upon whom they have been bestowed.

THE LITERATURE OF BENGAL.

TO THE EDITOR.

In my last letter I made some general remarks on Mr. R. C. Dutt's *Literature of Bengal*. This time I shall go into details. I wish to inform the reader at the outset that I am entirely friendly to Mr. Dutt and his book. That, however, should not prevent me from pointing out some ugly blunders.

All the English writers, (understanding by that expression those native scholars who employ the English language as the medium of their thoughts), from a long time back, have been commit-

ting a serious error about Chaitanya. The late Babu Tara Prasad Chatterjee, one of the first batch of our B. A.'s, fixed 1484 A. D. as the year of Chaitanya's birth. It will be found in his essay on Chaitanya read before the Bethune Society in 1860. This is a palpable mistake. Babu Surendranath Banerjee, in his lecture before the Bhowanipur Students' Association, said "that Chaitanya was born in the year 1485." Mr. R. C. Dutt, in his present book, follows him and fixes the year 1485 as the correct birth date of the great reformer. Even Sir William Hunter, who is generally accurate, has fallen into the trap, for he writes, in page 95 of his *Brief History of the Indian People*, "in 1485 Chaitanya was born." The year 1485, however, is not correct. Chaitanya was born in the month of *Phalguna* of the Hindu *Saka* 1407. As usual, by adding 78 to the Hindu era, we get the corresponding English year, which is 1485. But the above writers do not seem to be aware of the fact that when the English year ends, the Bengalee year still continues. The English year ends in the middle of the month of *Pous*. Thus we see that 3 additional months are still left, and as Chaitanya was born in one of these additional months, we have to add one more to the number, and, therefore, the year 1486, A. D. is the real birth date of the great latter-day Apostle of Vaishnavism in Bengal. An exactly similar mistake was made by those gentlemen who erected the present tomb to the memory of Michael Madhusudan Dutta. The poet was born in the month of *Magha* of the Bengali year 1230 and, therefore, by adding 593 to the number, they fixed the year 1823 A. D. as his birth-date, which is wrong. This error has been corrected by the biographer of the poet who gives the year 1824, as the proper date.

I take this opportunity of correcting a common blunder regarding the date of Chaitanya's death. On the authority of "Chaitanya-Charitamrita," the year is 1455, Sak. Adding 78, we get 1533 A. D. Sir William Hunter, following Professor H. H. Wilson, gives 1527 A. D. as the date of Chaitanya's death. Some correspondence, I am told, passed between Sir William Hunter and Pandit Mahendra Nath Vidyanidhi, the biographer of Akshaya Kumar Dutt. The Pandit brought the error to the Doctor's notice; but that great scholar seems to be unwilling to accept the correction. That Prof. H. H. Wilson committed a blunder, Sir William Hunter is slow to admit. But he should remember that no authority can be so reliable as that of "Chaitanya-Charitamrita" of Krishnadas Kaviraj Goswami.

In page 193 of the *Literature of Bengal*, Mr. Dutt calls the biographer of Michael Madhusudan Dutta by the name Jogendra Chandra Basu. The biographer is Jogindra Nath Basu and not Jogendra Chandra.

In page 59 he writes "*Academy of Bengali Literature*," &c., &c. The Englished name is not *Academy of Bengali Literature* but *Bengal Academy of Literature*. *Bangiya Sahitya Parishad* is the original appellation. How should it be translated? 'Sahitya Parishad' is, I think, qualified by 'Bangiya' which simply indicates the place of its existence or limits the scope or extent of its operations. The other construction, *viz.*, 'Parishad' qualified by 'Bangiya Sahitya,' would be unnatural; for 'Banga Sahitya' and not 'Bangiya Sahitya,' if such were the meaning, would be proper. If the gentlemen who have christened the institution really mean that 'Parishad' should be qualified by 'Bangiya Sahitya,' the sooner they alter the name into 'Banga-Sahitya Parishad' the better for all concerned. As such, till they alter it, the correct translation would be 'Bengal Academy of Literature.' Mr. Dutt would not have made these mistakes, had he been more in touch with the people about whose literature he has written. While passing a magnificent panegyric on the biographer of Michael Madhusudan Dutta, he is careless of the very name of the author he praises!

These are some of the many instances, in his book, of carelessness, for which he may be called upon to answer. He is the President of the *Bangiya Sahitya Parishad* or Bengal Academy

of Literature. He is not careful about even the name of the institution of which he is the head. The Parishad consists of some men of culture and reputation. The very word "Parishad," as they write it, is doubtful. The vowel sound at the end should be omitted if an assembly be meant. It should be spelt "Parishat" as Kalidasa spells it in the opening scene of *Sakuntala*. Gentlemen desirous of correcting the vagaries of Bengali spelling and idiom should not themselves set the example, in their very name, of slovenliness. "Parishad" may be justified, but the justification will scarcely be admitted by good scholars.

Then, again, the names of the great men of India have all been misspelt: Hurrish into Harish, Rajendralala into Rajendra Lal, Peari Charan Sircar into Pyari Charan Sirkar; Kissorsy Chand Mittra into Kisori Chand Mitra, &c. The rule has long been accepted of spelling a name after the manner of its holder. A Government security standing in the name of Hurrish will not be allowed to be transferred by a Harish. A cheque signed Rajendra Lal will be dishonoured by any Bank if the account stands in the name of Rajendralala. It is too late to correct Calcutta into Kalikata. Indeed, if Mr. R. C. Dutt be really desirous of playing the purist in the matter of personal names, he should spell them after the correct method of transliteration from Sanskrit. "Hurrish Chandra" should be "Harichandra," "Pyari Charana Sarakara" for "Peari Charan Sirkar," "Ramecha Chandra" for "Ramesh Chunder," &c. The first President of the Bengal Academy of Literature should give us some system instead of caprice in such an important matter as the spelling of personal names. Verily, he should begin by correcting the spelling of his own name.

This is scarcely the place for taking up the eulogy bestowed on this very book by the *Englishman* of the 16th January last. It makes some errors which should not go uncontradicted. Mr. R. C. Dutt is spoken of as a nephew of the poet Madhusudan Dutta. The poet comes from a family in Jessore, while Mr. R. C. Dutt belongs to an altogether different family. Then, again, we are told of a poem named *Srimanta Sadagar* by Mukundaram who also wrote *Chandi*. This is as correct as saying that Moore wrote a poem called "The Veiled Prophet of Khorasan" besides another named *Lalla Rookh*, or that Swift wrote a tale called "Voyage to Lilliput" besides another work called "Gulliver's Travels." The whole of the concluding part of the article, which condemns Sanskritised Bengali, is really a complete retraction of the high praise bestowed in the earlier part on Mr. R. C. Dutt as both a critic and historian of Bengali Literature. The *Englishman* does not take into account that Michael Madhusudan Dutta, whom Mr. R. C. Dutt regards as the first of Bengali poets, wrote not in Bengali but a highly artificial language abounding with such Sanskrit words as were the delight of the poets of mediæval India and as were eschewed by Valmiki and Vyasa.

S. C. SANYAL.

AN M. P. ON ENGLISH EDUCATION IN INDIA.

At the Baranagore Victoria School, on Sunday, prizes were distributed. Mr. J. Caldwell, M.P., for Mid-Lanarkshire, presided and delivered the following address:—"He said that whilst he had hoped to get away from Calcutta without making anything of the nature of a public speech, yet, if he were to be called upon to make such a speech, it was, perhaps, not inappropriate that it should be on an educational subject, a subject in which for many years, he had taken a deep interest. Some might think that it would be a very easy matter for him (Mr. Caldwell) to address an assemblage of school boys. The task, however, was not so easy as it might at first sight appear. He rather felt himself in the position of a teacher in Scotland who, when asked for the reason why he always reverently took off his cap when he entered the school, replied to the effect that he was but an humble schoolmaster with but very little influence in the world, whilst before him were children, with probably great futures and destinies, before whose undeveloped talents he stood in awe and bowed with reverence. Such, he hoped, also were the feelings which animated their teachers, as, from time to time, and under varying conditions of success, they carried on their work of instruction. In India as in England,

Scotland, and Ireland and, indeed, in every country, the teaching profession was doubtless but poorly paid for the results which were expected and demanded. Nevertheless he thought their teachers and the teachers of India might, in some measure, console themselves for the smallness of their incomes by the thought of the noble work that they were doing in aiding the rising generation to take a fitting place in the civilization, progress and development of the world. From what he (Mr. Caldwell) had seen of India, and from all that he had been able to gather concerning the prosperity of the people, he should say that India was wonderfully developing, and that in no part of India was that development more marked than in the province of Bengal, of which Calcutta was the great and leading centre. There had been a rapid, and at the same time a steady improvement during the last 20 or 25 years, and the improvement was still going on. That a country so largely agricultural as India, should, in common with the rest of the agricultural world, to have suffered, would not have been in the least surprising. But whilst there has been agricultural depression everywhere, and particularly in England and Scotland, it was satisfactory to find that that depression, (except it might be owing to the recent rather dry season) had not extended itself to India. True, other countries like the Argentine Republic had been cutting India largely out of markets for wheat, but that had been more than made up by an advance in the cultivation and production of tea, cotton, and of jute, whilst agriculture in India generally had been aided by increasing railway and canal facilities in bringing produce to the markets and for shipment, and in the extension of irrigation works. Whilst the past had been so far well, yet it was impossible to overlook the depression that might be in store for the agriculturist of India in the near future.

The rural population was increasing, whilst the virgin soil was getting more and more limited. The cultivation of tea was increasing faster than the demands of the present markets, although new markets were being opened out, whilst jute, although at present a monopoly of India, might be cultivated in other countries. It would be well, therefore, for the rulers of India to look ahead and not depend too much on the present agricultural prosperity of India. They ought to recognise that, in order to promote the prosperity of the country, they must also do all they can to develop trades and manufactures. No doubt in many manual arts and manufactures the Native Indian was highly skilled, inheriting the skill and dexterity of many generations. Still, for quantity and for practical purposes, machinery was largely taking the place of hand labour, and, to keep pace with the march of the world, it was as necessary in the case of India as it has been found in the case of Great Britain and Continental countries, to stimulate and quicken the growth of education so as to produce as much highly skilled labour as possible. So convinced were the people of Great Britain of the necessity and importance of education that, in the British Isles, elementary education was entirely free, whilst technical and secondary education, as also University education, by means of scholarships and bursaries, were in a large measure free. Compared with that state of matters, he found that in the Baranagore Victoria School, which was representative of Indian higher schools generally, the school fee in the junior or lowest elementary classes was 2 rupees, or 2/4d. per month, and that while the total income of the school was 5,938 rupees, the school fees amounted to 5,121½ rupees as against only an aggregate of 816½ of Government grant. It was, he stated, impossible not to see that if India was to have any chance at all in the race for the trades and manufactures of the world, India must be put on a more equal footing as regards education and skilled labour with the countries of Europe and America. All honour to what voluntary agencies and enterprise had accomplished and were accomplishing in the way of education, and the Government ought to do everything to stimulate rather than the supplant private enterprise. But private enterprise, although in India most willing, was not able wholly to undertake the vast work of education that was necessary. He quite recognised all the good work and great interest shewn by the Government of India in the work of education, and he congratulated the people of India on having as Viceroy a Scotchman who was distinguished for the interest which he took in education. He found throughout India the great interest which he took in education. He found throughout India the great interest which the Government of India were taking in developing not only University and secondary education, but also in having schools for the more efficient education, and training of Native teachers. Still, even with all that was being done, more local and more Government assistance had become a necessity. He found European opinion in India much divided on the question of education. There were a few Europeans who were against the State having anything to do with the development of education, even of vernacular education. In their opinion it would tend to educate the masses to be above doing any manual labour or drudgery work. The very same objection had been stated against free education in Great Britain, but experience had shown that education did not tend to make the masses unwilling to work, but rather tended to dignify labour and to encourage people to labour more

jealously so as to increase their material comforts. The present difficulty in the case of the Native of India was that his wants being few and his ambition very limited he did not strive to produce more than was necessary to meet his daily wants. It was possible that, in some few cases, education might produce an unwillingness to do menial or manual work, but such unwillingness would quickly disappear when the necessity for work became apparent. Again, the more labour became skilled, the greater would become the prosperity of India, in which prosperity the Europeans and upper classes of India would all share. Obviously in this age of enlightenment, ignorance could never become an object to be desired by any country or people. There were Europeans, however, and some of them very influential, who doubted the expediency of teaching English to the Native or of increasing what was considered to be an already too numerous class of educated Natives. Their objections were twofold. First, what was the use of going on increasing an army of men with University degrees for whom there was no demand in the country, and who could not command probably more than 20 or 25 rupees or from 23s. 4d. to 29s. 2d. per month? As regards this objection the answer was that the value of educated men, although not fully appreciated at present, would gradually become more appreciated and recognised as the value of education became practically more apparent. Electricity was not much in use in Calcutta at present, nevertheless that was no reason for discarding its use as the rising light and motive power of the future. The second objection was that the spread of English education did not conduce either to the true enlightenment or to the loyalty of the recipients. There was no doubt a good deal of the most unjust disloyalty on the part of some who had received the benefits of a secondary and of an English education. That, however, was no good objection to the spread of such education, as there was no necessary connection between the progress of secondary and English education and disloyalty. The British Government had no occasion to fear the light of education being brought to bear on its Government of India. Not one anna of tribute was exacted by Great Britain from India. Every anna raised by taxation in India was intended to be spent in behoof of India and in the interest of India—a condition of things without a parallel in the case of dependency of any other country in the world. The British Government had done much to develop the prosperity of India by encouraging railways, canals and irrigation works and to improve the sanitary condition of the people by introducing water supplies to towns and cities, and in promoting works of a sanitary nature. Whatever debt might be due by India was more than represented by the present actual value of such practical and useful works. Britain sent out the pack of her educated young men who devoted the best portion of their lives to the service of India, and who were replaced with fresh and vigorous men when the period of superannuation had arrived. In that way India possessed a stream of continuous fresh and vigorous blood and talent chosen by examination from the West, an advantage for progress and development enjoyed by no other country in the world. It was not too much to say that to this judicious administration and Government of India much of its prosperity was due. Native talent was being increasingly employed in the service of the Government of India and would be extended as far as the peculiar circumstances of India would allow. In the case of a people composed of so many different races and religions as India it might be impossible in all cases to employ Native talent. In the case of the administration of Justice Native Judges were largely employed, and employed to advantage; but in their case there was always an appeal to a Higher Court or Power which gave confidence even to the suitors of different religious belief from the Judge. In the case of other administrations, however, the well recognised impartiality of the European was generally preferred by the Native to that of another Native whose religion must necessarily differ from that of many over whom he might be set. Mere intellectual knowledge or attainments was not of itself a proper or sufficient test as to the relative fitness of a Briton and an Indian for a post of administration, were confidence of the governed in the impartial administration was an important consideration. He (Mr. Caldwell) had been much struck by the number of Scotchmen whom he had met in India, and who all seemed to be occupying places of position or of trust. Why was that? Some would answer that it was because the Scotch were a more highly educated people than the English or the people of other nationalities. He did not think that that was the true answer. The success of the Scotchman was not due alone to his intellectual acquirements. Except in the case of those who went to the University, the attainment of the average Scotch boy was only a very modest attainment of reading, writing and arithmetic. His success lay in a different direction. It was in the moral and religious training and in the personal influence of the teacher which made Scotchmen noted all over the world for their truthfulness, their honesty, their steadiness, their perseverance and their conscientiousness. In a purely intellectual and educational examination there were Natives in Calcutta who could excel the Scotchmen of Calcutta, but yet no one would say that for the position which the

Scotchman occupy an intellectual Native with a University degree would be preferable. That brought him to remark and to point out that mere intellectual knowledge was not the sole end and aim of education. There was something higher beyond, which was the secret of the Scotchman's success. He quite recognised that in all matters of religion the Hindu and the Christian were not agreed, and he for one would not raise any question upon which the Hindu and the Christian disagreed. He would rather refer to those points upon which both Hindu and Christian were agreed, and it would be seen that a good Hindu might possess all the qualities which contributed to a Scotchman's success. So far as he (Mr. Caldwell) had been able to discover—and he would be glad to be corrected if he were wrong in his information—all intelligent Hindu believed in one great God above all other Gods, the maker of heaven and earth who governs the world, who heareth prayer, and who knows everything that is going on in the world or which passeth through the minds or thoughts of men. Christians believed the very same thing. Again, Hindus believe in a future life, and that according as men lived and acted in the present life so should be their condition in the next life. Christians held the same belief. Next Hindus counselled their followers to do three things, to cherish good thoughts, to speak good words, and to perform good actions. Christianity commanded the same. On these great essentials Hindu and Christian were agreed and he reverted to what he had said was the secret of the Scotchman's success, namely, that he was noted for his truthfulness, that is, that he always spoke the truth, and other men might rely on the truth of what he might say, that he was noted for his honesty, never stealing what belonged to his neighbour; that he was noted for his steadiness and integrity, for his perseverance, his determination to overcome obstacles, and for his conscientiousness; that he would perform his work as faithfully in his master's absence as if his master were present. Now there was nothing in all those qualities in a Scotchman which a good Hindu could not aim at, and was not even bound by his profession of Hinduism to observe. He impressed upon them that if they wished to make education an element of success in life they must not content themselves with striving after mere intellectual attainments, with relying solely upon being a Hindu and with saying prayers at certain stated times, or dipping themselves in the waters of the Ganges. They must go further. They must carry out the whole of the Hindu faith. They must put Hinduism into every day life and action. They must daily cherish good thoughts, daily speak good words, and daily do good actions. They must be truthful, honest, steady, persevering and be conscientious, with the ever present belief that there was one great God above who knew their every thought, word, and action, and that according as they lived in this present life so might they expect to fare in the next. Whatever value others may put on education, let every true Hindu value education, intellectual and moral, as the true key to success in life. Let it not be confined to the vernacular, but let it be extended to a full knowledge of English. He (Mr. Caldwell) differed from them in language, in race, and in religion. Nevertheless he acknowledged them as members of the same great British Empire, alike the subjects of Her Majesty the Queen, the Empress of India. It was as part of the British Possessions that India was so much indebted for her prosperity, and in having the fruits of her soil and the products of her manufactures brought out, through British enterprise, into all the markets of the world. Citizenship of the British Empire was a privilege which the people of India might justly value. The British Empire consisted of one-fourth of whole habitable globe, and comprised within its possessions and sphere of influence the most habitable and fruitful quarter of the globe. The English language had now become the language of 130 millions of people, was daily spreading, and was destined to become the most important language of the world. In India with its 300 millions of inhabitants there was a strong and an earnest desire everywhere to learn English. Nor was there any reason to wonder at that, for it had become patent to everyone that a knowledge of English was instrumental to the attainment of positions of trust, power and influence in all parts of the world. The Native of India required no stimulus or inducement to learn English. All that was needed was to place the means of instruction within his reach, and it would be contrary to all the past history and traditions of the world to anticipate any ultimate evil results from a spread of education. It was quite true that notwithstanding the naked condition of the people and the want in many cases of even the elements of a home or of a shelter, still even the very poorest and the most infirm, in the absence even of a compulsory Poor Law, were well cared for, and that the Native had all the appearance of being well fed and well nourished, and seemed everywhere to be contented and happy with his lot. Still they must recognise that the world was progressing and developing, and that, with that progress and development the condition of the people of India must advance. It was necessary, therefore, to look ahead and to begin to sow broadcast the seeds not only of vernacular but of English education. In conclusion, he quite recognised that the responsibility for the Government of

India lay with the House of Commons, of which he (Mr. Caldwell) was a member. He considered that the duty of the House of Commons was to govern India primarily for the benefit and in the interest of the people of India. He had no sympathy with those who might seek to govern India in the interest of any section of the people of the United Kingdom. India was not to be kept back from developing her material prosperity merely on account of any supposed or real detriment that such development might have upon British manufactures. It was quite possible that having the advantage of cotton and jute Native grown, India might be able successfully to compete with and even to overcome the manufactures of Lancashire and of Dundee. To the inexorable law of free competition, certain industries of Great Britain might, perhaps, in course of time, suffer, but the result, as a whole, would be beneficial to the British Isles. The growth of manufactures in India meant, meantime at least, greater trade in machinery from Britain, whilst as India prospered there would be the greater market for other British manufactures. He hoped that nothing would occur which might in the least tend to shake the confidence of the people of India in the unselfish and purely philanthropic character of British rule, and he hoped that the Government of India would continue to gain on the affections of the people, and that its hold of India would be deep seated and deep rooted owing to its justice and impartiality of administration, and to its seeking as its chief end and aim the comfort, well-being, and happiness of the people of India.

OUR REGARDS TO MR. RUSSELL.

THE writer of these lines hereby tenders to Mr. W. Clark Russell the assurance of his thanks and appreciation. I have always loved sea stories, and those of Mr. Russell stand at the head of their class. From "The Wreck of the Grosvenor" to "List, Ye Landsmen!" I have read them all. Yet salt water, and the things thereon and therein, are not the only things he knows about; not by many degrees of latitude.

In his last book he makes a sailor talk thus: "I have suffered from the liver in my time, and know what it is to have *felt mad*. I say I have known moments when I could scarce restrain myself from breaking windows, kicking at the shins of all who approached me, knocking my head against the wall, yelling with the yell of one who drops in a fit; and all the while my brain was as healthy as the healthiest that ever filled a human skull, and nothing was wanted but a musketry of calomel pills to dislodge the fiend," &c., &c.

So much for what Mr. Russell's sailor (or Mr. Russell himself) says; and there are plenty of people who can testify that this is not a bit overdrawn. One fact in particular it helps us to realise, namely, that the life of a sailor does not guarantee good health. Indigestion and dyspepsia—of which liver complaint is a sequence and a symptom—is as common among sailors as among landmen.

One of the latter, however, may now tell of his experience. "All my life," he says, "I had suffered from biliousness and sick headaches. I would have an attack about every three weeks. At such times my appetite left me, and I could neither eat nor drink for days together. I suffered from dreadful sickness and straining, and vomited a greenish-yellow fluid. My head felt as though it would burst. I had a bad taste in the mouth, sallow skin, and the whites of the eyes turned yellow. I was recommended to adopt vegetarian diet, and did so, but the attacks were just as frequent and violent. I consulted doctors and took their medicines, but was none the better for it. In this way I went on year after year."

Well, we shall agree that there could scarcely be a worse way to go on, and it all came about thus: The overworked stomach put more work on the liver than the latter could do. Indignant and disgusted at this the liver refused to do a stroke more than its proper share. Hence more bile accumulated in the blood than the liver was able to remove. This surplus bile acts as a slow poison—and not so very slow either. The tongue is furred, the head aches and feels dull and heavy; the eyes and skin are greenish-yellow; there is dizziness and nausea; cold hands and feet; spots before the eyes; a pungent, biting fluid rises into the throat; constipation; high coloured kidney secretion; prostrated nerves; irritability; loss of ambition; fears and forebodings, &c., &c.

This is "biliousness" or "liver complaint" in its simplest form. When long unchecked it produces irregular action of the heart, rheumatism, gout, and any, or all, of a dozen other organic disorders. There is no more certain or powerful impulse to misbehaviour; suicide and other crimes often resulting.

What to do? To get rid of the poison by starting the skin and bowels into energetic action; then to keep them going at a healthy and natural gait. How to do this? Let our friend Mr. F. Widger, 4, Portland Square, Plymouth—whom we have just quoted—speak on that point.

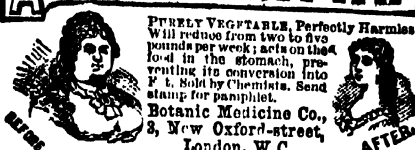

In his letter, dated March 3rd, 1893, he adds:

"Two years ago, after all medicines had failed to help me, I first heard of Mother Seigel's Curative Syrup. I procured it from Mr. R. S. Luke, Chemist, Tavistock Road, and began to use it, and nothing else. After having consumed one bottle I found myself vastly better, and by continuing with it I got rid of my old trouble altogether."

We should mention that Mr. Widger is a tailor and outfitter at Plymouth, and well known and respected in that community. He permits us to use his name out of gratitude for his recovery. The potency of Mother Seigel's Curative Syrup over liver disease is due to its ability to cure indigestion and dyspepsia, which is (as we have said) the cause of liver disease.

Every house on the land, and every ship on the sea, should have this remedy as a necessary part of their stock and stores. Perhaps Mr. Russell may recommend it in his next book. But no "musketry of calomel pills." Oh, no.

ALLAN'S ANTI-FAT

PERFECTLY VEGETABLE. Perfectly Harmless. Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into fat. Sold by Chemists. Send stamp for pamphlet.

Botanic Medicine Co.,
3, New Oxford-street,
London, W.C.

CAUTION!

IT having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (2s. 4 annas, 8 annas or 9½d., 12 annas or 1s 1½d. and Rs. 2 or 2s. 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes the prices have been obliterated and the boxes represented to be of higher value than they really are.

Sole Wholesale Agents for India, Burma and Ceylon.

G. ATHERTON & CO.,
3, NEW CHINA BAZAAR STREET,
CALCUTTA.

NOTICE—Should any difficulty be experienced in obtaining supplies the Agents will be happy to forward sample boxes at above Rupee rates plus V. P. P. Charges and Postages.

TEXT BOOKS IN ENGLISH.

BY SARADA PRASAD BANERJEE.
SPECIMEN PAPERS AND ANSWERS

on
THE ENGLISH ENTRANCE COURSE

For 1895.

Having the largest sale of all similar works,

ENGLISH PREPARATORY

COURSE

FOR 2nd & 3rd CLASSES.

This book has been approved by the Central Text Book Committee.

INDIA READERS NO. 2

FOR 4th & 5th CLASSES.

INDIA READERS NO. 1

FOR 6th & 7th CLASSES.

These books are of remarkably simple style and quite suited to Indian students.

The attention of School authorities in the N.-W. P. and Oudh, the Punjab, Madras, Bombay, the Central Provinces, Assam, and Burma, is invited to the above publications of unique merits.

To be had of

S. K. LAHIRI & Co.,
College Square, Calcutta.

Congress Sketches: A Review

OF THE
SPEECHES AND THE SPEAKERS
AT THE

Fourth Indian National Congress
Held at Allahabad.

Reprinted with additions and alterations from
Reis & Rayyet

With a portrait of Mr. George Yule, President.
Sold by the publisher G. P. Varma, and
at the office of the Advocate, at Lucknow
for 8 Annas a copy, besides postage.

POSTSCRIPT.

After paying the expenses of the publication
the surplus will be placed wholly at the dis-
posal of the family of the deceased man of
letters.

Orders to be made to the Business Manag-
er, "An Indian Journalist," at the Bee
Press, 1, Uckoo Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October,
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corfi,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengal journalist (Calcutta :
Thacker, Spink and Co.) ; nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindoo Patriot*, in its primeval days
under Kistodas Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great qualiti-
es, his death from pneumonia in the early
spring of the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—*The Times*
of India, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journal-
ist becomes worthy of publication ; it is more
rarely still that such a life comes to be written
by an Anglo-Indian and a member of the
Indian Civil Service. But, it has come to
pass that in the land of the Bengali Babus,
the life of at least one man among Indian
journalists has been considered worthy of
being written by an Englishman.—*The*
Madras Standard, (Madras) September 30,
1895.

The late Editor of *Reis and Rayyet* was a
profound student and an accomplished writer,
who has left his mark on Indian journalism.
In that he has found a Civilian like Mr.
Skrine to record the story of his life he is
more fortunate than the great Kistodas Pal
himself.—*The Tribune*, (Lahore) October 2,
1895.

For much of the biographical matter that
issues so freely from the press in apology is
needed. Had no biography of Dr. Mookerjee,
the Editor of *Reis and Rayyet*, appeared, an
explanation would have been looked for. A man
of his remarkable personality, who was easily
first among native Indian journalists, and in
many respects occupied a higher plane than
they did, and looked at public affairs from a
different point of view from theirs, could not
be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the two elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished citizen in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the farthest-minded editors that Western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but presents the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, and some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel-silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the toughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonaallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dundun says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Silt Inspector from Sunkatia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Puraudhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—A Corporal offered Rs. 30 for the very same watch. Gentleman's open faced, keyless real solid gold watch Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

30, Lower Chitpore Road, Fouzdar
Balaakana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accouchier, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Paralysis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HURTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

VOL. XV.

CALCUTTA, SATURDAY, FEBRUARY 1, 1896.

WHOLE NO. 210.

CONTEMPORARY POETRY.

THE PURPLE EAST.

Dec. 25.

BY WILLIAM WATSON.

It is the birthday of the Prince of Peace :
Care is put by ; men greet as brethren ; all
Children are glad ; the holly hangs in hall ;
The fatness of the land, the earth's increase,
Cumbers the board ; their toil the toilers cease ;
Friends unto friends about the wide world call ;
Somewhat of her abundance Wealth lets fall :
It is the birthday of the Prince of Peace.
The dead rot by the wayside ; the unblest
Who live, in woods and the wild mountains lurk
Trembling, Christ's foldless flock, shorn of their fleece.
Women in travail, babes that suck the breast,
Are spared not. Famine hurries to her work.
It is the birthday of the Prince of Peace.

Speak once again, with that great note of thine,
Hero withdrawn from Senates and their sound
Unto thy home by Cambria's northern bound,
Speak once again, and wake a world supine.
Not always, not in all things, was it mine
To follow where thou led'st : but who hath found
Another man so shod with fire, so crowned
With thunder, and so armed with wrath divine ?
Lift up thy voice once more ! The nation's heart
Is cold as Anatolia's mountain snows.
On, from these alien paths of base repose
Call back thy England, ere thou too depart,—
Ere, on some secret mission, thou too start
With silent footsteps, whither no man knows.

Modest beyond just bounds, whose numbers rung
This eventide, reproachful, in my ear ;
Thou to whom England seems a mistress dear,
Insatiable of honey from thy tongue :
Because I crouch not fawning slaves among,
How is my service proved the less sincere ?
Have not I also deemed her without peer ?
Her beauty have not I too seen and sung ?
But for the love I bore her lofty ways,
What were to me her stumblings and her slips ?
And lovely is she still, her maiden lips
Pressed to the lips whose foam around her plays !
But on her brow's benignant star whose rays
Lit them that sat in darkness, lo ! the eclipse.

"She hides her hour." And must I then believe
That when the day of peril is o'erpast,
She who was great because so oft she cast
All thought of peril to the waves that heave
Against her feet, shall greatly undecieve

Her purblind son who dreamed she shrank aghast
From Duty's signal ? She will act at last—
When there is naught remaining to retrieve ?
At last ! when the last altar is defiled,
And there are no more maidens to deflower,—
When the last mother folds with famished arms
To her dead bosom her last butchered child,—
Then shall our England, throned beyond alarms,
Rise in her might ! Till then, "she bides her hour."

The dewfall of compassion, it is o'er ;
The nightfall of indifference, it is come.
From wintry sea to sea the land lies numb.
With palsy of the spirit stricken sore,
The land lies numb from iron shore to shore.
The unconcerned, they flourish : loud are some
And without shame. The multitude stand dumb.
The England that we vaunted is no more.
Only the witling's sneer, the worldling's smile,
The weakling's tremors, fail him not who fain
Would rouse to noble deed. And all the while,
A homeless people, in their mortal pain,
Toward one far and famous ocean-isle
Stretch hands of prayer, and stretch those hands in vain.

O vanished morn of crimson and of gold,
O youth and roselight and romance, wherein
I read of tourney and of paladin,
And Beauty snatched from ogre's dungeoned hold !
Ever the recreant would in dust be rolled,
Ever the true knight in the joust would win,
Ever the scaly shape of monstrous Sin
At last lie vanquished, fold on writhing fold.
Was it all false, that world of princely deeds,
The splendid quest, the good fight ringing clear ?
Yonder the Dragon ramps with fiery gorge,
Yonder the victim faints and gasps and bleeds ;
But in his Merry England our St. George
Sleeps a base sleep beside his idle spear.

Yea, if ye could not, though ye would, lift hand—
Ye halting leaders—to abridge Hell's reign ;
If, for some cause ye may not yet make plain,
Yearning to strike, ye stood as one may stand
Who in a nightmare sees a murder planned
And hurrying to its issue, and though fain
To stay the knife, and fearless, must remain
Madly inert, held fast by ghostly band ;—
If such your plight, most hapless ye of men !
But if ye could and would not, oh, what plea,
Think ye, shall stead you at your trial, when
The thunder-cloud of witnesses shall loom,
With ravished Childhood on the seat of doom,
At the Assizes of Eternity ?

—The Westminster Gazette.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

WEEKLYANA.

OFFICIAL mourning, on account of the death of Prince Henry of Battenberg, will be observed till the 13th of February as will appear from the following Notification in the Home Department :

"Intelligence having been received of the death of His Royal Highness Prince Henry Maurice of Battenberg, K.G., P.C., the Governor General in Council hereby directs that the officers of Her Majesty's Civil, Military, and Marine Services do put themselves into mourning until the 13th February next, that being the date up to which official mourning has been proclaimed for Great Britain and Ireland.

J. P. HEWETT,

Secretary to the Government of India.

Calcutta, Saturday, Jan. 25, 1896."

Court mourning will last forty days.

It was the pleasant duty of the ex-Sheriff Mr. R. D. Mehta to telegraph to the Queen-Emress the satisfaction of the citizens of Calcutta at the marriage of her grandson, the heir-presumptive. The present Sheriff Mr. Playfair has been as prompt to cable the regret of Calcutta at the death of her youngest son-in-law. On Saturday, after consultation with the heads of representative associations in Calcutta, the Hon. Mr. Playfair despatched the following telegram to the Private Secretary to Her Majesty the Queen, at Windsor :—

"The citizens of Calcutta tender Her Majesty the Queen-Emress, the Princess Beatrice and the Royal Family sincere and heartfelt sympathy in their sorrow."

The following reply was received :—

"Queen and Princess Beatrice return their sincere thanks to the citizens of Calcutta for the kind, sympathetic message of condolence you forwarded."

PRINCE Alexander, the eldest son of Prince Frederic of Prussia, a bachelor, aged 75, is dead. Both the German Emperor and Empress were present at his bed side. He had been in the navy and taken part in the campaign of 1866 when he was posted to the headquarters of the Crown Prince. He took but little interest in political matters. Latterly he passed his days in reclusion devoting much of his time to works of charity.

MR. C. P. Villiers, "father of the House of Commons," celebrated, on January 3, his ninety-fourth birthday. His parliamentary life began in January 1835, when he was returned as member for Wolverhampton. He is in sufficiently good health to take a keen interest in political affairs.

EMILY Jane Mercer Elphinstone de Elphault, or Petty-Fitzmaurice, Baroness Keith, and Dowager Marchioness of Lansdowne, died at Micklecour, Perth, on June 25 last, at the age of 76 years, after making a will bearing date July 13, 1894. The executors are her son, Henry Charles Keith, Marquess of Lansdowne, and her sister Georgine Guinelle, Marquise de Lavalette. The value of the personal estate of the deceased in the United Kingdom (including 36,222*l.* secured on the Tullihall estate in Scotland, and 20,000*l.* on the Lansdowne estates in Wiltshire) has been sworn at 100,348*l.* 9*s.* 3*d.*

THE medical evidence at the Westminster Coroner's Court shewed that the death of the Rev. William Hurndall, forty-nine, pastor of the Westminster Congregational Chapel, was due to suffocation and coma, the result of gas fumes. He and his wife were sleeping in a room in which a gas stove was burning. The flue of the stove got blocked, both Mr. and Mrs. Hurndall became unconscious and Mr. Hurndall ultimately died.

A RECENT sounding of the Pacific Ocean, near the coast of Japan, gave a depth of 29,400ft, or approximately $5\frac{1}{2}$ miles, or a little more than the height of Mount Everest, the loftiest of the Himalayas. In a previous attempt to reach the floor of the ocean at this depth, the wire broke at 25,800ft. It has been suggested as one theory of the formation of mountain ranges, that they represent the crumpling up, or buckling, of the earth's crust under the severe contraction strains that were set up as the surface of the globe solidified. *The Scientific American* remarks that

"if this be true, the deep ocean valleys or gorges, such as this off the coast of Japan, must be the result of the same action. Taken in connection with the loftiest mountain, this sounding gives a difference in distance, from the earth's centre of about twelve miles, or 1-333 of the earth's radius."

SUICIDE is not confined to man. Moments of desperation have been observed in insects. There are times when life becomes unbearable, overpowering reason and instinct and love of life itself :—

"M. Henry, a Frenchman, being curious to see the effect of benzine on a wasp, put some of it under a glass in which a wasp was imprisoned. The wasp immediately showed signs of great annoyance and anger, darting at a piece of paper which had introduced benzine into his cell. By and by he seems to have given up the unequal contest in despair, for he lay down on his back, and bending up his abdomen, planted his sting thrice into his body, and then died. M. Henry allowed his scientific interest to overcome his humanity so far as to repeat the experiment with three wasps, only to find that the other two did likewise. He is, therefore, of opinion that wasps, under desperate circumstances, commit suicide."

THE newly discovered Argone has been a windfall to the discoverers, Professor Ramsay and Lord Rayleigh. For their gaseous substance in the air, they are getting solid gold and silver. The Smithsonian Institution at Washington has sent them a cheque for ten thousand dollars and the Academy of Sciences, Paris, has awarded them the Lecomte prize of fifty thousand francs. France has further honoured them by making them officers of the Legion of Honour.

THE Prince Albert Victor Fund amounting to about Rs. 85,000 has an unexpended surplus of Rs. 15,000. It is proposed to devote the sum either towards the establishment of an hospital to be erected in the northern part of the town by the Calcutta Medical School, or for the erection of a clock tower near Nimtollah or at the east end of the Harrison Road.

MR. Symthe, Mark Twain's agent, has formed a high opinion of Australia. He says :

"We visited all parts of Australia and New Zealand, and Mr. Clemens established a record so far as the receipts from his lectures were concerned. In Adelaide we took £250 in a single night, and in Melbourne and Sydney it was very much the same. The largeness of the proceeds is the more remarkable when it is remembered that the Australian colonists pay a good deal less for seats than is obtainable in other parts of the world. Thus when we took Sarah Bernhardt there the highest price paid for a seat was 10*s.* 6*d.*, not more than half the sum that would be given in London or New York. But the reason why lectures or concerts pay so well in Australia is that everybody goes to hear them. Their taste for seeing and hearing celebrities is insatiable. In Sydney, a town of less than 300,000 people, Mr. Clemens gave no fewer than ten lectures. There is no part of the world where people are so thoroughly glad to go night after night to a lecture or a musical recital given by a celebrity."

IN the present rage against the Hindu joint family system, it is pleasing to read the letter of Mr. S. K. Banerjee, B.A., of Bankipore, in the *Englishman* of the 27th January. We wish he had given more particulars :

"Sir,—The joint family system has been one of the characteristics, nay a unique characteristic, of the Hindu race. In the Hindu Law we find it presumed that a family is always joint until the contrary is proved. The system is unknown in any other part of the civilized world. Even in India we find millions of cases where such a union has existed for a couple of generations, but comparatively few that extend to the third generation. There is only one family in Bengal, probably the only one in India, that has been living together under the joint system for nine generations. It is the Nandi family of Jaingram in the district of Burdwan.

The Nandis are a very rich family, carrying on business in various branches, and the whole of the income is accumulated into a joint stock. They live in one long two storied barrack, in which one room is allotted to each male member and they are wholly governed by a body of selected members who form themselves into a committee, having the power to regulate and control the affairs of the family. It is like a small republic under a president who is called the kurta of the family. The number of the members amounts to over three hundred. The history of the family is very interesting indeed, their mode of living, and their ways of celebrating festivals and marriages among themselves. There is one general gomasta, who has the charge of all provisions, and early in the morning he distributes chota huzi (consisting of fried rice and treacle) to all the members in equal quantities. The members get their food, clothes, books and almost everything from the common stock.

Envelopes and post cards are also given, but of late some of the members have abused the arrangements by taking a number of envelopes and postcards, and selling them. So now whenever any member asks for envelopes or post cards, they are given to them after the address has been written on them by the manager, who has charge of all the stationery. The house has got a big thick volume containing all the rules and regulations. Whenever a child is born in the family the father gets a fixed sum for ornaments for the new born babe and also gets a monthly stipend for his child. When a daughter is fit to be married the whole expenses are borne by the common stock."

If attempts had been made to improve and reform the system instead of breaking it, the result would have been more satisfactory than the annual sittings of the National Congress.

"RAIPUR" in the *Englishman* bears testimony to the Sanskrit and Bengali scholarship of the present Lieutenant-Governor of Bengal.

"I happen to know that Sir Alexander Mackenzie is a good Eastern linguist, and that at Cambridge he took up Sanskrit and passed examinations in it with credit. Sir Alexander may not be a Panini, but he has a scholarly knowledge of Sanskrit that would more than suffice to enable him to form a critical opinion on the comparative merits of text-books in the language. Moreover, I may say he has a colloquial command of Bengali, which is remarkable even from a Bengali standpoint. He speaks the language better than many a Bengali gentleman, as many of my countrymen will be ready to testify. Those who have talked with him in that language can vouch for this."

THE services of Captain J. W. Currie having been replaced at the disposal of the Government of India, in the Military Department, Mr. A. H. Gayer has been appointed Private Secretary to Sir Alexander Mackenzie. Commander E. W. Petley, Calcutta Naval Volunteers; Lieutenant-Colonel J. J. Macleod, Bihar Light Horse; and Major W. K. Eddis, Calcutta Light Horse, have also been added to the staff as Honorary Aides-de-Camp.

..

MR Michael Finucane, Officiating Secretary to the Board of Revenue, replaces Mr. R. C. Dutt as a member of the Bengal Legislative Council.

..

REVISED Transfer Rules for Colleges in Bengal are published in the *Calcutta Gazette* of January 29.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

~~~~~

REUTER'S Pekin correspondent states that China has agreed to open the West River provided she is allowed to retain the territory ceded by Burma to China by convention. The question has been referred to Lord Salisbury.

MR. Chamberlain, speaking at Birmingham on Jan. 25, said that there were signs that the political storm was abating, and that Germany's unexpected and unprovoked hostility to England was passing away. The Venezuelan dispute, he said, was due to misapprehension. Great Britain would not dispute the Monroe doctrine, and had no desire for an inch of American territory beyond what she rightfully possessed. Armenia, he said, remained a danger and disgrace to Europe, but English efforts to bring about reform in that quarter were fruitless in the absence of support. Referring to the Transvaal, he believed that matters were settling there. Several German papers, we are told, refer to the Emperor's action in the Transvaal as a splendid triumph over Great Britain. The German Press generally continue their virulent attacks upon England.

Austria and Italy are seeking to bring about a reconciliation between Great Britain and Germany.

Sir Henry Fowler, speaking at Wolverhampton, said that the Opposition must support the Government in presenting a united front to every hostile interference with Britain's rights and honour.

Lord George Hamilton, speaking at Chiswick on Jan. 28, said that he felt confident of an honourable and satisfactory settlement of the Venezuela question, thanks to the conciliatory attitude of America. Great Britain, he said, would oppose any interference with her Colonies in South Africa with her whole united force and that of her Colonies throughout the world. He urged the necessity for a continuous policy maintaining the naval and military strength, and said that Government would bring about a closer connection with all parts of the Empire and make it a living reality more capable of its maintenance in times of peace and of its preservation in times of peril.

THE *Times* cordially approves of Sir James Westland's measure in regard to the cotton duties, which is likely to secure equality of treatment for Indian and English industries simply and straightforwardly.

THE report of the offensive and defensive alliance between Russia and Turkey, published by the *Pall Mall Gazette*, is denied at the Turkish Embassy in London. It is, however, believed that a tacit agreement exists whereby Russia would occupy Armenia for the restoration of order, and Russian support would be accorded to Turkey in certain events, such as a British fleet entering the Dardanelles.

THE deaths are announced of Sir Frederic Leighton, the painter, of General Richard Lawrence, last brother of the late Lord Lawrence, of Mr. Alexander Macmillan, the publisher, of Sir Joseph Barnby, the musician, and of the Right Hon. Hugh Childers, the politician.

KING Menelek has written to King Humbert and General Baratieri, asking for a delegate to treat for peace.

A MEETING of Americans has been held at Pretoria at which a telegram was despatched to Mr. Olney, stating that their property was in jeopardy, and requesting an American diplomatic agent to be despatched to the Transvaal, as they desired to have their grievances redressed.

THE *Times*, discussing the question of British Indians in Natal, urges a settlement on the basis of the proclamation of 1858, as Great Britain could not afford a war of races among her own subjects.

ADVICES from Madagascar, dated the 23rd December, state that a native rebellion has broken out against the Hovas. A Norwegian trader and several Hova officers have been killed. The movement at present is in the district of Vatmondry, but it is daily extending.

THE Canadian Government has voted half a million sterling for drilling the entire militia of the Dominion.

THE Ottoman Porte is borrowing from the officials' pension fund for urgent expenses, as the Sultan seriously apprehends a revival of the insurrectionary movement in Macedonia shortly.

A BLUE BOOK on Armenia has just appeared which deals chiefly with the report of the Sassun Commission, and shows that the reports in the press of the massacres were overdrawn. Only forty were killed in the Sassun massacre, and the total of nine hundred perished in the district, in which twenty-three villages were destroyed.

PRESIDENT Kruger has issued a proclamation stating that he has reason to suspect that it is the intent of several Rand Companies to close their mines, which, he says, indicates a desire to renew the disturbance which lately took place. The President says that the Transvaal Government has resolved to vigorously protect the mining industry and to severely punish any attempts to disturb its peaceful development.

THE *Pall Mall Gazette*, in a telegram from Cairo, states that a revolution, due to tribal dissension, has broken out in Khartoum, and that the Mahdi has been overthrown. A Cairo telegram, however, speaks of only rumours of revolt among the tribes south of Khartoum against the Khalifa.

THE Mahomedans in London, at a meeting of the Anjuman-i-Islam, presided over by Mr. Monlen Ibrahim, adopted a resolution offering the Queen-Empress the services of her Mahomedan subjects in defence of Imperial interests. The president was, in addition, of opinion that, provided her finances were in a healthy state, India alone was able to cope with any Great Power.

THE Viceroy's health has greatly improved, the fever having left him. The *Warren Hastings*, in which he is cruising in the Bay, called at Akyab yesterday. Lord Elgin is expected back to Calcutta to-morrow to preside at the Legislative Council meeting postponed from last Thursday to next Monday to pass the two fiscal measures introduced in his absence, though with his consent, reducing the import duty on cotton goods and making the Indian mills' production excisable.

PRINCE Henri D'Orléans and his party consisting of M. Roux, a French lieutenant, and M. Briffaud, a trader, have discovered the real source of the Irrawady. They started from Tonkin and reached Sadiya, the eastern frontier station of Assam, within a year. The travel was hazardous and painful. Leaving Tonkin at the end of January 1895, the travellers reached Taikon early in September. The most difficult part of the journey was from the last mentioned place to Sadiya. They crossed seventeen ranges of mountains varying from 12,000 to 13,000ft. in height.

It is known that the Irrawady has two sources, the Nmai Kha (Eastern) and the Mali Kha (Western). But it was undecided which was the true one. The French explorers state that the eastern branch, known as Tourong is the true Irrawady. This branch subsequently takes the name of Nmai Kha. The Mali Kha is formed of several small streams which drain the Khamti country.

SIR Lepel Griffin has not lost his hold on Native India. The restorer of the fortress of Gwahar is still a power with Scindia. The young chief has agreed to the payment of £2,000 in aid of the East India Association to its present directing head. We hope the Association will recover, under this refresher, its former vigour and usefulness, and the sovereign princes of India, who built it up and still maintain it, will receive its protection.

THE second group of District Boards having failed to recommend a member for the Legislative Council of the N.-W. P. and Oudh, the Lieutenant-Governor has made a selection for them. In thus appointing Raja Rampal Singh, he has the approbation of the Congressists. The directly nominated members are Mr. Syed Mahmood, of Aligarh, and Kunwar Aditya Narayan Singh, of Benares. Mr. Mahmood is an exceptionally able man, and we hope he is himself again to be of use in the Council. Since his enforced retirement from the Bench of the Allahabad High Court, he was not heard of much. He is now given an opportunity to re-establish his reputation.

ORDERS having passed for official mourning on account of the death in the royal household, the Poudré Bill at Belvedere fixed for the 18th February will not take place. It seems, however, that the Governor is free to be entertained. Sir Alexander Mackenzie strayed into the Black Town last Wednesday for a little amusement. The first to welcome him was the musical Raja of Pathuriaghatta. The opposing House in the same street is preparing to entertain the Lieutenant-Governor next Wednesday, at an Evening Party in the afternoon. Last night, Sir Alexander was present at the Party at the India Club in his honour.

As a means of improving the finances of the Bengal branch of the Countess of Dufferin's Fund, Sir Alexander Mackenzie has proposed a "Hospital Sunday" for Mahomedan mosques and Hindu temples. Negotiations have been opened for the purpose. We very much doubt the success of the scheme. Mosques and temples are not churches. Even if mosques be of some assistance, temples must not be thought of in this connection.

THE Charitable Endowments Act, 1890, is gathering funds. The latest investor is Babu Ram Lal Mukerji, the youngest and the only surviving son of the late Babu Thakurdas Mukerji, of Boichhi, in the Hooghly district. It is pleasing to find the son in his declining years follow the footsteps of his revered father rendering charity. He has applied to the Government of Bengal to invest a 3½ per cent. Government promissory note for Rs. 50,000 for the purposes of the Act. The endowment is to be called "Babu Ramlal Mukerji's Fund for the relief of distress due to inundation, or to scarcity brought on by drought, in any part of the province of Bengal, including Bihar, Chota Nagpur, and Orissa." The object is disclosed in the title. The length of the purse is hardly commensurate with the length of the name or the extent of the distress to be relieved. It is doubtful whether the recipients of his favour will bless him for the jaw-breaking name of the Fund. Could not a shorter one be devised? Or, is he anxious to be remembered, in some form, for ever, for the fifty-thousand? In these days of electric speed and telegraphic messages, Babu Ramlal could not have fixed upon a better plan of sinking his charity into

oblivion. The Government notification closes with the words "Any objection to the proposed order (vesting the security in the Treasurer of Charitable Endowments) or suggestions therein may be transmitted in writing to the Secretary to the Government of Bengal, Revenue Department, before the 29th day of February 1896." What may this mean? Is there any doubt about the genuineness of the security, or its ownership, or its validity, or its non-transferability? Or, is the Government afraid of any evil consequences to others of the gift?

THE Bengal Government is grateful for charity, great and small, actual and potential. It has thanks for Raja Rameswar Prosad Narayan Singh of Muksudpur, for a donation of Rs. 25,000 to the Countess of Dufferin's Fund; to Babu Jagat Kisor Acharya Chowdhury for his willingness to pay to the Nasirabad municipality Rs. 1,900 and payment out of that sum of Rs. 1,500 for the construction of a burning ghat to be built on his land for which he will charge nothing; to the Hon'ble Prince Jahan Kadir Mirza Muhammad Wahed Ali Bahadur, K. C. I. E. (as President of the Mahomedan Literary Society) for Rs. 500; to Haji Kasim Arif Sahib for Rs. 2,000; to Maulvi Wahid Buksh for Rs. 150 and to Raja Ranjit Singh Bahadur of Nasipur for Rs. 100, the last four sums, an aggregate of Rs. 2,750, being a contribution towards the cost of constructing the building for the Elliott Medressa Hostel. It must not, however, be said that the Bengal Secretariat makes no quantitative analysis of its praises. The Muksudpur Raja is thanked for "his liberality and public spirit," the Archarya Babu for "his liberality"; and for the remaining four, the Director of Public Instruction is requested that "the thanks of Government may be conveyed to the donors." There is another feature in the publication of these four donations which should not be lost sight of. We will not stop to enquire about the taste that can include all the four different descriptions of Her Majesty's subjects under one general denomination of gentlemen. The Secretary to the Government of Bengal in the General Department introduces, in the Gazette, for general information, his letter to the Director of Public Instruction, in big capitals as "Liberality of certain Muhammadan gentlemen in contributing to the Elliott Madrasa hostel building." That there may be no mistake about the nationality of the donors, the letter concludes with the expression "His Honour (the Lieutenant-Governor) would be glad to see other Muhammadan gentlemen following their (the donors') example." Government resents, and rightly too, any assumption of title. The Behar Chiefs would not be allowed to be called their Highnesses in official letters and documents. Yet we see Raja Ranjit Singh described as Raja Bahadur. He has been given only the title of Raja. That of Bahadur yet remains to be won. The British Government is a great leveller. It has ennobled, by conferment of titles, many low in caste and not otherwise worthy of the distinctions. It seems to aim at unwarranted conversion of faith. How could it then call Raja Ranjit a Mahomedan? We know there are Mahomedan Rajas, that is, Rajas with Mahomedan names. But this is the first time we hear of a Mahomedan Raja with a Hindu name. We are not aware that any of the Rajas of Nasipur with a long descent were Mahomedan or embraced Islam, or that Ranjit himself has been converted. The blunders of Europeans have been many. But here is an instance which is not ordinarily matched. Mr. Buckland must answer for the mistake. He is credited with being a knowing Civilian. The more's the pity. The outrage is not the less than when enquiries were made as to what Benares *Sarees* or ornaments would the widowed Maharani Surnomoyi of Cossimbazar receive as khillut, or when it was proposed to call the Durbhanga Babuans Mirzas.

LITTLE did we suspect when, early last month, we feared that the Rana of Jhallawar was tempting fate, that it was to overtake him so soon. Soon after, the *Pioneer* startled all India with the following announcement:

"Some trouble has arisen in Jhallawar, one of the petty States in Rajputana. The ruling Chief there is Maharaj Rana Zalim Singh, and his previous record is not an unclouded one. As a youth he was a promising scholar of the Mayo College, and much was hoped from him when he was entrusted with the charge of the State in 1884. In two years, however, he had so conducted himself that his mis-

government could not be overlooked. It was at first proposed to deprive him of his powers as a ruling Chief, but on a representation from Sir Edward Bradford, the then Agent in Rajputana, he was given a chance of redeeming himself. The Rana failed to profit by this opportunity, and in September 1887 he had to suffer the penalty which he had previously escaped. It was not until July 1894 that full powers were again given to him. For a short time he was on his good behaviour, but gradually he drifted into his old habits. Last year he adopted such tyrannical measures towards his people that serious complaints were made against him. Matters had risen to such a pitch in October that Captain Evans Gordon reported that a reign of terror existed in Jhalapatan, the capital of the State, and that in his opinion the Rana was unfit to remain in power. The Government of India called for further information before taking any action, and as matters did not improve and the Rana took up a defiant attitude, Mr. R. Crosthwaite, the Agent for the Governor-General, was directed to proceed to Jhalapatan. He reached there on December 31st and found affairs were rapidly approaching a critical stage. The Rana had sent his Dewan and other officials out of the way, in order to prevent them from giving information. He had served out ball cartridge to his sepoy and he was engaging Pathan mercenaries from among the local Valuti settlers. This was his method of showing his hostile feeling against Government. Such preparations on the part of a petty Chief, who has only a few hundred half-trained and ill-armed sepoys in his service, are explained by the fact that the Rana is not at times fully responsible for his actions. Mr. Crosthwaite, fearing mischief might result from the presence of the Pathans, and seeing the Rana obstinately bent upon taking his own course, suggested that the Political Officer should be furnished with an escort pending a decision as to the measures to be taken. Accordingly two squadrons of the Central India Horse from Angar, and two Companies of the Deoli Irregular Force marched to Jhalapatan, where they are now in camp. This movement of troops has restored confidence amongst the townspeople, and no outbreak of lawlessness is now likely to occur. The Rana is to be allowed to address a personal explanation to Government before final orders are passed upon his case, for at present he retains his authority such as it is."

A burnt child dreads the fire, or, in the more expressive Bengali saying, a cow burnt in its shed is afraid of the vermilion cloud. Whatever the *Pioneer's* explanation of the movement of troops, and the Rana has his own, the tragedy at Manipur must have been vivid in the minds of the Politicals who suggested the step. With that recent experience, no Political would now, without a sufficient military *entourage*, attempt the arrest of a native Prince in his own territory or offer him any other insult. Mr. Crosthwaite would not evidently risk the repetition of the Bengal *fiasco* in Rajputana. He has, however, yet to prove that his apprehensions were not unfounded, or rather the Rana, according to our present political code, must disprove the allegations against him.

The plucky little new journal of Ajmere—the *Rajputana Malwa Times* has a different version from the *Pioneer's* :—

"The Maharaj Rana of Jhallawar is an honour to the entire Rajput race, for even in these degenerate days he has still sufficient Rajput spirit left in him not to allow any cowardly considerations to stand in the way of the observance on his part of a due regard for the rights of his fathers and the proud traditions of his house. He is of course in the bad books of the Politicals who want to have their own way in all things, and who consider independence in a Feudatory Prince to be nothing short of a heinous crime. The story of the deposition of the Maharaja of Jhallawar is no doubt an old one, but it will bear telling over again. The unfortunate prince, it would appear, has been endowed with the quality of self-respect which is so very scarce among the titular puppets who now-a-days go by the name of princes. The Maharaja would not lick the dust off the shoes of the then Political Agent whose impudence was only matched by his impertinence. He was consequently on the look out for catching the Maharaja tripping so that he might put in execution his plots of due vengeance against him. The refusal of the Maharaja to lend him his state carriage fanned the flame of his wrath, and he proceeded to forge an instrument for the annihilation of the poor prince which descended on his head like a bolt from the blue, and eased him of his throne and prerogatives.

"It was at this time that the Queen of England assumed the title of the Empress of India. Invitations were sent round to the Indian Princes all over the country, asking them to attend the Delhi Durbar, and they all flocked to it with their retinues and followers. A similar letter was, of course, addressed to the Maharaja of Jhallawar, but thanks to the ingenuity of the Political Agent it was intercepted on the way, and never reached the hands of the Prince. Such being the case, he did not of course care to attend the Durbar to which he was not invited. His absence did not fail to attract the notice of Lord Lytton, who construed it as an act of disrespect on the part of the Maharaja to Her Majesty who was his liege and sovereign. This when combined with the representations of the Political Agent cost the Maharaja his throne. In June 1894, however, on the recommendation of a friendly and upright Political Agent, he was once more invested with full authority. But misfortune has not taught him to be servile, and he has resented some encroachments on his rights by Mr. Gordon, the present Political officer who of late has been trying to lay the law down to the prince, and question some of his decisions. He has sent a spirited reply to the officer charging him with overriding the terms of the Jhallawar treaty. He has also made a representation on the subject to Mr. Crosthwaite who, we hope, will follow the straight path of duty, and will not crush the spirit of the prince which he is in honour bound to respect if not to nourish."

Again :—

"Our readers have already been made acquainted with the strained relations which lately existed between the Maharaj Rana and the Political Agent. The latter individual who is fully endowed with the arrogance and impudence which characterize his tribe, had taken umbrage at the spirited and independent behaviour of the prince, and being in possession of the confidence of the higher authorities he has not failed to poison their ears against his foe. On the occasion of Mr. Crosthwaite's visit to Jhallawar, the Maharaj Rana who got due notice of the impending event, told off his troops to be in a state of readiness for the A. G. G.'s inspection. This fact was laid hold of by his foes as the instrument for his annihilation, and when the A. G. G. was in Jhallawar, he was informed that the Maharaj Rana had become a rebel, and had actually his troops in readiness for hostile purposes. The A. G. G. telegraphed to Deoli, and the place was at once in a state of siege. Two Cavalry troops and some forty common cannon came up from Deoli, but as the Maharaj Rana as expected did not give battle to the British forces, Mr. Crosthwaite was very much in the position of the English general of whom it is told,

The noble Duke of York,  
Who had ten thousand men,  
He took them up to the top of a hill,  
And he took them down again.

A reign of terror has been instituted in Jhallawar. The Maharana wanted upon the A. G. G. but failing to obtain a fair hearing from him, he sent a representation on the subject by telegram to the Viceroy. The message was intercepted by the clerk, and though it was finally sent to its destination, the A. G. G. ordered that no other communication from the Maharaj Rana should be allowed to leave Jhallawar. It is insinuated that the prince is about to break out into mutiny, and he is placed under strict surveillance. He is shuttled like an ordinary criminal, and every movement on his part is keenly watched. The very ordinary human rights are denied to him, and he is not allowed so much as to send a second representation to the Viceroy. And to crown all, he is at last about to be dispossessed of his paternal throne—robbed of his paternal crown—deprived of his paternal sceptre. It was on the 9th January that an act of treachery was perpetrated—that this poor prince was deprived of the services of his faithful Commander-in-Chief. A scion of the same family who is likely to prove so much wiser in the hands of the Politicals to be moulded into any shape that may please them will be placed on the Jhallawar *gaddi* whose present occupant is to be sent to Benares for his spiritual welfare."

Having been spotted, the Rana is an under-trial prisoner in his own house and territory. As such, he is subjected to all the restraints of the position. We do not know if he is restricted to his own unaided judgment, which is said to have gone wrong in the explanation of his conduct. That he is given an opportunity of defence speaks of the fairness of the Viceroy to do him justice. We await further particulars. In the meantime, we will give some facts which may help to unravel the situation.

THE disgraced Rana is the adopted son of the late Maharaj Rana Pruthi Singh, the 2nd Chief who reigned in Jhallawar and the great grandson of the celebrated minister Zulim Sing of Kota, in whose family the ministership was made hereditary, by a supplementary article of the Treaty of 1817, concluded, at Delhi, between the British Government and that Principality. On his relinquishing the hereditary right, Kota, in 1837, was dismembered, and a new Principality formed for Zulim. It was called Jhallawar, from Zulim Sing's family being Jhalla Rajputs, originally from the Jhallawar Division of Kattywar, in Guzerat. Under the treaty, with Muddon Sing, of April 1838, the succession was limited to the descendants of Zulim Sing. But Pruthi Singh, in common with all reigning chiefs, received, after the mutinies, Lord Canning's *Statute* of adoption. He died in 1875, 3 or 4 years before, he had adopted a younger son of the Chief of Wadawan. The British Government recognised the son and the adoption, and proclaimed him, under the name of Zulim Sing, Chief of Jhallawar, ignoring the protest of the Kota Chief who claimed the reversion of the Jhallawar territory on failure of heirs male of the original Zulim Sing. The then Maharao Sattrool of Kota was himself deprived of his powers and Nawab Sir Fazlly Khin was appointed, by the Supreme Government, administrator with independent powers. A Kharita was addressed to the Viceroy for the rendition of Jhallawar to Kota. The Supreme Government had already decided against Kota, though Sir Lewis Pelly, the then Agent to the Governor-General for Rajputana, had, in a manner, supported its contention. He was disinclined to speak in any way against Lord Canning's policy of adoption, nevertheless he thought that a special agreement could not be superseded by a general one.

The proclaimed chief was educated in the Mayo College at Ajmer. After he was invested with powers, some years later, he refused to give an appointment to one educated at the same College and recommended by Sir Edward Bradford. The Rana's troubles now began. Shortly after, he was deprived of his powers, on the ground, that he had changed the settlement made during his minority by the British

Government. After a long rustication, he was reinvested lately, only to be disgraced the more.

BOMBAY in public meeting assembled has denounced the Cotton and Tariff Bills introduced in the Governor-General's Council. The meeting was convened by the Sheriff; Mr. R. M. Sanyal president, and Mr. George Ketrledge moved "That this meeting protest against the proposal to re-arrange the cotton duties in such a manner that the poorer classes hitherto exempt will have to pay 3½ per cent. duty on coarse cloth manufactured in India, which forms their wearing apparel, while the rich who use the finer goods manufactured in Lancashire are relieved by the reduction of 1½ per cent. of the duty hitherto paid by them without hardship or complaint. That this meeting further protest against the wholly groundless assumption that the finances of India are in a condition to admit of the remission of half a crore of rupees, one-third of the amount of the cotton duties, in presence of the notorious fact that the Famine Insurance Fund is suspended, necessary public works are stopped throughout the Empire, while every Provincial Government in India is embarrassed and the administration impaired owing to the ever-recurring demands of the Government of India." Mr. Ketrledge advised the holding of mass meetings all over the country against the resolution of the House of Commons ordering the withdrawal of the import duties as soon as the finances of India improved. "Think of it," said he, "here is a dependency, a conquered country of three hundred millions of people, a country quite undeveloped, the people dreadfully poor, so little education that only 60 out of 1,000 have the least smattering of the learning, where in times of famine within our experience, men, women and children have died by millions and yet the British House of Commons orders, on the application of a small but influential number of its own body, that as soon as there is a sufficient surplus obtained by other means, the cotton import duties shall not be utilized for the development of the country and the advantage of its people." The resolution was unanimously adopted and a suggestion to boycott Lancashire goods was vociferously cheered. We don't know how far Bombay is prepared to take up the suggestion. Even if it were practicable, how to supply the demand?

There is opposition to the Bills from all quarters, European and Indian. The Government takes its stand on fairness to all, the equalization of duty and excise. Whether it is philanthropy to the people of India, or justice to the Indian taxpayers, these measures have always their origin in the interests of the cotton lords of England. The Indian industries may starve, let only Manchester thrive. So the Indian mills must be handicapped.

Two deputations have waited on the Finance Minister, one from Bombay and the other from Cawnpore, from the two Provinces chiefly and directly affected. But all to no purpose. The Bills must be passed on Monday.

At an inopportune moment, Mr. P. D. Mehta has resigned the membership of Council.

## REIS & RAYYET.

Saturday, February 1, 1896.

### THE NEW BENGAL POLICE.

ON the 7th December last, we spoke of the old Police. To-day we take up the new.

At the reconstruction of the new Police in Bengal in 1862-63, the patronage passed away from the hands of the Magistrates, which used to be generally exercised by the Joint-Magistrates at Head-quarters after the amalgamation of the posts of Magistrate and Collector. The District Superintendents at the outset, were mostly military officers and other Europeans having interest with the local Government. These generally believed themselves all powerful, even as the Magistrate of the District. The consequence was a bitter feeling between magisterial officers of all grades and the executive Police, the victims being usually the poor Indian Inspectors and Sub-Inspectors. Those very Magistrates in charge of the old Police, who had pressed Darogas to ob-

tain confession by hook or by crook, all on a sudden, turned virtuous, and the first question from the bench was whether the confession was voluntary. Pettifogging Mukhtiaris who always take their cue from the Magistrate, prompted complaints against the investigating officer, of extorting the confession, the result being the discharge of the accused and his place in the dock being taken by the prosecuting Police officer. Many such in this way fell into trouble. Those who were fortunate enough to be acquitted by the Sessions Court, felt the serious strain on their purse. Naturally, in a short time, most of the educated men of good family, who had entered the force, in prospects of pay and promotion, left it in disgust. It was not till Sir Richard Temple's Lieutenant-Governorship, who had been on the Police Commission, that the District Superintendents were subordinated to Magistrates of districts. Sir George Campbell and Sir Charles Elliott completed the subordination. There is now a better feeling between them, though we greatly doubt if it be for the general good. Magistrates are generally known to side with the Police, even when they go wrong. Another serious evil is the lording of the Police Superintendents over the Deputy Magistrates in their judicial capacity.

The wholesale prosecution of Police officers, as we have said, denuded the force of all respectable and educated Indians. There are very few of them now in it. The residue have fully inherited the vices and the bad reputation of the old Police, hence the people are shy of coming across them. The people of Bengal are generally timid. The old Darogas never attempted to remove this timidity. Hence their conspicuous failure in the detection of thefts, house-breaking, robbery and dacoity. It was an evil day, when Government abolished the Commissionership for the suppression of Thugi and Dacoity in the Lower Provinces. Messrs. Wauchope and Ward, of the Civil Service, assisted by a Deputy Magistrate, Babu Chunder Seekur Roy, had almost exterminated the old dacoit gangs and a regular dacoity was very scarce down to 1863. Preliminary to the abolition of the department, the thin end of the wedge was inserted by appointing an uncovenanted officer, Mr. J. H. Reily, after Mr. Ward's death, lowering its prestige, which became *nil* when Mr. Reily was appointed head of the Detective Branch of the Bengal Police with one Inspector on Rs. 200 a month in some districts under him. Since then dacoity has greatly increased, specially in the metropolitan districts, committed by gangs of upcountrymen. We are not aware that any serious attempt has been made by Government to suppress this revival of an old crime.

The failure of the present Police to detect crime, is due to want of touch with the people. House-breaking, robbery and dacoity are always committed after sufficient preparations. A bad character is known to the people of every village where he resides. A meeting of accomplices in his house or his absence for the same purpose in other villages; becomes known to the villagers. An accomplice must also be secured in the village or house itself in which a crime takes place. But the Police fail to obtain any information for its detection. Receivers of stolen property are mostly bunias and sonars, who promptly melt gold and silver. In large towns, these bunias keep their shops open till 2 in the morning and the melting pots in their backyards are busy enough at late hours. Though the Police

are well aware of these misdeeds, they only levy blackmail and never bring the rich receivers to justice. One or two examples, in each town, would root out this remunerative profession in no time. But this is impossible with the *personnel* of the present force. European officers generally live so apart from the people and isolated that they obtain no reliable information to act independently of their subordinates. If they had less desk work and moved more among the people, they would better perform the legitimate functions of the Police,—the suppression and detection of crime.

Credit, however, must be given to the new Police, for suppressing latialism and organised riots, which had been so prevalent previous to 1863, between Zamindars, Indigo-planters and rayyets. They have, however, always failed to trace out thefts of all kinds, so much so, that 80 per cent. of this class of crime, remain unpunished. The old Police were better in this respect. It is, however, strange that 95 per cent. of deliberate murders come to light and are punished. Unless the Indian officers of Police mix freely with the people of both towns and villages and treat them as rational beings and not as machines to screw out money from, no reliable information can be available, regarding a crime committed or to be committed—to frustrate the machination or bring the offenders to justice. But the Police, both old and new, have always been bugbears to the people at large. Hence their failure as detectives.

The superior European officers are, with few exceptions, mere ornamental figure heads. Who ever heard of their having successfully investigated a serious theft, robbery or dacoity? Nevertheless, they are always on the move, which swell their travelling allowances. There are instances of Assistant Superintendents having drawn travelling allowances equal to their pay, while the travelling was performed on borrowed tatts. Indian subordinates, who have to travel about a good deal, are now allowed a mileage within their circles. No wonder, with their scanty pay and fixed horse allowance, they have recourse to extra pickings.

#### DR. SAMBHU C. MOOKERJEE.

##### HIS LIFE AND LETTERS.

[ Mr. Skrine has sent us for publication the accompanying letter to him from Baboo Siddheshur Mitter. The two letters from Dr. Mookerjee to Baboo Siddheshur form enclosures of the letter to Mr. Skrine.—ED. R. & R. ]

To—F. H. Skrine, Esqr.

16th January, 1896.

DEAR SIR,—It does not become one in my humble position to thrust himself uninvited on the time and attention of a hard-worked official like yourself, specially, when the few moments that he can snatch from business, must naturally be wedded to rank and position similar to his. But by writing a book, you have, I venture

#### The Indian Association for the Cultivation of Science.

PRACTICAL CLASS in Chemistry under Bibu Ram Chandra Datta, F.C.S., on Monday, the 3rd Inst., at 4 P.M. *Subject*: Manganese, Nickel, Cobalt and Zinc.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., on Tuesday, the 4th Inst., at 6 to 8 P.M. *Subjects*: Histology—Large and small Intestines; Physiology—Alimentation.

PRACTICAL CLASS in Chemistry under Bibu Ram Chandra Datta, F.C.S., on Wednesday, the 5th Inst., at 4 P.M. *Subject*: Barium, Strontium, Calcium.

Lecture by Babu Syamadas Mukerjee, M.A., on Thursday, the 6th Inst., at 3 P.M. *Subject*: Analytical Conics.—Trilinear equations of the first degree.

Lecture by Dr. Mahendra Lal Sircar, on Thursday, the 6th Inst., at 6 P.M. *Subject*: Volta-electric and Magneto-electric Induction.

PRACTICAL CLASS in Chemistry under Bibu Ram Chandra Datta, F.C.S., on Friday, the 7th Inst., at 4 P.M. *Subject*: Potassium, Iodine, Ammonium, and Magnesium.

MAHENDRA LAL SIRCAR, M.D.,  
Honorary Secretary.

February 1, 1896.

to think, laid yourself amenable to all sorts of criticism and communication, and I dare say, you are prepared to waste some valuable time over them. Besides, the generous but nonetheless vigorous defence of the Bengali character with which, permit me to observe, you have had the courage to usher your maiden (as I think) performance to the literary world, emboldens a Bengali to tread forbidden ground with less fear and caution.

I have read with great interest your excellent biography of Dr. Mookerjee. What with an admiration for the deceased that never knew waning, every line of your precious volume I have read with feelings of gratitude for its author. But I shall leave praise aside and proceed to business.

I think if some more little incidents connected with his life—little anecdotes I mean—than what are already in print, were given, they would materially add to the popularity of the book. I think Jogesh and Kisari Bibu can give you a lot. I am glad to hear that a second edition is necessary and will be soon taken in hand, and I have no doubt advantage will be taken to add to the matter.

You have done me honour by publishing a letter of mine written to Jogesh Bibu on receipt of the sad news of Dr. Mookerjee's death. I really feel quite flattered over it—not because I have figured in print, but because I should be associated with a friend and well-wisher even after his death. I can only find two letters of Dr. Mookerjee addressed to me. I enclose them herewith in original with copies. Kindly return me the originals when no longer required, as I should be sorry to part with them. The copies I have supplemented with notes to enable you to properly understand the letters. I have no idea of course if you will consider it worth your while to publish these letters in the next edition. One of them is important, however, as showing a bit of his mind as influenced by the shameful prosecution he had to undergo for libel. You have, I see, avoided this altogether. But would not that lead an ingenuous critic to think that you have avoided the thing because you could not defend it?—I mean Dr. Mookerjee's conduct in writing the libellous paragraph at all. At one time I used to be well acquainted with the ins and outs of the thing, but I have got such a bad memory that I have forgotten all about it now, except that I was convinced at the time that Dr. Mookerjee was blameless. Whether he was blameless because the matter was forced upon him in a manner there was no escaping it, or because he honestly thought he was doing a public duty (as he says in his 2nd letter to me), I cannot remember—I think, however, that those behind the scenes were satisfied that Dr. Mookerjee did not act maliciously. My idea is that if this somewhat unpleasant matter be given a place in his biography, as like everything else connected with his life it should be (unless the object of biographies is to paint not what a man was but what he should have been), it would not require much effort at special pleading to bring him spotless out of it. I had once well-nigh got him entangled in a suit for libel. [ After detailing how the matter referred to appeared in *Reis*, the correspondent continues ] The Zamindar thereupon deputed some of his chief amla to visit Dr. Mookerjee and insist upon an unqualified apology, threatening criminal prosecution in case he refused. I was present at most of these interviews that the delegates of the Zamindar had with Dr. Mookerjee, he was firm as a rock and would not eat his own words. He was satisfied that the source I had got the information from was perfectly reliable and he resolved to face all the terrors of a criminal prosecution rather than give the lie to himself. Failing to attain their object by alternately coaxing and threatening him, the Zamindar's people suggested that he should, in justice to the man maligned, thoroughly investigate into the matter by sending a man to the scene of action to make local enquiries, &c. Dr. Mookerjee was by no means wanting in a strong sense of justice, and he readily consented to this. They proposed that L. should be entrusted with the enquiry. I don't know or cannot now remember if he was known to Dr. Mookerjee, but any way he did not object to L.'s going to enquire into the matter. The Zamindar's people left for their place with L. and returned to Calcutta about a month after, L. assuring that he had enquired very minutely but had failed to find an atom of truth in the accusation. The amla thought they had checkmated Dr. Mookerjee and rather strongly demanded the apology. Dr. Mookerjee was not satisfied with the manner in which L. had proceeded on his errand and was not convinced that the report published in *Reis* was not correct. If he were to do anything, he said, there must be a fresh enquiry. It was not pressed, and Mookerjee gave the Zamindar's men distinctly to understand that he would not apologise although other journals, including a notable one, which had quoted him, expressed their regret to the Zamindar and withdrew the imputation. The men returned to their place and neither Dr. Mookerjee nor the public heard anything about the threatened legal proceedings. I have narrated this event somewhat in detail to show Dr. Mookerjee's love of truth and honesty on the one hand and his firmness on the other.

I venture to remark that your book does not contain quite as many little anecdotes about Dr. Mookerjee as would make it more interesting and show to greater advantage Dr. Mookerjee's

likes, dislikes, &c. I dare say Kisari and Jogesh Babus and others could give you heaps. I can now remember only one. There was an Evening Party at Government House, the last I believe, of Lord Dufferin's, when Lord Connemara, the Governor of Madras, was present. Well, at the Party the Viceroy introduced Dr. Mookerjee to Lord Connemara. After the usual courtesies were interchanged and Lord Connemara had complimented Dr. Mookerjee upon the excellence of *Reis and Rayyet*, the Governor asked Dr. Mookerjee what class of Mahomedan he was, i. e., whether Shia or Sunni. Thinking that his dress had misled him, Dr. Mookerjee quietly replied that he was not a Moslem, but a Brahman. This would not satisfy the Governor. When again Dr. Mookerjee said his country was Bengal, Lord Connemara laughed aloud remarking that he had great regard for the learned Editor's wit, which he must reserve for his paper, but he, the Governor, who comes from the land of Brahmans in Maharashtra, was not to be thus befooled. He knew better. In vain would Dr. Mookerjee assert that he was a Brahman of Bengal and a Brahman of Brahmans. Lord Connemara, like Sir Auckland Colvin previously, had fallen into the same error about the nationality of Dr. Mookerjee. Sir Auckland had said that it was not Mookerjee's dress that had led him to think that Mookerjee was a Moslem--it was his face, his features, every lineament of which proclaimed in unmistakable terms his birth from old Moslem stock. The situation was very amusing and poor Dr. Mookerjee did not know how to prove his parentage to the unbelieving official. Thrown on his wits, Mookerjee could only remember that one of his ancestors had been to Delhi. This was a settler. "There now, didn't I tell you you were a Mahomedan? You must have sprung from the Moslem stock of Delhi. You may be a Brahman now--but you must have been a Moghul at one time. I can always make out a Mahomedan from the face." This was, as far as I am aware, one of the few occasions on which Dr. Mookerjee was checkmated. His powers of conversation and his wit were of such a high order that it would require extraordinary skill to turn the talk on him in a discussion like this.

Dr. Mookerjee was a regular store-house of amusing and interesting stories, and one could sit listening to him for hours. I generally used to go to him by nightfall and often sat listening to him till 2 in the morning--when he would rise for his dinner! I had often to go without mine, till one day when, being hard pressed to stay for sometime longer as I was bidding good night at about ten, I told him that on several occasions I had gone without dinner, he reproached me for not telling him that my staying till 1 or 2 A.M. meant fasting, and since then whenever I stayed late I used to have dinner there.

I hope to be pardoned for the length of this letter, for I am sure to a busy man like you it would mean unnecessary waste of time.

Yours truly,  
SIDDHESHUR MITTER.

From Dr. Mookerjee to Baboo Siddheshur Mitter.

September 29, 1888, 1-30 A.M.

MY DEAR SIDDHESHUR,--I received your circular\* diplomatique, but we have no space for circulars of any kind. It has appeared in the proper quarters, not excepting the \* \* Notwithstanding, it will not go down with the public.

Your last circular in *propria persona* is lying before me. I regret I can make no use of it. It wants the essential elements of a proper piece of news of the kind. The minutology of such mementos is an interesting enquiry--the numismatics are indispensable.

I am glad for Pratap's sake that Lord Dufferin has been so good as to give him a medal by way of a *souvenir*. But I cannot publish the fact without more details. It is no use pretending to tell others what you do not yourself know well enough. At any rate, this is my principle and rule of conduct.

Your Beames' interview† will appear shortly. I am still inclined to defer it till the landing of Lansdowne, our next Providence.

\* This relates to a printed letter I had addressed almost every newspaper in India suggesting some public memorial to Sir Charles Aitchison.

† Hearby hangs a rather amusing tale--but it does not affect Dr. Mookerjee's life in any way. Pratap Chandra Roy and myself had our last interview with Lord Dufferin in Simla, in July 1888 I think. We asked him for a certain favour which being refused, I had to bring His Excellency round by a bit of shuffling and the result was a medal. The newspapers said P. C. Roy was the first recipient of the retiring Governor-General's favour, &c., but it was reserved for Dr. Mookerjee with his extraordinary shrewdness to detect something below the surface.

‡ This refers to a somewhat stormy interview I had with Mr. Beames at Bhagalpur soon after his transfer there as Commissioner from the Board of Revenue. I had written an amusing account of it. It was not inspired by any ill feeling. It however never saw the light of day. I think I subsequently withdrew it--or Dr. Mookerjee rejected it as ungenerous.

You must be delightfully enjoying life--always on the move, untouched by *ennui*, a daily and nightly guest of the well-to-do and opulent, a stranger to responsibility or care, endowed with boundless health and spirits and appetite adequate to the demands of a Herculean frame. Yours is the very ideal of a life of happiness.

And yet, for all that, there may lurk a skeleton in the elegant and polished cupboard.

Yours sincerely,  
SAMBHU C. MOOKERJEE.

Dr. Mookerjee to Mr. Mitter.

25th August, 1890.

MY DEAR SIDDHESHUR,--I am afraid I have kept you in suspense too long. You certainly expected an answer to your long letter of the 3rd, even if you were disappointed as regards the appearance in "*Reis and Rayyet*" of the literary communication\* accompanying. If I do not write, you would at any rate hear from the office, directly or indirectly. For you are a man of the world, Mr. Mitter--using the term in the innocent sense, that in which I regard myself a man of the world--and you did not end your long despatch, personal, social, and legal, without a business reference. After the tactics of young misses, my young bachelor reserved his unerring dart for the postscript.† But alas! though my man of the world's understanding appreciated the prudence of thus introducing the matter instead of writing a separate letter to the manager, my unbusinesslike ways, or to speak more accurately, the chaos on my table, spoiled the whole game. So far from getting any reply or seeing your article in print, you did not get your subscribed copy of *Reis*.

26th August.

Now your despatch has turned up, you may be sure of an account in the office of "*Reis and Rayyet*" from August 1890--for that is an advantage--whether your MS. be published or not. Your copy is safe, though your "copy" may be suppressed--if that poor pun be any consolation to you. Don't sulk, my dear fellow, I shall try to humour you. I confess I have a sneaking liking for you with all your youthful pranks and peccadilloes. And I like Premiks and Premikas and always do my best to encourage love and letters. I have from a long time past been expecting to see educated ladies shaming the male man into earnest study in order to maintain his position and elevating the tone of our society. I am thankful to God for sparing me to see the bright day dawn at last unmistakably. The review will probably appear this week, which will be mighty early considering that friend Malabari's *Gujrat and Gujrahis* has only just been noticed in the third edition received early last year--after his second had been entirely ignored!

I have already tired you I am afraid, and have certainly not left enough space for entering at proper length on the subject of the late shameful prosecution of *Reis and Rayyet*. You know all about it. You say you know one of my enemies. There you are modest--certainly mistaken. I know you know many. I know you fellows I all were fanning ashes into flame. You of a place which has been called a "Tari Khana," though without a drop of "Fari," were in ecstasies at the prospect of the ruin of a paper the like of which, according to European opinion, has never been produced in India, and of the imprisonment and consequent death in all likelihood of a man who has sacrificed himself to the public good and for an example to his countrymen of a quiet, honest citizen life, according to his lights, and who had never done any of you harm, had never molested any one at all, unless by speaking the truth in the general interest. You talk of admiring *Reis and Rayyet*. I am afraid you are only tickled by the jokes--at most pleased with the literature--but you miss the soul that breathes through the writing. You have not understood the personality which expresses itself in the words. Had you imbibed the spirit of the paper you would have been a better man--you would have shown more enthusiasm of soul--a more earnest sense of duty. You would have sympathized with the spirit in which the obituary notices which were seized upon by strangers as a splendid opportunity for crushing paper and editor, and you would have done your best to prevent the conspiracy, or, if unable to do that, to reduce its numerical strength, of at any rate to vindicate within the circle of your influence the good faith of the writer. It was your host of miscellaneous, irresponsible

\* This refers to a short review, since published, of "*Pramila*," a book of poems written by a young Bengali girl.

† In the P. S. I asked him to have my name registered in his office as a subscriber to *Reis and Rayyet*.

‡ I am sure, at all events hope, that he was not in earnest when he included me among his enemies.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.--Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

croakers and calumniators that inflicted the real wrong by . . . I was terribly prejudiced all round. I would not, under any circumstances, call in Hindu ladies to save myself, though many advisers, including Wilson of the *Daily News*, remonstrated with me for my maudlin sentiment or conservatism. . . . My only consolation is that the leading men of the bar gradually came to learn that . . . and that I had no personal feeling in taking up my pen but wrote entirely in the public interest.

What shall I say of your dogmatism on a matter in which after my own heart I was guided by the best lawyers in Calcutta? You think this, that, and t'other! What! are you greater than Bonnerjee or the Advocate General?

You say it was not my good policy to go up to the High Court. Surely no giant of a Mitter is needed to tell me that. Why, my own health, if nothing else, admonished me to have done with the nonsense as quickly as possible. My own counsel at the Police Court pressed me repeatedly to submit to the court. But then I thought not of policy, but of honour and truth and the public good. Believe it or not, even at that hour—that critical moment, when I expected every moment to swoon on the floor from the suffocating atmosphere of the court, I thought of perhaps an unworthy world—I was anxious to leave a good example of fortitude and rectitude. I was anxious that my friends might not have to blush for me. Yes, if there were a personal regard, it was a wish not to tarnish my reputation under the pressure of persecution aggravated by ill health and financial strain. Alas! the glory of the stand I made has been wholly lost upon even educated Bengalis like your good self.

Yours most sincerely,  
SAMBHU C. MOOKERJEE.

#### AN INDIAN JOURNALIST.\*

(From the *Calcutta University Magazine*, January, 1896.)

It is an eminently readable volume that Mr. Skrine has produced. The life story, as told by him in the form of a study, is one of entrancing interest. We read it through at a sitting. Mr. Skrine's mode of telling it is really admirable. If the common Anglo-Indian biographies (like Shadwell's *Clyde* or Goldsmit's *Outram*) were written with a tithe of his skill, they would not have fallen still-born from the press. Only one flaw we can detect; it is that he is too often in the moralising vein. The disquisitions on biography, on letter-writing, on heredity, &c., are mere digressions, and are singularly out of place in a life of 71 pages only.

Sambhu Chunder's letters have an unique charm. They have a flavour all their own. No one who had read his enormous sentences and carefully chosen unfamiliar phrases in *Reis & Rayyet*, could have imagined that its editor could write such delightful prose.

In fact, in these letters he lays down his gigantic turban and his cumbersome *choga*, and appears in the plain clothes of a kindly-hearted, scholarly old man. As he himself wrote to a young correspondent: "Friendly letters, to my mind, ought not to be stately narratives, or rigidly construed statements, or elaborate arguments. They should be of the nature of familiar intercourse. For my part, I love to talk with you through the post, giving myself up to the bent of the hour or the suggestion of the moment."

There is one feature which makes these letters of peculiar value to our young men. It is their extremely simple and idiomatic diction. Sambhu Chunder consciously laboured for this end. "I have penned through the word 'accustomed,' not because it is in any way wrong or inaccurate or infelicitous, but because I wished to show that a simpler word would do, and be perhaps more expressive because it is downright English, which the other is not. . . . I wished to present another example to the youth, which is naturally fascinated by the music of voluminous words and of rolling periods, in order to give it confidence in its knowledge and taste" (pp. 149-150). This is a lesson which our young men, especially the writers of our college correspondence, would do well to lay to heart.

Another delightful feature of these letters is that they are strewn over with specimens of Dr. Mookerjee's subtle humour.

We give a few of the shorter passages which I am sure the reader will enjoy:—

(i) "I fear that, like Napoleon the Great, I am too much given to asking questions. You may answer at leisure, or not at all" (p. 153).

(ii) "But it is time enough to send you an assurance that your correspondent lives" (p. 152).

(iii) "Sir Walter Scott said to his dear son-in-law—'Be a good man, John!' Easier said than done, might Lockhart reply. The difficulty is about the way. The Rishis, ancient and modern, are usually silent" (p. 164).

\* *An Indian Journalist*: being the Life, Letters, and Correspondence of Dr. Sambhu C. Mookerjee late Editor of "Reis and Rayyet" Calcutta. By F. H. Skrine, J.C.S., Calcutta: Thacker, Spink & Co. 1895.

(iv) "I am naturally a very mild man, as I believe most brave men are" (p. 251).

(v) "No longer the formidable White Mogul of all India, you may be loved without high treason or low suspicion. . . . The most gushing sentiment from the Antipodes cannot be very dangerous." Letter to Lord Dufferin (p. 332).

These letters contain much information about Dr. Sambhu Chunder Mookerjee's inner man, and, indeed, they look like a Boswell's *Life of Johnson* in an epistolary form. They also contain a good deal of the private thoughts of men who have made their mark in Indian history. All these causes combine to make these letters very delightful reading. We could not help going through dozens of pages every time that we opened the book, and we can confidently recommend it to our readers.

Of Mr. Skrine's work, we shall say only a few words. To him it was a labour of love, and he has done it very well indeed. He deserves the thanks of the Bengali community for making one of their members known to the civilised world. If Europeans ever come to respect Indians it will be from reading lives like these. Mr. Skrine's introduction to the letters is excellent. We notice one serious inaccuracy only: the controversy as to the authorship of the *Vasudeva Vijaya* has not been stated with impartial fulness. The photograph of Dr. Sambhu C. Mookerjee, which forms the frontispiece, has been very finely executed. The printing does credit to the *Bee* press. Indeed, in the course of a hurried reading, we could discover three mistakes only, *viz.*, "vour's" p. xxvii (probably *sic in orig.*) "guage" (p. 69) and "ormal" (p. 150). There are two changes for which the book would have been the better. The index ought to have been placed at the back of the volume, and Mr. Skrine's "head pieces" to the several letters might well have been printed in a different type from the letters themselves—as in Froude's *Life of Carlyle*.

We heartily wish that the book would run into a second edition, though we are afraid its price would stand in the way of any large sale. As all profits from this book are to go to the late doctor's family, it would be a disgrace to our countrymen if it does not command a wide circulation.

#### MARK TWAIN INTERVIEWED IN BOMBAY.

In the course of an interview with a *Times of India* representative, Mark Twain gave an account of some early experiences:—

"How did I make my first start in journalism you ask? Well I first stumbled into it as a man falls over a precipice that he is not looking for. I wasn't, as far as I could see, intended for a journalist, but out in Nevada in those early silver days it was a struggle—a scramble from pillar to post—and one had to get a living as best he could. I was invited to take a place on the staff of a daily newspaper there—the *Territorial Enterprise*—and I took it. I should have taken command of a ship if it had been offered, for I wasn't particular in those days. I had had no training, but yet they offered me the post of first officer, not the chief editor, but a subordinate post, and I remained in the journalistic profession for four years in Nevada and San Francisco together. On the *Territorial Enterprise* I was what they called the City Editor. It was a large title, but the pay was not correspondingly great, in fact, the name was merely for style, in reality the City Editor should have been called the local reporter. The post was, so to speak, flung at me. I didn't ask for it. There was a chief editor, a news-editor, and a telegraphic-editor, and in those days they gathered in from the San Francisco and Sacramento papers a good part of the reading matter of the journal. We were expected and supposed to furnish facts pure and simple for the columns of the *Enterprise*, but there were not facts enough to fill the required space, and so often the reading material was largely a matter of imagination—sometimes based on fact, but not always. After about four years in these parts I went off to the Sandwich Islands to write a series of letters concerning the sugar industry there for the *Sacramento Union*. I was gone about five or six months, and when I came back I concluded to deliver a lecture or two on the Sandwich Islands, and I did so. It seemed an easier way of making a living than by journalism; it paid better, and there was less work connected with it, so I dropped journalism and took to the lecturer's platform for two or three years. Then I went on an extended tour in Europe, which lasted for five or six months, and when I returned I was asked to write a book. I did so, and from that time on I have written books mainly. Up to the present I have stepped out of silver-mining—that, by the way, was my first start in Nevada—into journalism, from journalism into lecturing, and from lecturing into book-making, each of these steps being not forced in any way, but the one leading to the next by a sort of natural sequence."

#### METHOD OF LITERARY WORK.

The conversation having turned to his method of work, Mr. Clemens remarked: "I work very regularly when I work at all. I work every day and all day from after breakfast till late into the

night until the work is finished. I never begin to work before eleven in the morning, and I sit at it till they pull me away from table to dress for dinner at seven at night. They make me stop then for a while, as they think I might overwork myself, but I don't think there is any fear of that, for I don't consider the kind of writing I do is work in any way: it is in no sense a labour with me. The mere physical work would not hurt me or anyone else, you can sleep that off. The mental part of it is nothing but amusement; it's not work. I always write my own copy. I have tried a type-writer and also a phonograph, but I couldn't get along with either."

"You do not find dictation any help then?"

"I couldn't learn the art. I could conceive that for commercial correspondence it would be easy to do, but there's no inspiration about that. There's nothing to help inspiration or whatever you may call it, like the sight of your own work as it goes along. I am not a very rapid worker, but when I sit down to it I get through a fair amount in a day. For instance take 'The Innocents Abroad': it contains 650 octavo pages with about 200,000 words on them. That book I wrote in a good deal of a hurry, and that's the only book I ever wrote in a hurry. The contract compelled me to furnish the manuscript complete on a certain date, therefore I worked every day from one o'clock in the afternoon till midnight, and I got it finished in sixty-two days. I must have written on an average 3,000 words per day."

"What do you find most helpful in your work?"

"Tobacco," replied Mr. Clemens, picking up a capacious briar-root pipe, which was kept busily engaged as he paced up and down the room, enveloped in a thick cloud of smoke. "I always smoke when at work; I couldn't do without it, I smoke by necessity. I did stop smoking once for a year and a-quarter but in that year and a-quarter I didn't write anything. I have no works in contemplation just now, but as soon as I get at leisure I shall go to work again. There are two or three things I want to write and I may---no doubt shall---write some sort of book on this excursion, but I always leave myself quite free in these matters. I never make any promises to myself or anybody else, because I don't like being hampered by the feeling that something has to be done when perhaps I am not in the mood to do it."

Passing from Mark Twain's own works to those of other authors, the name of Rudyard Kipling was mentioned. "I have met him several times," said Mr. Clemens, "and I like him very much. I admire his work prodigiously. There is no question as to his genius: that must be confessed by everyone. He has genius and plenty of it, and if there is any fault found with him it can only be as to the accuracy of his presentation of Indian matters. There is sure to be criticism of detail; every author has to put up with that. His accuracy of detail may be criticised here, but we in other parts take his accuracy for granted. We don't know anything about that, and besides we don't read his work for fact anyhow; we read it for the pleasure of it. I have an amazing fondness for his 'Plain Tales,' and I think that some of his ballad work is inimitable; I don't see how anyone could possibly surpass it."

#### MEMORISING THE LECTURES.

To an interviewer from the *Bombay Gazette*, Mark Twain confided something as to his lecturing method:—

"Then I presume you prepare carefully for your lectures?"

"Yes, I am not for one moment going to pretend I do not. I don't believe that any public man has ever attained success as a lecturer to paid audiences (mark the qualification), who has not carefully prepared, and has not gone over every sentence again and again until the whole thing is fixed upon his memory. I write my lectures, and try to memorise them, but I don't always succeed. If I had a better memory it would be worse in some respects, for when one has to fill up an ellipsis on the spot, there is a spontaneity about the thing which is considerable relief. I ought really to write the whole thing beforehand, but I don't do it, as I prefer to use material which has appeared in my books. The extracts, however, are seldom exactly the same as they are printed, but are adapted to circumstances."

"No, I don't localise, because to do that you want to be well posted up, and know exactly what you are about. You must be exactly prepared beforehand. I never pretend that I don't indent on my books for my lectures, for there is no object in doing that. It is all very well to talk about not being prepared and trusting to the spirit of the hour. But a man cannot go from one end of the world to the other, no matter how great his reputation may be and stand before paid houses in various large cities without finding that his tongue is far less glib than it used to be. He might hold audiences spell bound with unpremeditated oratory in past days

**DEAFNESS COMPLETELY CURED!** Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

when nothing was charged to hear him, but he cannot rely on being able to do so when they have paid for their seats and require something for the money unless he thinks all out beforehand.

"You ask me whether my memory has deserted me on the platforms sometimes? Yes, it has sometimes entirely. And the worst of it is that, as I prefer to select things from my books, my remarks are often in the narrative form, and if you lose yourself in the narrative it is not very comfortable, because a tale should have an end somewhere. Still I have generally managed to get out of the difficulty some way or other. It is really very curious to see what a man can do on the platform without the audience suspecting anything to be wrong. A case in point occurred in Paris a year ago. I began some opening remarks at one of my 'At Homes' there with an anecdote, as for some reason or another I wanted to fill up the time. I began telling the anecdote, but I found when half-way that my memory regarding it had gone. So I switched on to another line, and was soon leaving the half-told anecdote far behind. My wife and daughter were present. And I afterwards asked them whether they remembered the breakdown. They replied in the negative. I then asked whether they heard the finish of the anecdote with which I had begun my remarks, and they at once replied they had not. As you say, if anyone would be likely to discover a flaw, it would be my wife or my daughter, and when I found that they were unaware of the defect, I was quite satisfied that the audience in general knew nothing about it."

#### OUR REGARDS TO MR. RUSSELL.

THE writer of these lines hereby tenders to Mr. W. Clark Russell the assurance of his thanks and appreciation. I have always loved sea stories, and those of Mr. Russell stand at the head of their class. From "The Wreck of the Grosvenor" to "Lost, Ye Landsmen!" I have read them all. Yet salt water, and the things thereon and therein, are not the only things he knows about; not by many degrees of latitude.

In his last book he makes a sailor talk thus: "I have suffered from the liver in my time, and know what it is to have felt mad. I say I have known moments when I could scarce restrain myself from breaking windows, kicking at the shins of all who approached me, knocking my head against the wall, yelling with the yell of one who drops in a fit and all the while my brain was as healthy as the heatmost that ever filled a human skull, and nothing was wanted but a musketry of calomel pills to dislodge the fiend," &c., &c.

So much for what Mr. Russell's sailor (or Mr. Russell himself) says and there are plenty of people who can testify that this is not a bit overdrawn. One fact in particular it helps us to realise, namely, that the life of a sailor does not guarantee good health. Indigestion and dyspepsia—of which liver complaint is a sequence and a symptom—is as common among sailors as among landmen.

One of the latter, however, may now tell of his experience. "All my life," he says, "I had suffered from biliousness and sick headaches. I would have an attack about every three weeks. At such times my appetite left me, and I could neither eat nor drink for days together. I suffered from dreadful sickness and straining, and vomited a greenish-yellow fluid. My head felt as though it would burst. I had a bad taste in the mouth, sallow skin, and the whites of the eyes turned yellow. I was recommended to adopt vegetarian diet, and did so, but the attacks were just as frequent and violent. I consulted doctors and took their medicines, but was none the better for it. In this way I went on year after year."

Well, we shall agree that there could scarcely be a worse way to go on, and it all came about this: The overworked stomach put more work on the liver than the latter could do. Indignant and disgusted at this the liver refused to do a stroke more than its proper share. Hence more bile accumulated in the blood than the liver was able to remove. This surplus bile acts as a slow poison—and not so very slow either. The tongue is furred, the head aches and feels dull and heavy; the eyes and skin are greenish-yellow, there is dizziness and nausea; cold hands and feet; spots before the eyes; a pungent, biting fluid rises into the throat; constipation; high coloured kidney secretion; prostrated nerves; irritability; loss of ambition; fears and forebodings, &c., &c.

This is "biliousness" or "liver complaint" in its simplest form. When long unchecked it produces irregular action of the heart, rheumatism, gout, and any, or all, of a dozen other organic disorders. There is no more certain or powerful impulse to misbehaviour; suicide and other crimes often resulting.

What to do? To get rid of the poison by starting the skin and bowels into energetic action; then to keep them going at a healthy and natural gait. How to do this? Let our friend Mr. F. Widger, 4, Portland Square, Plymouth—whom we have just quoted—speak on that point.

In his letter, dated March 3rd, 1893, he adds:

"Two years ago, after all medicines had failed to help me, I first heard of Mother Seigel's Curative Syrup. I procured it from Mr. R. S. Luke, Chemist, Tavistock Road, and began to use it, and nothing else. After having consumed one bottle I found myself vastly better, and by continuing with it I got rid of my old trouble altogether."

We should mention that Mr. Widger is a tailor and outfitter at Plymouth, and well known and respected in that community. He permits us to use his name out of gratitude for his recovery. The potency of Mother Seigel's Curative Syrup over liver disease is due to its ability to cure indigestion and dyspepsia, which is (as we have said) the cause of liver disease.

Every house on the land, and every ship on the sea, should have this remedy as a necessary part of their stock and stores. Perhaps Mr. Russell may recommend it in his next book. But no "musketry of calomel pills," O, no.

A Wonderful Medicine.

**BEECHAM'S PILLS**

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness,

Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

**WORTH A GUINEA A BOX.**

For females of all ages these Pills are invaluable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

**Beecham's Magic Cough Pills.**

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

**Beecham's Tooth Paste**

Will recommend itself being efficacious and economical; it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.  
After paying the expenses of the publication the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

**OPINION ON THE BOOK.**

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October, 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahmin of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

#### "IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although I sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonaallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdim says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

##### SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Pneumonia, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

#### CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

## CONTEMPORARY POETRY

### THE PURPLE EAST.

BY WILLIAM WATSON.

Never, O craven England, nevermore  
Prate thou of generous effort righteous aim !  
Betrayed of a People, know thy shame !  
Summer hath passed, and Autumn's threshing floor  
Been winnowed ; Winter at Armenia's door  
Snarls like a wolf ; and still the sword and flame  
Sleep not ; *thou only* sleepest ; and the same  
Cry unto Heaven ascends as heretofore ;  
And the red stream thou might'st have staunch'd, yet runs ;  
And o'er the earth there sounds no trumpet's tone  
To shake the ignoble torpor of thy sons ;  
But with indifferent eyes they watch, and see  
Hell's regent sitting yonder, propped by thee,  
Abdul the Damned, on his infernal throne.

You in high places ; you that drive the seeds  
Of Empire ; you that say unto our hosts,  
" Go thither," and they go ; and from our coasts  
Bid sail the squadrons, and they sail, their deeds  
Shaking the world : lo ! from a land that pleads  
For mercy where no mercy is, the ghosts  
Look in upon you faltering at your posts—  
Upbraid you parleying while a People bleeds  
To death. What stays the thunder in your hand ?  
A fear for England ? Can her pillared fame  
Only on faith forsworn securely stand,  
On faith forsworn that murders babes and men ?  
Are such the terms of Glory's tenure ? Then  
Fall her accursed greatness, in God's name !

Heaped in their ghastly graves they lie, the breeze  
Sickening o'er fields where others vainly wait  
For burial : and the butchers keep high state  
In silken palaces of perfumed ease.  
The panther of the desert, matched with these,  
Is pitiful ; beside their lust and hate,  
Fire and the plague-wind are compassionate,  
And soft the deadliest fangs of ravening seas.  
How long shall they be borne ? Is not the cup  
Of crime yet full ? Doth devildom still lack  
Some consummating crown, that we hold back  
The scourge, and in Christ's borders give them room ?  
How long shall they be borne, O England ? Up,  
Tempest of God, and sweep them to their doom !

**DEAFNESS.** An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

I had not thought to hear it voiced so plain,  
Uttered so forthright, on their lips who steer  
This nation's course : I had not thought to hear  
That word re-echoed by an English thane,  
Guilt's maiden speech when first a man lay slain,  
" Am I my brother's keeper ? " Yet full near  
It sounded, and the syllables rang clear  
As the immortal rhetoric of Cain.  
" Wherefore should *we*, sirs, more than they—or they—  
Unto these helpless reach a hand to save ? "  
An English thane in this our English air,  
Speaking for England ? Then indeed her day  
Slopes to its twilight, and for Honour there  
Is needed but a requiem, and a grave.

O towering Daughter, titan of the West,  
Behind a thousand leagues of foam secure ;  
Thou toward whom our inmost heart is pure  
Of ill intent : although thou threatenest  
With most unfilial hand thy mother's breast,  
Not for one breathing-space may Earth endure  
The thought of War's intolerable cure  
For such vague pains as vex to-day thy rest !  
But if thou hast more strength than thou canst spend  
In tasks of Peace, and find'st her yoke too tame,  
Help us to smite the cruel, to befriend  
The succourless, and put the false to shame.  
So shall the ages laud thee, and thy name  
Be lovely among nations to the end.

Still, on Life's loom, the infernal warp and weft  
Woven each hour ! Still, in august renown,  
A great realm watching, under God's great frown !  
Ever the same ! The little children cleft  
In twain : the little tender maidens reft  
Of maidenhood ! And through a little town  
A stranger journeying, wrote this record down,  
" In all the place there was not one man left."  
O friend, the sudden lightning of whose pen  
Makes Horror's countenance visible afar,  
And Desolation's face familiar,  
I think this very England of my ken  
Is wonderous like that little town, where are  
In all the streets and houses no more men

—*The Westminster Gazette.*

**DEAFNESS COMPLETELY CURED !** Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Arthur Sprockel, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

## WEEKLYANA.

THE Select Committee on the Cotton Duties Bill agreed to the following provision:—

"No duty shall be levied under this Act on any goods which at the commencement of this Act are upon the premises of any mill and are ready for issue therefrom, either without undergoing any further process, or after being made up into bales or packets:

Provided that a list of such goods be made up and deposited with the Collector within seven days from the commencement of this Act.

(2).—The returns of the production of such goods prepared under section 8 of this Act shall be separate from those of other goods."

The Select Committee report:

"There is now to be leviable an uniform duty of three-and-a-half per cent. *ad valorem* on cotton goods produced in British India with power to apply tariff valuations as in the case of customs-duties.

We have, at the instance of the millowners, provided that the returns of goods produced shall be rendered once in each month instead of twice.

We have made additions to section 16, respecting inspections of mills, for the purpose of protecting secrets pertaining to trade processes.

We have amplified sections 28 and 29, relating to the taking of samples, by enabling the Government to prescribe, when necessary, what are to be deemed to be sufficient samples, and owners to require that any sample taken at a mill shall be delivered to the Collector in a sealed cover.

We have added a section (41) providing that no duty shall be levied under the proposed Act on any goods which at the commencement of the Act are upon the premises of any mill and are ready for issue therefrom.

We do not think that the measure has been so altered as to require re-publication, and we recommend that it be passed as now amended.

J. Westland.  
Alex. Edw. Miller.  
C. B. Pritchard.  
J. D. Rees.  
G. P. Glendinning.  
P. Playfair.  
G. P. Glendinning.  
P. Playfair."

We dissent from the recommendation that the Bill be passed.

Thus all of the Committee sign the report. But the two non-official members, in a separate note, do not agree with the recommendation to pass the Bill. In pursuance of the same plan of protest and non-opposition, at the final debate on Monday, while objecting to the policy of Government, they agreed to the measure without voting against the motion to pass the Bill.

FOLLOWING the suggestion thrown out at the Bombay mixed meeting of Natives and Europeans, Poona, by way of practical protest against the excise on coarse cotton cloths, at a native meeting, on Feb. 2, of 2,000 persons, resolved that all Indians should wear cotton goods manufactured in the country. The Poona patriots are practical men. But do they believe the scheme feasible, to say nothing about the other objections?

THERE is a proposal to bridge the Mahanady at Cuttack, to link the Bengal-Nagpur with the East Coast Railway.

AN order having passed for the tindal or the man in charge of a boat to wear, after the manner of the gariwallas, a badge, the boatmen of Karachi have struck work. Pending a settlement and to prevent public inconvenience as much as possible, the Port Trust are plying their boats free.

THE Convocation of the Calcutta University comes off on Saturday, the 22nd February, at 3 P. M.

WE give below the dates of the University Examinations for the year 1897:—

The Entrance, 28th and 29th January and 1st, 2nd, and 3rd February.

The F. A., ... 8th, 9th, 10th, 11th, and 12th March.

The B. A., ... 8th, 9th, 10th, 11th, 12th, and 15th March.

The M. A., Premaund Roychand Studentship, B. L., and Honours in Law Examinations of the current year will be held on the 16th November next and following days. The re-examination of the unsuccessful candidates at the 2nd L. M. S. Examination will commence on the 16th November, 1896.

DURING January, 45,347 persons visited the Indian Museum, that is, 1,417 male and 480 female Europeans, and 31,882 male and 11,568

female Natives of India, at a daily average of 2,155 during the 21 public days.

MR. W. Griffiths goes on six months' leave. Professor A. Pedler acts for him as Principal of the Presidency College.

THE holidays of the year prescribed for the Court of Small Causes of Calcutta, are:

|                                                                                        |     |                         |
|----------------------------------------------------------------------------------------|-----|-------------------------|
| New Year's Day ...                                                                     | ... | January 1st.            |
| Sri Panchami ...                                                                       | ... | " 20th and 21st.        |
| Dole Jatra ...                                                                         | ... | February 28th.          |
| Eed-ul-Fitr ...                                                                        | ... | March 16th and 17th.    |
| Good Friday ...                                                                        | ... | April 3rd and 4th.      |
| Chaitra Sankranti ...                                                                  | ... | " 11th.                 |
| Id-uz-Zuha ...                                                                         | ... | May 25th and 26th.      |
| Dasahara ...                                                                           | ... | June 20th.              |
| Mohurram ...                                                                           | ... | " 22nd to 24th.         |
| Patiha Dawazdabum ...                                                                  | ... | August 22nd.            |
| Janmashtami ...                                                                        | ... | " 31st.                 |
| Dusserah Vacation, including Mahalaya, Durga, Lukhi and Kali Pujas, and Bhadrakali ... | ... | Oct. 6th to Nov. 6th.   |
| Jagadhatri Puja ...                                                                    | ... | November 13th and 14th. |
| Christmas holidays ...                                                                 | ... | December 24th to 31st.  |

All Sundays are holidays.

The day which may be fixed by the Government of India for the observance of the Birthday of Her Majesty the Queen-Empress of India shall also be a holiday.

THERE was an interesting meeting, on January 16, of Indians or rather of the Society of Arts, Adelphi. The occasion was the reading of a paper, by Colonel R. G. Woodthorpe, of the Indian Survey Department, on "The Shan Hills: Their People and Products." Mr. Geo. Curzon, Under Secretary for Foreign Affairs, presided.

The Chairman, reports the *Standard*, introduced the lecturer "as one possessing long and unique experience of the Indian frontier, having been a member of the Commission, under Sir W. Lockhart, which explored the Southern Pamirs and the Oxus Valley, and established friendly relations at Chitral. After being head of the Indian Intelligence Department at Simla, Colonel Woodthorpe was transferred to the north-eastern frontier, and was placed in charge of the survey operations on the Commission then delimitating the boundaries between Siam and the States we had taken over as part of the heritage of Burma. It was natural, therefore, that he should have been made a member of Mr. J. G. Scott's Commission of Inquiry into the geographical character of the areas out of which it was then proposed to make a buffer State."

"Colonel Woodthorpe gave a graphic description of the physical features of the Shan States, which form the easternmost portion of our Burmese possessions. Under Burmese rule peace and quiet were seldom their lot, and evidences were plentiful of the depopulation of States that were at one time under profitable cultivation. Since our occupation of Mandalay an improvement had been observable. To the devoted labours of our political officers and their able assistants to their resourcefulness in emergencies, and their infinite tact and skill in dealing with both rulers and people, the Shan States owed their present peaceful and happy condition, and their increasing prosperity. Having described a long journey through the States, and illustrated some of their peculiarities with lime-light views, the lecturer spoke of the habits of the people. Gambling, he said, was universal; and on market days respectable-looking men might be seen seated in a booth, or some other shelter, selling tickets from little books for the lottery of the thirty-six animals, a diagram of which hung behind him to assist the investor in making his choice. Attempts were being made, with some success, to reduce the excessive public gambling, but as the receipts from the licences were very great, and in Keng Tung some were set apart to provide pin money for the Queen and Princesses, the reform must not be effected too violently. The Sawbwa was assisted in his government of the State by sixteen Ministers. They received no settled salary, but a certain proportion of fines, taxes, &c., and were often very poor, the daughter of the Prime Minister of Keng Tung having a vegetable stall in the market. The State was divided into districts, each under a hpaza, or commissioner, with four or five advisers, invested with certain magisterial, civil and revenue powers. These hpazas had the power of life and death, without reference to the Sawbwa. Each district was subdivided into village circles under their own head men. The chance of studying these peoples to full advantage was, added the lecturer, fast slipping away. Up till now they had been almost entirely isolated, owing to the insecurity that had prevailed in the regions where they were settled. In consequence, they had, no doubt, preserved their languages and institutions in a far purer state than members of the same races who had lived under happier and

more peaceful conditions elsewhere. Now, however, an era of peace seemed to have set in. These tribes were in constant contact with the outside world; their languages were undergoing modifications, or dying out, and their customs were being assimilated to those of the Shans and Chinese. Many illustrations of this had come under his observation during the past half-year. He would, therefore, recommend any one interested in such inquiries to come before it was too late; the inducements were surely sufficient—a good climate, in the midst of splendid mountain scenery, simple, friendly folk to live among, and an occupation full of interest in itself, and sure to lead to results of permanent value. Work had been begun on the line of railway from Mandalay to the Kun Low ferry on the Salween. It was hoped that it would tap the trade of Western Yunnan. He would have been glad to see a line run up into the Southern Shanplateau, at least, if not to the Salween itself. The construction of the cartroad to Taunggyi had had most excellent results; but a line of rail would, in the opinion of many qualified to judge, greatly increase the agricultural wealth of the country.

Sir Charles Crosthwaite, formerly Chief Commissioner of Burma, expressed the hope that some public interest would be taken in the very beautiful country and the very remarkable people described by Colonel Woodthorpe.

Lord Lamington believed that with the advantages of peace and security under British Government, the Shan States would be developed. Properly cultivated, the land would pay any labour.

Mr. J. G. Scott remarked that no one knew where the Shans came from.

Sir Owen Burn, Chairman of the Indian Section of the Society of Arts, expressed the obligation of the Society to Colonel Woodthorpe and to Mr. Curzon.

The Chairman endorsed what had been said as to the importance of the particular corner of the world to the ethnologist, the philologist, and the comparative sociologist. He could imagine no more interesting study for a man of such tastes than those interesting tribes hidden away in this remote country, with customs, superstitions, habits, and language entirely dissociated from those of the rest of the world. The time for studying these people was now. The British system that had taken them into its embrace had many advantages. It brought the Pax Britannica to that out-of-the-way country; but, on the other hand, it had a strange and, in some respects, an unfortunate knack of flattening out the social knobs and excrescences which everywhere appeared on the surface of national character. Those States would benefit by peace and improved social conditions, but they would lose by the gradual disappearance of those idiosyncrasies which should be studied at once by competent students (hear, hear).—*The Standard*, Jan. 16.

The British system, according to the Under-Secretary for Foreign Affairs, is an eraser. It extinguishes a race by deathly peace and order. There is a call therefore to his countrymen to study the curious Shans before they are transformed by British rule.

\*\*\*

MR. C. E. A. W. Oldham, Under-Secretary to the Government of Bengal, in the Financial and Municipal Departments, having been transferred, in the same capacity, to the Judicial, Political and Appointment Departments under the Chief Secretary, Mr. B. Foley, Offg. Joint-Magistrate and Deputy Collector, Bettiah, Champaran, acts as Financial Under-Secretary.

..

PROFESSOR Richard, M.E., has been made to pay double penalty for his bad temper. On the complaint of E. Calder, the Chief Magistrate has fined the Professor in the sums of Rs. 30 and Rs. 100 on charges of assault and wrongful confinement. The evidence for the defence connecting the *Sunday Times* with the prosecution, that the complainant was a tool for extorting money for that journal, had no effect on the Magistrate.

..

THE public exhibitions by the Professor of the healing power of electricity are being repeated by Dr. Maloney who has just arrived to elbow up the Professor. The Doctor heralds himself by a long array of medical diplomas, testimonials, and press extracts in the advertisement columns of the *Englishman*.

\*\*\*

PROFESSOR Schuster, of Owen's College, Manchester, writes to the *Manchester Guardian*, explaining the discovery of Professor Röntgen, of Würzburg, which may lead to the unraveling of the secrets of the human system.

"It has long been known that the highly electrified particles projected from the negative pole of a vacuum tube produce a strong luminosity (phosphorescence) of the glass walls of the tube. Professor Röntgen's discovery is that, in addition to this phosphorescence another radiation is produced which is capable of penetrating through all bodies, though not at the same extent; thus, aluminium is more transparent to this radiation than Iceland spar. Flesh, skin, and blood are more transparent than bone, and it is quite correct that a photographic print can be obtained in which all the bones of the hand are shown perfectly, while the flesh parts are extremely faint; any abnormal formation of the bony parts would certainly appear in the photograph. The images are, however, of the nature of shadows, and not

like the images formed by a lens. In consequence, it would not, I believe, at present be possible to obtain pictures of the inside of bodies which are more than about an inch thick. The new radiation is very different from that of light; it is not possible to say at present what its nature is."

The credit of the first discovery is claimed, by the Buda-Pesth *Pester Lloyd*, for a Hungarian, Professor Philip Lenard, of the Stuttgart University.

## NOTES & LEADERETTES,

### OUR OWN NEWS

&

### THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

~~~~~

THE mad and maddening poetical appeal of Mr. William Watson with which we open our present number, does no justice, poetic or other, to the Sultan. He would send him to an unmentionable place, as a late Prime Minister of England would send the Turk bag and baggage out of Europe. The present Prime Minister, however, takes a more moderate view of the situation. The horrors in Armenia, if not disproved have been found to be vastly exaggerated. Lord Salisbury is not deaf to an appeal for redress. The Armenians, we are afraid, are more sinning than sinned against. It is the unfortunate Sultan who has to answer for all their sins. They of Armenia are not so suffering as the appeals for their protection make them to be. They are more aggressive than their alleged aggressors. Lord Salisbury, though not so pronouncedly in favour of the Turk as the late Lord Beaconsfield, has still a sneaking fondness for the Sultan and will not rush to war against him.

AT a banquet given by Nonconformists at the Hotel Metropole, Lord Salisbury made a speech, when he said that the appeal made by the Transvaal for foreign support proved what would have happened had Ireland been under Home Rule. He upheld the cause of the Ulstermen, whose demands had been ignored though they formed the majority of the population in the Transvaal. Respecting Venezuela, he said he had never contested the Monroe Doctrine, though he had upheld it as Monroe understood it. England, continued the Prime Minister, was unable to go to war with the Sultan on behalf of Armenia, and must give time for the execution of the reforms. He did not believe that the Sultan had ordered the cruelties in Armenia, though his Government was weak, wretched, and impotent. The Powers, he further added, would watch the execution of reforms, and not go further. Referring to the loyalty of the Colonies, Lord Salisbury declared that he cared not how much the British were isolated, so long as they were united.

THE remains of the late Prince Henry of Battenberg were, on February 4, transferred at Portsmouth from the *Blenheim* to the yacht *Alberta*, anchored off Cowes. The Queen and Princess Beatrice visited the ship and deposited wreaths on the coffin. The funeral took place next day and was a most imposing military ceremony. The Queen and Princess took part in the procession from Cowes to Whippingham.

THE *Times'* Berlin correspondent states that the Emperor William's action regarding the Transvaal is the natural outcome of the policy pursued for years past to secure the development of South Africa on German lines under his own influence, to render the Transvaal economically independent of the Cape Government. It is reported at Cape Town that the visit of Dr. Leyds, the Transvaal Agent to Berlin, is connected with the German purchase of seven miles of land on Delagoa Bay coast.

MR. Gladstone, replying to a letter addressed to him by an Egyptian resident in Paris, says that the moment for the British evacuation of Egypt appeared to him to have arrived some years ago, and that he then hoped that other Governments would assist him to effect a settlement, but that hope was not realised, and he cannot say why.

THE *Times'* Rome correspondent states that Great Britain has referred to France the request of Italy to allow the passage of the Italian troops through Zeila to the interior of Abyssinia.

THE Porte is arranging a loan of thirty million francs on the security of lighthouse dues.

MR. Justin McCarthy retires from the leadership of the Irish party owing to ill-health, but will retain his seat in the House of Commons.

THE American Senate has adopted the Free Silver Bill, replacing the Bond Bill of the House of Representatives.

MR. Holland, speaking at the annual meeting of the Manchester Chamber of Commerce, admitted that Sir James Westland's new Bill was an honest attempt on the part of the Government to fulfil Sir Henry Fowler's pledges made to the House of Commons in February, 1894. One of the advantages of the Bill, he said, was that the customs and excise moved on parallel lines.

ADVICES from Queensland state that heavy floods have occurred there, in which twenty people have been drowned and fifty miles of railway submerged.

THE French Chamber of Deputies has passed without a division the Pekin Convention of June, 1895.

THE Emperor William has issued a rescript thanking the Germans throughout the world for the greetings on the occasion of his birthday, and expressing his gratification at their increasing readiness to co-operate with his efforts to promote their welfare.

THE intention to propose to the Reichstag to create a big German Navy has been abandoned for the present session, Prince Hohenlohe, the Chancellor, fearing to jeopardize the ordinary estimates.

NOTWITHSTANDING the strongest opposition on the part of his wife and the Pope, Prince Ferdinand has issued a proclamation announcing that his son will be baptized in the orthodox faith on the 14th instant, and that the Czar will be the sponsor.

IN the course of a speech made by Mr. Baifour at Bristol, he said that Asia and Africa were large enough for all, and he regarded without fear and jealousy a commercial outlet for Russia on the Pacific Ocean. Russia, he said, the world generally, and British commerce in particular, would be gamers thereby.

A CONFERENCE of the Commanders of forces in New South Wales, Victoria, South Australia and Queensland has been held, at which a scheme of federal defence was drafted, and also urging the immediate adoption of the rifle in use by the Imperial forces.

THE United States bond issue has been covered five times over.

CAPTAIN Stewart and Lieutenant Alston, commanding the Sikh force in Nyassaland, have gained two brilliant victories over the remaining slave dealing Arabs who were utterly routed. The Chiefs who have been captured will be executed forthwith. The trade route into the far interior is now open.

LORD Elgin returned to Government House on Sunday, and, after presiding at the Legislative Councils on Monday and Thursday, again left, on Friday, for a cruise in the Bay. He will be back in time for the next sitting of the Council to be held on the 13th instant.

WE read in the *Englishman* of February 5 that the Governor of Madras could not accept the invitation of the Adyar Club to a farewell ball in honour of himself and Lady Wenlock on the 14th February, because, as he said, the Viceroy and Governors are precluded from attending such festivities during a Court mourning. The official mourning in India on account of the death of Prince Henry of Battenberg lasts till the 13th February, and Lord Wenlock did not think himself justified to accept any invitation of a festive kind on the day immediately following the close of that mourning, for the Court mourning does not end till later. In Bengal, the etiquette is different. The Governor not only accepts such invitations but also attends them in succession, while the official mourning, prescribed by the Governor-General of India in Council, continues.

THE Entertainment at the residence of Babu Romanath Ghose to the Lieutenant-Governor and Lady Mackenzie, on Wednesday, was splendid, considering how parties for mixed gathering in native houses now pass as such. He expended freely and was anxious that no part of the programme suffered from niggardliness. After the fashion of the time, arboriculture was largely laid under contribution. The house was fitted for the nonce for high dames and mighty earls. There was also a full tide of song, mostly a graphophone reproduction by Father Lafont. Sir Alexander Mackenzie freely enjoyed the entertainment and himself added to it by singing for the graphophone snatches of two songs—"Once I loved a maiden fair" and a Scotch song, and gave the exhibiting Father permission to use the musical record in his future performances.

The invitations for the party included all grades of society. Some ladies and many officials were present. The titled and the untitled made a great show. Babu Romanath was not unmindful of the creature comforts of his guests.

THE three Honorary Secretaries of the Anjuman-i-Islam of Surat have addressed the following letter to Kuan Bahadur Abdul Jubbar of this city :

"Dear Sir, We have the pleasure to convey to you the thanks of the Anjuman-i-Islam of Surat for your very interesting letter (published in the newspapers) regarding your experience of the Belouin Arabs and your pilgrimage to the Hedjaz. Allow us to assure you that the Anjuman-i-Islam of Surat is proud of Mahomedans like you.

The members of the Anjuman-i-Islam were greatly interested when your letter was read before them, and they one and all felt that the Almighty Creator has already accepted you as one of the best Hajis."

We hope the Kuan Bahadur will follow up his last letter and give to the public his other experiences. He could not better employ his hours in retirement, or nothing would be more agreeable to him. He declined with thanks the offers of private service, successively made to him, that he might devote himself entirely to the service of his God. Not only the followers of the Prophet but the public in general will be much interested in a book from the pen of one of such mature judgment and held in general esteem. It could not fail to be an authority, it is sure to be a good and unfailing guide to the future Hajis.

A GRAND-DAUGHTER of the late Dr. Alexander Duff, Miss Duff, who is a good Sanskrit scholar, having studied Sanskrit at Berlin with Professors Oldenberg and Geldner, is now engaged on a great work "Tables of Indian Chronology down to 1300."

IN another column will be found a letter from one of the medical men of this city to the author of "An Indian Journalist," objecting to Mr. Skrine's remarks on early marriage. The correspondent draws an erroneous deduction from the book. Mr. Skrine is not an advocate of infant, but, in Bengal, of early marriage. They are two very different things. The first is a crime against nature; the second a sociological necessity in a tropical climate, where the passions are so precocious and so overmastering. Mr. Skrine thinks that here marriages should take place as soon after the attainment of a certain stage as possible. How many, he remarks, are wrecked at the very outset of life by celibacy!

THE *Athenaeum's* notice of "An Indian Journalist" which we reproduce elsewhere, though short, is appreciative. The remarks to which exception has been taken by the London journal, belong to what Mr. Skrine calls Dr. Mookerjee's "juvenilia" and are introduced to shew a phase in his intellectual development. Mr. Skrine evidently does not believe in the story about the appointment of Lord Canning, the last Governor-General and the first Viceroy of India, and has a very high regard for the abilities of the first Indian Chancellor of the Exchequer, who gave to India something better than the hated income tax, who restored order in the finances of the empire reduced as they were to chaos by the mutiny, and who, had he not been cut off in his punie, would, Mr. Skrine believes, have placed them on a basis unshaken by the depreciation of silver. What a contrast is presented by his grasp of the situation and the policy of alternate drift and tinkering which has passed current since the days of Mr. James Wilson.

THE Mahomedans of Bombay, having cabled a message of condolence to the Queen-Empress, have received a telegram of thanks "for their kind sympathy in this moment of deep sorrow." The Mahomedans

of Calcutta have not combined for the same loyal purpose. The societies representing them mean to proceed independently of each other. The Central National Muhammedan Association has resolved that "This Association's sense of grief at the untimely death of H. R. H. Prince Henry of Battenberg be recorded, and that a letter of condolence be sent to Her Gracious Majesty the Queen-Empress and Her Royal Highness Princess Beatrice." There seems to be a split in the camp of the Central Muhammedans. Recently, we read, a preliminary meeting for a new society was held on the 20th January, at the residence of one of the prominent members. This organization has been named the Mahomedan Constitutional Association, to distinguish it from the existing ones, or to mark them down as unconstitutional. A cub of Mysore has been appointed at its head. If the cub has a tithe of the organizing power of the Tiger, the "Constitutional" will soon overleap its predecessors. But it will not be a walk over.

The two old Societies welcomed the new Lieutenant-Governor at Belvedere on Thursday. Sir Alexander Mackenzie gave a joint reply to the two separate addresses. The Constitution was nowhere.

THE Classified List issued by the Statistical Department of the Custom House, Calcutta, is a very useful publication. It will materially lessen the work of the Department, and is indeed welcome to importers who will be saved much time and constant references to the Department. Its want has all along been felt, but it was reserved for Mr. Skrine to remove it. The List is alphabetical and gives the names of the articles, their denomination, the heading in trade returns under which they are to be entered, and whether dutiable or free on import, and if dutiable under what number of the Tariff Schedule. It might be made independent of the Tariff Act, by adding two more heads of information, the rate of duty and how it is leviable. Being published before the Cotton Duties Act, 1896 (II of 1896) and the Act to amend the Indian Tariff Act, 1894 (III of 1896), the List necessarily takes no account of them. All omissions will be rectified and additions made from time to time, to make it a complete guide. The Collector himself will "be much obliged by any information bearing on errors or omissions therein." The additions will be issued free to subscribers. The price has been fixed to include only the costs of printing and publication.

IN 1892, the Maharaja of Rewah married the Maharani of Ojein, the only daughter of the late Maharaja Sir Radhadas Singh of Dumraon. That marriage was a triumph for the Dewan Jai Prakash Lal. His Highness of Rewah takes a second wife in the sister of the Maharaja of Rutlam. All the British superintendence during his minority and English education seem to have been lost on him. When will our Princes cease to practise polygamy? This over-marrying, for one thing, causes no small trouble to their States, and is a great hindrance to a successful rule. English statesmanship in India once consisted in not allowing State prisoners to marry. The present policy of the Paramount Power seems to be not to discourage the marrying propensity of the Princes. The end is the same or similar.

THE Municipal Commissioners of Calcutta, as represented by their General Committee, are prepared to meet half way the demand for increased emoluments to their Chairman to be selected by the Local Government. They are willing to pay the maximum salary of Rs. 3,000 fixed by the law. But they would reserve the exercise of the discretion vested in them by the law to grant any house allowance, till, perhaps, they find their new Chairman agreeable to themselves. This disinclination to give in at once has been construed in certain quarters as a good and sufficient ground for depriving the Commissioners of the discretionary power and empowering the Local Government to fix the pay and allowances of the Municipal Chairman. The Commissioners as a body will consider the matter next Thursday. We have already pointed out that Sir Ashley Eden thought that allowances to the Chairman should be capitalized and invested in a house for his official residence. Sir Charles Elliott laid down that a house-allowance in Calcutta should not exceed Rs. 250 a month.

THE tragic end of Ram Chandra Singh Deo, the late Raja of Patna, in the Central Provinces, was made the subject of a question

in the Governor-General's Legislative Council on Thursday. Replying to the Hon'ble Rao Sahib Bulwant Rao Bauskate, the member from those Provinces, the Hon'ble Mr. Woodburn, the late Chief Commissioner, said:—

"The Government of India have had their attention called to this case, but they do not think it necessary to make any further inquiry into the circumstances."

A very full inquiry was made at the time by the Administration of the Central Provinces. The result of that inquiry was reported to the Government of India in the following terms:—

"I am directed to report, for the information of the Government of India the death, by suicide, of the Maharaja of Patna on the 8th of June. The Maharaja shot his wife dead, and then shot himself. The Political Agent for the Chhattisgarh Feudatories at once proceeded to Bilangir, the Maharaja's headquarters, and made a detailed enquiry, of which the official report has just reached the Chief Commissioner."

"At the time of the murder and suicide the Maharaja was undoubtedly insane. Suspicion of this had before been occasionally hinted. His mother is of unsound mind. The Maharaja himself had especially since his accession, from time to time displayed eccentricities of conduct and outbursts of temper, only too easily to be accounted for in the light of the present tragedy, but regarded at the time as not unnatural in a hot-headed and self-willed young Chief, new to power, impatient of restraint, and forming, in his distant and isolated capital, exaggerated ideas of his own power and importance. For such outbreaks the Chief Commissioner has himself had to take the Maharaja to task. To reproof and counsel he showed himself readily amenable. And his bearing and conversation were so uniformly frank, courteous and amiable as to rebut all suspicion of his character or intellect being seriously warped. The terrible ending came suddenly when after an outbreak of unfounded fear and suspicion of his wife, his servants and his surroundings, he had in a visit to the Political Agent and Commissioner of the Division become apparently calm and reasonable. The Maharani was a sister of the Raja of Kutubudi, a neighbouring Chief, and was a lady held in the highest esteem by all who knew her. There was one child of the marriage, a daughter, who sustained no injury."

It may be added that the Political Agent reported that he had reason to believe that the immediate cause which led the Maharaja to shoot his wife was her refusal to give him a sum of Rs. 20,000 from her private purse for the purpose of a trip to England, which he contemplated, and the Government of India have no information which would lead them to doubt the correctness of the report.

Restrictions were imposed on the powers of the Maharaja, which were not imposed on the two other young chiefs, who were installed along with him in January, 1894. Under these restrictions he chafed, but they were unfortunately necessary, and were imposed not at the instance of the Political Agent, but by myself as Chief Commissioner. The Political Agent, in his relations with the Chiefs in Chhattisgarh, amply justified the expectations in which I appointed him to the post.

The Diwan was an officer of the Maharaja's own selection."

Mr. Woodburn takes all the responsibility, if there be any, upon himself. The Raja was a lunatic and was born of an insane woman. He was put under restrictions, but not such as to save him from self-destruction. An immediate cause, uninvestigated, of the bloody deed is given. But it was not deemed necessary to make the inquest done on the violent or accidental death of any ordinary subject of Her Majesty. If the report now made public were published at the time, there would probably have been no cause for the agitation of which the present question and answer are the outcome. It is the mystery in which the action of Government is shrouded and the difficulty of getting any true information that supply causes for many unfounded or ugly rumours.

To the question of the Hon'ble Bibu Mohini Mohan Ray, regarding the apprehended transfer of the Chittagong Division under the Government of Bengal to the Assam administration, the Hon'ble Mr. Woodburn made answer:

"The Government of India decided in 1892 that the Chittagong District should be transferred to Assam as soon as settlement operations were concluded in it. It was at the same time decided that the expediency of transferring the whole of the Chittagong Division should be considered by the Lieutenant-Governor of Bengal and the Chief Commissioner of Assam. That question is now under the consideration of those authorities, and will be eventually submitted for the decision of the Government of India."

The Government of India will give attentive consideration to any representation against the proposed transfer which the people of the Chittagong Division may submit through the Government of Bengal; but they do not think it necessary to publish at present any papers relating to the matter."

The transfer has been decided upon. It is only a question of days to make over a Regulation Division to a non-Regulation Administration. Sir Rivers Thompson often complained of the vastness of his dominions. Sir Charles Elliott agreed to part with a portion of them. It is a superfluous assurance that a hearing will be given to a representation through the proper channel. But will the papers be published in proper time to allow of a representation? Or, will it be rejected as too early, or too late, or not to the point?

REIS & RAYYET.

Saturday, February 8, 1896.

THE NEW COTTON LAW NO LAW.

THE English agitation against the Indian cotton duties has begun to bear fruit. There is already a reduction preparatory to wholesale repeal. Last Monday, the two Bills for the purpose were passed. They would have been law the previous Thursday, but could not be as it was found necessary for the Viceroy to be present, who had been away to the Bay to regain health, shattered by a long persistent fever. Alive to his duty, he cut short his cruise to preside at the meeting specially fixed out of the ordinary council day. The Bills were introduced in his absence by the Finance Minister, on Thursday, the 23rd of January, after suspension of the ordinary rules of business. The same day, the Bills were referred to the Select Committee with notice that they would be passed the next Council day, a week after. A motion asking for another week's time, as the proposed measure, which could be accepted only at a sacrifice of nearly half a crore of revenue, was too important to be disposed off so quickly, was not agreed to. Sir James Westland explained, that a fiscal measure should not be delayed in council, but be passed as soon as introduced. He had a high precedent for his contention in the practice of the House of Commons where, he said, "when a Resolution on a fiscal matter is before it, it practically comes into effect at once, without a day's delay." We wish the Legislative Councils in India were as many Houses of Commons for the several Presidencies of the Empire. There may be occasions for passing measures as quickly as possible. There may be times when delay would be dangerous. The provision in the rules for such despatch is not intended for every-day business or for matters requiring serious deliberation. The imposition of a new tax or the repeal of one is a matter not to be lightly approached or easily disposed of. The exceptional provisions are reserved for extraordinary circumstances. If every request for suspension of ordinary rules were to be complied with, they might as well not have been made. Exceptions ought to prove, not be the rule. Nor are rules made without a purpose. They are so many safeguards for the general good. A practice, which cannot bode good, is growing to dispense with the rules on ordinary occasions. That shews either negligence, or laziness, or ignorance or a spirit of lawlessness. Those charged with special powers have a distinct responsibility thrown on them. Let such powers not be lightly exercised. Again, the giving up of a revenue is a more serious task than the imposition of a new impost. The repeal, though partial, of the cotton duties was a matter of more concern than was its re-imposition. The repeal, at a sacrifice of revenue, demanded still more lengthy consideration. Sir James was, however, prepared to grant time, if the Select Committee found it necessary, that is, if they could not finish their deliberations, after every exertion, within the prescribed seven days. The Bills were, accordingly referred, for report, to Sir Alexander Miller, Sir Charles Pritchard, Mr. J. D. Rees, Mr. G. S. Glendinning, Mr. P. Playfair, Sir James Westland and Mr. P. M. Mehta, who was not present in Council or Calcutta, having resigned his seat. The Finance Minister was all fairness. The unseemly haste he attributed to the desire to cause the least inconvenience to trade. He would

not also, by the reference to the Select Committee, bind the members of the Council to the principles of the Bills.

It was unfortunate that Mr. Mehta resigned at a time when no non-official member from Bombay could be appointed to speak on the Bills. To give the people there no cause of grievance, the Finance Minister had taken the unprecedented course of forwarding beforehand, to that city, his speeches and the Bills. "To-day," he said, "all mill-owners at Bombay, and the newspapers there, will receive copies of the speeches which I have delivered, and also of the Bills as they stand and as now introduced before the Council."

Sir Griffith Evans saw no objection to the reference at that stage to the Select Committee, on the understanding that the Council was in no way committed to the principle of the Bills, and as the views of the Committee would aid the Council in the discussion of the measure.

To be in order, the same Committee was appointed twice to report on the two Bills—one to provide for the Imposition and Levy of certain Duties on Cotton Goods, and the other to amend the Indian Tariff Act, 1894.

It is not said how many times or on what days the Select Committee sat. They considered the papers numbered 1 to 16 placed before them, and made their reports. These reports are dated the 3rd of February, the day the Council sat for passing the Bills. It will be remembered that the Bills were referred to them on the 23rd of January with instructions to report within a week. The reports were therefore due on Thursday, the 30th of January. It does not appear that any extension of time was granted them, nor could it be, for there was no meeting of the Council till Monday next, the 3rd of February.

There is no knowing when they completed their deliberations. Four days before they made their report, they were *functus officio*. Even if they wrote any portions of it before the 30th of January, there being no separate dates for them and the whole bearing an after date, a date subsequent to the determination of their duties, the report is void from beginning to end. Its acceptance cannot validate it. There being nothing to receive, how can there be an acceptance? Presentation cannot bring the dead to life. It is a wonder how the first Legislative Assembly in the Empire could perpetrate the illegality. It is no legal maxim that a Legislature can do no illegality.

Could then the reports be acted upon? What becomes then of the structure built on no foundation? The Council could probably discuss the Bills as introduced by the Financial Minister. The debate was not confined to it. At any rate, the Bills as amended by the Select Committee were considered in Council and passed as such. The Governor-General on the same day gave his assent to the Bills miscalled Acts of the Governor-General of India in Council. The next question is, Does that assent rectify the original mistake, or does it not add to the illegality? We do not suppose that there is any lawyer who will argue that two illegalities make one legality. Are we then to accept the so passed Acts as law and be bound by them?

Sir James Westland might have avoided this predicament and yet gained his object, if he could see his way to agree to the motion of Rai Bahadur

Ananda Charlu for extension of time. The members of the Committee might fret to sit and finish their work within the first week. Still they would have submitted as the sequel proved in the Council, where several members spoke opposition but had none to record.

We may here make an end of the two Bills. But we will go a little farther.

When the Council met on Monday, the 3rd of February, the Viceroy presiding, Sir James Westland, after "expressing the very great pleasure with which I and the Hon'ble Members of your Excellency's Legislative Council see you take your seat once more amongst us as our President," presented the Report of the Select Committee and explained the changes made by the Committee. He had nothing to say about the resurrection of the Committee after their legal demise, or how they derived any authority to act after the 30th of January.

Again the Finance Minister applied for suspension of the rules of business, to admit of the report of the defunct Committee, dead before the date of the report, being taken into consideration. The President declared accordingly. The member in charge of the Bill then moved that the report be taken into consideration.

If a law could be made at one sitting of the Council, or if the members were to be saved the trouble of attending more than twice on one particular measure, the rules of business would be different. It is necessary that a measure be examined at different stages, for one thing, to allow time for due consideration. We advocate no unnecessary opposition to Government. It was, however, a sorry sight to find non-official members abandoning their position in a matter which they believed uncalled for, and unwisely introduced. It was a voluntary abandonment of rights and, therefore, worse than the pass to which the members of a Local Legislature were reduced by the strong action of the President. In due course a Bill was introduced, after leave taken, without any suspension of the rules of business. In proper time, after wide publicity, it was referred to the Select Committee. That Committee made their report. It was for a time before the public. Then was started an agitation which aimed at the root of the principle of the Bill. The Governor saw the propriety of the agitation and the necessity of the reconstruction of the Bill. He was for the concession claimed. He consulted his counsel, not one member would agree to any alteration, as, for one valid, substantial reason, it could not be done, at that stage. But the Governor had declared himself for it and was determined to have it. In spite of the opposition of the entire Council, he ordered a re-reference to the Select Committee. That Committee again deliberated and re-amended the Bill as the Governor wished. The measure so amended a second time passed the Council and the members did not feel themselves humiliated.

In the present instance, several members, official and non-official, spoke against the measure, but under command of the Viceroy, for we cannot explain their conduct in any other way, they agreed to it. In the earlier Bills we were familiarized to the doctrine of legislation by mandate. Now we have the theory of opposition without a division. The legislative conscience, both official and non-official, tends towards the same direction.

THE COTTON DUTIES DEBATE.

THE VICEROY'S SPEECH.

His Excellency the President said :—

The same cause which has compelled me most unwillingly to absent myself from earlier meetings of this Council prevents me from attempting any lengthy or reasoned arguments in favour of the Bills now before it. It is, however, the less necessary for me to do so, because I entirely agree in and adopt the defence of the policy of the Government which has been made by my hon'ble colleague in charge of the Finance Department in a manner which, while it was in no way deficient in vigour and mastery of detail, has been commended here, and will no doubt be recognised elsewhere, as showing a full measure of temper and moderation. I desire, however, more especially to express my entire concurrence in what he has said of the nature of our responsibilities as administering the affairs of this portion of the great Empire of the Queen-Empress. It is, of course, absurd to represent the Government of India and Her Majesty's Government as advocates of two hostile interests. Hon'ble members may recollect a spirited passage in an eloquent speech of Sir Henry Fowler, in which he declared that every member of the House of Commons was a member for India. Is there to be no reciprocity in this matter? I am glad to say that I am not called upon to argue that question after the speech of the Hon'ble Sir Griffith Evans to-day. So far as we are concerned, who hold our commission from the Queen-Empress, we are bound, as the Hon'ble Finance Member has pointed out, to weigh carefully all the circumstances of the case where, as here, other interests as well as purely Indian interests are involved.

Now, I should like to look for a moment at the history of this case. The Hon'ble Finance Member reminded you in his introductory speech that it extended over three years. None of us, I think, will wish to renew the discussions or even the memory of the discussions of 1894, and all I would say is that I cannot take the description of those discussions by the Hon'ble Sir Griffith Evans as completely exhaustive, because he omitted one result of that controversy which perhaps did not attract so much attention at the time, but which I always thought was of great importance; and that was the admission by Her Majesty's Government that the claim for the imposition of these cotton duties must be measured by the financial necessities of India. Accordingly when, at the end of 1894, we presented an overwhelming case, so far as our necessities were concerned, the imposition of these duties was agreed to subject to the condition that they were not to be protective. I am not going to enter into any argument now as to the propriety or reasonableness of that condition. It is sufficient for my purpose to say that it was accepted by the Government of India, and that this Council endorsed our acceptance. The main debate in 1895 was concerned with the method by which we should carry out that condition. We, the Government of India, certainly thought then, and Council probably thought still more emphatically, that we had amply met our obligation; but in matters of this importance we are bound to be fair-minded, and it has been impossible for us to refuse to acknowledge that the arrangement which we thought sufficient last year has been inadequate to fulfil our obligation. It then became our duty to reconsider our arrangements. I regret that it was not in our power to act upon the suggestion which those interested in cotton goods in Bombay and Calcutta made to us; and I join with my hon' colleague in recognising the ability, liberality, and fairness of mind which are apparent in the papers in which they embodied their views. There were no doubt advantages to be gained from that proposal, and it was most carefully discussed and considered by us; but we came distinctly to the opinion—and

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1895-96.)

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., on Tuesday, the 11th Inst., at 6 to 8 P.M. *Subjects*: Histology—Large and small Intestines; Physiology—Alimentation.

Lecture by Babu Syamadas Mukerjee, M.A., on Thursday, the 13th Inst., at 3 P.M. *Subject*: Analytical Conics.—Anharmonic Ratios.

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Friday, the 14th Inst., at 6 P.M. *Subject*: Curved Mirrors, its Properties and Applications.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

February 8, 1896.

nothing that has emerged since has weakened my conviction---that this particular remedy would fail in what the Hon. Mr. Playfair has most truly insisted upon as the all-important condition, namely, some reasonable chance of finality. It is impossible, of course, to give the hon'ble member the pledge he asks. If, as I have said, the imposition of these duties must be ruled by India's financial necessities, he would be a bold man who would undertake to prophesy the duration of those necessities; but we do put forward the present legislation in the hope and belief that it meets the obligation which we undertook when the duties were imposed, that obligation being that the mills in England and the mills in India should compete on equal terms. I have said the mills in England and the mills in India, because it has been attempted to put forward the hand loom weaver, and I have been somewhat surprised to find this matter insisted upon so strongly in this Council. We have had some suggestions from His Honour the Lieutenant-Governor, based on the statistics of a limited area, which of course I cannot deal with on the spur of the moment; and we have had an ingenious, and, if I may say so, an amusing attempt by the Hon. Sir Griffith Evans to reconcile his opinion of 1894 with the necessities of his argument to-day.

The Hon. Finance Member and the Hon. Mr. Rees have, I think, shown how entirely different is the position of the hand-loom weaver as a competitor from that of one set of millowners competing with another. I cannot but think that the reasonable men in Lancashire (and I venture to say that there are reasonable men there) will be the first to acknowledge this fact. I say so with the more confidence, because I come from a district Scotland which was the home of hand-loom weaving in the memory of men still living; but all that I can recollect is row upon row of houses, through the dusty windows of which one could see the looms still there, but silent and deserted as an asset of no value, to perish with the roof that covered them. It may be said that these weavers at home had no duty to assist them: no, but they also were not scattered over the vast Empire of India, but were able and knew how to bring their influence to bear on Parliamentary elections, and they had the Scottish "dourness" (if I may use a Scotch word) that is not easily beaten; yet beaten they were absolutely out of the field, and I have a firm conviction that, if it ever comes to real competition between mills and hand-loom in India, I shall be able to agree with the Hon. Sir Griffith Evans of 1894 that it is not 3½ or 5 per cent. that will save the latter.

The Government must proceed with the legislation they have put before you, and must ask you to pass these Bills. We believe they will effect their purpose and restore to the great trade both in Lancashire and in India the feeling of security which at this moment it sorely needs. I venture to hope that, if this most desirable end is attained, the somewhat excited feelings of to-day in certain circles will pass away, and it will at least be acknowledged, as the Hon'ble Sir Griffith Evans has most handsomely said, that the Government of India has had no other object in view but to deal with a most difficult question in the manner which, in their judgment, is most likely to be effectual.

NAUTCH GIRLS IN LONDON.

Begum Jan and Wazeer Jan, two Nautch girls who have recently arrived in England made their first salaam before an English audience at 35 Leicester Square. These, it is claimed, are "the first two genuine Nautch girls who have ever left the shores of our Indian Empire for Europe," and they challenge contradiction of this fact, declaring that the so-called Nautch girls who have before this come to Europe were not the genuine article, but were Italian or Hungarian women. A Nautch girl, it is asserted, has too lucrative a living to be tempted to come away to a foreign country, and she has not the moral courage to encounter the difficulties involved in maintaining her caste and obtaining her accustomed victuals. The general notion that Nautch dances are improper is not borne out by the performances of Begum Jan and Wazeer Jan. Just as there are with us respectable dances and others, so there are in India moral and immoral Nautch dances.

There is no "mystic mythology" in the dances of Begum and Wazeer; they execute curious little *pas seules* with out-stretched arms and twirling fingers; they move to and fro with jingling of bangles and an occasional sedate pirouette, and, on the whole, their performance is monotonous and unexciting. The girls are accompanied by three musicians, two of whom play extraordinary "violins," each with forty-seven strings, and the other plays two little drums which he carries in an apron. The music consists of the usual crude wailing sounds emitted in a minor key---there is not a major tone in all the forty-seven strings---and the very drums are pitched in the same lugubrious tones. The whole performance, consisting of dance music and song, is fascinating enough in its quaint and weird way. The girls wear costumes of green and red gauze over tinselled tunics, with little tasselled caps of gold embroidery, and have nose rings, small but brilliant, in the left nostril.

Every Indian Nautch dance has its story, and every dance is a pantomimic representation of the story. What the story was which

was danced and sung there were no means of knowing, but the Nautch girls were obliging enough to sing a special "Ode in honour of the English Press," of which the following is as near a rendering as possible :---

"Kings and Queens with golden crowns and jewels and money are only puppets,

The real Kings of the world are those who influence with the pen
And tell people in all parts of the globe what others are doing.
Whether from the jungle, or city, or sea, or earth,
They it is who will find out the truth of every thing;
But what they write, being the truth, is not always pleasant,
And so they are always very poor."

After the dancing Professor Abaji Bhise, of Bombay, gave a clever and beautiful "transformation" performance. A cylindrical lump of plaster, which stood in a little brilliantly lighted niche, slowly turned into a statue-like head, and this, in turn, Galatea-like, became the head of a living and good-natured Indian girl with merry eyes and a broad grin. She died away into the statue again, and then a flower-pot seemed to grow out of the air and a tree sprang up, first with leaves and then with bud and blossom. A glass bowl of water was then seen in which a fish presently appeared, and then came a birdcage with birds---every transformation seeming to fade and dissolve, and grow again into some new form without any apparent manipulation or machinery whatever.

THE MILLENNIAL FESTIVAL OF HUNGARY.

The State of Hungary will, under the august protectorate of His Imperial and Royal Apostolic Majesty Francis Joseph I., celebrate this year the Millennial Anniversary of its Foundation.

The whole civilized world takes an interest in this rare historical festivity, fully appreciating its high importance.

The chosen representatives of the Nation have decided to organize a series of festivities in order to give foreign guests and other visitors a clear and correct idea of the importance, this State has proved itself to be in the historical events of the last ten centuries, and of its present position amongst civilized nations.

Solemn Political Acts,

Festivities

in Commemoration of National Heroes; an Historical Exhibition, showing relics of great value and treasures of Art and Industry methodically classified:

an Historical Pageant

arranged with extraordinary splendour by the higher classes of Society, as well as numerous other symbolic acts and performances shall recall to the visitor's mind the foundation and the vicissitudes of this State, revive the weary struggles for national independence and Christian civilization, and give testimony of its steady and unswerving contests for progress and liberty, thus to render evident the great

historical, political and cultural Mission of the Hungarian Nation.

The General National Exhibition

is meant to set forth all the moral and intellectual power of the Hungarian People; it is to comprise not only the agricultural and industrial products of the country, but also to show the national character and faculties that reveal themselves in popular life, the progress made in every line of public instruction, as well as the means produced and developed by the country in view of taking its share in the economical competition of all the progressive Nations of the World.

The Millennial Festivities will give occasion to the inauguration of newly erected public institutions as well as to the convocation of International and National Congresses, which are to be held by nearly hundred different social groups, classes and avocations, in view of discussing the result attained in the past as well as the aspirations of the future. All the constitutive elements of the National Power will unite to illustrate, from every point of view, the importance of the Hungarian Nation as an element of political, intellectual and economical power in modern civilization.

It is unnecessary to enumerate here, at greater length, all the instructive details which will be afforded by the Millennial Exhibition to Scholars, Politicians, Literary Men, Artists, Agriculturists, Manufacturers, Merchants and even to simple Workmen. We want only to point out such details, as are likely to arouse the interest of the Public at large.

Festivities, Monuments.

The Millennial Festivities shall commence on the 2nd May 1896.

On this day the Millennial Exhibition will be inaugurated by His Imperial and Royal Apostolic Majesty Francis Joseph I., in the presence of the Princely Guests, the Members of the Dynasty, the Ambassadors accredited to the Imperial and Royal Court in representation of all the civilized nations of the World; the Members of both Houses of the Hungarian Legislature, the Hungarian Government and the common Ministers of the Monarchy, the Members of the Austrian Legislature and the Austrian Government, the Deputations of the Residential City of Budapest and of all the Departments and Municipal Bodies of the country, and the representatives of all its Scientific and Literary Societies and Institutions of Fine-Arts.

On the following days

Thanksgiving services

will be held in all the Churches of the country; all the Municipal Bodies, Institutions and Societies will assemble at

Special Meetings;

Gala Performances

will be given in all the Theatres, the programmes of which will consist of Dramatical Plays and Operas which have been awarded first prize;

Gymnastic and various Sporting Clubs

will arrange races, regattas and shooting-matches with valuable prizes. At the same time an almost uninterrupted series of

International Congresses

and other Meetings will be held, accompanied by Inaugurations of public buildings; while in various provincial towns and counties numerous

Millennial Art-objects

(memorials and historical paintings) will be exhibited and charitable and other foundations created for the occasion will be inaugurated. The Government will establish 500 primary and technical schools in different parts of the country. In short, public life will present a varied and vivid picture, not surpassed even by Nations of the highest culture. All these festivities will culminate in the

Anniversary of the King's Coronation.

As early as June the 5th the Royal Insignia, viz., the holy Crown, the Purple Mantle, the Sword and Sceptre will be conveyed to the Coronation Chapel, there to remain on public show for three days. On June the 8th the High Dignitaries of the Realm shall proceed in procession with the Royal Insignia to the Royal Castle, there to pay homage, in the name of the Nation, to the Bearer of the Crown of Saint Stephen. This procession will be headed by caualcades arranged by the Nobility of the country and by gala carriages occupied by the Members of Parliament. The procession shall defile before the King and then proceed to the new

Parliament House.

This monumental Structure

has been erected at a cost of nearly 16,000,000 Fls. for the Nation wanted it to be worthy of her constitution, laid down a thousand years ago. Its inauguration will be solemnized by

a Millennial Meeting of Parliament,

the first that has ever been held before.

After this meeting the Members of both Houses will once more proceed to the Royal Castle, there to renew to the King the oath of reciprocal fidelity, sworn to by their ancestors 1,000 years ago at Püsztaszer.

As a continuation of this solemn act, the

Arpad Memorials

will be erected at those seven points of the Hungarian frontier (Deveny, Zimony, Munkacs, etc.) which were occupied by Prince Arpad ten centuries ago on entering this country with his horsemen.

The official Millenary Festivities will, on the 27th of September, be closed by an act of international importance.

His Majesty the King will on that day open, for international traffic, the new waterway called the

"Iron Gate"

which colossal work was commenced by Count Szechenyi and accomplished by Hungarian Engineering art and capital.

Finally the last generation of the first Millennium will erect as a token and memorial for generations to come

a Pantheon-like Triumphal Arc

to hold the statues of all those great men, who by their genius and bravery have so often led up Hungary to the heights of Prosperity and Power.

The series of official festivities will be diversified by such a social and popular character. These will be the

Interparliamentary Conference for international Courts of Arbitration;

the Congress of Journalists

with the view to constitute an International Journalistic Union; international Congresses of Art-Historians, of Actors, Tourists, Athletes, Mountaineers, etc.; numerous National Congresses embracing every intellectual and material interest of the country, in which the leading personages of all groups and branches of national production, the highest authorities in the field of commerce, industry, communication, etc., as well as those who are in the forefronts of the literary, spiritual and philanthropic movements of the country will convene, in order to demonstrate their faculties and aspirations at this most solemn moment of the History of the Nation.

There is a movement in all classes of Hungarian Society with a view to carry out the ingenious project of the Artist Paul Vago, the great

Historical Pageant

Several Municipal Bodies have already promised their concurrence, while scores of noble men and women, bearers of historical names have declared their readiness to take part at their own costs. All the costumes and fashions of all the races and social

classes who have inhabited this country, during ten centuries, shall pass before our eyes in this beautiful Cortège. The genius of the artist will call into life in their now living descendants all the belligerent ancestors, who have conquered Pannonia under Arpad and, during the reign of Louis the Great, annexed to this Realm all the neighbouring countries; all the High Dignitaries, both Civil and Ecclesiastical, who, under Stephen the Saint, King Kalman and Mathias Corvinus have spread Christianity, Enlightenment, Liberty and Wealth to the extreme confines of this part of Europe; all the Crusaders of Joannes Hunyady; all the Kings, Princes, Noblemen and Poets of modern times who have led on the Nation in her struggle for modern ideas. All these historical figures will be followed by their retinues or surrounded by the popular types of the respective epochs. To judge by the sketches of the artists, this Pageant promises, with its glamour, the picturesqueness of its groups and the symbolic significance of its details, far to surpass everything that has hitherto been offered on similar occasions.

The Millennial Exhibition.

All these festivals cover an area of 500,000 square metres and consist of 169 constructions and pavilions erected at a total cost (including private expenses) of 10,000,000 Fls. This Exhibition is divided into two sections, viz.

I. The Historical Section

containing, as above mentioned, Art-Treasures, Relics, Memorabilia and Antiquities of the past, which shall illustrate the Political, Religious, Military and Private life of each principal period of the History of the Nation.

His Majesty Francis Joseph I.

will figure as chief exhibitor, upon whose command the Archives and Treasures of the Dynasty will exhibit a collection of priceless value;

His Imperial Majesty the Sultan

will send the precious relics of those of His illustrious Predecessors on the Ottoman Throne who, in the past, have materially influenced the destinies of Hungary. Italian, German, Polish and Russian Museums and Collections have also promised to send valuable objects relating to Hungary; while the Hungarian Clergy, the Aristocracy and the Municipal Bodies have voluntarily offered for exhibition all the relics and art-treasures in their possession. Graphic sketches, paintings, historical charts, battlepieces, imitations and similar means and objects shall fill up any void that might be left in the picture of an epoch.

These collections will be accommodated in a group of buildings the architectural details of which are a reproduction of all the conspicuous parts of the monumental buildings of the country, thus presenting a general review of the History of Hungarian architecture. These groups of buildings, though of a temporary character, have nevertheless required an outlay of 600,000 Fls.

II. The Section of modern Times.

This section will contain everything offered by similar exhibitions. Nevertheless, the visitor's mind will, here too, be impressed with the solemnity of the Millennium and the enthusiasm inspiring the Nation at this momentous period of her History. The buildings show the luxury of solemn festivities and the programme embraces the national life in all its manifestations. And not only shall the present condition of Hungary be laid open to general view, but the world shall also be impressed with the fact of the great progress Hungary has made during the re-establishment of her Constitution, in 1867, obliterating, in this comparatively short time the misfortunes and neglects of many centuries.

In order that none of the social or economical classes of the country should remain excluded from the Millennial Exhibition, there will be represented besides exhibiting producers also those elements of the People which are not usually represented in exhibitions, viz., the Army and Navy whose colossal mechanism shall be explained in all its details, the Public Health Institutions with all their various apparatuses, Commerce with its complicated organisation, its far-reaching almost invisible threads, and finally the village and country people with their manners of life, their customs, and in their picturesque costumes, placed in a natural frame in the shape of some 30 dwelling houses copied from nature and used by the different nationalities and tribes of this country.

These brief indications will perhaps suffice to arouse the sympathies of all civilized people and direct the interest of the public at large of all countries toward the Millennial Festivities of the State of Hungary.

"AN INDIAN JOURNALIST."

(From the *Athenæum*, January 10, 1896.)

Mr. F. H. Skrine's book *An Indian Journalist* (Calcutta, Thacker, Spink & Co.) tells the story of the life of Dr. Sambhu Chunder Mookerjee, late editor of the well-known Calcutta paper *Reis and Rayyet*. Dr. Mookerjee must have been a remarkable man, and by his death India, and particularly Bengal, has lost its most eminent

native journalist. He had a wonderful spirit of independence, and stood up manfully against his own countrymen when he thought their "reptile press" was behaving unfairly to the British Government. It was his privilege to enjoy the friendship of Lord Dufferin and Lord Lansdowne, both of whom bear hearty testimony to his worth. He set a great example to his countrymen by cultivating the friendship of his Mohammedan fellow subjects, and by inculcating the lesson that Hindus and Mohammedans should endeavour to live together in peace and amity. He was no friend of the fluent orators of what is called the "National Congress" party, yet he did not hesitate to criticize sharply the British Government, if he thought it was taking a line of policy inimical to the best interests of the natives of India. But, while holding a manly, straightforward attitude of independence on all questions of political importance, he was never tired of avowing what India owed to the "British Crown, which has given us such a strong and equitable government as we could never hope to form ourselves, which has advanced us to a new life, and is daily improving us." It is decidedly unfortunate Mr. Skrine should very unnecessarily have revived Dr. Mookerjee's severe strictures on Mr. James Wilson, the first Indian Chancellor of the Exchequer, and given currency to the apocryphal story of Lord Palmerston's reason for nominating Lord Canning to be Governor-General. Mr. Wilson's untimely death was the greatest loss India has sustained, so far as her financial interests are concerned, and his far-seeing perspicacity and true financial genius might possibly have saved her from her present grievous monetary troubles. As to the story of Lord Canning's appointment, Mr. Skrine ought to have known that Lord Canning's illustrious father died in 1827, and Lord Palmerston first entered the Cabinet in Lord Grey's ministry of 1830. But bating these two points, we have to thank Mr. Skrine for a highly interesting memoir of one whose memory the best sons of Bengal will long hold in reverent esteem.

"AN INDIAN JOURNALIST."

MR. SKRINE AND EARLY MARRIAGE.

To F. H. Skrine, Esquire, I. C. S.

DEAR SIR.—It is with great pleasure and interest, I have read your biography of our late talented countryman Dr. Sambhu Chunder Mookerjee, Editor of *Reis and Rayyet*. You have faithfully portrayed his character, not omitting even his great cynicism which was a bar to his popularity amongst his countrymen. But I would be wanting in my duty should I allow your diatribe against the opponents of infant marriage (for I am not against early marriage in the European sense of the term) to pass without a protest, however well-intentioned it may be. It is likely to create mischief in our community, for the advocates of that baneful custom will always cite you as an unbiassed authority.

You are perhaps not unaware that the hero of your work was at one with us on the subject of infant marriage and presided at the meeting of the supporters of the Age of Consent Bill and was entrusted with the drawing of the memorial that was presented to strengthen the hands of Government.

May I introduce myself by informing you that I am a medical man of over 30 years' experience and have paid considerable attention to the subject long before the Age of Consent Bill came before the legislature and read a paper on the nubile age of females in India in the Calcutta Medical Society, and sometime after also another on the Indian causes of diabetes, its prevention and treatment, and, year before last, at the Indian Medical Congress, a third one on functional flow in warm climates?

I take my stand on physiological grounds, not forgetting the experience derived from living in the very community itself and comparing the past with the present. Happily for my country, infant marriage of boys may be considered as a thing of the past, perhaps, never to return, while the infant marriage of girls yet remains a matter for serious consideration. But I have every hope that in course of time a truer estimate of the evil will have a firmer hold on the minds of the people.

Begging to be excused for the intrusion (but should you like to call for my opinions, I shall be too glad to let you have them), I remain, Yours faithfully,

BALLY CHUNDER SEN.

* * We have noticed the letter editorially.—ED. R. & R.

THE INTERNATIONAL CONGRESS OF HOMŒOPATHY.

TO THE EDITOR.

SIR,—At the forthcoming International Congress of Homœopathy to be held at London, in July next, it is desirable that Indian experience should be well represented. For this reason, it is requested that our colleagues, that is, the licentiates and graduates of the Medical Colleges in India, will favour the Congress with papers on medicine, surgery, gynæcology, &c., to Dr. Richard Hughes, M. D., 36 Sillwood Road, Brighton, England. Any information regarding the present state of homœopathy in the different parts of India, will be gratefully accepted by me.

For the information of those who may want to know them, I give the names of the office-bearers of this Congress:

Dr. R. Dudgeon, Honorary President; Dr. Alfred C. Pope, President; Dr. Dyce Brown, Vice-President; Dr. Galley Blackley, Treasurer, Dr. Hawkes and Mr. Dudley Wright, Joint-Secretaries.

Yours, &c.,

HEM CHANDRA RAY CHAUDHURI, L. M. S.

24, Mirzapore Lane, near Creek Row, Calcutta.

OUR REGARDS TO MR. RUSSELL.

THE writer of these lines hereby tenders to Mr. W. Clark Russell the assurance of his thanks and appreciation. I have always loved sea stories, and those of Mr. Russell stand at the head of their class. From "The Wreck of the Grosvenor" to "List, Ye Landsmen!" I have read them all. Yet salt water, and the things thereon and therein, are not the only things he knows about; not by many degrees of latitude.

In his last book he makes a sailor talk thus: "I have suffered from the liver in my time, and know what it is to have *felt mad*. I say I have known moments when I could scarce restrain myself from breaking windows, kicking at the shins of all who approached me, knocking my head against the wall, yelling with the yell of one who drops in a fit; and all the while my brain was as healthy as the healthiest that ever filled a human skull, and nothing was wanted but a musketry of calomel pills to dislodge the fiend," &c., &c.

So much for what Mr. Russell's sailor (or Mr. Russell himself, says and there are plenty of people who can testify that this is not a bit overdrawn. One fact in particular it helps us to realise, namely, that the life of a sailor does not guarantee good health. Indigestion and dyspepsia—of which liver complaint is a sequence and a symptom—is as common among sailors as among landmen.

One of the latter, however, may now tell of his experience. "All my life," he says, "I had suffered from biliousness and sick headaches. I would have an attack about every three weeks. At such times my appetite left me, and I could neither eat nor drink for days together. I suffered from dreadful sickness and straining, and vomited a greenish-yellow fluid. My head felt as though it would burst. I had a bad taste in the mouth, sallow skin, and the whites of the eyes turned yellow. I was recommended to adopt vegetarian diet, and did so, but the attacks were just as frequent and violent. I consulted doctors and took their medicines, but was none the better for it. In this way I went on year after year."

Well, we shall agree that there could scarcely be a worse way to go on, and it all came about thus: The overworked stomach put more work on the liver than the latter could do. Indignant and disgusted at this the liver refused to do a stroke more than its proper share. Hence more bile accumulated in the blood than the liver was able to remove. This surplus bile acts as a slow poison—and not so very slow either. The tongue is furred, the head aches and feels dull and heavy; the eyes and skin are greenish-yellow; there is dizziness and nausea; cold hands and feet; spots before the eyes; a pungent, biting fluid rises into the throat; constipation; high coloured kidney secretion; prostrated nerves; irritability; loss of ambition; fears and forebodings, &c., &c.

This is "biliousness" or "liver complaint" in its simplest form. When long unchecked it produces irregular action of the heart, rheumatism, gout, and any, or all, of a dozen other organic disorders. There is no more certain or powerful impulse to misbehaviour; suicide and other crimes often resulting.

What to do? To get rid of the poison by starting the skin and bowels into energetic action; then to keep them going at a healthy and natural gait. How to do this? Let our friend Mr. F. Widger, 4, Portland Square, Plymouth—whom we have just quoted—speak on that point.

In his letter, dated March 3rd, 1893, he adds:

"Two years ago, after ten men had failed to help me, I first heard of Mother Seigel's Curative Syrup. I procured it from Mr. R. S. Luke, Chemist, Tavistock Road, and began to use it, and nothing else. After having consumed one bottle I found myself vastly better, and by continuing with it I got rid of my old trouble altogether."

We should mention that Mr. Widger is a tailor and outfitter at Plymouth, and well known and respected in that community. He permits us to use his name out of gratitude for his recovery. The potency of Mother Seigel's Curative Syrup over liver disease is due to its ability to cure indigestion and dyspepsia, which is (as we have said) the cause of liver disease.

Every house on the land, and every ship on the sea, should have this remedy as a necessary part of their stock and stores. Perhaps Mr. Russell may recommend it in his next book. But no "musketry of calomel pills." Oh, no.

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or straining after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. A letter on page 285, for instance, is a delight. A piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—The *Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate mere unmarred by ostentation and earnestness unspoiled by harshness. —The *Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —The *Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality. —The *Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." Dr. H. Moore of Royal Artillery from Poonamallee says:—"I sold it for Rs. 16 x Pte. W. Hopkins of Sussex Regt. from Durrum says:—"I have sold it for Rs. 20 x Mr. T. B. Scott of Puna Opium Department says:—"The watch you sent me some 5 or 6 years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Silt Inspector from Samukia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kumbhee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

CONTEMPORARY POETRY.

EAST OR WEST?

BY MR. WALTER CRANE.

Which England wouldst thou waken? Her asleep?
With jewelled hand upon the gaming board
Of commerce, dreaming gold, to spend or hoard—
The toil-wrung wealth of mine and furrow deep?
Or her, the wasted mother, able scarce to keep
Her starveling brood from hunger's cruel sword—
Or death untimely, or disease untoward—
Mid storied barns, and fattened kine and sheep?
Wouldst kindle War's red flame from East to West?
With blood wipe out the stains of blood and wrong?
While furnished children pine within thy gate,
Or, hopeless, workless, wander dispossessed?
Make clean thine own hearth, England, and be strong—
The sword and scales thy Ministers of State.

Dec. 31, 1895.

A VINDICATION OF ENGLAND.

BY MR. ALFRED AUSTIN, THE NEW POET LAUREATE.

To the Author of "The Purple East."
Comrade, to whom I stretched a comrade's hand
Ere Fame found hers to greet you, and whom still
Right bravely singing up the Sacred Hill,
I watch from where its cloudless peaks expand,
Think not that you my love now less command
If to you, wilful, I oppose my will,
And pray you not untune sweet voice to shrill,
In harsh upbraidings of the Mother Land.
To smirch Her is to soil oneself with shame;
Nor is the rhyme yet written that can mar
The scroll emblazoned with her fadeless fame.
"Sloping to twilight"! Blinded that you are!
Look! in her hand shines Freedom's sword aflame,
And on her forehead glows the Morning Star.

But She, not you, nor any child of Song,
Must sound the hour the friendless to befriend,
And with immitigable justice rend
The ensanguined trappings from the Rod of wrong.
I too cry out, "How long, O Lord! how long
Shall ghouls assail, and not one glaive defend?"
But God's great patience never comes to end,
And by long-suffering Vengeance grows more strong.
So from unseasonable chidings cease,
Impious to Her who bears within her breast
Wails from the East and clamours from the West.
Nay, should the clamour and the wails increase,
Firm in the faith she knoweth what is best,
Keep you, to-night, the Festival of Peace.

Would that we now together were, we twain,
Together seated by the Yule-log blaze,
And you should read to me your latest lays,
While at my window wept the wintry rain,
And I would lend my heart unto the strain,
So sweet it is to listen and to praise,
Now wisdom grafted on the greener days
Hath made antipathy a part of pain.
And you should pledge me in the wassail wine,
And I pledge you; and you aloud should cry,
"Drink we to England!" and my voice reply,
"Yes, unto England! England, yours and mine!"
And you would understand, with God on high,
She bides her hour behind the bastioned brine.

—The Westminster Gazette.

WEEKLYANA.

A MEMBER of the Nandi family of Jamgram writes to us:—

"In your issue of the 1st February you have quoted a few lines from the *Englishman*, in which Mr. S. K. Banerjee, B. A., gives an account of a joint family at Jamgram, District Burdwan.

Perhaps Jamgram is a mistake for Jamgram which is in the District of Hughli. If he means the Nandi family of Jamgram, then I would humbly beg to point out the following inaccuracy in one of his statements. At the end of his brief note he says—

"Envelopes and post cards are also given, but of late some of the members have abused the arrangement by taking a number of envelopes and post cards and selling them."

This is not quite true. The envelopes and post cards are only given to the members of the family to correspond with their relatives. Some of the youngsters abused this privilege by writing to their friends. So now whenever they ask for post cards and envelopes, they are given to them, by the officer in charge, after the address has been written. But this does in no way concern the grown up members of the family."

We shall be glad to receive further information. A full account of the family and the constitution that governs it, with other particulars, will be an interesting and useful study. In a land where dissension is the rule, the Nandis of Jamgram are a great family and deserving of public respect. They teach a practical lesson which our patriots will do well to recognize and follow. The Congressists will surely profit by the system of domestic government which has survived nine generations amid uncongenial surroundings.

IN memory of the late Mr. Framjee Dinshaw Petit, Bai Awabai Framjee Petit has paid to the Trustees of the Bai Sakerbai Dinshaw Petit Hospital, Bombay, Rs. 1,000, the interest of which is to be applied in feeding animals at the hospital. Another donation of the value of Rs. 7,500 has been made, for the same purpose, to the same hospital, by Sir Dinshaw Manockjee Petit, Bart., and family.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

THE Governor-General in Council has laid down the following test, for detection of lead or copper in the articles of food and drink in emigrant vessels :

"To test the water, a cup or any small white vessel should be about half-filled with it, and a drop of sulphide of ammonium stirred in with the glass rod. Any iron-lead or copper contained in the water, even to a smaller extent than 1/10th of a grain per gallon, would be shown by an inky colouration appearing more or less deep according to the quantity. Should such a change occur, then a drop of hydrochloric acid should be stirred in, when the colour will disappear instantly if due to iron, but persist if due to lead or copper. It is unnecessary to distinguish between lead and copper, as both are highly dangerous.

To test lime-juice for lead or copper, pour two ounces of the juice into a white cup or basin, add ten drops of hydrochloric acid (B.P.—Sp. gr. 1.16), stir with a glass rod, and add five drops of solution of ammonium sulphide. A darkening indicates lead or copper. If the amount of these metals is small, the darkening will require about ten minutes to attain its maximum intensity.

To test ghee, flour, rice, meal or any light-coloured food, about 30 minims of sulphide and an equal measure of the acid should be added separately to 2 ounces of water and a portion of the food well stirred with the mixture, lead or copper being indicated by the darkening that occurs."

THE Board of Revenue, L.P., has notified for general information that, under the orders of the Government of Bengal, the importation of Garhjat ganja and siddhi into British territory will be prohibited from the 1st of April 1896.

A REVISED notification, taking effect from the 1st of April next, prohibits the possession, without a license from the Collector or other duly authorized officer, of any foreign excisable article in any quantity whatever (except spirituous and fermented liquors imported by sea and kept only for private use and consumption and not for sale,) within the districts of Champaran, Mozaffarpur and Durbhanga in the Patna Division; Bhagalpur and Purnea in the Bhagalpur Division; Darjeeling and Jalpaiguri in the Rajshahi; Chittagong, Noakhali and Tippera in the Chittagong; Lohardaga, Palamau, and Singhbhum in the Chota Nagpur; Cuttack, Balasore, Puri and Angul and Khondmals in the Orissa; and Midnapore and Hooghly in the Burdwan Divisions of the Bengal Presidency.

MR. Justice Hill will preside at the first Criminal Sessions of the year opening on Wednesday, the 19th of February.

MR. H. Dawson having been allowed leave for six months from the 7th April, Mr. A. S. Judge will act as Superintendent of the Customs Preventive Service, Calcutta, and of the Sulkea Salt Golahs, Mr. Judge in his turn being replaced as Collector of Income-tax, Calcutta, by Mr. R. G. Girard, Superintendent, Stamp Department, Calcutta Collectorate.

THE examination of candidates for admission to the Executive Branch of the Provincial Civil Service and to the Subordinate Civil Service, will be held at the Senate House of the Calcutta University, on the 23rd, 24th, 25th and 26th instant.

MR. Madhu Sudan Das, the elected representative of the Orissa and Chota Nagpur Divisions, has been gazetted a member of the Bengal Legislative Council.

TWO prisoners having escaped from the Cossipore police station, and one of them re-arrested, he and the guard over him were each sentenced by the Sealdah Magistrate to six months' rigorous imprisonment.

THE post of Scientific Adviser to the Trinity House, originally held by Professor Faraday, and which has been in abeyance since the resignation of Dr. Tyndall, was offered to the discoverer of argone and has been accepted by Lord Rayleigh.

THE Queen has approved of the appointment of Viscount Midleton as Lord Lieutenant and Custos Rotulorum of the county of Surrey in the room of the late Admiral the Hon. Francis Egerton.

MISS "Birdie" Sutherland of the Gaiety Theatre has refused to settle for £3,000 her claim for £20,000 for breach of promise of marriage against the Hon. Dudley Marjoribanks, offered by his father Lord Tweedmouth who was opposed to the marriage.

"HE is a liar, a daylight robber, and one of the greatest imposters that ever came to London. He has killed a woman in three weeks stone dead. When I first knew him he was a tailor, and then a boat-maker, and he is now a doctor." Such were the expressions used by Mr. Richard Brown, a medical man of Stafford, Peckham, of Mr. J. Ferdinand, an American living at King's-road, Chelsea. The American sued the Englishman for slander claiming damages at £2,000. The English jury awarded 5 shillings. How to account for the smallness of the amount which seems to add insult to injury? Is it to be supposed that the reputation of the American was so high that it could not be affected by the disparaging statements against him? Then, greater the fame, the smaller the damages. The insignificant may now look for substantial ones. Or, was it the truth of the imputations that belittled the claim? We in India must not suppose so. For, here, whatever its truth, a libel is always heavily punished both civilly and criminally. We must not, however, omit to mention that, besides the 5 shillings, the plaintiff got his costs. The defendant pays in addition his own expenses which may be heavy.

WE read in an English paper :—

"A hard struggle for life was made the other day by a fox in the vicinity of Sittingbourne. The Tickham Foxhounds met at Bredgar, and there was a large attendance. A fox was soon found, and it led the hounds at a hot pace through Stockbury, where it doubled back near to the point whence it started. The fox recrossed the Maidstone road, revisited Stockbury, and then ran straight to Newington, where it passed through an orchard and was temporarily lost to view. Up to this point the fox had given the hounds a hard run of one hour and five minutes. It was next seen scaling a garden wall, and, being hard pressed, it dashed through a window, entered the sitting-room of a cottage, jumped into the empty fire grate, and clambered up the chimney, whence it emerged, covered with soot. The fox got on the roof, but was driven back, and at once dived down the chimney. But it was compelled to beat a retreat backwards. From the roof it was hustled to the ground, and upon Mr. Rigden, M.F.H., coming up was despatched. And the slaughter, by a crowd of mounted Englishmen and a mob of savage dogs, of this brave little animal, after such a gallant struggle for life, is called sport!"

What savagery! The large crowd that could see unmoved or rather enjoyed the struggle for life, were no better than the brutes that so diabolically made an end of it.

IT is refreshing to turn to the efforts made by ladies to preserve birds who afford more pleasure while living than when killed :

"A number of ladies in the neighbourhood of Godalming and Guildford have commenced a crusade against the wearing of any aigrettes or feathers the obtaining of which leads to the destruction of rare or beautiful birds. In an appeal which is made by two ladies of Charterhouse, Godalming, it is pointed out that when it was remembered that 60,000 dozen aigrettes were supplied to one dealer alone in London, and that an American lady was seen wearing a coat made of the breasts of humming birds, it is evident that no species can long withstand such a drain, and that the white heron, the bird of paradise, and many other beautiful birds must become extinct unless the demand ceases. Over 100 ladies in the neighbourhood have pledged themselves not to wear any aigrettes or feathers except those of the ostrich, domesticated birds, or birds killed for food."

THE Secretary of State has passed a second order in the Madras kissing case. Lord George Hamilton takes a lenient view and is unwilling to punish the wife for the sin of the husband :

"After giving full weight to everything that has been urged on Doctor Smith's behalf, I have come to the conclusion that the complaint made against Doctor Smith was substantially true. This being so, I desire to express my concurrence in the view taken by Sir H. Fowler that an officer who has been guilty of the conduct charged against Doctor Smith more especially when regard is had to the professional relation of Dr. Smith and of the complainant, who was also his guest at the time, could not be allowed to remain in the service. I am therefore unable to comply with the prayer of Doctor Smith's memorial that Sir H. Fowler's decision be reversed and that he may be reinstated in the service with arrears of pay. I have, however, taken into account the fact that since my predecessor's decision was given, Doctor Smith, owing to the appointment of the Commission, has been kept in suspense as to his final sentence for a very considerable time, and that in the course of that time the period which would have sufficed to qualify him for pension, if he had been allowed to remain in the service, has expired. I have also borne in mind the fact that the concession which I am about to make will more particularly benefit Doctor Smith's family who must otherwise have suffered very severely on account of his offence. In view of these considerations, and solely as an act of grace, I have decided that Doctor Smith be retired with effect from the 1st July 1895, on a pension of £292 per annum. He may be allowed his grade pay (Article 306 C. Army Regulations, volume 1) for the period between 9th October 1894 (when he resigned) and the date above mentioned minus the amount of any compassionate allowance already drawn under this decision. He will be able to continue his subscription for pension for his family under the Indian Service Family Pension Regulations. The Government of India will be asked to issue the necessary instructions."

“HOME” Correspondent writes to the *Times of India* :—

“The Bombay Government has recently issued a printed State paper, signed by Lord Sandhurst, the Governor, calling in question certain allegations made by Mr. Donald Mackenzie, a member of the Committee of the Howard Association, 5, Bishopsgate-street Without, London, and published by that body in their last Annual Report, protesting against the cruel practice of flogging Somali (African) boys and men at Aden for petty offences. It now appears that Mr. Mackenzie was merely so far in error that he reported fifty lashes as the maximum legal limit, whereas it is thirty. With this modification, he still maintains that his protests were justified.

The Bombay Government paper says of the Somalis, at Aden, that ‘their treatment, in connection with petty offences, differs in no respect from that observed in the case of all other *native* subjects of her Majesty.’ Thereupon Mr. Mackenzie writes to the Howard Association (January, 1896) :—‘It is to my mind doubtful if the Aden authorities have a right to apply the Indian Criminal Code to the Somalis. These are not British Indians. They are natives of Africa under British protection and are a fine set of men. I do not think that the Arabs of Aden are punished by flogging. India being a conquered country, this mode of punishment for petty offences is there inflicted on the natives as a mark of inferiority. Would the British officials in India, or Aden, flog a Frenchman, a German, or an Englishman for such minor offences?’

The Committee of the Howard Association, having carefully gone into this matter, have adopted the following resolution, which was moved by Mr. W. W. Baynes, J. P., and seconded by Mr. Henry Gurney, *vis* :—

‘The Committee of the Howard Association have repeatedly taken occasion to express their appreciation of various penal reforms adopted by the Bombay and other Governments of India; but they are convinced that the statements of their colleague, Mr. Donald Mackenzie, in relation to the flogging of natives for petty offences, in Aden as also in India, are substantially correct, being indeed corroborated by the recent State paper of the Bombay Government.

‘The Committee hope that, both in Aden and in India, the chief authorities may see the justice and wisdom of abolishing invidious race distinctions in modes of punishment, not only on grounds of humanity, but also because such distinctions tend to injure the interest of Imperial loyalty and unity.’

NOTES & LEADERETTES, OUR OWN NEWS

& THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

PARLIAMENT was opened on Tuesday, the 11th of February, by Royal Commission. The Queen's Speech, as read by the Lord Chancellor, was as follows:—“I continue to receive assurances of friendly sentiments from the Foreign Powers. The principal object of the Anglo-French treaty in Siam is to make more secure the establishment of the independence of the kingdom of Siam. I have accepted, with the Emperor of Russia, the line agreed upon by the Commissioners for delimitating the frontier of India and Afghanistan from the Russian dominions.

The Government of the United States has expressed a wish to co-operate in the termination of the differences between Britain and Venezuela, and I have expressed sympathy with the desire to come to an equitable arrangement, and trust that further negotiations will lead to a satisfactory settlement.

The Sultan has sanctioned the principal reforms in Armenia urged by Great Britain, France, and Russia. I deeply regret the fanatical outbreak of a section of the Turkish population resulting in a series of massacres, causing the deepest indignation in Great Britain.”

Her Majesty then alludes to the armed incursion into Transvaal from the territory of the Chartered Company, resulting in a deplorable collision with the Boers, which the British Government promptly intervened to prohibit, and warned its subjects against participating in. The origin of the proceeding will be the subjects of a searching enquiry. President Kruger, acting with moderation and wisdom, has placed his prisoners in the hands of Sir Hercules Robinson, and I undertake to bring to trial their leader. Mr. Kruger's conduct and his voluntary assurances lead me to believe that he recognises the importance of redressing the legitimate grievances complained of by the majority of the inhabitants of the Transvaal.

Next allusion is made to the necessity and the fortunate result of the Ashanti expedition. Her Majesty and her daughter are greatly touched and comforted by the wide-spread sympathy at home and abroad regarding the death of Prince Henry of Battenberg. Her Majesty hopes that efficient British control over Coomassie will tend to develop the country, benefit the people, and promote peace and commerce.

Reference is then made to the success of the Chitral engagement with the Border tribes to maintain and protect the road from Peshawar, which will be loyally observed.

Her Majesty then says that the extension and improvement of the Naval defences of the country are the most important subject to which the efforts of Parliament can be directed. Measures will be presented during the session to mitigate agricultural distress, and further assistance will be given to voluntary schools.

The Lords voted the address in reply to the Speech from the Throne. In the debate which took place, Lord Rosebery criticized various points of the Speech, notably the Siam treaty and the inaction as regards Armenia. He approved the policy of Government in the Transvaal, but ridiculed the proposal to grant Home Rule to the Rand.

Lord Salisbury defended the Siam treaty which, he said, removed the possible danger of a French occupation of Siam. He believed that the compromise would be found to remove the chances of a conflict between Britain and Venezuela. Regarding Armenia, he said that it was useless to threaten warlike measures which it was impossible to enforce.

In the debate in the House of Commons Sir W. V. Harcourt eulogized the action of Mr. Chamberlain in the Transvaal and the attitude of President Kruger, and demanded that a searching enquiry be made regarding the action of Dr. Jameson and the Chartered Company. Mr. Balfour said that the Company's armed force would be transferred to the Imperial officer and a full enquiry would be opened as to the position of the Chartered Company after the trial of Dr. Jameson, unless all the facts were revealed. A Home Rule amendment brought forward by Mr. Dillon has been rejected by a majority of a hundred to sixteen votes. The Liberals support the amendment. Mr. Chamberlain said that he believed that Mr. Cecil Rhodes, Sir Hercules Robinson, the Reform Committee at Johannesburg, and President Kruger were equally ignorant of Dr. Jameson's intentions. Government, he said, had no desire to insist on the autonomy of the Rand, and hoped that if President Kruger disliked the idea that he would submit other proposals. He hoped that President Kruger would come to England, as personal negotiations would greatly facilitate the settlement.

In a long despatch to Sir Hercules Robinson Mr. Chamberlain endorses the grievances of the Uitlanders, and says that a decreasing minority, mostly composed of agriculturists, monopolise the whole government and right of taxation, while the great majority, who have made the prosperity of the Transvaal, are without a voice. Nevertheless, the despatch adds, neither the British nor the Cape Government in any way foresaw the rising in the Rand or Dr. Jameson's invasion. In view of meeting the wishes of the Uitlanders, without interfering with the interests of the Transvaal generally, Mr. Chamberlain suggests that President Kruger should establish a scheme of local autonomy for the Rand, with power to legislate on local questions, including taxes and paying tribute to the executive. Mr. Chamberlain also invited President Kruger to England to discuss the question. The President accepted the invitation provided the subjects for discussion were specified beforehand. In the despatch from Mr. Chamberlain to Sir Hercules Robinson, dated 13th January, he instructs him to warn President Kruger against relying on any Foreign Power, as Great Britain would prevent, at all cost, foreign interference in South Africa where she was the paramount power, hence the commissioning of a powerful special flying squadron for the Cape. In reply to Mr. Chamberlain's despatch, the premature publication of which he deprecates the President is compelled to state that he cannot suffer any interference in the internal affairs of the country, and that the efforts of the Transvaal to secure an understanding with Great Britain are endangered by again exciting the minds of the public.

In the German Reichstag, on February 7, Baron Marschall Von Bieherstein, Foreign Minister, in reply to a question, said that he accepted the responsibility of the Emperor William's telegram to President Kruger. He further stated that it was not intended to ask for an increase in the Navy during the present session, but that it would be necessary to increase the German fleet in proportion to the growth of German interests abroad. This, he added, had nothing to do with the recent events. The Prince also stated that

he was informed that there was no prospect of the early re-opening of the Indian Mints. Germany, he said, does not consider it expedient to take the initiative in convoking a monetary conference. On the 13th, the Foreign Minister declared that President Kruger had never asked for German intervention. He praised the correct attitude of Mr. Chamberlain in the Transvaal affair, and said that the relations between Germany and Great Britain had remained throughout friendly. The Baron added that the reported German designs against the autonomy of the Transvaal were baseless.

THE Czar, in announcing to Prince Ferdinand the despatch of Count Kutusoff to Bulgaria to act as his representative at the baptism of Prince Boris, says that Russia is prepared to forget the past and to restore friendly relations between the two countries. A deputation from the Sobranje having waited on him to express thanks for the baptism of Prince Boris in the orthodox faith, Prince Ferdinand in vehement language replied that his sacrifice of his son had broken family ties, and he had demanded from the Bulgarians no mere lip-service in return. The Russian Government have decided to appoint a Resident diplomatic Agent at Sofia. The Sultan has formally recognized Prince Ferdinand.

THE Anglo-French Niger Commission is about to begin its sittings in Paris. It is believed that the deliberations will be extended to other pending questions between the two countries.

MR. Sexton was offered and has declined the leadership of the Irish party in place of Mr. Justin McCarthy.

THE young Turkish party are again showing signs of activity at Constantinople. Several of them have been arrested.

ADVICES from Corea state that the rebels have killed a detachment of Japanese who were guarding the telegraphs, and that the Russians have landed one hundred men and one gun at Chemulpo. Renter's correspondent at Yokohama telegraphs that a revolt took place at Seoul on the 11th instant, and that the Premier and seven officials were murdered. The King and the Crown Prince took refuge in the Russian Legation, which is now guarded by two hundred Russian marines.

THE Bluebook on Armenia has appeared from which it appears that Sir Frank Lascelles, British Minister at St. Petersburg, telegraphed to Lord Salisbury on the 9th of August that Prince Lobanoff, replying to Sir Frank Lascelles, had said that the employment of force by Russia or any other Power against Turkey was repugnant to the Czar.

NANSEN is said to have reached the North Pole.

THE Viceroy returned from the Bay on Wednesday. Lord Elgin does not go to sea again, but passes a few days at Barackpore where he goes this afternoon, returning thence on Wednesday next. We are not sure that it is a proper place to go to to recover health.

MR. A. C. Trevor succeeds Sir Charles Pritchard as Public Works Minister.

OFFICIAL mourning on account of the death of H. R. H. Prince Henry of Battenberg having ended, Lady Mackenzie will be "At Home," on Monday next, to ladies and gentlemen on the Belvedere List.

ONE of the first orders passed by Sir Alexander Mackenzie was to further improve the residence of the Lieutenant-Governor. Accordingly, a scheme is under consideration for lighting the Alipur Jail and Belvedere with electric light.

THE first to welcome Mark Twain to Calcutta was Sir Alexander Mackenzie. The Lieutenant-Governor of Bengal invited the American humourist to dinner on Saturday last. The three "At Homes" of the distinguished visitor were crowded and very much appreciated. After enlivening Darjeeling he was to have given another lecture at Calcutta, but it is not to be.

THE Military Tournament was vastly patronized by the public. The earnings for the ordinary days were Rs. 42,000. More accommodation had to be provided for and extra performances were given. These last added another Rs. 11,000 to the drawings.

A TELEGRAM from Simla dated the 13th of February to a contemporary thus reports the destruction of the P. W. D. offices and records :

"About eight o'clock last night flames were seen issuing from the upper rooms of the Public Works Secretariat, and in an incredibly short space of time the whole of the upper portion of the centre block was ignited. The fire speedily extended to the whole building and the wind, being fresh, caused the fire to burn fiercely. The Municipal and Government fire brigades were present but the fire was too fierce to be subdued, and the efforts of the firemen were concentrated on saving the adjoining houses, and were successful. The ruins are still smouldering, although the hose were playing all night. The building is entirely destroyed and few records have been saved. The fire apparently originated in a fire-place or stove after the office was closed. There were no fatalities, but three men were slightly injured."

Another telegram of the 14th says :—

"The ruins of the Public Works Secretariat are still smouldering. A working party, under an Executive Engineer, is engaged in removing the debris where cool enough. The basement range of masonry and the record rooms are found to be uninjured, and the valuable records are saved. The safe containing the cash and the stamps has been recovered. The fire engines continue to play on the burning ruins. A searching enquiry into the cause of the fire is already proceeding. It is rumoured that the Secretariat will remain at Calcutta this season, as there is no office accommodation at Simla. The injured men are progressing well."

MR. Wilkins and Mrs. Ricard were married in 1865. Soon after they fell out, and under a mutual agreement lived separately till 1892, when the wife sued for a divorce. The husband also filed a suit for nullity of marriage in that she had taken in him another mate when her previous husband Mr. Ricard was living. The court and jury decided that Mr. Ricard, who was not heard of since 1860, was dead, and a decree nisi passed in favour of the wife. Six months after, Ricard suddenly turned up. Wilkins then filed a fresh suit for a declaration that his marriage with Mrs. Ricard was void. It was proved that the new comer, who did not claim back Mrs. Wilkins as Mrs. Ricard, having married again in the belief that she was dead, was no imposter. The question now was could the court go behind the decree already given, or was it not a bar to the present suit? The court did not see its way and the counsel for the wife stuck to the technical plea of *res judicata*, for, as he said, he could not give up his client without a provision being made for her. The court adjourned the case to allow the parties to come to a settlement.

A BARRISTER in India complains to Mr. Labouchere of *Truth* "of the unfair advantage which a young member of the same Bar is said to enjoy over his professional competitors owing to the fact that he is the son of a gentleman holding high office in the Government. The father is practically in a position of authority over the Magistrates of the Presidency, and it is suggested that for this reason Natives think it to their advantage to retain the services of the son."

A father is certainly not to be blamed if he is anxious for the welfare of his son and does nothing wrong for his advancement. Nor is the son to suffer, if he is worthy of success, because of the high position of the father. The question in the particular instance is, has the father unduly influenced any one in the interest of his son? He may have descended from his high platform and introduced his hopeful to attorneys commanding briefs. If litigants in the mofussil employ the son, in prospective hopes of benefit from the father, their sins, if any, are not to be visited on the father, unless he himself be the direct or indirect cause of such employment. It is too sweeping a charge and a far-fetched grievance that the father has control of a kind over the magistrates before whom the son appears as an advocate. It may be demanding too much to enquire if any magistrate has suffered because the son lost his case. Litigants are not to be expected to engage the son unless they believe that the magistrates, before whom he appears, are guided more by the considerations of his sonship than influenced by his arguments. There may be magistrates weak enough to be stirred by visions of distant disasters. As a rule, we suppose, we must take them to be better men of the world, that they are more attentive to their immediate duty than to any possible prospective disadvantage. They may shew for the son of the arbiter of their official

career a regard which they may not reserve for any other. But that is a distinction which the particular son can always expect with every son of Britain from the magistrates of India. There are very few magistrates, of all grades and kinds, in India who make no distinction among the advocates, or are equally rude or gracious to them. You cannot deny to the son in question the advantage of his birth. It is at the same time the duty of the father to see that his name is not wantonly dragged through the mire when he does not wish it, by those who, wishing to befriend him, for benefits received or expected, take his name, not in vain, to advance the son in his profession.

SIR Griffith Evans characterised Sir James Westland's tinkering of the Tariff Act in 1894 as a descent from the high region of finance for grovelling among fish maws and shark fins. No remark could be happier. Heroic, however, as the stand was that the Finance Minister had made in 1894, against the imposition of the cotton duties, his necessities soon obliged him to listen to the voice of reason and raise a revenue that is almost ideally unobjectionable. As the fates, unfortunately, would have it, before the ink was dry with which the order was promulgated for the reimposition of those duties, the Finance Minister has once more been obliged to tinker with the customs tariff. Compelled to give up a portion of the duties on cotton at the dictation of Manchester, or, if that be offensive, in the interests of free trade, though every other import must continue to be dutiable, Sir James Westland has taken up a powerful microscope for examining every public department and seeing what can be made of this or that situation. The privilege, hitherto enjoyed freely by a number of poor scribes, of sitting on the verandahs of the Calcutta post offices for assisting the illiterate, chiefly Upcountry coolies, cartmen and servants, in the writing of their money-orders and superscriptions of letters and, very occasionally, a letter or two, for a very small fee, never exceeding half an anna, has been put up to auction. It is said that full fifteen hundred rupees have been found by the Finance Minister by this scheme of fleecing a dozen or so of very poor people whom no other Government would have thought of taxing. It is proposed to extend the plan to Howrah and some of the suburban post offices, preparatory to its ultimate extension all over India. The measure is worthy of a great Government such as we have. The glory, hitherto unique, of the revenue adventures of bold baron North and his good knight Probert among the mountains of Venodotia, would pale before that of Sir James Westland in search of ways and means on the plains of Hindustan. The ingenuity displayed deserves to be immortalized. It is on a par with that discovered by the Agent to the East India Railway Company. Under the orders of that lynx-eyed official, the cobblers and shoe-blacks plying their trade within the Howrah railway station have to pay a fair percentage of their earnings to the Company. Resolved to give to the shareholders as large a dividend as possible, the Agent has discovered another source of income. Cabs waiting at the station in expectation of fare have begun to be charged. A late Superintendent of one of the large printing establishments of the Government of India displayed greater genius. It seems that half a dozen bullocks are entertained for dragging carts laden with printed forms to different public offices in Calcutta. It struck him that the dung of these animals, might reduce the expenditure of coal for his engines. The order was passed that the keepers of the animals should supply a certain quantity of dung-cakes everyday. The men protested that as the animals always worked from early dawn to dewy eve along the public thoroughfares, their droppings went to swell the street refuse and were the property of the Municipal Corporation, and that employed as they themselves were for the whole day in loading the carts and driving them, they had neither the time nor the right for storing the valuable material. It was with great difficulty that they could escape obeying the order of the Superintendent whose economical zeal was praise-worthy. The Asiatics believe in the transmigration of souls. Is it difficult to conjecture what such officials were in a previous state of existence? There are confectioners in the Indian bazars who kill ants and bees for the sugar in the stomachs of those little thieves.

THE attempts to dissuade Maharaja Sriram Chunder Bhunj Deo from marrying beyond his caste, seem at last to have succeeded. Yesterday we received a telegram that there was joy at Maurbhanj,

among the Raja's relatives, officials, friends and subjects at the change of his determination to marry an accomplished girl of a pioneer of a new religion who had married a daughter of his to a prince who was far removed from him in political status as in the religion of his birth. As soon as he became of age, the Maurbhanj Raja had made his choice of this girl, whom he intended to marry after he had married his sisters and then take her to England. When this intention was known, there was alarm at that backward Hindu Raj. However enlightened a prince may become, it is no good policy to cause pain to his people by adoption of a faith or unfaith which they do not believe in or cannot comprehend. They may overlook many excesses but will not allow him to commit an outrage on their religion. That is a sore point, especially with the uneducated and the fanatical. It is a wise resolve not to drive them to desperation. We hope the present determination in the interests of the state which he represents, is final and the Maharaja will be allowed peace. He is not to be pursued for an indiscretion committed in youthful hot haste, when he was scarcely master of himself. There may be reasons why he should stick to his word, but there are good grounds and sufficient why he should not.

WE are grieved at the death, this morning, from pneumonia, of Babu Bolly Chand Singh of this city—the sole survivor of the glorious Singhis of Jorasanko. The attending physician, Dr. Sanders had despaired of his life for the last three days and had prepared the family for the worst. Last night Dr. Salzer was called in and he found the patient dying. Babu Bolly Chand cannot be said to have died young like some of the prominent members of his family, for he was 61 years of age and the average span of life in Bengal is much less. Baboo Bolly, without inheriting a fortune, had to keep up the prestige of the great name he bore, and he maintained it to an extent to the last. For his good manners, amiable disposition, regard for others, great and small, unostentatious private charity, he had many friends who besieged his house during his last illness, and the esteem of all who knew him. The circle of his friends and acquaintances was very large.

Though born of high degree he had almost to begin his life anew. He was an orphan at an early age and inherited an involved estate. More to acquire business habits than to make an income, he accepted Government service as an ordinary clerk, under Mr. Edmund Drummond, the Comptroller-General, Bengal, afterwards Lieutenant-Governor of the N.-W. P., who was fond of the Babu and wanted to train him up in business, and wished to see him in a responsible post in the Upper Provinces. For a scion of a wealthy house, to rise above the disadvantages and difficulties in which Baboo Bolly found himself in in his early years, shews ability and judgment. Unwilling to cause pain to anyone, he understood his rights, and knew how to enforce them. In a notable instance he firmly resisted a very doubtful claim from a very high quarter, to which many, greater than he, would have submitted.

A good soul, he was in peace with all the world. *Requiescat!*

POOR Rajendra Nath Mookerjee, who is undergoing imprisonment for having used an order with an altered date in filing an appeal, and who has been disbarred, with, as it must be said, undue haste may, after,

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1895-96.)

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F.C.S., on Wednesday, the 19th Inst., at 4-15 P.M. *Subject*: Inorganic Acids.

Lecture by Babu Syamadas Mukerjee, M.A., on Thursday, the 20th Inst., at 3 P.M. *Subject*: Analytical Conics.—Trilinear equation of the Circle.

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F.C.S., on Friday, the 21st Inst., at 4-15 P.M. *Subject*: Inorganic Acids (continued).

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Friday, the 21st Inst., at 6-30 P.M. *Subject*: Refraction its laws and their Applications.

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F.C.S., on Saturday, the 22nd Inst., at 4 P.M. *Subject*: Inorganic Acids (continued).

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary,

February 15, 1896.

all, be the victim of a wrong conviction. The man had unfortunately a bad name while acting as a Moonsiff at Balia in the Ghazipore district. A mass of anonymous letters and petitions had been sent up to the N.-W. P. High Court, and the Judge of Ghazipore also charged him with various irregularities. The enquiry then made brought to light that as an Overseer in the Bengal P. W. D., he had a bad odour. It is possible that these matters had some thing to do with the terrible punishment to which he has been subjected and which every man of feeling cannot but deplore. Rajendra comes of a good stock, from the old town of Haulshahar. He had been educated at the Seals' Free College, Calcutta. Passing the matriculation examination of the Calcutta University, he joined the Civil Engineering College. Then, he became, as already said, an Overseer. Leaving this appointment, he took up the law and successfully passed the examination of the Allahabad High Court. He then practised at Furrakhabad and Goruckpore and then officiated as Moonsiff at Balia. Not being confirmed in that appointment, he joined the Allahabad High Court and, after practising there for about 9 years, got into his present troubles. During the latter period of his practice at Allahabad he used to make a fair income. He had good natural parts which he had improved by study. Indeed, unlike most native lawyers in good practice, he had retained his habits of study. Every one at Allahabad is sincerely sorry for him. What a sad collapse of a promising career!

REIS & RAYYET.

Saturday, February 15, 1896.

JHALAWAR.

THE fate of the Maharaj Rana still hangs in the balance. Let us take a dip into the past history of the State.

Jhalawar is one of the Rajputana States to which a British Resident is attached. It is not so very petty as it is supposed to be, having an area of 2,694 square miles and a population of 340,488, chiefly Hindus including 20,863 Mahomedans. The income is about 20 lakhs a year, though during the time of its first Chief Muddon Singh, the grandson of Zalim Singh, the minister of Kotah, it had been about 24 lakhs. The reason is obvious. For the new principality, the Jhalla family took, in 1838, almost the half of Kotah or its most fertile provinces from Maharao Ram Singh, who from ignorance of the administration of his own State, was easily deceived into the belief that only a third of his territory was alienated, to free him from the domination of the hereditary Jhalla administrator of his kingdom.

The ancestors of Zalim Singh of Kotah originally came from Hulwad, a small Jhalla chiefship in Kattywar, and first settled in Mewar territory, where they were given a small hamlet in *Jagir* in return for the feudal service of two horses to the Maharana at Udeypore. By marrying a daughter to one of the Kotah chiefs, the grandfather of Zalim Singh entered the service of that State, where he rose to be Fouzdar or Commander of the Forces, the post being subsequently inherited by his celebrated grandson, the founder of the family in Rajputana.

For some private reasons, he incurred the serious displeasure of the then reigning chief Maharao Durjan Sal. He had, therefore, to leave Kotah and take refuge in his Jagir hamlet in Udeypore (the kingdom being called Mewar). His great ability and genius, however, soon gained for him the favour of the Maharana whom he successfully advised to resist the incursions of the Marhattas headed by the Peshwa. The result was a drawn battle stopping, for a time, their advance into Mewar, at the sacrifice of the lives of her bravest nobles, which made Zalim's position very unsafe in the capital, as the sons

vowed vengeance for the originator of the calamity in their families. Under the advice of the Rana, Zalim once more retired to obscurity. Repenting at his death-bed and fully aware of Zalim's sterling qualities, Maharao Durjan Sal sent for him and placed in his lap the young heir and son Omed Singh, then 10 years old. After Durjan Sal's death, Zalim Singh became the *de facto* Ruler of Kotah and remained so, without interruption, during the long reign of Omed Singh of 52 years. Immediately after the accession of Omed Singh, Zalim Singh, following the custom of Rajasthan, invaded and acquired a pergunah named Khicheewarra, inhabited by the *Khichee* Rajputs, and the small chiefship of Shahabad worth 3 lakhs a year, owned by a degenerate descendant of the famous King Nal of ancient India. This custom is still known in Rajasthan by the word *Tikadour*, that is, a run after new acquisition immediately after coronation.

When Zalim came to power, Kotah was heavily indebted and most of its fertile lands usurped by powerful Sirdars who, living in their moated castles with armies of retainers, set law and the Maharao's authority at defiance. The fiscal or khalsa income did not exceed 4½ lakhs of Rupees a year, a sum insufficient to keep up the dignity of the Ruler or even pay the interest of the heavy debts due to native bankers and soucars.

From this miserable plight, Zalim raised Kotah to the first rank of the then Native States of India. He began by crushing the powerful nobility, by sending them one after another to fight the Marhattas, hordes of whom were then ravaging Rajputana, now under the Peshwa, then under Holkar and Scindia and again under Amir Khan, the Pindara leader, who rose from a Sowar to be leader of armies and finally Ruler of the Tonk Principality. The policy was to withhold aid from the nobles and, when sufficiently humbled, to sequester their usurped lands. There was not a biga of fallow land; he cultivated all the culturable waste, by thousands of cattle purchased by the State. The income rose to more than 50 lakhs, and the stored grain of the crown lands in a famine year was sold for 1 crore of rupees. By a well-equipped army, both of mercenaries and Jagirdars, he protected the Kotah territory from the incursions of the predatory Pindaras, in whose final subjugation by the British, he greatly assisted. His reward was the hereditary primeministership of Kotah by the Supplementary Article of the Delhi Treaty of 1818. His loyalty to Maharao Omed Singh was amply borne out by the fact that, when the British offered him the Chaumahala or four out of the twelve pergunahs sequestered from Jaswant Rao Holkar, he declined the grant for himself and had it transferred to his Chief. He was a prominent figure for more than 50 years, during the latter end of the last and the beginning of the present century, not only in Rajputana but also in all India. He maintained an army of scouts in all the Indian Courts who brought him intelligence in a marvellously short time. It was he who advised the Paramount Power against the extension of the monopoly of opium into Rajputana, which, if persisted in, would probably have brought on a war.

During the long reign of Maharao Omed Singh no troubles arose. He left 3 sons—Maharao Kishore Singh, who succeeded him, Bishen Singh, who was exiled and whose descendants are now living at Indore, and Prithi Singh, killed in the battle of Mangrore, which took place between Kishore Singh after his accession

to the Gadi and Zalim Sing, the minister. Though a quiet man, Kishore Sing was induced by his fiery brother Prithi Sing to try to cancel the hereditary primeministership. This was too much for Zalim who revolted. In the war which ensued, the British Government assisted the Prime Minister and the battle of Mangrole humbled down Kishore Sing, who had to resubmit himself to the dominion of the Jhalla.

Maharao Kishore Sing got an annual allowance of Rs. 1,64,000 with the assignment of a small escort of horse and foot and the outward semblance of royalty. The Chief's jurisdiction was limited to the Palace enclosure, while Zalim Sing remained master of the State with the *personnel* of the administration, both civil and military, entirely under his command. At this time the old administrator had grown totally blind and the agreements between the nominal reigning chief and the *de facto* ruling party were therefore drawn up by Colonel Todd, in favour of Zalim's son, Madho Sing. We may here mention what is still related at Kotah, that when Colonel Monson had to retreat with his small army, followed by an overwhelming force, with Juswant Rao Holkar in command, the gates of the Mokundurra pass were closed to the Holkar, while Monson passed through them to a place of safety. A meeting was then arranged to settle matters between Juswant Rao, blind of one eye, and the Kotah administrator, who was wholly blinded by age. It took place on a small boat on the River Chambul, commanded by the guns of the Palace Fort. Before leaving the city, Zalim had given peremptory orders, that on the slightest show of treachery on Holkar's part, the boat with them both should be sunk by cannon shot. He said that as he was too old, being almost 90, his life was of no consequence, but the death of Juswant Rao would free the Kotah State of its troubles. The recourse to cannon shot was not necessary, as Holkar listened to reason. It is still believed in those parts that the fate of India was settled that day by two men with only one eye. Zalim Sing was so conscious of his powers, that to the last he used to say that if he had only been able to secure the Rana of Udeypore as his permanent master, he could have secured the empire of India—not altogether a vain boast, considering the prominent figure he cut in those troublous times and the services he rendered to his master of Kotah, to Rajputana generally, and to the then-rising British Power.

On the death of Zalim Sing, his only son Madho Sing quietly succeeded him and remained in power for 10 years, when he died. Nothing of importance occurred during his incumbency, as he was a quiet inoffensive man and the great prestige of his father assisted his peaceful administration of Kotah. After him came his son Muddon Sing, whose arrogance and want of consideration for the reigning Chief Maharao Ram Sing, the nephew and the adopted successor of Maharao Kishore Sing, produced, in A. D. 1838, a serious quarrel which led to the dismemberment of Kotah and the creation of the new Principality of Jhalawar for Muddon Sing on his relinquishing the hereditary administratorship of Kotah.

HOMŒOPATHY IN INDIA.

THE Homœopathic League of London is doing good work. Its honorary secretary is Mr. E. H. Laurie, 16 Blandford Square, London, from whom information respecting it may be obtained. Recently it issued the tract No. 50, treating of "Homœopathy in India." The pamphlet is divided in two parts. The first contains a History of Homœopathy in India, by Dr. P. C. Mazum-

dar, and the second gives the Reminiscences of an old Homœopath in Calcutta.

A book that deals with the origin and the spread of homœopathy in India is welcome indeed. But the League tract gives no sufficient information. Dr. Mazumdar writes some words about himself and his father-in-law, the late Dr. B. L. Bhaduri. The paper is more a homage paid by the son to the father than a contribution to the subject. It contains no reference to work done outside Calcutta, and even about the metropolitan sphere the writer shows meagre knowledge. Homœopathy has been introduced and is gradually being pushed forward against mighty odds. The introduction of a new faith based on positive sciences is a great phenomenon, especially in India where medical science is based more on deduction than on induction. It is not only by ratiocination but also by cures, where the other schools have failed, that homœopathy has gained a footing.

I give some particulars, most of which are taken from Dr. Sircar's paper published in the "Transactions of the International Homœopathic Convention" held at London in 1881. The first homœopath was Dr. Honigberger who came to Lahore in 1839 to treat the famous Maharaja Ranjeet Singh, and his book "Thirty-five years in the East" was published in London, in the year 1852, describing his experiences. In 1846, Surgeon Samuel Brooking, a retired medical officer, opened homœopathic hospitals at Tanjore and Pudocota, under the patronage of the respective rajas. In 1851, a similar institution was opened at Calcutta by Dr. C. Fabre Tonnere under the patronage of the hon'ble Sir John Hunter Littler, G. C. B., Deputy Governor of Bengal. In 1854, Mr. E. De Latour, Judge of Shahabad, treated many cases of cholera there, and converted his deputy Syed Zainuddin Hosein to the new creed. Two of his sons, Syed Hosein and Syed Ali Bilgrami hold important offices in the dominions of the Nizam of Hyderabad. About this period many civil and military officers in India used homœopathic medicines. Captain May in Hastings and Mr. Walter Duval in Entaly used to distribute free medicines to the poor. In 1861, Babu Rajinder Dutt, of the Wellington Square Dutt Family, took to the new science being converted by Dr. Tonnere. With Babu Rajinder, the relief of distress was a passion and a labour of love. His taste for medical charity was first created by his education, though short, in the Calcutta Medical College. He opened his outdoor dispensary first to distribute old school remedies, and since his conversion homœopathic medicines were given free both to the rich and the poor. Dr. Berigny's advent in 1864 stirred Babu Rajinder to fresh conquests in the domain of the three different schools, the one European and the other two Indian, Kaviraji and Yunani. Great efforts were made to stifle the infant, but it could not be done, for the social position and influence of Babu Dutt. I may mention that Dr. Tonnere was appointed health officer of Calcutta, by the influence of Sir Henry Sumner Maine, the then law member, whose medical attendant he was. While in the Municipality, he was not allowed to practice.

Homœopathy gradually gained ground in other parts of India. In 1863, Babu Loke Nath Maitra, a disciple of Babu Rajinder, went to Benaras to practise, and in 1867, under the patronage of Mr. Ironside of the Civil Service, established a hospital. Two years after, a dispensary was opened at Allahabad and placed under the charge of Babu Preonath Bose, a cousin of Babu Rajinder. In another year, another hospital was started at Agra under Babu Gobind Chunder Roy. Babu Dutt was now the leading spirit in all homœopathic propaganda. Pundit Iswara Chandra Vidyasagar, Dr. Sambhu Chunder Mookerjee, Dr. Mahendra Lal Sircar, Dr. B. L. Bhaduri, Dr. Girish Chunder Dutt, Dr. Gopal Chunder Goswami, Dr. Gopal Chunder Lahiri were among his converts. In 1867, Dr. Leopold Salzer came to this country it is said from Alexandria, having graduated in the university of Vienna, in 1859, and is still in our midst.

The dominant school was growing bitter against the new which was not yet firmly established. The conversion, in 1867, of Dr. Mahendra Lal Sircar gave it a fresh start. The old school denounced the new as the resort of amateurs. The accession of Dr. Sircar was a shock of earthquake to them. "The Supposed Uncertainty in Medicine"---his avowal of new faith---completely upset them. Dr. Sircar, being rudely treated, ceased to attend the meetings of the Bengal Branch of the British Medical Association, where the paper was read and of which society he was a Vice-President, and the Society too did not long survive his secession.

To defend the cause of homœopathy in the wordy warfare that ensued, Babu Rajinder Dutt invited Dr. Sambhu Chunder Mookerjee from his residence at Baranagore, a metropolitan suburb. The *Hindoo Patriot* thundered forth leaders from his pen. The other newspapers followed suit, not excepting the *Englishman*. It was a unanimous condemnation of the trade-union of the orthodox school. There was battle not only in the stronghold of the Goliaths but also outside it. Though the adversaries were a multitude, yet truth and justice gained, for it was a fight with bullets from the brain. The situation was critical for Dr. Sircar. The dominant school deprived him of his only means of support for six months. Dr. Sircar, however, bore it bravely, for it was on occasion of the triumph of homœopathy of which he was the new standard-bearer. If he had been captured the battle would have ended in smoke. Capture him, they could not; the adversaries wanted a surrender. But he was not the man to surrender even at discretion as advised by Dr. Fayer, his revered professor. Dr. Sircar could practise homœopathy, they had no objection, but he must not avow his faith. It was rather a surrender of the adversaries than of Dr. Sircar's. Had he not been fully conscious that this new truth was a heavenly light and ought to be revealed in its full luminosity, and he its new priest, he would have accepted the easy terms of his opponents and remained with them in the Sanhedrim of the Pedants. He had also to resist the persuasion of friends advising him to revert to the old school as a matter of cool calculation and policy. This difficulty of Dr. Sircar was somewhat smoothed down by encouragements from Babu Rajinder Dutt and Pandit Iswara Chandra Vidyasagar.

Strong in the strength of his conscience and his cause, Dr. Sircar showed a bold front. An unskilful skirmisher would have shown his back to the enemy. Homœopathy had gained ground through the exertions of volunteers but it was reserved for a regular to fight the decisive battle. Among the passed students of the Calcutta Medical College at that time, he was the most cultivated of them all, not only in science but also in the English language. For this reason, if not for any other, he was not a mean opponent and he could hold his own. A trial of strength with foreigners in their own language requires capacity and hence an equal contest can bring respect from them. National literature should no doubt be improved, but, situated as we are, the cultivation of English literature is a necessity.

An apparent calm followed the fight. The rage of the Old against the New school was visible only at the bedside of patients and in the private conversation of medical men. The reigning Philistines would not meet their reformed brothers. At this time "The Calcutta Journal of Medicine" was started. It commenced in 1868 and continues to this day with a brief intermission. "The Indian Homœopathic Review" dating after 1876, is a lilliputian aid to the cause of homœopathy in India.

In 1878, homœopathy was again brought to the front, in the unsophisticated paladium of learning in the Calcutta University. Dr. Sircar was voted a place in the Faculty of Medicine, after he had been eight years in the Faculty of Arts. There was no dissentient vote at this significant meeting, though the old school was represented. The weather was calm but it was one before a storm. The ominous cloud formed and it was

standing still. It required a trifling motion to destroy an existing structure. Dr. Charles, the president of the Sangrados, moved like Cobra Bungaris to swallow one of his own species. "The Indian Medical Gazette" began to spread venom by its hissing. The Faculty of Medicine protested against the action of the Senate. Dr. Sircar replied producing testimony in favour of homœopathy from the recognized old school authorities, as Hippocrates, Hufeland, Liston, Lauder Brunton, and others. The Senate met again and requested the faculty to reconsider their proposition with special reference to the letter of Dr. Sircar. They replied that they could not agree with him, for "homœopathy is based upon principles and methods of enquiry which are diametrically opposed to what they believe to be the true principles and methods of sound, logical, inductive reasoning and careful thorough-going research." The reply was nothing, only they avoided a definite issue by stilted phrases. They ought to have shown in what respect homœopathic proving falls short of the inductive logic.

The Senate met to decide the question finally. It was an unsanguinary battle of freedom of thought against orthodoxy. Both sides were well represented. The first attack came from the orthodox rank. The party of progress replied. Dr. Rajendra Lala Mitra's peroration clearly pointed out the obstinacy of the old school. He said "it rested with the meeting to decide whether the university should be known to the public and posterity as composed of representatives of those who condemned Galileo, or of educated Englishmen of the latter half of the 19th century; whether the Fellows should be the leaders of tradeguilds and professional jealousy, or liberal patrons of science; whether they should be men ready to ratten those who did not fall into their ways, or upholders of perfect freedom of thought and action; whether they should be the administrators of a moral Lydich law, or the protectors of honest independent enquiry into the arcana of nature; and it was earnestly to be hoped that their decision should not disappoint the public." The result of this conflict was a victory for homœopathy.

After this decision, the sinners were more sinful than before. They showed their worst intolerance. At first they were for mending matters by entreating Dr. Sircar to resign, but it was to no effect. Subsequently they all, excepting Dr. McLeod, the editor of the "Indian Medical Gazette," ended their own existence in the Faculty of Medicine. To preserve the Faculty was impossible, unless Dr. Sircar resigned. At last he was obliged to withdraw.

The third collision was a trivial one. It was a puny spite put forth in a number of the "Indian Medical Gazette" of 1882, by the editor himself. It was a feeler. He had miscalculated the strength of his adversary, Dr. McLeod pelted a tiny brickbat and received a heavy stone in answer. He never shewed himself again.

The first hospital was opened in 1851 by Dr. Tonnere. In 1861, Babu Rajinder Dutt established his charitable dispensary at 1, Uckoor Dutt's Lane. It existed for a long time. Dr. Mahendra Lal Sircar opened an outdoor dispensary at his residence No. 51 Sankaritola, in 1867, and it exists to this day. The average attendance of new patients is about twelve thousand a year besides the large number of the old. Since then other similar institutions have sprung up in different parts of the town. Sir Raja Saurindra Mohun Tagore's is one of them. In 1891, a hospital was opened principally by the efforts of Dr. Mazumdar, but it has a precarious existence.

One Jelowitz, M. D., was practising homœopathy in Bombay. The Rev. Augustus Muller, a Roman Catholic Missionary has his dispensary at Mangalore, Madras Presidency.

Of homœopathic schools, the less said the better.

Information respecting the past and the present state of homœopathy in the different parts of India is solicited.

Letter to the Editor.

AN INDIAN PASTEUR INSTITUTE.

SIR,—The appeal made to the public, through the British Indian press, for funds to establish a Pasteur Institute in India, must have been read with much surprise by a large number of the English people, who are well aware that the reputation of Pasteur's treatment for hydrophobia is rapidly declining in the Western world.

A certain section of scientific men, however, presuming on their professional prestige, have the audacity to try and impose upon the humane Hindoo people, the system of barbaric empiricism called Pasteurism.

This term conveniently conceals every kind of ruthless cruelty that human curiosity, when divested of every restraint of natural feeling or religion, can devise.

As the Archbishop of Canterbury, Dr. Benson, has remarked, in no part of the world are there to be found greater refinements of brain than among the Hindoos.

We have confidence, therefore, that they will not readily accept or countenance this inhuman and fallacious system.

With regard to the vaunted value of Pasteur's anti-rabic inoculations, the *Standard* remarked at the time of his death, that "an important and by no means diminishing section of the medical profession both in France and elsewhere, continue stoutly to deny that Pasteur's method is anything better than scientific quackery."

Many of the most eminent physiologists including Professor Virchow, have the candour to admit the impossibility of pronouncing on the value of Pasteur's inoculations against hydrophobia.

During last autumn, patient after patient in England died of hydrophobia immediately after undergoing Pasteur's treatment.

The papers last week contained an account of a Miss Wallender who returning from treatment at the Buda Pesth Institute, having been certified by the doctors as cured, developed hydrophobia while in the train, and has since died in terrible agony. So far from saving the unfortunate sufferers bitten by rabid animals, from the risk of hydrophobia, there is strong evidence that the disease has increased in all the countries where the system is practised. In view of the growing evidence of its futility and danger afforded by the constantly increasing death-roll, it is surprising that anyone has still sufficient confidence in the system to expose themselves to its risks, as there is undeniable ground for believing that it communicates the disease it claims to prevent, in cases where the person escaped contamination by the bite.

Pasteur's treatment is based on the supposition that the disease is caused by a specific micro-organism, but this germ, it is admitted, has not been found.

It is on the strength of the same vague hypothesis of innumerable germs, that these experimentalists prophesy conquests "beyond the farthest flights of hope," to be achieved by them over cholera, enteric fever, and other zymotic diseases.

Yet the science of bacteriology becomes more and more confused as each so-called discovery is announced; and so they spend their time "in dropping buckets into empty wells, and growing old in drawing nothing up," in consequence of employing wrong methods of research.

But the true is the clear, and the more intense the intellectual light brought to bear upon truth, the more consistent does it become.

As the human mind has a strong tendency to close with truth, we are compelled to conclude that such vagaries as the pretended discoveries of legions of polymorphic and endless anti-toxins for their devitalization in the human system, are better adapted to the pages of nursery fables than to the manuals of science.

The endeavour to establish amid a people, whose religion and traditions inculcate profound reverence for life as a sacred thing, a temple of torture where animals the most sensitive are dissected

alive piecemeal, in order that pretenders to science may prepare mysterious viruses with which to inoculate and poison the public, is surely the acme of impirical presumption and scientific absurdity.

MAURICE L. JOHNSON.

Baker Street, Western-super-mare,

January 23, 1896.

THE COTTON DUTIES DEBATE.

THE SPEECH OF SIR ALEXANDER MACKENZIE.

His Honour the Lieutenant-Governor said :—

"It is an extremely difficult position to have to follow in debate such a speech as we have listened to, especially in the case of one who like myself entered this room with considerable doubts as to the equity and wisdom of this measure. It would have been well, I think, had the forms of the Council permitted it, if Sir James Westland had given us this speech at the commencement of the debate when he presented the Report of the Select Committee. I should then have had the assistance of the criticisms of the commercial members and others who are more familiar with this subject than I am myself. I must confess that, listening with all my ears, I have not been able to follow clearly and completely the very rapidly read paper with which the Financial Member has favoured us. I do, however, see that he has been able to meet some of the objections that were brought forward to this measure. I think he has, to a large extent, met the objections arising from the allegation that there is a transfer of taxation from the well-to-do classes to the poorer classes. No doubt what he has said will be submitted to criticism hereafter, and the case in favour of the Bill may not in the end prove to be so strong as he has made it appear; but as well as I can judge I think he has to a large extent met that particular objection. He has not, however, dealt with what to my mind is one of the principal objections to the measure, that is, the protection and favouritism shown to one special item of our import tariff, while there are undoubtedly many other items in that tariff which have equal claims to consideration. As a free trader myself I shall rejoice to see the day when we revert to free trade altogether, but so long as our finances require us to realise duties of this kind I can see no particular reason why cotton should be more favoured than (say) woollen or other goods in the tariff. There is an inequity which comes out very clearly in the proposal to reduce the duties on cotton goods to $1\frac{1}{2}$ per cent. less than the ordinary tariff rate. I am not, moreover, altogether convinced that either he, or the other Members who have to a certain extent taken his view, have fully realised the effect of the retention in the Bill of the exemption of hand-woven goods. That is a point which presses very much upon my mind and regarding which I shall have to say something by and bye, but as to the general form of the thing and treatment of the Bill I must say now that I certainly understood, when this measure was introduced a fortnight ago, that the only principle to which the Government was pledged was the principle of removing from our fiscal system not only all protection but all appearance of protection, and I thought it was quite open to the Select Committee to consider fairly and frankly the objections that were raised to the particular scheme of the Government and to put forward any better scheme which would have secured the main object in view.

"Judging from their report, however, the Select Committee appear to have felt themselves precluded from considering any scheme save that which lay within the four corners of the Bill; but I cannot see myself why it should not have been open to the Select Committee to have taken some such line as this. 'Lancashire says, that there shall be no protection. We agree, and we will tax everything alike, imported yarn, imported cloths, country-made yarn and country-made cloths'—mill-woven of course I mean, for no one has ever dreamt of taxing the domestic spindle; and then they might have gone on to say 'We shall not of course require the Indian mill-weaver to pay his duty twice over, but he shall be entitled to set off against the duty on his cloth what has been actually paid on the yarn.' I would have met the difficulty with regard to the Indian dyes, to which the Hon'ble Member referred in introducing the Bill, by saying 'Very good, here we are prepared to make a sacrifice and we will admit dyed goods at grey or white values.' It appears to me that it was possible to devise some scheme which would entirely have done away with protection, or the very appearance of it, without raising or retaining all the inherent difficulties which appear to me still to cling to this measure.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

I entirely concur with Sir Griffith Evans in all he has said about its being our duty to sympathise with and support the Government in its efforts to hold the scales evenly between Manchester and Indian interests, and I think the Government has honestly tried to do its duty; but I do regret that the Select Committee, with all the opportunities that they had of consulting gentlemen interested in the trade, were not allowed to consider whether some better scheme than that contained in the Bills might not have been devised.

"Now, as regards this question of the hand-loom trade, opinions, as the Council see, differ very considerably. I confess that I agree with those who hold that the protection will have a very serious effect upon both the Indian and import interests. It robs the measure, in my opinion, of all hope of finality. It is, I fear, the little 'pitted speck' in the 'garnered fruit' of our cotton-duties which rotting inward bids fair to 'moulder all.' I differ from those who speak of the indigenous weaving industry of India as a moribund industry. I would rather describe it as in a state of suspended animation. Nor do I think the description given us just now by the Hon'ble Sir James Westland of the condition of the weaver generally is altogether correct. The weaver does not stand so much alone as some suppose. There is no doubt that he is a very depressed member of the community at present, but he has behind him the Marwari, the native piece-goods dealer, and I have myself seen scores, nay hundreds, of villages in which the weaving classes are kept from utter extinction simply by the action of the local Marwari, who finds it to his interest to keep them under the hand. He gives them advances, little as an ordinary rule, just enough to keep them alive, but he has prepared to increase these advances whenever it suits his book; and I happen to know that there is a very real intention on the part of some big dealers here in Calcutta to act in this way and take advantage of that protection which is given to hand-loom by the present Bill. I cannot help thinking that both the mills of India and of Lancashire will feel that competition very severely, and if that is the case then I agree with Sir Griffith Evans that it is extremely unlikely that there will be any finality attaching to this measure. I have had very little time to go into the matter, but I have had the statistics of a typical weaving district in the neighbourhood of Calcutta examined. I find it is a mistake to suppose that the hand-weavers use only the coarser counts. My information is that they use very largely the very finest counts, and that they use these counts in a very large proportion, up to in fact one-third of their total yarns, and the cloth turned out by them is better liked by large classes of consumers than any imported or well-sized goods, and so long as the prices can be kept down to the level on mill-woven goods or near it, the outturn of the hand-loom weaver will be in demand. Taking the statistics of the district to which I have referred—of course I only put them forward by way of illustration—I cannot build a whole theory upon a few figures which I take out at random—I find that the exemption of coarse cottons in 1878-79 had no effect whatever upon the trade of the district. The amount of twist and yarn imported from Calcutta and the value of hand-made goods exported from the district remained practically stationary. But when the cotton-duties were altogether taken off in 1882 the quantity of yarn taken fell from 60,000 maunds in 1881-82 to 21,000 maunds in 1890-91, and the value of hand-made goods exported fell from 7½ lakhs to 1¼ lakhs, while the value of imports of European piece-goods rose year by year with the improvement of communications from 9 to 31 lakhs of rupees last year. In its best year the district exported before the repeal of the duties took effect, nearly 12 lakhs of rupees worth of hand-made goods and took exactly that same amount of imported European goods; but in 1890-91 the hand-made industry had, as I say fallen to 1¼ lakhs. Now, these figures seem to me to shew just this, that the hand-loom cannot compete with the mills on equal terms, but that they can compete when the mill goods are saddled with an excise. It may be said that the local Administration ought to view with satisfaction anything that can be done to stimulate an industry so depressed as the hand-loom industry. The salvation of the proletariat of India no doubt lies in the development of mechanical industries; but we must look to the conditions of our own day; it is to the power-loom, the steam-engine and electricity that we must look for their salvation; and therefore I do not hail the revival of this hand-loom industry with any great fervour. We are told that the Finance Minister has the prospect of a surplus and that this must go to relieve the distress of Lancashire or to stifle its complaints. My Lord, no relief that we can give will meet the case of Lancashire, involved as it is in the throes of a struggle such as Mr. Stevens has described. It is futile to spend our surpluses in such a way. These Bills will not relieve Lancashire, and any flaw in them will, as has been urged, give an opening for fresh agitation and further disturbance of trade. Then, again, I must say, in spite of all the Hon'ble Sir James Westland has said, that I do not myself feel satisfied that we ought to remit taxation at the present moment. The financial situation is in his hands, and in the womb of the future; we know nothing

about it; but on general grounds I can see any number of objects to which surpluses, if available, might, in my opinion, be more usefully applied. One great matter that occurs to me is the reform of our currency. Surely it would be wise to accumulate surpluses with a view to securing that gold reserve which is the only thing that will save us from the bugbear of a constantly fluctuating exchange; and, even if there be nothing in that, I can point to Burma across the Bay, your fine new territory, which requires development in every way, with its calls for irrigation, railways, roads and works of every description. You have the port of Calcutta hampered with crushing dues which interfere most seriously with the development of trade. You might endeavour to strengthen generally the trade of India to meet that competition which is looming upon it from the islands of the East. Not only that, but, as was suggested by Sir Griffith Evans, you have, I fear, grinning at you from behind the door of the North-Western Provinces at present the actual spectre of famine. I should have been glad, therefore, as I have said, to have seen some scheme devised which, whilst avoiding any appearance of protection, would have applied our system of taxation to all counts and all goods, and I should have preferred much not to diminish revenue, or favour unduly one special branch of trade."

ORDERS AND ARROWS.

WHEN the captain of a ship orders some hands aloft to furl the main royal the men jump to obey, as a matter of course. A sailor can climb up on a yard without having a shilling ashore or a penny in his pocket. In fact, Jack seldom signs articles until he has used up both cash and credit.

But when a doctor—who is a sort of captain when one is laid up in the dry dock of illness—orders a patient to go abroad for the benefit of his health, it is quite another thing. A trip and sojourn away from home is an expensive prescription, and most of us can't afford it. If the doctor says it is a choice between that and the graveyard we shall have to settle on the graveyard; it is handy by, and easy to get to. But are we really so hard pushed? That is, as often as the doctors say we are? Let's turn the matter over in our minds for a minute.

Here is a case that is pat to the purpose. It concerns Mr. Arthur Whiddon Melluish, of 3, Regent's Terrace, Polsloe Road, Exeter; and for the details we are indebted to a letter written by him, dated March 7th 1893. He mentions that, in obedience to the orders of his doctors, he went to Cannes, in the South of France, in November, 1890, and spent the winter there. He also spent the following winter at the same place. He felt the better for the change; we will tell you why presently. But he obtained no radical benefit, which also we will explain later on.

It appears that this gentleman had been weak and ailing nearly all his life; not exactly ill, not wholly well—a condition that calls for constant caution. In March, 1890, he had a severe attack of inflammation of the lungs.

Now I want the reader to honour me with his best attention, as I must say in a few words what ought properly to take many. Shoot an arrow into the air—as straight up as you can. You can't tell where it will fall. It may fall on a neighbour's head, on your own, or on a child's, or on the pavement. Everybody's blood contains more or less poisonous elements. These are arrows, but unlike your wooden arrow they always strike on the weakest spot, or spots, in the body. If they hit the muscles and joints we call it rheumatism and gout; if they hit the liver we call it liver complaint or biliousness; if they hit the kidneys we call it Bright's disease; if they hit the nerves we call it nervous prostration, epilepsy, or any of fifty other names; if they hit the bronchial tubes we call it bronchitis &c.; if they hit the air cells we call it inflammation of the lungs, or by-and-by, consumption. And inasmuch as these poisoned arrows pass through the delicate meshes of the lungs a thousand times every day it would be odd if they didn't hit them—wouldn't it?

Now, wait a bit; It follows that all the various so-called diseases above named are *not diseases at all in and of themselves*, but merely symptoms of one only disease—namely, *that disease which produces the poison*! Good. We will get on to the end of the story.

After the attack of lung inflammation Mr. Melluish suffered from loss of appetite, pain in the chest, sides, and stomach, and dangerous constipation. He could eat only liquid food and had to take to his bed. For weeks he was so feeble and he could not rise in bed. He consulted one physician after another, obtaining no more than temporary relief from medicine. Then he was ordered abroad as we have related.

His letter concludes in these words: "Whilst at Cannes I consulted a doctor, who said my ailment was weak digestion, and that I *need not trouble about my lungs*. But I never gained any real ground until November, 1891, when I began to take Mother Seigel's Curative Syrup. This helped me in one week, and by continuing with it I got stronger and stronger, and am now in fair good health. This, after my relatives thought I should never recover. (Signed) Arthur Whiddon Melluish."

To sum up: This gentleman's real ailment was indigestion and dyspepsia, from which the blood poison comes that causes nearly all disorders and pains. The air of Southern France helped him temporarily, because it is milder than ours; it did not remove the poison. By care and the use of Mother Seigel's Curative Syrup he would have done better at home, as the result shows.

So we see that it isn't the climate that kills or saves; it is the condition of the digestion. If therefore your doctor orders you abroad for your health, tell him you will first try Mother Seigel's Curative Syrup.

A Wonderful Medicine.

BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are in valuable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical: it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.
After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October, 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmy days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—The *Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—The *Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—The *Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plum-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." Dr. H. Moore of Royal Artillery from Poonamallee says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdum says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Samkutia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Foudzari
Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON, DIXON, 43 & 45 East Bloor St TORONTO, Canada.

VOL. XV.

CALCUTTA, SATURDAY, FEBRUARY 22, 1896.

WHOLE NO. 713.

CONTEMPORARY POETRY.

FROM HAFIZ.

BY JAMES HUTCHINSON.

Again, on earth, the vernal showers
Descend, and make all nature glad ;
Again, the brown Savannahs wide,
Are decked, in green, and gayest flowers,
And joyful, now, the Bulbul sad,
Hears tidings of his blushing bride.

How softly, now, the zephyr blows !
Ah ! wanderer, if thou comest again,
To hear the sweets, by nature given,
Then gently woo the blushing rose,
And from the gloomy cypress, drain
The odours, which they waft to heaven.

My heart is chill, my locks are hoar,
And hope but points, beyond the tomb ;
Then beauty cease, with cunning art,
To wake the throb, that beats no more,
To tear me, from my hallowed gloom,
And, from my God, distract my heart.

There are, who veiled, in look severe,
Contemptuous, smile, upon the bowl,
And all the joys, which wine inspire ;
That hypocrite, too oft, I fear,
To midnight shrines resigns his soul,
That burn not, with chaste Vesta's fire.

All hail Religion ! maid divine,
Blest be thy servants, evermore ;
Remember youth her mighty sway,
When Noah's Ark, upon the brine,
Amid conflicting billows roar,
Unhamed, pursued its trackless way.

Cease, to court the inconstant world,
Nor boast of fortune's favours won,
'Tis all a chance ; to-morrow's noon
May see thy house, in ruin hurled ;
That state of splendour past, and gone,
Thou could'st not deem, would fade so soon.

Mine be the draughts, my Magian Boy !
Of spirit, which the spirit heal ;
And when they're quaffed, those stores of thine
I'll search, in quest of other joys,
Greedy, their choicest treasures steal,
And, only, drain the cup divine.

That helpless, restless insect, man,
Ceaseless, alike mid joy, or woe,
Pursues his little schemes of gain,
With care, matures each worldly plan
One thought, too busy, to bestow,
Upon that bourne, beyond his ken.

In vain, he sees his palace rise ;
In vain, he sees his gardens bloom ;
In vain, he sees his coffers fill ;
Behold the spot ! where last he lies ;
Alas ! how narrow is the tomb,
How dark, that dwelling, and how still.

Come, tell me, why thy jetty hair,
Which, now, so softly, shades thy brow,
In many a musk-diffusing fold,
That fairer, shows thy face, so fair,
Thou bindest, sweetest ! tell me now,
What costly treasure, does it hold.

In purple robes, thy limbs array,
My moon of Canaan ! and arise,*
And, for a palace, leave thy cell ;
Low humbled, when proud Pharaoh lay,
His wisest then, how vainly wise !
Did Joseph, in his prison, dwell ?

Can monarchs, by the sword, obtain
Contentment sweet, that boon of heaven ?
Can tyrants, with their armies vast,
Acquire proud Freedom's mountain reign ?
Those bulwarks were, by Nature, given ;
To guard that blessing, to the last.

Then, Hafiz, quaff the ruby tide ;
Bid Woman crown thee, with her smiles ;
Be gay,—forget the frowns of age,
And let thy days, in rapture, glide ;
To sophists leave their subtle wiles ;
But scorn not thou, the sacred page.

If Sheeraz' Beauty would receive
My heart, and bid my arms enfold
Her lily neck ; oh ! then believe,
More dear, her dimpled smile I'd hold,
Than Samarcand's, Bokhara's gold.

* Under the name of the moon of Canaan, I believe, the Mohammedans characterise the Patriarch Joseph. In the present instance, it is supposed, I believe, that the poet, under this simile or device, addresses the remainder of the wine, in the flask, before him ; this of course appears singular to us who are comparatively unacquainted, with the allegorical style of writing, not uncommon however, among the poets of the East. The Song of Solomon is probably an illustration of this style of composition, and is of course familiar to all.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

A stream so clear, with banks so fair,
As Rocknabad, can Eden show ;
Or, can its sweetest bowers compare
With rosy Mosellay's ? Ah no !
Then, bring yon antidote to woe.

Yes ! talk of singers, talk of wine,
Of the fair forms, that graceful flow,
Amid the dance's mazy twine ;
Nor, on the future, care bestow,
Which sages know not,—nor can know.

Alas ! those fair, those thoughtless dames ;
That, thro' Sheeraz, so wanton stray,
Poor Hafiz' heart have wrapt, in flames ;
Remorseless, stolen his peace away,
As Tartars seize their helpless prey.

And sure, those darlings have no need
Of trophies, to enhance their charms ;
Why cruel then, make hearts to bleed ;
Could aught improve those snowy arms,
The conscious blush, their cheek, that warms ?

Oh ! I can fancy, how the soul
Of soft Zuleika, then was toss'd,*
Amid conflicting passions roll ;
When shame, and all she prized the most,
For Jacob's darling Boy, were lost.

Suspicious Maiden ! yield thy mind,
To borrow, from experience' store ;
Believe me, Sweet ! the young will find
Truth, in the hoary sage's lore,
And, with their years, will love it more.

That breath, which sweet smells of the South,
The roses, which its dew have wet,
Do bitter words become ? that mouth
Should shed but sweets—And must I yet,
Forgive thee ? would I could forget.

Hafiz ! that power, alone, is thine,
Like orient pearls, thy notes to string,
That, like the Pleiads, sweetly shine,
So clearly beautiful, they bring
The heart's response, on willing wing.

WEEKLYANA.

IN reply to a remark of a contemporary, we are requested by the writer of Dr. Mookerjee's life to say, that the reason why copies of the book were not ladled out to editors right and left was that it was published for the benefit of Dr. Mookerjee's family, and that Mr. Skrine regarded it as a sacred obligation to reserve as many copies for sale as possible.

THE Czar and the Czarina will make their ceremonious entry into Moscow on May 6, and the coronation comes off in the Usspenski Sabor, the famous Cathedral of the Assumption, on the 12th of the same month.

THE Lazereff Institute for Oriental Languages, Moscow, have decided to award the prize, valued at 700 roubles (£80), founded by the late D. G. Kananoff, for an essay treating of "The Armenians at Byzantium to the period of the Crusades," from Byzantine sources. The essays may be in Russian, Armenian, French or German and to be sent in by December 1897. Such enquiries are ominous. They cannot bode good to the Sultan.

* Zuleika is the name given, in the Koran, to Potiphar's wife. Her love for Joseph is recorded, at considerable length, in that work, and forms the subject of several beautiful poems, by different Eastern writers.

M. MICHELIN, the Radical deputy for Paris' Bill presented to Parliament, proposes a tax varying between 50frs. and 1,000 frs. a year, on the possessors of the various grades in the Legion of Honour, and another of 25 frs. to 50 frs. on the holders of decorations of the Order of Agricultural Merit. The owners of foreign decorations are put down for sums ranging from 20 frs. to 400 frs. Soldiers decorated with the Cross of the Legion of Honour, and all civilians to whom it may have been awarded for bravery on the battlefield are exempted. Here is an unobjectionable source of revenue, and we commend it to Sir James Westland. If an impost were levied on every title conferred in this country, it would yield an income certainly larger than the duty on fishmaws and sharkfins.

..

IN connection with the Panama scandals, *La France* having published the names of one hundred and four members of Parliament said to have received bribes from the Panama Company, M. Labussiere brought a libel action against seven persons connected with that newspaper. Only one of them appeared and was sentenced to eight days' imprisonment and a fine of one hundred francs. The absent six defendants were ordered three to six months' imprisonment and a fine each of six thousand francs. The present is only one of a series of information laid against the offending journal. If all the 104 members went to law and the order of court were the same in every case, the fines would amount to about four million francs. France is a country of wonderful resources. She surprised the world by prompt payment of her enormous war debt to Germany. Her representative in the press may be enabled to rise to the dignity of the pictured situation.

..

READ this :—

"A law case which has lasted 300 years has again come on for hearing in a Bavarian Court. It is waged between the market community of Burginn, at Unterhanken, in Bavaria, and the Lords of Thüngen. The case was commenced on June 21, 1595, when the legal advisers of this community appeared before the legal tribunal which then held its sitting in Speier, against the Lords of Thüngen, for a sum of 2,000,000 marks, as owners of a forest of noble oaks and beech trees. Century by century death thinned the ranks on each side, but others took up the cause, and when the case came on for trial the other day matters seemed as fresh as ever. It is hoped, however, that June 21, 1896, will see the last of this venerable suit."

..

THE old order changeth giving place to new. Sir Alexander Mackenzie has modified or rather slackened the order of Sir Charles Elliott about tours of inspection. While "quite concurring with Sir Charles Elliott as to the importance of personal supervision and communication between the Heads of Departments and the Chief Executive Officers of the Administration and their subordinates, and of the value of local inspections by Divisional, District, and Sub-divisional Officers," the present Lieutenant-Governor is not for the hard and fast rules obtaining on the subject. "The essential point," he thinks, "is that the Commissioners, District Officers and Sub-divisional Officers should be personally acquainted with all parts of their respective jurisdictions, and should inspect, with reasonable frequency, all public institutions therein situated, and should make from time to time, in person, such local enquiries as may be necessary to enable them to conduct their duties with satisfaction to themselves and Government or supply any information specially required by Government." Commissioners, who may be expected to understand their duties, are allowed the liberty "to exercise a sound discretion in arranging the length and character of their own tour programme," and "will in future be under no obligation to give up more important duties in order to visit yearly 'every sub-divisional office, registration office, subsidiary jail or lock-up.'" As regards District officers, Commissioners will decide annually the duration of each of such officer's tour, which should be spread over the year. The inspection by the Magistrate-Collectors of their own offices, though very important, must not be too constant to over-turn the office as a whole to the detriment of current work. It will be enough if there is one detailed inspection of the work in all departments annually by the District officer, and another similarly thorough one by the Commissioner. The programme of Sub-divisional officers is to be laid down by the Magistrate-Collector, subject to the approval of the Commissioner. The best part of the resolution is the conclusion which we quote entire:—

"The great difficulty in connection with the touring of District and Sub-divisional Officers is the disposal of case work. Commissioners must see that proper arrangements are in all cases made for

this. If a District Officer's tour is designed to last for some time, it is desirable that he should fix in his programme dates and places for the hearing of cases, and arrange to dispose of them accordingly, after due notice to the parties concerned. Convenient centres for the disposal of case work should be selected, notified and adhered to, the District Officer's camp being kept stationary until the files are cleared. Periodical visits to head-quarters should always be provided for in the case of the more extended tours. The Lieutenant-Governor thinks that a Sub-divisional Officer can generally, except when visiting the least accessible portion of his charge, arrange to spend two or three days a week at head-quarters. It is during these periods of re-visiting his head-quarters that criminal cases should ordinarily be tried and special care should be taken that parties are not harassed by being forced to accompany the Sub-divisional Officer from place to place. The main point to be kept in view is to reduce to a minimum the inconvenience and trouble which the tour of a Sub-divisional Officer must unavoidably occasion to parties, witnesses and pleaders."

The order, if strictly carried out, will remove a cause of much unnecessary annoyance, if it can not correct the Magistrates bent on mischief, or fond of *hairnning* and *pareshaning*.

YUSUF UDDIN'S application has been rejected by the Punjab Chief Court, who decided thus :—

(1) the District Magistrate of Simla acted under Section 191 (c) and not on complaint; (2) the objection of inadequate description in the warrant is untenable, because Yusuf Uddin was expressly identified by a policeman from Simla, and admitted his visit to Simla at the time in question, and never denied that he was intended; (3) The Magistrate had full jurisdiction to issue the warrant for execution in the Hyderabad railway lands. The Code of Criminal Procedure was extended thereto, and the purport and effect of such extension is exactly the same as if this addition had been made to the Code itself. It involved the extension of Sections 1 and 82 (4) The full jurisdiction ceded by the Nizam covers his subjects when within the railway lands: just as much as they are liable to British jurisdiction when at Simla. (5) The informal issue of a warrant to the Resident of Hyderabad was immaterial and was covered by Section 537. He was merely a channel through which the warrant reached the Railway Magistrate, to whom it should have been addressed.

The Mahratta, we are afraid, is treading dangerous ground :—

"Take an oath, a holy oath, by the love you bear to India, by the noble memory of your heroic Aryan ancestors, that as long as great Britain does not wipe off the disgraceful spot of dark injustice that disfigures her name, that as long as India is made the shuttle-cock of party politics in England, that as long as the people of this country are not treated as men who have every right to all that an Englishman delights in as subjects of Her Majesty Queen Victoria, India will have nothing to do with cloth which has been produced and stained by selfishness. Resolve rather to die than touch one inch of Manchester cloth. Let every one that buys one yard of British cloth be branded a traitor to his country—to be shunned as a veritable monster. Bring not forth the stock argument that Indian cloth is too costly. If it be, make for yourself a bed of hay and lie in that rather than pollute your frame and the name of Aryan by falling a victim to the seductions of Lancashire."

NOTES & LEADERETTES, OUR OWN NEWS

&
THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

DETACHMENTS of British, American and French Marines have arrived at Seoul, and the Foreign Ambassadors are now conferring regarding the situation in Corea and the steps to be taken. The *Times* in a telegram from Kobe states that the Russian action in Corea points to a protectorate, and has caused a bitter feeling in Japan. A detachment of British Marines has been landed at Seoul for the protection of the Legation. Japan is indignant at Russian action in Corea. In the House of Commons Mr. Curzon, replying to a question, said that he was unable to state the duration of the Russian occupation in Corea, because he had no reason to believe that such occupation actually exists. No representations, he added, had been made to Russia on the subject. To another question, he replied that Government considers the Russian pledge not to occupy any part of Corea as still binding.

THE British Consul at Archangel telegraphs that the explorer Nansen is returning, having reached the North Pole.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

THE American House of Representatives has rejected by a large majority the Free Silver Bill which the Senate substituted for the Bond Bill.

IN the House of Commons, Mr. Chamberlain, replying to Mr. Brownrigg, said that he would not lose sight of the question of the status of British Indians in South Africa.

HER Majesty has addressed a letter to the nation in which she thanks them for their sympathy in her own sorrow and that of her daughter Princess Beatrice.

MR. Dillon has been elected leader of the Irish party by thirty-eight against twenty-one votes.

THE House of Commons has voted the Address in reply to the Queen's Speech. An amendment by Mr. L. Atherley-Jones in favour of arbitration with Venezuela was withdrawn at the urgent instance of Mr. Balfour, who said that any discussion of the subject at present would not facilitate a satisfactory and honourable settlement. An amendment of Mr. Wedderburn regretting the policy of Government in regard to Chitral was rejected by 192 against 79 votes.

THE deaths are announced of Sir Charles Aitchison and General James Walker.

SIR Edward Clarke, assisted by Messrs. Lockwood, Gill and Carson will defend Dr. Jameson.

THE Sultan has sanctioned a loan of three millions sterling with the Ottoman Bank.

A TERRIBLE explosion, due to exposure to the sun, of 22 tons of dynamite occurred at Viedendorg, a suburb of Johannesburg. Hundreds of houses are in ruins, one hundred persons were killed and several hundred wounded.

ALL the Powers have now assented to recognise Prince Ferdinand.

SIR John Millais has been elected President of the Royal Academy.

THE *Times'* correspondent at Constantinople states that the Sultan has instructed the Turkish Ambassador in London to invite Great Britain to regulate the situation in Egypt with the Sizerain power on the basis that it guarantees the security of communications between India and England.

GOVERNMENT has approved of the nomination of Earl Grey as the Administrator of Rhodesia in conjunction with Mr. Cecil Rhodes.

IN the House of Commons, Mr. Balfour, replying to a question, said that Germany had not approached Great Britain on the subject of a monetary agreement, but the Government was willing to consider with the Indian Government the question of re-opening the Mints, if such a measure could form part of a satisfactory scheme of currency reform.

MR. Balfour, in moving the new rules devoting Friday to supply and limiting the debate on the annual estimates to 21 days, explained that it was not intended to curtail the privileges of private members, which would rather be increased by the proposed change.

"MARK TWAIN" wrote from Darjeeling to the author of "An Indian Journalist":—

"Dear Mr. Skrine,—I have read with great interest and pleasure your book about that fine character, Mukerjee, and I hold myself your debtor for that opportunity."

SIR Alexander Mackenzie seems to have set apart Fridays for native amusements—entertainments in native houses. Last week, he was present at the house of Raja Binay Krishna of Shovabazar, who, foremost to give the retiring Governor a farewell entertainment, was not slow to welcome the new. This week the British Indian Association had a conversazione in honour of the Lieutenant-Governor.

MR. Justice Pigot has resigned and goes away on the 6th of March, when Mr. Justice O'Kinealy is expected back from leave. The retirement of Mr. Justice Pigot is a distinct loss to the High Court.

THE rolling stone in the High Court that gathers moss, Mr. Justice Gordon, now officiating for Mr. Justice O'Kinealy, will, when Mr. Justice O'Kinealy rejoins the High Court, act for the Hon'ble Sir H. T. Prinsep whose leave has yet to run.

MR. Griffiths has a high sense of honour. The syndicate having passed a vote of disapproval upon him, he has resigned the Registrarship of the Calcutta University. It would appear that, on the 27th of January, an elder son of Mr. A. M. Bose, one of the perpetual syndics, escorted his younger brother, a candidate at the Entrance Examination, to the Senate House where he had his seat. While there Bose the elder, who probably trespassed into forbidden ground, was opposed by a *Chaprassae*. The son took it as an insult and filed a complaint through the father. Mr. Griffiths being written to, replied that the *Chaprassae* ought to be rewarded rather than punished for his devotion to duty. Mr. Bose thereupon moved the syndicate, and that select body disapproved of the action of the Registrar, who then resigned. The syndicate further refused to re-open the question or to withdraw the resolution. They say that their vote is not one of censure, at any rate it was not meant so. This ought to have explained and made up all differences. But there seems to be a feeling to make the present an occasion for reform of the syndicate.

What might y contests rise from trivial things!

THE Calcutta Corporation has accepted, for its Chairman, Mr. H. C. Williams on his own terms,—full pay Rs. 3,000, house rent Rs. 500.

MR. T. Hart Davies, District Judge of Kurrachi, has solved the difficulty, which exercised the Government of India for a time, about imprisonment of wives for refusal to go back to their husbands. Rukia sued Vali for cancellation of marriage, in that it had not her lawful guardian's consent, and that she had the right to repudiate it under Mahomedan law on arriving at years of discretion. The suit was decreed *ex parte*. With that decree in her favour and believing it to be a dissolution of marriage, she took a second husband. After this marriage, the first husband revived the old suit. It was tried, and then dismissed, on the ground that the Court had no jurisdiction, the parties being domiciled in a foreign State, where the marriage was performed. On appeal to the Sudder Court this decision was upset, and the case remanded to be tried on its merits. It was then held that the marriage was legal and could not be repudiated by the wife. Then Vali sued Rukia for restitution of conjugal rights, and obtained a decree. On his applying to enforce the order, arose his difficulty. The Judge refused the application. We will let the Judge state his own reasons for his decision.

"It was, indeed, impossible to contest it (the decree) as the marriage with the plaintiff had been declared by the Court to be legal. Now the husband seeks to enforce his claim by the wife's imprisonment, and she appears in Court, and states that she absolutely refuses to go to her legal husband, and would rather go to jail than do so. So the case is a hard one. She is a bigamist, indeed, in the eye of the law, but an innocent bigamist; she married her present husband under the impression, which was indeed correct then, that the Court had annulled her previous marriage. She has had a son by her new husband, and it is natural that she should view the prospect of leaving him, and going to a man whom she does not know at all, with extreme distaste. The surprising thing is that the lawful first husband should care to have her to live with him when she has already borne a child to another man, and the fact of his previous marriage would not prevent him from getting another bride he wished. The question of imprisonment in default of obeying a decree of a Court for the restitution of conjugal rights has been much discussed lately, and a bill to enable the Court to use its discretion in such matters which the Hon. Mr. Mehta introduced, was not passed. There is something extremely repugnant to one's ideas of propriety, indeed, of mere decency, to insist on a woman returning to a man whom she hates, and of imprisoning her like a criminal if she does not go back to him in accordance with the Court's decree, and in the famous case of Rukmabai, though a decree was given to her husband, I do not think that matters were ever pushed as far as imprisoning her for disobedience to the decree. But on this point, I am not quite sure. In England, at all events, as Sargent C. J. observed in the case of Rukmabai,—'Legislation following on the case of Weldon v. Weldon has recognized in 47 and 40 Victoria, Chapter 68, the propriety, or at any rate the advisability of abolishing the practice of enforcing a decree for conjugal rights by imprisonment,' and I think

the same tendency should be encouraged in India. Here, indeed, it is more than doubtful whether the penalty of imprisonment in default of obedience to a decree in a conjugal suit is not a penalty purely invented by English Law. There appears nothing in Hindu Law to justify it, and both among Hindus and Mussulmans it seems probable that marital duties were some of that very numerous class which could only be enforced by religious sanction. But however this may be, no doubt, under Section 260, C. P. C., the decree in a conjugal suit may be enforced by the imprisonment of the party who disobeys it. Now the Hon. Sir A. Miller, when introducing his amendment of the Civil Procedure Code in July, 1894, to give the Courts discretion in such matters, stated that the Bombay High Court had held in Rukmabai's case that if the defendant refused to comply with the decree in a conjugal suit, the Court had no option but to sentence her to imprisonment. I presume that the conclusion was arrived at in the course of the execution proceedings, which have not been reported, and I am unable to say on what grounds their Lordships arrived at this conclusion. But the words of the Code are, I think, plain. The decree 'may' be enforced, and I fail to see how this can be interpreted as 'must.' At all events in a case of this sort, where all the equities and proprieties are clearly on the side of the defendant, I am not inclined to strain the interpretation of the law against her, and I must decline to pass an order for her committal to the Civil Jail."

If it is surprising that the first husband should claim the wife after she had borne a son to another husband, it is no less a wonder that a court would allow the re-opening of a cause to raise no end of difficulties all which it is not competent to meet. We must say that the Judge has done well to disallow the application. It would have been better not to decree the suit for restitution of conjugal rights. Better still if the old suit were not revived.

IN India saints, prophets and incarnations have in all ages been plentiful. The cry is—still they come. The business requires neither learning nor capital, and, while unattended by any kind of risk, has far greater attractions than any secular profession. When successful, it brings not only wealth and honour, without any kind of dodgery or humiliation, but everything else that the most depraved of human beings can have a craving for. The English schools and colleges set up in the country in recent years, and the honest careers opened to men of education under British rule, threatened at one time to make the prophet a *rara avis*. But the public services and the liberal professions being now overcrowded, the spectacle of English-speaking natives playing the roll of prophets is becoming common enough. It is an indigenous profession, and, there being a large number of models for imitation, affords a far better resort for the unsuccessful graduates and under-graduates than even patriotism.

The lives of these men are indeed worth studying, and it is a pity that no one has yet come forward to entertain or warn the public with biographical sketches of these living saints. One of the most famous of these has made the classic soil of Nadia his head-quarters and is struggling hard to pass as another Chaitanya. It is said that he was a student of a school in the Eastern districts, and that upon being turned out of his *alma mater*, he determined to spoil the students of the English schools of the country by teaching them to hate the study of the English language and literature. He has in fact the curious power of making boys neglect their education and become devoted to him like slaves. He is always surrounded by a number of little urchins who patrol the streets of Nadia with banners and music in the usual style of Sankirtans. He is not known to receive visits from grown up boys not likely to pay him a pecuniary fee for the honour. Young ladies, specially rich widows, are always welcome to his hermitage. It is said he has a regular staff of diplomatic officers (of course of the softer sex). To convince his followers as to his godhead, he professes to have the power of performing every kind of feat, possible and impossible. The British Government itself is in existence by his sufferance, and, if so inclined, he can upset it at any moment. He is said to be a handsome young man. It is very seldom that he appears in public in the day time. When he comes out at all he has always a veil over his face. Considering the nature of his movements, we think he should be the observed of others than his immediate followers.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

*REIS & RAYYET.**Saturday, February 22, 1896.***JHALAWAR.**

WE resume our account of this State. For some years previous to 1838, there had been strained relations between Maha Rao Ram Sing and the hereditary administrator Raj Rana Muddon Sing, grandson of Zalim Sing, mostly from the latter's personal arrogance and the former's natural irritation at being a nonentity in his own dominions. The greatest enemy of Zalim Sing and of his son Madho Sing, could not accuse them of want of tact and discourteous treatment of the reigning Prince, even during the bitter days of war, ending with the battle of Mangrole, brought about by Maha Rao Kishore Sing's ungrateful treatment of the old minister. The Maha Rana wanted to break through the hereditary administratorship, which the Paramount Power had recognised by treaty, as a reward for his faithful and distinguished services, both to his own chief and to that Power. Otherwise Zalim Sing was not the person to go to war with his own liege lord, a war in which, by the way, a small British force commanded by European officers co-operated, some of whose graves may still be seen in a state of good preservation at Mangrole, the headquarters of a Tahsil, in Kotah territory. In Kotah, the Jhalas have yet a large following of their admirers, whose talk is always of their administrative ability to the detriment of the members of the reigning family, their want of intellectual qualities, &c. An anecdote is still told by old men with relish of the great political sagacity of Zalim. On the breaking out of hostilities between master and servant, when Maharao Kishore Sing bolted from Kotah, first to Goburdhun and then to Nathdwarra, the famous shrine in Mewar territory, the old man, with great piety and devotion, placed Kishore Sing's embroidered slippers on the Guddi, saying that, though his royal master was absent, the slippers, which had encased his feet, would remain in the place of honour. Some even say that he reverently placed them first on his breast, as a token of his humble devotion.

But Raj Rana Muddon Sing unfortunately was made of different stuff. For fear of personal insult, he went about with a large armed following, even in his visits to temples. To prove the uselessness of the precaution, Maha Rao Ram Sing once hid himself in Muthureshjee's temple, which has a large endowment from the State. When Muddon Sing entered the sanctum, where armed followers have no access, Ram Sing appeared before him and, taking hold of his hands, asked jocosely of what use were his armed retainers? Then of course Muddon Sing tried to get out of the situation in the best way he could. But it was only a temporary reconciliation. The breach again appeared and began to widen. The culminating point was reached on the last day of a Dusserah, on the evening of which the chief goes, in great pomp and state, to Kishorepura, a suburb of the city, where, amid the booming of guns, the religious as well as the ceremonial portion of the big annual Durbar, is terminated. Though the Jhalla minister had been independent, since the time of Kishore Sing, he had to perform one menial service to the Maharao, namely, to put his Cumurband, a long richly embroidered cloth, on the waist. This the minister had to adjust with his own hands. But on this particular Dusserah,

Ram Sing waited long for the Cummerband service of the minister, and, in the end, was obliged to go out, rather late, without it, on hearing that Muddan Sing had gone to the Dusserah encampment, in advance of him. This was the last straw to break the camel's back. Muddon Sing's neglect of the service which his father and grandfather had always loyally performed, led to the severance of his connection with Kotah and the creation of the principality of Jhallawar for him with an income of some 20 lakhs. With his thorough knowledge of the whole territory, he selected the most fertile Pergunas, the Maharao having only agreed to alienation of a third of his territory. Even that consent was extorted. Zalim Sing's heirs were justly entitled only to Shahabad, originally acquired by him, and the Chowmehala or 4 Malwa Pergunas of Holkar, offered, as a reward to him, by the British Government and at his instance transferred to Kotah. Kotah was shorn of much of its splendour by the exodus of the Jhala family, as half the town population accompanied Muddon Sing to his new capital, and the Maharao had to consent to the emigration. The treaty also gave him the right to a portion of the army of all branches—foot, horse and artillery. Innumerable roofless houses, near the base of the inner city walls, still testify to the glory of Kotah under the Jhala regime, besides their palatial houses, one within the Palace yard, a 2nd near the Surujpole gate, a third in the chowni and a fourth with extensive gardens at Nauta, on the other side of the Chumbul river.

Maharaj Rana Muddon Sing reigned about 8 years in his new Principality. On his death, his Rani, a lady of the Bhati clan Rajputs of Jesulmere, accompanied her lord's dead body to the funeral pile and became a Sati, previously advising the young heir to marry a niece of hers, as there was no likelihood of his getting children by his wife, a daughter of the house of Chomu in Jaipur. The prediction was strangely fulfilled, as all the children the late Prithi Sing of Jhalawar ever had were from a Bhati wife—a son who died young and a daughter afterwards married to Maharao Raja Sheodan Sing of Ulwar, though she did not live to old age. But there was literally no issue by the Chomu Rani, called Nathawutji. Though only 16 years old, Prithi Sing was allowed to assume the reins of government without any restriction or even a council—that panacea for all evils in the present age. His father had, by applying the screw, raised the annual revenue to about 24 lakhs, but that hard settlement could not always be maintained, so the income came down to its original figure. Addicted to pleasure, he spent no small sum on his amusements. Cock-fighting alone cost about 3 lakhs a year, to say nothing of the expenses on numerous musicians, male and female. Nevertheless, he gave a moderate portion of his time to state affairs which he superintended personally through a Kamdar and other departmental heads, and was always accessible. He always kept the main policy of the Jhala family prominently in view, for his guidance, that "of invariably trying to secure the favour of the British Government and of its officers on the spot," as the founder of the family had inculcated and been greatly benefited by it.

Prithi Sing reigned for about 29 years and died in 1875, in his 45th year, a victim to the vicious life he had led. As the 3rd article of the Jhalawar Treaty of 1838 limited the succession to the descend-

ants of Zalim Sing and as there was no one else to succeed him, he had always endeavoured to obtain sanction to adopt a son. Lord Canning's general Sunnud, after the munities, conceding the right of adoption to all the reigning Princes of India greatly favoured Prithi Sing's ambition. Colonel Brooke, when A. G. G. in Rajputana, facilitated the actual adoption, though after Prithi Sing's death in 1815, Colonel Sir Lewis Pelly was doubtful of its strict legality. The Supreme Government, however, rejected Kotah's claim to the reversion of its old territory under the 3rd article of the Treaty, and accorded sanction to the adopted son being placed on the Gadi, who was proclaimed under the name of Maharaj Rana Zalim Sing, according to the custom prevailing among Rajput families of assuming the name of the 4th ancestor in the ascending degree.

THE INVIOLEATE POLICE.

THE order of the late Lieutenant-Governor prohibiting Judicial officers from commenting on the conduct of Police officers, was a surprise to those competent to form a correct opinion on the subject. Those familiar with that official literature know how this order originated in a wrong conception of the duties of a Judge. An attempt was made to make out a case in favour of the Police officers. Magistrates and Judges were blamed for their open remarks in violation of the principle that no public servant should be publicly censured. It was ruled that any remarks suggested during a trial should be quietly and secretly communicated to the superior officers of the Police. The result, as was expected if not desired, was that all Judicial officers closed their eyes to the misconduct of the Police.

This, however, is no new order. It has practically been in force, in some form or other, since a long time past, and during the last *regime* it was given its present shape or strictly enforced. The Magistrate's register with a column for remarks on the Police was withdrawn. The trial registrar has no such column. Seeing the temper and tendencies of the late Lieutenant-Governor, even veteran Deputy Magistrates had given up making remarks. They found the uselessness of such observations and felt their unpleasant consequences. For all their pains, they earned only the bitterness of the District Superintendent and the censure of the Magistrate.

Is the Government or the Inspector General of Police aware of the uncalled for, annoying and insulting remarks which some of the District Superintendents and their young assistants are in the habit of making against the Deputy Magistrates and their judicial proceedings? Latterly, some of the Police Inspectors were encouraged by the District Superintendents and young Magistrates to the same unseemly course. In all fairness to the judicial officers, some such instances should have been brought to the notice of Government. If a Deputy Magistrate is bold enough to resent, he is snubbed by the District Magistrate. Magistrates have been known to openly avow that they could not displease the District Superintendent or lower their prestige with their own subordinates or the people in general. For this deplorable state of things the last administration is wholly responsible.

Who can deny that there are many dishonest officers in the lower ranks of the Police force? Some of them are most unscrupulous and notorious in their districts. They are a great public misfortune. But they may purchase properties in

their districts, make their little fortunes, live in a better style than their superiors, without, on that account, being least suspected, if they can only please the District Superintendent which is also the way to the good opinion of the District Magistrate. The scandal is not confined to one district; it is spreading. Deputy Magistrates and Sub-Judges cannot ordinarily remain in one district beyond a limited time. Police officers are bound by no such regulations and are allowed to stay in one district for 5, 6 and 7 years. The more the public and the press demand their removal, the greater their claim to continue in the old place, for the prestige of the police and Government.

It is difficult to understand how a Magistrate or a Judge can overlook the doings of the Police in the course of a judicial proceeding. If it deserves praise, he is not to withhold it. Censure he must reserve for secret report. When a Police officer perjures himself, will he not be called a perjurer? When he suppresses a crime and spoils a case, or tampers with witnesses or manufactures evidence, will not the trying Magistrate criticise such conduct, or give reasons for his conclusion? Or will he, in obedience to the order for secret report, overlook the misconduct, keep his judgment incomplete, and invite censure for himself from the District Judge and the High Court? It will not satisfy any conscience nor meet the ends of justice of an open court, to say that this officer has been reported to his superiors. In some districts where there are police officers of the class above described, they have virtually become professional witnesses, as it is impossible to decide Police cases without their evidence. They intentionally mix themselves up with them, and the fate of a prosecution moves in the scale of their evidence. The Deputy is called upon to explain when there are large acquittals and his attention is always directed to the well known maxim "no conviction, no promotion." No notice, however, is taken of the agency which makes and unmakes cases, which secures convictions and regulates acquittals. Almost all riot cases or cases under some other sections, such as 107 and 145 and 147, Criminal Procedure Code, in which high Zamindars and wealthy persons are concerned, are pre-arranged in every detail and worked out accordingly. There are very few District Superintendents who thoroughly know their subordinates.

THE ECONOMICAL RESOURCES OF BRITISH INDIA.*

THE subject is a big one, and is, or ought to be, of perennial interest, not only to artisans, traders and merchants, but also to every one who feels concerned at the growing poverty of India. Unfortunately, there is hardly a single book on the subject which, in a handy form, deals with it correctly and exhaustively. The existing literature consists chiefly of Reports and Blue-books replete with the most puzzling tables, and giving, on some of the most important points, the most distorted views. The memorandum by Dr. Watt is no exception to the rule. It contains a deal of valuable information within a small compass. But it is far from exhaustive, and the views propounded and sought to be uphold cannot be accepted by those who know anything about the real condition of the country. The Doctor does not actually say that the country is overflowing with milk and honey. But he goes a great way to suggest that the people have a plentiful supply of good and wholesome food, and that

* *Memorandum on the Resources of British India* by George Watt, M.B., C.M., C.I.E., Reporter on Economic Products to the Government of India. Government of India Central Printing Office.

their normal condition is not one of semi-starvation as it is believed to be by many competent authorities. The learned economist says :—

"The contentment of the people, the growth of luxurious demands, and the expansion of foreign trade, must be admitted as prognostications of prosperity."

The apparent contentment of the people, and the growth of luxurious demands do not necessarily prove prosperity ; while the expansion of what is called India's foreign commerce, but which, to a great extent, is sheer spoliation, proves that the country is becoming poorer and poorer.

The people of India are naturally averse from doing anything that might amount to a confession of extreme poverty involving want of means to keep body and soul together. A poor labourer who is unable to feed himself or his family, will silently starve in his hut. He will, if compelled by necessity, enter one of those religious sects that ennoble beggary. He may, in extreme cases, join a gang of thieves. But the spectacle of a large number of men in a state of semi-starvation clubbing together for bullying the officials or breaking the windows of the rich, has never been seen in India even during the direst famines. The peasants do not know much about the real causes of their poverty, and our British rulers do not come in for a share of their abuse to the same extent as the village landlord or the village banker. But if the Governors and Councillors could ever, with their own ears, hear the curses that the weavers daily pronounce on them, their self complacency would be sure to abate very materially. They might not be led by fear of Heaven's wrath to change their policy as a God-fearing Hindu and Mussulman ruler would be under similar circumstances. But they might be less prone to talk glibly about the contentment of the people, or the necessity of an excise tax on the handloom weavers for completing their ruin and for benefiting Manchester to the fullest extent possible.

Dr. Watt speaks of the growth of luxurious demands as indication No. 2 of the country's prosperity. But who are the men that create the demand for English boots, broadcloth and velvet? Are they not mostly the men who, as merchants, brokers, Government officials or Railway employees, are in reality so many assistants in the work of draining the life-blood of India? We at least have never seen a peasant with Dawson's boots or a velvet cap. To say nothing of such luxuries, it is rare to meet with a rayyet having a broadcloth coat, or even a decent longcloth jacket in mid winter.

As to the inference drawn by Dr. Watt from the expansion of what is called India's foreign commerce, the fallacy is so obvious, and has been exposed in these columns so many times, that we feel much reluctance to revert to it. From the figures supplied by the Doctor himself, it appears that the average exports of India now amount to about 108 crores of rupees per annum, and that the value of her imports is about 66 crores. It is, therefore, evident that India is now giving 42 crores of rupees every year gratis to England. Does Dr. Watt mean to say that India's material prosperity is increasing by having to give this enormous amount to England without any tangible return?

It would perhaps be said that a considerable part of this amount represents the interests and the dividends that India has to pay to her British mahajans. But India's liability to the English capitalists is almost as unreal as were the debts of the Nawab of Arcot to the officers of the East India Company. In the case of India, the money was no doubt advanced by the capitalists. But a careful study of the trade statistics of the last 100 years would show that not a pice of that money ever reached India. The whole was spent in England, and yet India was saddled with the liability. Within the last 100 years, India has given to England at least 1,000 crores, and at the same time her liability to English capitalists has amounted to about another 1,000 crores in various shapes. Can such a state of things be regarded either as a cause,

or as an indication of India's prosperity? To us it seems that the facts and figures given by Dr. Watt prove only the growing poverty of the country. The picture is alarming indeed, however glowing the colours in which it is painted.

There are, however, a few rays of light that tend to cheer the heart amidst the gloom. We read :

"The Bengal Iron Company at Barakhar is progressing very satisfactorily and the success of the enterprise seems assured. The Company produce a yearly increasing quantity of pig iron, which finds a ready sale. The quantity turned out during the year 1892 was said to have been 19,486 tons."

This is good news indeed so far as it goes. But the railways being the chief consumers of iron and the principal railways of India being practically in the hands of Government, the iron industry of the country cannot be expected to flourish unless Government be determined to encourage Indian industries even at the risk of offending Manchester and Birmingham.

The salt industry of India seems to be on a yet more hopeful footing.

"The total quantity of salt produced in India during the year 1892-93, was 898,909 tons, valued at Rs. 5,382,845."

"The home product is slowly but steadily taking the place of the imported."

THE POETICAL WORKS OF BABU NOBIN CHANDRA DAS, M. A.

This volume of Bengali poems consists mainly of a metrical translation of Kali Das's "Raghuvansa" with a few detached original pieces. The translation, though wanting in the grandeur of the original, reflects credit on Mr. Das. He displays considerable ability in handling some of the difficult passages in the great work of the greatest of Sanskrit poets. The arduousness of his labour can be appreciated by only those that have ever undertaken a similar task. Although the Bengali language is only a modern form of the ancient Sanskrit, yet the difficulty of translating a Sanskrit work into any of the vernaculars is quite as great as that of translating any English work into Bengali. To begin with, the Sanskrit works abound in long compounds which cannot possibly be retained intact in a Bengali dress. Then again there are peculiar modes of expression in Sanskrit which have no corresponding forms in Bengali. Take for instance the following verse in the original

"Tadgunaih Karuamagtya Chapalaya Prachoditah."—canto I. v. 9. To the translator the latter part of this verse must, at first sight, appear to be very nearly unmanageable. To make it intelligible in Bengali, Babu Nobin has been necessarily obliged to add a few words of his own. But his periphrasis is neat, and gives the exact sense of the original without marring its beauty.

To make his translation both intelligible and interesting, Mr. Das has added a good many notes containing much valuable information. In almost all his works, Kalidas displays a knowledge of geography which in a man of his age must appear quite

The Indian Association for the Cultivation of Science.

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F.C.S., on Monday, the 24th Inst., at 4-15 P. M. Subject: Organic Acids.

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F.C.S., on Tuesday, the 25th Inst., at 4-15 P. M. Subject: Organic Acids (continued).

PRACTICAL CLASS in Chemistry under Babu Ram Chandra Datta, F.C.S., on Wednesday, the 26th Inst., at 4-15 P. M. Subject: Organic Acids (continued).

Lecture by Bibu Svamadas Mukerjee, M.A., on Thursday, the 27th Inst., at 3 P. M. Subject: Analytical Conics.—Special forms of the Trilinear equation of the second degree.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

February 22, 1896.

marvellous. The fourth canto of the "Raghuvansa" where the poet gives an account of the conquests made by Raghu, teems with geographical references which, but for the notes by the translator, would be unintelligible. In some cases these might have been made fuller. For instance, with regard to the country called Komboj in the original, the translator contents himself by saying that it is to the north of India. A little enquiry might have enabled Mr. Das to give more precise information. He is also silent on some points of antiquarian interest requiring elucidation. Upon the whole, however, the present translation is a valuable addition to our vernacular literature.

We may mention here that Babu Nobin Chandra is a younger brother of Rai Bahadar Sarat Chandra Das, C. I. E., who has attained a high reputation as a Thibetan scholar.

JOURNALISM IN INDIA.

Mr. F. H. Skrine, c.s., has earned the thanks of the Bengali public by bringing out an excellent edition of the letters and correspondence of Dr. Sambhu Chunder Mookerjee, prefaced by a very readable summary of his life-story. The volume is named "An Indian Journalist." It has set us thinking about the conditions of journalistic work in India.

What we most mark in the subject of this memoir is the essential loneliness of his position. This is a fault of the time and country rather than that of any individual. The Indian weekly papers are mere criticisms on events already known. The importance of any such paper depends entirely on the personality of its Editor. The Editor generally is a Grand Turk with no younger brother and no vizier to whom he may delegate his authority. Everything must bear the impress of his own hand or it would not pass current. Each weekly is known as the paper of this man or of that man. So much is this so, that the editor can have no holiday. Sambhu Chunder, whether racked by disease and wishing for a change of climate, or invited to see the Madras Congress, cannot move out of Calcutta lest his paper should sink into obscurity in his absence.

In such a state of things there can be no continuity of journalistic effort. No editor leaves a heritage to his successor. Each has to create an influence anew. I cannot therefore hold with Mr. Skrine that Sambhu Chunder found his best work in journalism. All journalistic work is ephemeral as Mr. Skrine admits. But it is doubly ephemeral in India. The good will of an Indian weekly is not worth taking as a gift after its Editor's death. An Indian Editor's work is therefore of a peculiarly hopeless character. In England, an Editor is the exponent of a great party in the realm. He is cheered by the hope that his work would be carried on after his retirement by men as great as he. But in Indian politics, there are only two great parties--the Government and the people. The people have yet to learn organisation and combined work. The majority of them are ignorant and unthinking. An Editor here must create a party and not merely educate it. He cannot, unless he descends very low indeed, be the exponent of any existing party. He is a pioneer. His work is that of an original genius. Genius is childless, and therefore, as I said before, there can be no continuity of journalistic work in the India of this age.

Mr. Skrine has not sufficiently noticed the effect of his isolated position on Sambhu Chunder's character. It is vice which Sambhu Chunder shared with every other Indian man of learning. In Europe, there are learned societies. A scholar there is thrown among his peers. He quickly finds out his relative position. The angularities of his character are soon rubbed off.

But in India, the corrective influence of living among one's peers is entirely absent. Every scholar here lives by himself. He is often surrounded by a coterie of admiring mediocrities to whom he is an oracle. By listening to their unmixed applause, the odd traits of his character are more clearly brought out. Individuality degenerates into perversity. The life's energy is spent in dreaming out grand plans of works which the world will not willingly let die. But the actual achievement of such a life comes to be only a number of ephemeral fragmentary efforts. The glorious "Might be--someday" is never realised, and the nation remains as poor as before.

Another circumstance, too, has a very demoralising effect on Indian Journalism. The State, here, has an absolute monopoly of information. Those papers only which become the apologists of the men in office can get intelligence. The body of officials is the most, indeed the only, powerful party in this country. A paper is valued by the people in proportion to the influence which its Editor is supposed to have in private with the powers that be. No paper seems to have a value of its own.

It is whispered that Kristodas Pal has great influence with Lord Ripon. Immediately the circulation of his paper goes up. It is seen that Lord Dufferin looks kindly upon Sambhu C. Mookerjee, soon the *Reis and Rayyet* comes to be read far and

wide. The Viceroy goes away. His successor has other personal likes and dislikes, and the paper at once loses its political importance. Within his own circle, Sambhu Chunder was flattered to the top of his bent. He came to imagine himself a Bengal Samuel Johnson. He made too much of the worthless title of Doctor given to him by a worthless American University only because it enabled him to call himself Doctor as Johnson were called. Violent personalities and hard Philistine hits did not appear unbecoming in his judgment, for, was not Dr. Johnson famous for them? Who would snub snobs and unmask the ignorance of pretenders to learning if it was not the Johnson of Bengal? He argued himself into the belief that he was the "dictator of the English Language" in India, and the sole repository of the latest and best English literature. This explains the affectation of learning and the love of quaint obsolete phrases which marked his editorials. His opposition to the Congress does not imply that he thought the movement to be wrong; for, his good wishes were often secured by something other than intellectual conviction. The Congress leaders could certainly have got him on their side if they had used a little tact in handling him. They should have appealed to his emotional nature and humoured his queer fancies.

--*The Indian Nation.*

JADUNATH SARKAR, M.A.

JURY TRIAL IN INDIA.

CRIMINAL PROCEDURE CODE, 1882, AMENDMENT BILL.

The Hon'ble Sir Alexander Miller moved that the Bill to amend the Code of Criminal Procedure, 1882, be referred to a Select Committee consisting of the Hon'ble Mr. Woodburn, the Hon'ble Babu Mohiny Mohun Roy, the Hon'ble P. Ananda Charlu Bahadur, the Hon'ble Sir Griffith Evans, the Hon'ble Mr. Cadell, the Hon'ble Mr. Rees and the Mover. He said:--"This Bill has been the subject of circulation for opinion, and a very large number of opinions have been received in respect of it, of a character which renders it necessary that in making this motion I should say a few words, mainly in respect to the third section of the Bill. The remainder of the Bill, though I cannot describe it as altogether non-controversial, is practically approved by all the opinions we have received, subject probably to some further alterations, such as are always found necessary in every draft--I should be surprised indeed to find a draft of any importance which when it came to be considered did not require some alteration, greater or less. In fact, I remember one of the most skilled draftsmen I ever had the pleasure of knowing was fond of quoting as a maxim *nihil simul factum est, et perfectum*.

"But as regards the third section of the Bill, which deals with section 303 of the Code of Criminal Procedure, the opinions are very much more varied, and I may say by way of general remark that I think one of the great advantages of the system of legislation which prevails in this country is that we are not obliged, as some other Government of which we know something practically are, to stick to every proposal which we make, right or wrong, from an instinct of self-preservation; but that we have the opportunity and freely use it, of discovering, after we have put our proposals into the form that *prima facie* recommends itself to ourselves, what the opinions of persons who are capable of giving advice in the matter from the outside are, and are able and willing to accept the advice we receive from outside persons and bodies so far as it commends itself to our judgment. I know it will be said--I know it has been said--that that is a weak thing; that having made up your mind you ought to stick to it, right or wrong. I confess that my opinion (and I am glad to feel that it is the opinion of my colleagues in the Government of India) is very contrary, and that obstinacy of the kind described is a sign of weakness, not of strength, and that it is a proof of strength after having asked for opinions to be able to accept them so far as they seem to be well-founded. I say this because I am about to propose a very material modification in the Section in question, a modification founded mainly on the opinions we have received from the responsible bodies whose opinions we have asked, and because we feel that whatever may have been the view which led originally to the proposal in question, it is one which ought to be modified in the manner in which I am about to describe in consequence of the concurrent opinions which we have received upon the point.

"But before I go into the details of the clause in question I desire to point out what the existing law and practice on the subject of verdicts is, because I think that that is not altogether understood. First of all, everywhere, as far as I know, where the principle of trial by Judge and jury--because it is not strictly trial by jury--prevails, there is a marked line of demarcation between the functions of the Judge and the function of the jury. It is the business of the jury to determine all questions of fact; it is the business of the Judge to lay down all points of law. The only exception I know to that anywhere is in the trials in England for libel in which under Mr. Fox's Libel Act the jury have, to a

certain extent, the power of entering into questions of law. That distinction is very strongly brought forward in sections 298 and 299 of the Indian Penal Code, and there is no doubt that in India, as in England, it is the duty of the jury to take the law from the Judge in every case, even if they disagree with the law as he lays it down. In fact, the meaning of a 'perverse verdict' is not one which is opposed to the justice of the case, but one where the jury have refused to accept the Judge's ruling as to the law. A verdict may be erroneous without being perverse; such verdicts are to be met with every day and everywhere, but what is a more exceptional case is that a verdict may be perverse without being erroneous. Now, the present law in India is that the jury shall return a verdict on each of the charges on which the accused is tried and the Judge shall so direct them, and that, if the Judge has any doubt as to the meaning of the verdict returned by the jury, he may ask such questions as may be necessary to ascertain what their verdict is, and that every such question and answer shall be recorded. That is the law as it stands in section 303 of the Indian Penal Code. In the proposed section we break that up into five sub-sections, three of which, with a very slight modification, accurately represent the existing law and practice. The other two, on which I shall have to comment, are new.

"The first provides, almost in the terms of the existing law, that the jury shall be at liberty to return a verdict on each of the charges on which the accused is tried, and the Judge shall so direct them. Then sub-section (2) propose to do that which is the common practice both in England and in India, but which is not expressly provided for by law in either country, namely, it enables the Judge to require the jury to give a verdict as to their belief or disbelief on any specified issues of fact and to deduce from the findings of fact the result of the trial. I say that is not at this moment expressly the law in either country, but it is the practice in both. At present it is perfectly true that a jury may—I suppose in India, certainly in England—if requested by the Judge to find a special verdict on the facts laid before them, refuse to do so, and bring in a general verdict of guilty or not guilty; but I have never heard of an instance in practice in which any jury has done so. On the contrary, I suppose there is not an assizes in any country in England in which it does not happen at least once that a jury is either requested to state its opinion on the various points of fact which arise in the case and does so, or does so voluntarily of their own accord, and I happen to know that the same thing occurs, if not frequently, at least sometimes, in India also.

"I do not wish to detain the Council at any great length on this point, but I will give two illustrations, one from my own personal knowledge and the other which I came across the other day. In the very first criminal case—a case in which a man was charged with burglary—in which I ever was concerned myself—and the fact has fixed it in my memory—the jury returned the following verdict:—'That the prisoner was found in possession of the stolen articles which he knew did not belong to him, but that there was no evidence as to whether he had taken them out of the house or had found them in the wood where they were found in his possession' That was distinctly a special verdict: and on that Mr. Baron Platt directed a verdict of 'not guilty' to be recorded. The other day I came across in the course of my reading—I did not take down the reference and I cannot now specify where, but I can easily find the case, if necessary—a case where a jury in this country found that the accused had killed the deceased not in self defence and without provocation, but that, inasmuch as there was no evidence of a previous quarrel or motive, they declined to find him guilty of murder: and on that the High Court of Calcutta ordered a verdict of guilty of murder to be entered.* Both of these are instances of special verdicts in which the Judge had entered a verdict in accordance with the facts found by the jury, disregarding any opinion on questions of law given by them. Therefore, I say that sections 1, 2 and 5 of the proposed Bill accurately represent the existing practice. They only vary from the existing law in this: that sub-section (2), if carried, would enable a Judge to require that to be done which in practice constantly is done without his being able to enforce it. At the same time I am bound to say that the variation between the proposal and the existing law is so slight that no very great harm will be done if the Select Committee should prefer to preserve the existing law unaltered, and neither I as an individual, nor as carrying out the views of the Government, would feel bound in the least to interfere with the discretion of the Select Committee if that should be the form which their discretion would take.

"Sub-section (5), however, has at present a very important addition attached to it, which is no part of the existing law of India, and that is, that a Judge shall not in any case enquire of the jury

their reasons for any verdict, nor whether they have believed or disbelieved any particular witness.

"That proviso was added to sub-section (5) because it was feared that, if the general power of the Judge to require verdicts on questions of fact were extended as proposed by sub-section (2), he might amongst other questions of fact ask these particular questions, and it was thought not desirable that the minds of the jury should be investigated as to how they arrived at the facts, the only object being to discover what conclusions of fact they had in effect arrived at.

"If, however, sub-section (2) is not passed by the Select Committee, it will not be necessary to introduce the proviso in sub-section (5), and in that case the law may remain as it stands at this moment in the Code.

"Sub-section (4) is really a portion of the same question as sub-section (5); that is to say, the object of sub-section (4) is, if it is not clear what the verdict is, to enable such questions to be asked as will show what that verdict really is. That is, as I say, a part of the existing law, and although it is considerably elaborated in the sub-section in order to make the process perfectly clear, it does not vary from the existing law in any respect, and I shall leave it to stand or fall with sub-section (2) according to the judgment of the Select Committee.

"There only remains sub-section (3). Sub-section (3) is the sub-section which provides that after a general verdict of guilty or not guilty has been given, if the Judge is dissatisfied, he may then require a special verdict on any question or questions of fact. This sub-section, as the Council will probably recollect I explained when introducing the Bill, is one which, if passed at all, would require to be safeguarded very carefully in order to prevent it from degenerating into a cross-examination of the jury. It is one which I stated the Government of India had put forward tentatively and for opinion, rather in deference to the high authorities who advocated its introduction,—and I may as well state at once that the persons to whom I am alluding are not now directly connected with the Government—in fact, I do not think any of them is even resident in India at this moment; I say it was put forward rather in deference to high authorities who considered that this would be a useful addition to the law than because they had themselves made up their minds upon the question as to how such a sub-section would work. We have found however that, varying as the opinions have been in other respects, the opinions of the responsible officers in the country, Local Governments and others, are almost unanimous against the introduction of any power of requiring a further verdict after a general verdict; and I am authorised to state that, if this Bill goes into Select Committee, I will in Select Committee move for the omission from the provision in question of that particular sub-section. I do so without the slightest hesitation and without feeling that in so doing the Government of India are in any way retreating from the position which they took up in introducing this Bill. Their sole object from first to last has been to improve the operation of the jury system as a means of the administration of justice. I admit that in my own personal opinion that instrument for the administration of justice is so very faulty that it can never be made quite satisfactory; but my desire has been to make it as useful and efficient as it is capable of being made, and, being satisfied that the particular provision in question is not apt for that purpose, we withdraw it without hesitation and without regret."

The Hon'ble Mr. Bhaskute said:—"My Lord, the Bill now referred to the Select Committee is, from a different point of view, even more important than the Cotton Duties Bill passed a few days ago. There never was till now a discussion of the principle of the Bill itself. I certainly agree to the present motion on the supposition that this discussion is reserved."

The Hon'ble Sir Griffith Evans said:—"After the statement made by the Hon'ble Sir Alexander Miller it is evident that the Bill must go into Select Committee. There is no objection to the Bill going into Select Committee, and I feel that it would be worse than useless at present to discuss the matters raised by the Bill. The statement made by Sir Alexander Miller requires very careful attention. The whole matter will have to be discussed in Select Committee, and it is quite possible that when the Bill emerges from the Select Committee it will contain little or no disputable matter with regard to which there will be any acrimonious feeling."

The Hon'ble Ananda Charlu, Rai Bahadur, agreed with the Hon'ble Sir Griffith Evans that the Bill should go into Select Committee after the excellent observations which had fallen from the lips of the Hon'ble Mover. He should like some explanation to be given with regard to certain other parts of the Bill, but, as the Bill would be before the Select Committee, and as he happened to be upon the Committee also and would have an opportunity of advancing his views, he thought it was undesirable to take up the time of the Council at present.

The Hon'ble Babu Mohini Mohun Roy said:—"May it please Your Excellency,—I crave permission to offer a few observations upon this Bill, I had no opportunity of stating my views at its introduction, which took place at Simla. The Bill is now being re-

* On further reference to the case I find that, though the statement in the speech is substantially accurate, it is not perfectly so. The Judge refused to receive such a verdict and directed the jury to reconsider it: they then, by his direction, found a verdict of guilty of murder: and the High Court held that the Judge was right in his action, and refused to disturb the second verdict.

ferred to a Select Committee. This seems to be an appropriate time for making a statement.

"The Bill seeks to introduce three important changes in the law—

First, empowering Sessions Judges to require the jury to return a special verdict and a further special verdict (clauses (3) and (4) of section 3 of the Bill);

Second, enlarging the power of the High Court to deal with cases where the Sessions Judge, disagreeing with the verdict of the jury, makes a reference to the High Court (section 4 of the Bill);

Third, formation of a special jury for the trial of offences which may be specified by the Local Government (section 6 of the Bill).

"There is nothing objectionable in the second item of change. The Bengal Government approves of it. The Calcutta High Court likewise approves of it and shows it is necessary in that 'it settles the law expressed in section 307 of the Code of Criminal Procedure, about which the judgments of the different High Court have been somewhat contradictory.' The Bombay High Court is against it, but the Bombay Government is not so adverse. It says, 'any' modification of section 307 of the Code is unnecessary. The proposed amendment, however, does not appear to be open to objection.' The Madras Government and the Madras High Court express no opinion upon this point. Reason and balance of authority are certainly in favour of the proposed amendment. The people of the country have more confidence in the High Court than in the Sessions Court and will not grudge an enlargement of the power of the High Court in cases of difference between the Sessions Judge and the jury. The Asansol outrage case is still fresh in their memory.

"The formation of a special jury in districts where practicable seems to be equally unobjectionable. But the proviso that the inclusion of the name of any person in the special jury list shall not exempt him from liability to serve as an ordinary juror is open to very serious objection. Mr. Stevens, Judicial Commissioner of the Central Provinces, says:

'At best the number of special jurors would be but small, and as presumably they would be called upon to act in those classes of cases which are most serious, most difficult and most complicated, they would apparently have a great deal more than their fair share of work, as compared with the common jurors.'

"The Chief Commissioner of the Central Provinces has expressed his general concurrence with the views of the Judicial Commissioner. I would humbly submit, for the consideration of Your Excellency and Council, that the proviso would be very unfair to special jurors. Without it they would have 'more than their fair share of work.' It would serve no useful purpose to make the special jury service a work of hard labour and an object of dislike to jurors.

"Now I come to the first item of change. The hon'ble and learned mover of the Bill candidly stated when introducing it.

'No doubt there are very grave considerations as regards such a process which might very well be perverted into a kind of browbeating or cross-examination of the jury, a practice which was prevalent in England in the days of the Tudors but has not been known their since then.'

"Jurors are now, as they ought to be, treated with more consideration. They are not starved into unanimity. Nor ought they to be heckled or browbeaten into a surrender of their independence. The clauses of section 3 of the Bill referred to above will greatly lower the status of jurors and render the entire jury service extremely distasteful. I would always deprecate any change in the law which might lead to such a result. The High Courts of Calcutta, Madras and Bombay are all against such change. The Bengal Government 'considers that this section might be so safeguarded as to be unobjectionable; but, in view of the feeling of the educated Native community in regard to it, it is clearly of opinion that it is not worth while to press the proposal.' The Bombay Government thinks there is no objection to the Judge asking the jury in some cases 'what their verdict is on each essential point for determination.' But His Excellency the Governor of Bombay dissents from his Council on this point. The Government of Madras has expressed no opinion upon it. The further statement which the Hon'ble Mover has made to-day renders it unnecessary that this matter should be discussed at any length.

"In this connection I would draw the attention of the Council to section 319 of the Code of Criminal Procedure and to section 5 of the Bill and point out that under the present law (section 319) 'all male persons between the ages of 21 and 60' are, with certain exceptions, 'liable to serve as jurors or assessors at any trial held within the district where they reside'. Now a district is a large area, and the sadr station, where sessions trials are held, is often two or three days' journey from remote parts of the district. It would clearly be a great hardship to persons residing in such remote parts to have to come up to the sadr station to serve as jurors or assessors. The area of liability to such service may justly be circumscribed to a radius of short and easy distance

from the sadr station so that the liability might not entail any great hardship or unreasonable sacrifice of time and money upon the persons subject to it. If there is railway communication, that circumstance may be taken into consideration in fixing the distance. The Madras Government is of opinion that 'the practical difficulty in working the law would probably be met by a provision that only persons resident within five miles of the District Court should be included in the list of special jurors.' There is no reason why a different rule should obtain in regard to common jurors and assessors. In framing or amending any law regarding the jury system, to paramount interests ought always to be kept in view, namely, the interests of criminal justice and the interests of justice to jurors."

The Hon'ble Sir Alexander Miller said:—"It is scarcely necessary that I should, considering the explanation I have already given, say anything further by way of reply again, but I wish to take advantage of my right of reply merely to mention that I originally intended and promised to insert the name of the Maharaja of Durbhanga on the Select Committee and have been in communication with him on the subject, but I have not put on his name on account of his recent illness which would have made it merely an empty compliment to have done so."

The motion was put and agreed to.

ORDERS AND ARROWS.

WHEN the captain of a ship orders some hands aloft to furl the main troyal the men jump to obey, as a matter of course. A sailor can climb up on a yard without having a shilling ashore or a penny in his pocket. In fact, Jack seldom signs articles until he has used up both cash and credit.

But when a doctor—who is a sort of captain when one is laid up in the dry dock of illness—orders a patient to go abroad for the benefit of his health, it is quite another thing. A trip and sojourn away from home is an expensive prescription, and most of us can't afford it. If the doctor says it is a choice between that and the graveyard we shall have to settle on the graveyard; it is handy by, and easy to get to. But are we really so hard pushed? That is, as often as the doctors say we are? Let's turn the matter over in our minds for a minute.

Here is a case that is pat to the purpose. It concerns Mr. Arthur Whiddon Melluish, of 3, Regent's Terrace, Polsloe Road, Exeter; and for the details we are indebted to a letter written by him, dated March 7th 1893. He mentions that, in obedience to the orders of his doctors, he went to Cannes, in the South of France, in November, 1890, and spent the winter there. He also spent the following winter at the same place. He felt the better for the change; we will tell you why presently. But he obtained no *radical* benefit, which also we will explain later on.

It appears that this gentleman had been weak and ailing nearly all his life; not exactly ill, not wholly well—a condition that calls for constant caution. In March, 1890, he had a severe attack of inflammation of the lungs.

Now I want the reader to honour me with his best attention, as I must say in a few words what ought properly to be taken many. Shoot an arrow into the air—as straight up as you can. You can't tell where it will fall. It may fall on a neighbour's head, on your own, or on a child's, or on the pavement. Everybody's blood contains more or less poisonous elements. These are arrows, but unlike your wooden arrow they always strike on the weakest spot, or spot, in the body. If they hit the muscles and joints we call it rheumatism and gout; if they hit the liver we call it liver complaint or biliousness; if they hit the kidneys we call it Bright's disease; if they hit the nerves we call it nervous prostration, epilepsy, or any of fifty other names; if they hit the bronchial tubes we call it bronchitis &c.; if they hit the air cells we call it inflammation of the lungs, or by-and-by, consumption. And inasmuch as these poisoned arrows pass through the delicate meshes of the lungs a thousand times every day it would be odd if they didn't hit them—wouldn't it?

Now, wait a bit; it follows that all the various so-called diseases above named are *not diseases at all in and of themselves*, but merely symptoms of one only disease—namely, *that disease which produces the poison*. Good. We will get on to the end of the story.

After the attack of lung inflammation Mr. Melluish suffered from loss of appetite, pain in the chest, sides, and stomach, and dangerous constipation. He could eat only liquid food and had to take to his bed. For weeks he was so feeble and he could not rise in bed. He consulted one physician after another, obtaining no more than temporary relief from medicine. Then he was ordered abroad as we have related.

His letter concludes in these words: "Whilst at Cannes I consulted a doctor, who said my ailment was weak digestion, and that I *need not trouble about my lungs*. But I never gained any real ground until November, 1891, when I began to take Mother Seigel's Curative Syrup. This helped me in one week, and by continuing with it I got stronger and stronger, and am now in fair good health. This, after my relatives thought I should never recover. (Signed) Arthur Whiddon Melluish."

To sum up: This gentleman's real ailment was indigestion and dyspepsia, from which the blood poison comes that causes nearly all disorders and pains. The air of Southern France helped him temporarily, because it is milder than ours; it did not remove the poison. By care and the use of Mother Seigel's Curative Syrup he would have done better at home, as the result shows.

So we see that it isn't the climate that kills or saves; it is the condition of the digestion. If therefore your doctor orders you abroad for your health, tell him you will first try Mother Seigel's Curative Syrup.

ALLAN'S ANTI-FAT

PURELY VEGETABLE. Perfectly Harmless.
Will reduce from two to five pounds in 10 weeks; acts on the food in the stomach preventing its conversion into Fat. Sold by Chemists. Send stamp for pamphlet.

Botanic Medicine Co.,
8, New Oxford-street,
London, W.C.

CAUTION!

It having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (*viz.*, 4 annas, 8 annas or 9½d, 12 annas or 1s. 1½d. and Rs. 2 or 2s. 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes the prices have been obliterated and the boxes represented to be of higher value than they really are.

POSTSCRIPT.

After paying the expenses of the publication,
the surplus will be placed wholly at the dis-
posal of the family of the deceased man of
letters.

Orders to be made to the Business Man-
ager, "*An Indian Journalist*," at the Bee
Press, 1, Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October,
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corft,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengal journalist (Calcutta:
Thacker, Spink and Co.); nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindoo Patriot*, in its palmiest days
under Kristodas Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great qualiti-
es, his death from pneumonia in the early
spring of the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—*The Times*
of India, (Bombay) September 30, 1895.

It is truly that the life of an Indian jour-
nalist becomes worthy of publication; it is more
rarely that such a life comes to be written
by an Anglo-Indian and a member of the
Indian Civil Service. But, it has come to
pass that in the land of the Bengali Babus,
the life of at least one man among Indian
journalists has been considered worthy of
being written by an Englishman.—*The*
Madras Standard, (Madras) September 30,
1895.

The late Editor of *Reis and Rayyet* was a
profound student and an accomplished writer,
who has left his mark on Indian journalism.
In that he has found a Civilian like Mr.
Skrine to record the story of his life he is
more fortunate than the great Kristodas Pal
himself.—*The Tribune*, (Lahore) October 2,
1895.

For much of the biographical matter that
issues so freely from the press an apology is
needed. Had no biography of Dr. Mookerjee,
the Editor of *Reis and Rayyet*, appeared, an
explanation would have been looked for. A man
of his remarkable personality, who was easily
first among native Indian journalists, and in
many respects occupied a higher plane than
they did, and looked at public affairs from a
different point of view from theirs, could not
be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmans—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unclouded by ostentation and earnestness unspiced by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dixon of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdim says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Sunkatia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kumtee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; Ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

VOL. XV.

CALCUTTA, SATURDAY, FEBRUARY 29, 1896.

WHOLE NO. 214.

WEEKLYANA.

IN an article headed "Saxons and Latins" in *Le Matin*, Robert Mitchell says:—"I admire, above all, this vigorous Anglo-Saxon race, which knows, without a tutor, how to develop itself without the protection of any one, imperturbably confident in their own force, always ready to encounter the unknown, before which we others, poor Latins, timorously retire. Jameson is a filibuster, but he has pushed with an irresistible enterprise the right of the Anglo-Saxon, striking in our sad century the last loud echo of the heroic times."

Again:—

"The English proceed in their own fashion and I believe in the firm superiority of their method. First, the missionaries test the soil, and so they have a moral hold on the metropolis of the country which they try to attach to the immense English Empire. Then come the merchants. India was conquered by merchants. A company of merchants and furriers created the Dominion of Canada."

The poet laureate of England sings the glory of

JAMESON'S RIDE.

The following poem appeared in the *Times*. It was afterwards recited at the Alhambra Theatre by Mr. E. H. Vanderfelt, accounted as a trooper of the Chartered Company's service, and was listened to in intense silence. Enthusiastic cheers were given for Dr. Jameson at its close, and the cheering was renewed when the National Anthem was played.

I.

"Wrong! Is it wrong? Well, may be;
But I'm going, boys, all the same.
Do they think me a Burgher's baby,
To be scared by a scolding name?
They may argue, and prate, and order;
Go, tell them to save their breath:
Then over the Transvaal border,
And gallop for life or death!"

II.

"There are girls in the gold-reef city,
There are mothers and children too!
And they cry, 'Hurry up! for pity!'—
So what can a brave man do?
If even we win, they'll blame us:
If we fail, they will howl and hiss.
But there's many a man lives famous
For daring a wrong like this!"

III.

"Let lawyers and statesmen addle
Their pates over points of law:
If sound be our sword, and saddle,
And gun-gear, who cares one straw?
When men of our own blood pray us
To ride to their kinsfolk's aid,
Not Heaven itself should stay us
From the rescue they'll call a raid."

IV.

"So we forded and galloped forward,
As hard as our beasts could pelt,
First eastward, then tending norward,
Right over the rolling veldt;
Till we came on the Burghers lying
In a hollow with hills behind,
And their bullets came whizzing, flying,
Like hail on an Arctic wind!"

V.

"O, sweet 'is the markman's rattle,
And sweeter the cannon's roar,
But 'tis cruelly hard to battle,
Beleaguered, but one to four,
I can tell you, it wasn't a trifle
To swarm over Krugersdorp glen,
As they plied us, with round and rifle,
And ploughed us, again—and again."

VI.

"Then we made for the gold reef city,
Retreating, but not in rout.
They had called to us 'Quick! for pity!'—
And He said, 'They will sally out.'
They will hear us and come. Who doubts it?
But how if they don't, what then?
'Well, worry no more about it.
But fight to the death, like men.'"

VII.

"Not a soul had or supped or slumbered
Since the Borderland stream was cleft;
But we fought, ever more outnumbered,
Till we had not a cartridge left.
We're not very soft or tender,
Or given to weep for woe,
But it breaks a man's heart to render
His sword to the strongest foe."

VIII.

"I suppose we were wrong, were madmen,
But I think at the Judgment Day,
When God sifts the good from the bad men,
There'll be something more to say.
We were wrong, but we aren't half sorry,
And, as one of the baffled band,
I would rather have had that foray
Than the crushings of all the Rand."

ALFRED AUSTIN.

Swinford Old Manor, Jan. 9.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

THE Marquess of Salisbury was sixty-six years of age on Feb. 3, having been born on Feb. 3, 1830. For fifteen years immediately preceding his elevation to the peerage, in 1868, he sat in the House of Commons as member for Stamford. His first appointment under the Crown, in 1866, was as Secretary of State for India. Three times he has occupied the responsible position of Prime Minister.

MR. George Curzon having, on his joining the Foreign Office as Under-Secretary, resigned the membership of the Royal Commission on the Administration of the Expenditure of India, Mr. R. G. C. Mowbray has been appointed in his stead.

THE letters patent creating the late President of the Royal Academy Baron Leighton of Streton, in the county of Salop, are dated January 24, the day before his death. In India, titles have been conferred on the dead.

DR. Haldane holds that men in mines die from carbon monoxide, and not, as popularly believed, from carbonic acid gas. To prove his theory, he is injecting poisoned blood from dead horses into mice brought from mines.

THE Storting was opened on Feb. 3 by a Speech from the Throne, in which the King said:—

"As both Norway and Sweden have hitherto preserved absolute freedom of action without appealing to any foreign Power for assistance during possible disputes or complications, so I cherish the hope that also in the future it may be granted them to maintain a similar completely independent attitude. I hope that the meeting of the commission on the conditions of the Union may lead to an agreement tending to the future happiness of both nations."

THE new income-tax scheme adopted by the French Cabinet on Jan 30, provides that the first 100*l.* of every man's income is to be exempt; the next 100*l.* pays 1 per cent.; the next 200*l.* 2 per cent.; the next 400*l.* 3 per cent.; the next 1,200*l.* 4 per cent.; and any excess over 2,000*l.* 5 per cent. Thus, an income of 360*l.* will pay 1*l.* + 3*l.* 4*s.* = 4*l.* 4*s.*; one of 3,600*l.* will pay 1*l.* + 4*l.* + 12*l.* + 48*l.* + 80*l.* = 145*l.*; one of 36,000*l.* 1*l.* + 4*l.* + 12*l.* + 48*l.* + 1,765*l.* = 1,765*l.* A considerable abatement is proposed for large families. Further compensation will be made by the abolition of the present house and door and window taxes. It is thus estimated that 6,500,000 persons will be freed of direct taxes altogether, and 1,000,000 more pay less than before; the remaining 500,000 will pay enough to make up for this, and to provide 240,000*l.* to be applied to the readjustment of the land-tax.

HERE is an account of a Scotch dinner, which, in some of its essential parts, will probably find an echo in the next St. Andrew's dinner at Calcutta.

"The fifth annual dinner of the London Forfarshire Association took place on Saturday, Feb. 1, at the Holborn Restaurant. Lord Kinnaird, president of the Association, was in the chair and among the eighty or ninety gentlemen present was Lord Justice Rigby, formerly member for the county. The banquet began with cockie leekie, and among the entrées was haggis, brought in amid cheers, and paraded round the room, preceded by a piper piping manfully. Many of the diners made a great point of washing their haggis down with a 'tot' of a neat whisky. The honorary secretary, Mr. Norman Will, announced that he had received letters of apology for the non-attendance of Mr. John Morley, Mr. Edmund Robertson, M. P., Mr. W. Allan, M. P., and other gentlemen. Mr. Allan spoke of Forfarshire as 'my much-loved native country,' and sent the following lines:—

Sing hey! for the lads o' Farfarshire,
Sing ho! for the lads o' Farfarshire,
Whaurever they are,
In peace or in war,
They haud up the glory o' Farfarshire.
Cry hench! for the lads o' Farfarshire,
Heuch, hench! for the lads o' Farfarshire;
Auld Scotland is proud
O' sic a bauld brood,
Sprung frae the gran' carles o' Farfarshire.
Hurrah! for the lads o' Farfarshire,
Hurrah! for the lads o' Farfarshire;
True to the backbone,
Their marrows [equals] are nane,
The wale [nick] o' the wairl' is Farfarshire.

The reading of the verses was hailed with much laughter and cheering. 'Her Majesty, a' her bairns, in a' airts,' was the first toast. Lord Justice Rigby, responding to the toast of the evening, said that when he was member for Forfarshire, his friends there used to tell him, if they wished to flatter him, that he deserved to be a Scotsman. (Laughter.) That compliment never failed to touch him, though he had, in spite of temptation, remained what nature had made him. (Laughter.) Pointing out how useful associations like this of Forfarshire could be, he said that when he was in the House of Commons impostors sometimes claimed his charity, not only falsely pretending that they came from Forfarshire, but presenting forged recommendations from the county. In such cases this association might be useful as a referee. ('Hear, hear,' and Cheer.) Principal Watson, Wm. Mr. Walter Shaw, Mr. James M. Small, Mr. J. F. Macfarlane, Mr. D. Couper Thomson, Mr. Patrick Garmon, Mr. T. Mason, Mr. A. Ritchie, Captain D. Peters, Mr. D. Calder, Mr. A. D. Dicot, and Mr. D. Steele (warden) took part in the proceedings. There was some good singing and reciting."

MILK sheet is believed to be a valuable adjunct in the treatment of small-pox in this country. Dr. W. B. Sampson, of Johannesburg, Transvaal, South Africa, has found it useful in other diseases—bed sores, erysipelas, &c. His mode of treatment is this:—

"Lay three or more blankets on a mattress, and take a single sheet, only large enough to envelop the body. If the weather be cold, first warm the sheet, then saturate it with about a pint and a half of warm milk, not boiled, open the sheet without wringing it, and lay it on the top of the blankets. Pack the sheet tightly round the patient's body, under the arms, covering the shoulders on each side with the top of the sheet, the arms resting bare upon the sheet. Then pack the blankets, one by one, over the body on each side and let the patient lie in this pack for say an hour. When taken out, he can either be sponged all over with warm water or take a warm bath."

THE Indian Contract Act, 1872, allows the right of a person interested in the payment of a money which another is bound to pay, to recover from him the advance. The person defaulting and not the immoveable property saved is liable under the law. The courts in India also take different views of the equity of binding the property, in the absence of a specific statutory declaration. The Law Member is prepared to incorporate into the law of British India provisions, founded upon the old rule of equity adopted by the English and Irish Courts, acknowledging the right of a paying, to the interest of a defaulting, co-sharer in the property preserved. The proposed additions to Act IX of 1872 are:

"69A. If any such payment as is mentioned in the last foregoing section is made by a person possessing an interest in any immoveable property and is by reason of the default of the person bound by law to make it, necessary for the purpose of preserving such property from alienation and has the effect of so preserving it, the person making the payment shall be entitled to a charge upon the property so preserved for reimbursement of the sum so paid, with interest at such rate as the Court may direct.

Such charge shall have priority over all charges on, and rights in, such property, which would have been defeated if such alienation had taken effect, and shall be subject to all such charges and rights as would have remained unaffected notwithstanding such alienation.

69B. When two or more persons are jointly interested in any immoveable property, and one of such persons, in order to its preservation, makes any payment in respect thereof to which they are jointly and severally liable, or to which they ought by law or in equity to contribute either equally or in any definite proportions, the person making such payment shall be entitled to a charge upon the interest or respective interests of the other or others of them for reimbursement to him of the proportion or respective proportions of the sum so paid to the payment of which he or they respectively was or were so liable as aforesaid, together with interest thereon at such rate as the Court may direct.

69C. If any person, at the request, made in writing and signed by a person having an interest in any immoveable property, and in order to preserve such property from alienation, pays any charge or demand affecting such property which such last-mentioned person was bound by law to pay, the person making such payment shall be entitled to a charge on the property so preserved for reimbursement to him of the sum so paid, with interest thereon at such rate as the Court may direct.

The person entitled to such charge shall have the same priority in respect thereof as between himself and the other persons interested in such property, as the person whose charge or demand was so paid as aforesaid was entitled to at the time of such payment.

69D. Any person claiming to be entitled to a charge on any property under any of the three last foregoing sections may maintain a suit against the owner of the property for a declaration of the existence and extent of such charge.

69E. Nothing in sections 69A, 69B and 69C shall affect the right of the Government to sell an estate free from all encumbrances and charges under the law for the time being in force for the recovery of arrears of land-revenue and other public demands, and, notwithstanding anything contained in the sections aforesaid, no charge of the nature therein described shall enure as against a *bond fide* transferee for value of immoveable property unless prior to the transfer to such transferee there has been registered in British India, under the law for the time being in force for the registration of documents, either an agreement by the predecessor in title to such transferee acknowledging, or a

certified copy of the decree of a Court of competent jurisdiction declaring the existence and extent of such charge;

Provided that, notwithstanding such registration, no such charge shall be valid as against a *bond fide* transferee for value of the property who shall prove to the satisfaction of the Court that at the time when he parted with his purchase-money he was in fact ignorant of the existence of the charge and could not by reasonable diligence have discovered its existence.

Explanation.—In the construction of this section 'purchase-money' shall include any valuable consideration given for the transfer of the property in question."

THE Ceylon correspondent of the *Travancore Times* reports:—

"The Superintendent of an estate prosecuted a Tamil labourer for wilful disobedience of orders in that the accused refused to yoke a pair of bullocks to a cart and work them on the 14th January last, alleging that that being the 'Mutu Pongal' day, it was a sin to work them. The accused was found guilty, the Police Magistrate stating that, though there is evidence that it is a sin, according to the Hindu religion to work bullocks on the 'Mutu Pongal', yet exceptions must be made in emergencies. Eleven rupees due to the accused as wages was forfeited."

The magistrate admits that the carter had good grounds for refusal of the work. Yet he punishes him. The poor man pays heavily for his religious scruples.

..

THE Neyyattinkara correspondent of the same paper describes the development of an omnipotent god in flesh:—

"On the banks of the Neyyattinkara River at Aroovipuram, a couple of miles from the town, a small Siva temple was built about six years ago by the efforts of one Nannan Aschan, a native of Sherayankeel Dist., as the Elovahs had no temple of their own up to this in this Taluq. Till very lately, very few people only from this and the neighbouring districts were resorting to it for worship. But during the late Sivarathri, people were invited from distant places as Thuvellah and they came in, in numbers. The crowd was so great that there was hardly sufficient place for the people to stand on. To attract people the cunning man and his adherents had made the necessary arrangements to feed all those who would resort to the place. Besides, his adherents and friends were giving out the news from the commencement of the establishment of the temple, that the Aschan was possessed of divine power to heal the sick and make barren women fruitful. On account of which also, lots of invalids and childless women come for his divine blessing with the full hope of attaining their object but to be disappointed at last. Almost all the people who had no objection to eat were fed sumptuously and those who would not touch the food prepared by them, were given provisions and vessels to make their own meals. But even among the high caste people, the invalids and barren women ate greedily the platanum fruits and milk that were given by the Aschan after biting and drinking as they supposed that divine power was instilled into them by them through these agencies and bore fruit. I am very sorry to find now, that it is the Aschan who is worshipped instead of the deity. In one sense, the people are right in worshipping the teacher as he is able to see and talk to the people whereas the deity that is placed in the temple is not able to do either. Sensible men of the place are afraid that the disciple of Siva (the Aschan) would in course of time replace the deity in worship as was done in so many other places as at Thuvracolum in Agasteeswaram where Mootuacooty is the presiding deity now."

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Vienna Press commenting on the report that the Sultan was seeking to reopen the Egyptian question, agree in condemning the attempt and urge Lord Salisbury to flatly refuse all discussion on the subject. The *Times*' correspondent at Constantinople telegraphs that, in reply to the Sultan's invitation to regularize the situation in Egypt, Lord Salisbury has stated that the suggestions of the Turkish Ambassador are too vague. The Sultan has therefore appointed a Commission to formulate concrete proposals. The French press eagerly discuss the question and urge a Franco-English understanding to effect a settlement based upon the British evacuation of Egypt. The Foreign Office and the Turkish Ambassador in London alike deny the statements of the *Times*' correspondent. It transpires, however, that negotiations in regard to Egypt are proceeding between Great Britain and France. In the House of Commons, Mr. Curzon, replying to a question, said that no foreign Government had made proposals recently involving the early evacuation of Egypt by the British.

IN the French Chamber of Deputies, on Feb. 24, a discussion took place on the Siam Treaty. M. Berthelot said that the negotiations

with England had been conducted in a spirit of conciliation, and he hoped that the same spirit would lead to an arrangement in other questions.

IT is declared at St. Petersburg that Russia does not intend to occupy Corea, but is entitled to guarantee its complete autonomy. Mr. Curzon, replying to a question in the House of Commons, said that the occupation of Seoul or any other place in Corea by the Russians had not occurred, and was not apprehended. He believed that five vessels had been added to the Russian squadron in Chinese waters during the past year.

IN the House of Lords, on Feb. 24, Lord Salisbury denied that he had ever argued in favour of protection, and said that he did not believe that protective duties on articles of first necessity would ever be adopted by Great Britain.

DR. Jameson and his officers were secretly landed at Portlet on Feb. 25, and conveyed by a circuitous route to Bow Street Police Station, where they were charged with undertaking a military expedition against a friendly State. They were each bailed for two thousand pounds, and the case was adjourned for a fortnight. Sir John Bridge sternly rebuked the cheering in Court, which he said would bring England into contempt. He emphasized the extreme gravity of the case, and warned the prisoners to be discreet in their behaviour during the adjournment. The Law Officers will prosecute.

MANY arrests have been made at Constantinople, it is reported, in connection with a plot on the life of the Sultan.

IN the Cortes Government was asked whether a German subject who had obtained a concession of land opposite Delagoa Bay, had offered to transfer it to the German Government. In reply the Government stated that it was examining the question and would seek to settle it diplomatically or otherwise.

MR. Gaschen, in a speech made at Lewes, said that the relations between Great Britain and Germany were now excellent. He hoped that recent events had removed the fallacy abroad that Great Britain could only defend her home interests. English isolation was self-imposed, and he believed that in the event of a struggle for life England would not be found a lone.

IT is announced that Mr. L. Muchant succeeds Mr. Currie on the India Council.

THE House of Commons had passed Mr. Balfour's amendment for the reform in the procedure. As regards the Committee of Supply the limit is extended to twenty-five days for the debate on the annual Estimates, and it is agreed that the change shall only apply to the present session, and that if found workable it will become permanent.

THERE will be an Evening Party at Government House on Thursday next. Owing to the heat of the weather, the Viceroy has been pleased to prescribe for the occasion mess for full dress for gentlemen. Successive Viceroys or their advisers felt the inconvenience of a full dress in hot weather. Lord Egin has the courage to introduce the innovation.

SIR Charles Bradley Pritchard, K.C.I.E., C.S.I., having resigned, and no person provisionally appointed to succeed being present on the spot, the Governor-General in Council appointed the Hon'ble Mr. Alan Cadeil, C.S.I., a temporary ordinary member of Council who, on the 24th February, took upon himself, under the usual salute, the execution of the office of Public Works Minister.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials, and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

OWING to the prevalence of cholera among coolies on the steamer emigration route from Goalundo to Assam, the emigration of all natives of India from the districts of Bengal to Assam, has been prohibited.

IN the Bombay High Court, Tukiram Santon was tried twice for murder of a little girl for her ornament. At the first trial, the jury were not unanimous—seven declaring the accused not guilty and two, guilty. Mr. Justice Candi, who was no sugar, not agreeing with the verdict of the majority, discharged the jury and directed a new trial. At this trial, the special jury unanimously found Santon guilty who was then sentenced to death.

THE following Editorial Note is from the *People's Friend* of Madras :—

"Mr. P. Ramasawmy Chetty's further retention in the Municipality is objected to by many people on public grounds. We too think he would do well to retire. At the same time, we have no hesitation in saying that he is one of our best men in many important respects. He is public-spirited, incorruptible, conscientious and liberal minded, and to him it is we owe the two Indian Competition wallahs in the Madras Civil Service that we have hitherto been able to produce, namely, his own deceased son Rathnavelu Chetty, and Mr. V. Venugopaul Chetty of the Christian college, now serving in Kurnool we believe. We wish we had a few more men imbued with the spirit and virtues of Mr. P. Ramasawmy Chetty."

Mr. Rathnavelu Chetty was the first Native Civilian of the Madras Presidency. His end was miserable. He is supposed to have shot himself because a European lady had called him a crow. He had also a rebuff from the Governor. The Duke of Buckingham refused to admit him to Government House, because of his European costume. When, however, he was afterwards received in his native dress, the first thing the Duke asked him was what he meant by giving up his national dress in order to adopt what he imagined better?

AT the Civil Service Examination to be held in London, commencing on August 3 1896, sixty-one candidates will be selected, if so many shall be found duly qualified, namely, for the Lower Provinces of Bengal (including Assam), 19; for the Upper Provinces of Bengal (the North-Western Provinces and Oudh, the Punjab, and the Central Provinces), 24; for Burma, 4; for Madras, 7; for Bombay, 7.

It is notified that no deduction will be made from the marks assigned to candidates in mathematics or English composition.

ONLY the other day, a native member of the Civil Service of India, in charge of a Sub-division, made a lamentable exhibition of his knowledge of the English language. On a Wednesday, the District Magistrate informed by wire the Sub-divisional Officer that he could not come the next day for a particular case in his own court which he wanted to try in the Sub-divisional Court, and asked him to "summon witnesses for Friday next." When on Thursday the parties appeared with their counsel and witnesses, the Sub-divisional Officer informed them that the Magistrate had postponed the case to Friday week, and enjoined the witnesses to be present that day. He further bound them down to appear nine days after. After he had thus dismissed the parties and was satisfied in his mind that he had carried out to the full the order of the District Magistrate, he passed on the telegram which he had hitherto kept to himself to the office to be made a part of the record in the case. The untravelled head clerk who, before filing, read the telegram, now ran up to his Chief and, in faltering accents, mumbled suspicion as to the correctness of the order based on the District Magisterial message. The Sub-divisional Officer for the first time felt a hesitation. Yet he doubted that he could be wrong—he who dressed himself as an Englishman, who mixed himself in European society as one of them, who kept no harem and observed no purdah and had learnt his English on the banks of the Thames and not the Hoogly. The head clerk, in all submission, still believed that next day was meant and not Friday, next week. There was suspension of the ordinary work of the Sub-divisional Court, the chief business being the discovery of the intention of the District Magistrate as disclosed in the telegram received overnight. There were no experts who could be consulted. The *amba*, none of whom had seen Europe and the world, could not possibly be of any material assistance in a matter in which their knowing Chief found himself at sea. There was no library that could be ransacked. In this dire difficulty he decided to consult the Magistrate himself. An urgent state message by wire was despatched immediately which brought back the in-

formation that the District Magistrate would be coming the next day. Horror of horrors! What was to be done? The parties had left Court and dispersed. How to bring them together the next morning? Notices, hurriedly and unintelligibly written, with the seal of the Court were issued, free of cost, and served at night on such as could be found, peremptorily ordering their attendance the next morning. The day dawned, the Magistrate, true to his two telegrams, entered appearance. The principal party on whom the notice could be served also shewed himself. But the case could not be proceeded with, for counsel and witnesses were absent. The Magistrate, finding how his assistant had prepared the way for the *fiasco*, was glad to avail himself of the opportunity afforded by a petition for postponement, adjourned the hearing, and left for his own place, a wiser man as regards his particular conduit pipe.

IN the *Crescent* of February 1, under "Dates of Events interesting to Muslims during the month of February," we read :—

"Feb'y 22—Order of the Star of India instituted, 1854"

It would have been well if this item were omitted altogether. There is no reason why the information should be specially acceptable to Muslims, unless the Order were founded for them. On the contrary, there is very good reason why it ought not to give rise to any agreeable emotion in them, for the Star contains a likeness, though of the sovereign. The feeling of true Mussulmans was represented by the late ruler of the Nizam's dominions, Nawab Afzaluddowla—one of the first of the Native Princes admitted to the Order. When the insignia was presented to him, he treated it with what was believed to be scant courtesy. There was a howl of indignation against the Prince for not shewing it proper respect. It was reserved for the late Dr. Sambhu C. Monkerjee to set the Nizam right with the public. He pointed out that, as a good Mussulman, Nawab Afzaluddowla could not do more than what he did. It was a blunder to introduce the likeness in a decoration intended, among others, for Mussulmans. Those days are certainly gone by. The present Nizam and his Mussulman ministers and other Native Mahomedan Princes have been too eager to be members of the Order. Still the initial objection remains. Our Liverpool contemporary also makes a mistake about the date of the Order. It was instituted after the mutinies—in 1861.

WE read in the *Englishman* that the Amir's conquest of Kafiristan has been done into verse by General Golam Haider's chief Munshi. The book is being printed. It narrates the events leading up to the recent expedition, including accounts of the Durand Mission and Golam Haider's march. It also describes the country, celebrates the victory of Afghan troops, and gives a catalogue of the influential Kafirs who are said to have submitted to the Amir of their own accord.

ON Monday, the 17th of February, the non-official members of the N.-W. P. Legislative Council met, in the Chatter Manzil, to elect their representative in the Supreme Legislative Council. Pandit Bishamber Nath proposed Syed Mohamed for the chair. The Syed, while thankful for the compliment, proposed Maharaj Kumar Aditya Narayan Singh as president of the meeting. When the Kumar, duly elected, had taken the chair, Raja Rampal Singh moved that Pandit Bishamber Nath be elected for the Supreme Council. Before the Pandit's name was seconded, Syed Mahmud, by way of an amendment, suggested that of the Maharaja Sir Pratap Narain Singh of Ayodhia. As soon as the late Judge of the Allahabad High Court had ceased relating the virtues of the successor of Maharaja Man Singh, Baboo Sri Ram informed the meeting that he had the authority of the Maharaja to say that he would decline the honour if elected. Then the Syed seconded the proposition of the Pandit and was all admiration for his nominee, who, as he said, but for his advanced age, would have been occupying a seat on the Allahabad High Court bench, and had the confidence of both Hindus and Mahomedans. Mr. Cooper then, as a second amendment, proposed the name of Syed Mahmud and the Pandit seconded, taking the opportunity to pay back the compliment lavished on him by his Mahomedan friend. This amendment, being put to the vote, was lost, when Mr. Cooper put forward Baboo Sri Ram as the best representative. The second amendment of Mr. Cooper, seconded by Sett Raghber Dyal, had the support of the proposer, the seconder, the proposed, and the chairman, or the majority of the members present. The result being reported to the Chief Secretary, he declared the election infructuous,

as there was no absolute majority of the non-official members of the Council. He suggested a second deliberation, but the Pandit, the Syed and Mr. Couper would not agree to the re-opening of the matter.

THE town of Ranaghat is in mourning on account of the death of Baboo Surendra Nath Pal Chowdry, the son of the late Baboo Sri-gopal and the great-great-grandson of Kisto Panthi, the founder of the Pal Chowdries of the place. Who has not heard of Kisto Panthi? He made himself famous by his unprecedented rise from poverty into the founder of one of the great houses in Bengal, and the second in the Nadia District. His probity was widely known and his charity was unstinted. Prosperity did not turn his head. He was not ashamed of his poor humble birth and gratefully acknowledged ever after the benefits received and remembered his benefactors with respect. Ranaghat was of his making. An unlettered man, with instinct for trade in which he made his fortune, when he began to acquire zamindaris, he was greatly assisted by his brother Simbhu Chunder, from whom Surendranath was lineally descended, through Bikuantonath, Nilcomul and Srigopal. The last was a model of a gentleman. The liberality and hospitality of the house knew no bounds. There is hardly a family of note in the Nadia District next to the Rajas of Krishnaghur which does not acknowledge the superiority of the Ranaghat Pal Chowdries in many respects. Litigation, the curse of Bengal, has played havoc with that family and still in its declining days, Baboo Surendranath tried to maintain the traditions of the house as best he could. Viceroy and Governors could not pass through the railway station at Ranaghat without being entertained by Surendranath. The humility of the founder of the house was a family trait in the principal members and was observable in Surendranath. If he welcomed all who came to him, he felt no hesitation in visiting those beneath him in rank and status. That quality endeared him to all. He took to Government service and was a Deputy Magistrate for four years, when he was obliged to leave it, to look after what still remained of the large estate and to make arrangements to pay off the debts of the family due to lengthened litigation. There are still senior members of the house founded by Kisto Panthi, but it was reserved for Surendranath, after his father's death, to keep alive the old memory. He interested himself in all the public movements and institutions at Ranaghat. Since the days of Lord Ripon, the era of local self-government, he had been, almost uninterruptedly the Chairman of the local municipality. An Honorary Magistrate, he was entrusted with first class powers and empowered to sit singly. His management of the Municipality was acknowledged on all hands as satisfactory. He died at the post of his choice. We are afraid the late Ranaghat petroleum prosecution, in which, against his will, he was forced to take an undignified part, told heavily on him. He was down with apoplexy from which he did not recover. We think it proper to make known that the proprietor of the petroleum depot who had served notice of suit for damages, to which Baboo Surendranath had replied repudiating his liability, was anxious to withdraw the notice if it could possibly hasten the recovery of the Chairman. But before he could do so, the final end came and Baboo Surendranath ceased to breathe. The shops at Ranaghat were closed the day after his death.

WHILE the Chairman of the Ranaghat Municipality, Bihu Surendra Nath Pal Chowdry, was still ailing and his condition causing alarm to his relatives and friends, the business of the Municipality threatened to come to a stand-still. On February 21, the Vice-Chairman having reported that cheques drawn and signed by him were refused by the Sub-Treasury officer, the Commissioners resolved that the matter be referred to the Commissioner of the Division through the District Magistrate for an expression of his opinion.

The Sub-divisional officer, who is the Treasury officer would not make any payment unless the Chairman signed the cheques. Now that he is dead, the payment must stand over.

LAST week, Khun Bibadur A. K. M. Abdus Subhan, the Sub-divisional Officer of Jahanabad, in the Hoogly District, has had a nasty fall from his horse. Early on the morning on the 20th February, he was riding along the Old Nagoore Road, bound for a village on the borders of the Midnapore District for a local enquiry, when the stirrup leather of the saddle gave way, and the rider fell heavily

on his head, when the horse was galloping fast. The Moulvi was unconscious for a while. He had to be carried back to his camp at Badimganj, 3 miles distant, where he was attended to by two of the local medical practitioners. No better medical aid could be obtained. It was then found that he had a cut and bruise on the head, and a bad sprain on his right side and back.

Badimganj is on the borders of the three Districts of Hoogly, Midnapore, and Bankura, and is 16 miles west of Jahanabad. It is far away from any of the railway stations, or from any of the important towns, where the services of an Assistant Surgeon could be had. Luckily, the injuries could be fairly attended to by the local doctors. Medicines had, however, to be sent for from the village of Ranjvanpore, in the Midnapore District, from a distance of 8 miles.

The Moulvi was confined to his camp for 3 days, when he was brought back to the Head-quarters of his Sub-division, in a Palkee. He is still confined to his room, though able to attend to urgent official work.

OUR contemporary of the extreme South—the *Travancore Times* is wroth because we ventured to put in a word for the unfortunate Sultan. Our appeal for fairness it calls "cynical sneer." It takes for granted that the Sultan is "blood-thirsty" and he "stands condemned before the united tribunal of all the world." The *Travancore Times* has implicit faith in its own self and has no charity for others. In the same issue it condemns a Christian Association, because of its Roman Catholic origin. It thinks the Society worse than "Hell Fire Club" or "Society for the suppression of virtue." These, at any rate, do not sail under false colours. Why should the Catholics call themselves Christians? That is a false pretence, our contemporary seems to say.

IN reply to the toast of "Her Majesty's Ministers" at the banquet of the Nonconformist Association, the Marquess of Salisbury, referring to Turkey and the Armenians, is reported to have said:—

"The other observation he wished to make concerning foreign politics he made rather in defiance of the traditions of the Foreign Office, because so many of the communications which he received were received from religious congregations, and especially from Nonconformist religious congregations. He held it morally to be a very high honour to the religious people of this country that they had taken so deep an interest in the fate of the Armenians. The more he felt sympathy with those feelings, and the more he honoured the motives from which they followed, the more he wished to have the opportunity of correcting a mistake which very naturally would modify their judgment of the other people connected with the Armenians. He had seen a statement made that her Majesty's Government had bound themselves in honour to succour the Armenians even to the extent of going to war with the Sultan to force him to govern the Armenians well. As a matter of fact, however, all that was contained in the articles of the Berlin Treaty was that the Powers agreed that if the Sultan promulgated certain reforms they would watch over their development. In the Cyprus Convention, too, which he drew up himself, and of which he had therefore a very intimate knowledge, nothing was mentioned of such a thing, nor would anything have induced him to pledge his country to an undertaking so desperate as that of forcing the Sultan by force of arms to govern well a country which otherwise he was not disposed to govern well. Such an undertaking would not have been possible. The people of this country had mistaken the real nature of the terrible crisis to which, during the months of November and December last, the Armenians had been exposed. The reforms that were proposed—and he could speak of them fairly because they were proposed by the late Government—were very good reforms, and the Sultan accepted them. But no reforms, however good, would immediately produce good government where good government did not exist before. They required time. What the proposed reforms did do at once, unfortunately, was this: Owing to a feeling which spread among Mohammedans, they imagined that their domination was threatened and that those who were formerly beneath them were to be placed above them."

Turning to the massacres, he remarked:

"The result of that belief was the perpetration of the horrors which Europe had witnessed. His opinion was that the Sultan's Government was weak, wretched, impotent, powerless; but it was a dream to imagine that the Sultan deliberately ordered all those outrages. There was no ground, in his judgment, to imagine so. It was race hatred that brought down upon the poor Armenians their terrible sufferings. They would ask, no doubt, why did not Europe interfere? He could only answer for England. (Applause.) When they were dealing with the rising of a whole fanatical population against another population against which they had a hatred, they were deceiving themselves if they thought that the arm of England, acting against men gathered in a mountainous district, could have done anything to mitigate the sorrows of the oppressed. Mr. Gladstone had said that this country could cope with five or six Sultans of Turkey. That was a most rash and ill-judged statement. If the Sultan would come out to meet them on the open sea, he had no doubt they could cope with five or six Sultans. (Cheers.) But under the circumstances the question was not worth arguing."

The Powers of Europe take a different view of the massacre from our contemporary the *Travancore Times* who would rush to war following

the poetic lead of Mr. William Watson. Continuing, the Prime Minister said:—

"Perhaps, however, they would ask why Europe did not interfere. He thought he knew what were the feelings of the Great European Powers. He spoke it with all hesitation, and he trusted he did not misrepresent them, but their opinion was—and none of them wished to occupy that country—their opinion was that there was only one Power in that country left—evil as it was—and that was the prestige of the Sultan's name—that with patience, and allowing the storm of fanaticism to pass away, could to some extent re-establish order and allow to industry and commerce their usual and secure course. That was the view of the Great Powers—that the Sultan should be given time. They believed in his goodwill, and they believed that in that direction, more than any other, was to be found relief for the suffering endured by the Christians of Asia Minor. It was not for him to pass judgment upon that view. It might be right or it might be wrong. At any rate he believed it was sincerely entertained, and there was no doubt that no other means of attaining that end had been suggested."

The evidence of the Prime Minister of England as to the non-bloodthirstiness of the Sultan may be an evidence of Turkey's guilt because of the place where the Premier spoke. It is too much perhaps to expect from our Christian contemporary any toleration for Nonconformists when it has nothing but condemnation for Catholics. Catholicity is a crime with our contemporary. But, but for it, the Southern Thunderer would be nowhere in a Hindu State. It is not the Premier alone that does not fall foul of the Sultan. The European press eulogize the moderation of the Premier.

REIS & RAYYET.

Saturday, February 29, 1896.

RADHANPORE.

RADHANPORE is dead. Radhanpore has been installed. Nawab Bismillah Khan Bahadur Babi died on the 19th of December last, at the age of 53, and his eldest son, aged 10 years, by his wife Revor Raniji—a Rajput Princess—otherwise known as Zinat Mahal—was put on the *takht* as Nawab Mahomed Sher Khanji on January 30. In proclaiming him the Nawab of Radhanpore, Colonel Jackson, the Political Superintendent of Palanpur, deputed for the purpose, abstained from announcing the arrangement made or to be made for administration of the State during the minority of the Chief. He contented himself by saying—"During the minority the administration of the State will be provided for by the Paramount Power in accordance with the principle which is always adhered to in like cases." He could only be positive that "whatever the exact form of government may be, I feel confident that from this time forth a new life of greater activity and reality is commencing for Radhanpore." Hereby hangs a tale. The late Chief, who was in failing health, made a will by which he appointed what was called the Radhanpore Council of Administration, which was to conduct the affairs of the State, both during his illness and the minority of his son and successor. The will, in Gujrati, is dated the 12th of December, 1895. The day after it was executed, a copy of it with a letter from the Chief was sent to the Political Superintendent, Palanpur. We may here state that Radhanpore is a first class chiefship under the Palanpur Agency, paying no tribute to the British Government and possessing full civil and criminal jurisdiction over all but British subjects. The council consist of a President and four members, any vacancy during the Nawab's life time to be filled, with his consent, by the remaining councillors, and after his death by that of the Revor Rani. There is a further provision that in important matters, the Hon'ble Javerilal Umiya Shankur Yajnik, the Bombay agent of the State, is to be consulted. The will begins, after the preliminary recitation about its necessity, thus:—"The absolute authority relating to every matter connected with

the royal family I give to my royal wife Revor Raniji. Therefore the expenditure of the royal palace shall remain under her supervision, and the business relating to this matter shall be conducted according to her will. Further, as to whatever settlement of villages and jagirs has been made for her, the same shall continue. And her dignity in all respects shall be maintained like myself. And as to whatever moneys and jewels I have up to this time given her, and whatever else I have given to her, the same shall continue in her possession. Therein no one shall interfere or question her. As to that I have given assurance to my royal wife Revor Rani. And in proof thereof I have made mention of it here."

We quote this part of the will to show in what estimation the Rani was held by the late Chief. It has been construed in some quarters as evidence of undue influence exercised over her expiring lord by the wife of a different religion. It would appear from a representation made by the Rani to the Governor of Bombay that the late Dewan Syed Bowamia was opposed to the interests of the Rani, that he was removed by the late Nawab, that he has turned a spy on the State, and that the present troubles of the State are due to him.

On the news of the death of the late Nawab, Colonel Jackson deputed his Assistant, Lieutenant Beale, to take charge of the State. When he arrived at Radhanpore on the 21st of December, the Dewan, Mr. Ardeshir Jamshedji Kamdin, the President of the Council constituted by the late Chief, refused, without a written authority, to make over the State. Lieutenant Beale then wrote to the Dewan, that he had directions to assume charge pending the orders of his Government "You will, therefore, be good enough to make over charge of the State to me. I write this to you as you asked for a written authority." The same day the Dewan replied "The Council is of opinion that unless an authoritative order is passed by Government to set aside and declare the said will as null and void, the Council does not feel itself justified, nor does it consider that it has the power to make over charge of the State, and in this manner free themselves from the trust and responsibility reposed on them by H. H. the Nawab Sahib. But at the same time, the Council would have no objection to submit to the general supervision of the Agency."

This protest elicited the reply of the Assistant Political Superintendent in these words. "As long as the alleged will of the late Nawab is not accepted by Government, it is, you will understand, the duty of the Political Superintendent to guard the interests of the State and all concerned, and so long as the orders of the Political Superintendent, which have already been reported to Government are not countermanded, I am bound to carry them out, and I hope you will assist me in so doing."

This letter is dated December 22. The same day, the Political issued the office order that "Khan Bahadur Ardesir Jamsetji, having, under the orders of the Political Superintendent, Palanpur, made over charge of the office of Dewan, he is placed under the orders of the undersigned until further orders for rendering assistance in the administration of the State and carrying on the work of reducing the system of State accounts to order and regularity."

Lieutenant Beale not only thus assumed charge of the State and took possession of the Durbar property, but also laid hands on the personal effects of the

Rani and "called upon her to give up all her private property and put it under attachment."

We are reminded of the action of the Commissioner of the Patna Division in the Bengal Presidency, on the death of the Maharaja Radhaprasad Sing of Dumraon. During his last hours, the Maharaja was removed to Benares to die. When the party that had accompanied him, returned to Dumraon, they found the Commissioner of the Patna Division, the Magistrate of Shahabad, a Deputy Collector, the Nazir of the Shahabad Magistrate's Court and a dozen mounted police ready to take possession of the palace, the treasury and otherwise to take over the estate for the Court of Wards. The Dewan Jai Prakash Lal, who had just arrived by another down train from Benares, went over to the garden house where the official party had gathered. They all then went over to the Rajbari, and, without a word of condolence to the Maharani, the officials proceeded to lock up the rooms and place guards and take down the statement of the Maharani—that is, what she had to say about the management of the estate. In reply, she produced a will of the late Maharaja appointing her executrix and the Dewan Jai Prakash Lal executor. The will was executed while Sir Stuart Bayley was Lieutenant-Governor and with his knowledge. The witnesses, among others, were Sir John Edgar, Chief Secretary, and Mr. P. Nolan, then Revenue Secretary to the Bengal Government. The will was signed at the house of Mr. Nolan when the Maharaja came to Calcutta to be invested with the title of K.C.I.E., and registered then and there in the presence of the Lieutenant Governor. The officials who had invaded the palace were taken by surprise. Without proceeding further in the execution of their errand, they returned to the place whence they had started. At dusk they revisited the Maharani. The Dewan was offered the managementship of the estate under the Court of Wards. He replied that he could not betray the trust reposed on him by the Maharaja. The Maharani repeated what she had said before and hinted that they had no business there. Before the officials returned, they put separate padlocks on the khas toshakhana of the Maharaja. The Dewan was next ordered by the Commissioner to furnish an account shewing the collections of the estate during the last three years. Next morning, the invading party dispersed to their respective head-quarters.

Letter to the Editor.

THE INDIAN NATION ON "AN INDIAN JOURNALIST."

SIR,—Mr. Marshman, the editor of the *Friend of India*, used to say that an occasional correspondent must not question the *motives* of an Editor, if he wants his correspondence to be published. As I am going to question the *motives* of the *Indian Nation*, I think my letter has no chance of being published in that paper. I, therefore, send you the following lines, in the hope that, for the sake of the subject, you will kindly make room for it.

In a recent issue of the *Indian Nation*, the Editor has devoted two leaderettes to Mr. Skrine's *Indian Journalist*. So long he had been waiting for a fit opportunity, it would seem, for indulging in some billingsgate at Mr. Skrine's expense. The letter of Mr. J. N. Sarkar, which the *Nation* has published and which has been made a peg for hanging its diatribe on, is characterised by it as original, independent, suggestive and what not. I, for my part, see nothing like independence, originality, or suggestiveness. The Editor has scarcely succeeded in disguising his wrath,—a

wrath that is shared by the Philistines of Babudom for Mr. Skrine's not having honoured them with presentation copies. The publication of the life of the Bengali Journalist by an English Civilian,—a Civilian, again, of Mr. Skrine's abilities and reputation,—has caused a severe heart-burning in many high quarters. The word has, accordingly, been passed to the Babu Editors of Bengal to ignore, if possible, the book itself, and with it, the name and fame of the departed Editor of *Reis and Rayyet*.

"Scarcely a Bengali Editor," the *Nation* remarks, "has been favoured with a presentation copy of a work, &c., &c." The *Nation* is not well-informed. I am in a position to say that many native Editors have been honoured with presentation copies. Babu-Editors, however, with the exception of a very few, do not know how to review a book or a pamphlet. Those amongst them who have received it, have not noticed the book. Such is the magnanimity of Bengali journalists towards a brother of the same profession. To present books to every editor in Bengal, whose number is nearly 100, is simply impossible. In the case of Mr. Skrine's book, it means a loss of Rs. 300. The *Nation* is not unaware of the fact that, after paying the expenses of the publication, the profits will be placed at the disposal of the bereaved family of the late lamented Doctor. The gentleman who does the small thunder of the *Nation* ought to be ashamed to complain of not having received a presentation copy at the expense of the Doctor's family. The Editor of the *Nation* is not a poor man. It is true, he is a barrister without a barrister's income. Yet as a school-master and maker of "keys," he makes a fair income. As such he ought to be able to buy a copy of the book and to notice it in his journal.

The Editor of the *Nation* complains of the price of the book as high. If he can charge Rs. 2/4, if I remember aright, for his brochure called "A study of K. D. Pal," no blame can attach to Mr. Skrine for pricing his book at Rs. 5. Mr. Skrine's book is three times as big as Mr. N. N. Ghose's "Study." There is nothing like a reading public in India, and to lower the price of a book is to injure the prestige of the author. The productions of Indian authors generally sell by weight as the Editor of the *Nation* cannot be ignorant.

In his paper "Journalism in India," the writer, referring to what he calls the loneliness of Dr. Sambhu C. Mookerjee's position, says that "This is a fault of the time and country rather than that of any individual." Neither country nor individual, however, is responsible for the same. It is the system of education, in which the Calcutta University delights in that is much to blame. It is a sort of education, which is extremely unsuited to the intellect or original genius of the Asiatics. The education of the Calcutta University consists in the presentation of foreign models to young men for their admiration. Every person cannot acquire a thorough conversance with a foreign tongue and the treasures enshrined in it. Unless the system be thoroughly changed the condition of a native of India of superior Western culture, will remain unaltered. The sort of isolation the writer notices cannot but be inevitable. Let us now take an instance. The *Hindu Patriot* was first edited by Babu Grish Chandra Ghosh; he was succeeded by Hurish Chandra Mookerjee, Hurish by Sambhu Chunder, and Sambhu Chunder by Kristodas Pal, and lastly Kristodas by Dr. Rajendra-lala Mitra in the name of another. All these were pre-University men, and, therefore, succeeded in keeping up the reputation of the *Patriot* in tact. With the death of Dr. Mitra, the *Patriot* passes into the hands of a Calcutta University graduate, with what effect I need not say. The same is the case with many other journals. If Dr. Mookerjee was lonely, his predecessors and successors were also lonely. But is it true that Dr. Mookerjee's position was so very lonely? I think it was not. Many young men, of undoubted ability, used to surround him and appreciate his learning and wisdom. None of them are mediocrities. Some of them are men of solid literary reputation. If they are so, it is Dr. Mookerjee who made them so. I wish to conclude with the following remarks

on the last paragraph of Mr. Sarkar's article, which seems to me to be a fair index of his culture and penetration.

Mr. Sirkar says :—"He made too much of the worthless title of Doctor given to him by a worthless American University, &c., &c." May I ask Mr. Sarkar why he is so much anxious to tail himself with his university title? Is it not a worthless title, whatever he may think of it? Who are the examiners of the Calcutta University that have passed him? How many questions did he answer? Besides, he sought the title, worthless though it is, and burnt many maunds of midnight oil for acquiring it, and he is so fond of it that he cannot think of writing a simple letter, intended for publication in a journal without airing it in capitals. Dr. Sambhu C. Mookerjee was far worthier of the title that was conferred upon him without the slightest solicitation.

Mr. Sarkar further writes,—"He argued himself into the belief that he was the dictator of the English language in India." Yes! Dr. Mookerjee was the 'dictator of the English language' in India." A writer like the late Mr. Robert Knight freely admitted that Dr. Mookerjee, though a foreigner, wrote English much better than most writers in India. Men like Professor Vámbéry have thought fit to say that as a journalist Dr. Mookerjee had not a superior in all Europe. If there was any man in India, who could be said to know the English language, it was Dr. Sambhu Chunder. If there was any voracious reader of English literature in India, it was Dr. Sambhu Chunder. If there was any man in India who could speak and write English correctly, it was Dr. Sambhu Chunder. If there was any man in India whose conversation could be listened to with rapt attention, it was Dr. Sambhu Chunder Mookerjee. Mr. Sarkar will do well not to speak of things he does not know. Let him not sit in judgment over one who was immeasurably his and his countrymen's superior. Dr. Mookerjee was a man who, while he lived, was revered by men better than Mr. Sarkar, and whose memory all sons of India, young and old, educated and uneducated, rich and poor, good and true, should cherish with equal reverence.

ALPHA.

BACTERIOLOGY; AND THE IMPERIAL BACTERIOLOGICAL INSTITUTE OF INDIA.

(From the *Calcutta Journal of Medicine*, Jan. 1896.)

The study of microscopic organisms has resulted in a branch of biology which has revolutionized medicine. This new branch has received the name of Bacteriology, from a Greek word which means a small stick, staff, or rod, from the fact that most of the organisms under notice are stick or rod shaped. With the progress of investigation, organisms had to be recognised, from the modes of their origin, development and function, as coming under this class, though their shapes were not strictly rod-like.

The science may be said to date from the time, now upwards of two-hundred years ago, when Leeuwenhoek first detected with his rude microscope, minute organisms in the saliva and putrid water. For a long time, from the fact of most of these organisms possessing the power of locomotion they were regarded as animalcules or microscopic organisms belonging to the animal kingdom, and Erhenberg and Dujardin included them among Infusoria under the name of *Vibronia*. But though it was soon discovered that not only locomotion was not the monopoly of animals but that some animals were as fixed as the higher members of the vegetable kingdom, there was another fact which contributed to the continuance of the mistake which referred them to animals. This was the mode of their deriving nourishment, which was fundamentally the same as that of animals. Like animals they were found to feed on the products of decomposition of plants and animals, and incapable of feeding on the carbonic anhydride and other inorganic substances contained in the surrounding medium.

It was Cohn who in 1853 showed that in point of morphology and development they own a kinship to plants. He referred them to the *Algae*, though he thought that the absence of chlorophyll brought them nearer to *Fungi*. Nageli in 1857 definitely classed them with the latter, and from the fact of their multiplying chiefly by transverse fission, called them *Schizomycetes*; but as they also multiply by the formation of spores, the name is not strictly correct. "The belief," according to Crookshank, "is rapidly gaining ground that the lowest forms of vegetable life

cannot be divided by a hard and fast line into a series with chlorophyll (*Algae*) and a series without it (*Fungi*), and the tendency now is to solve the difference of opinion between Cohn and Nageli by following the example of Sachs, and amalgamating the two series into one group, the *Thallophytes*."

The most remarkable fact regarding micro-organisms is that in one form or another they are found to be present almost everywhere—"in air, water, and soil; in the mouths of men as well as on the walls of their houses; on the hair of the head and the toes of the feet; in chalk and coal; in food and drink; but especially where there is disease, death, and decomposition." The bard of the Seasons uttered no exaggeration when, under inspiration, no doubt, from the crude science of his day, he said:

Full nature swarms with life; one wondrous mass
Of animals, or atoms organised,
Waiting the vital breath, when Parent-Heaven
Shall bid his spirit blow. The hoary fen
In putrid streams, emits the living cloud
Of pestilence. Through subterranean cells,
Where searching sunbeams scarce can find a way,
Earth animated heaves. The flowery leaf
Wants not its soft inhabitants. Secure,
Within its winding citadel, the stone
Holds multitudes. But chief the forest-boughs,
That dance unnumbered to the playful breeze,
The downy orchard, and the melting pulp
Of mellow fruit, the nameless nations feed
Of evanescent insects. Where the pool
Stands mantled over with green, invisible
Amid the floating verdure millions stray.
Each liquid too, whether it pierces, soothes,
Inflames, refreshes, or exalts the taste,
With various forms abounds. Nor is the stream
Of purest crystal, nor the lucid air,
Though one transparent vacancy it seems,
Void of their unseen people.

But while science has thus revealed a state of things which the mind cannot contemplate without a sense of insecurity and dread, she has at the same time made the consolatory discovery that all microscopic organisms are not our secret foes, that many of them are our true friends being the foes of our foes, and that on the vital activity of a large number of them, the maintenance of our health and many of the comforts of life depend, so that if, under her guidance, we take the proper precautions, we need not "from cates ambrosial, and the nectar'd bowl abhorrent turn," nor be afraid of enjoying life in the fullest measure. The precautionary measures, as regards a large number of infectious and miasmatic diseases, have been already formulated, but many more have yet to be discovered, and many errors have to be corrected before we can be said to be absolutely forewarned and forearmed.

The association of micro-organisms with disease has naturally invested their study with peculiar importance. The first suspicion of this association was suggested by the discovery that a class of fermentations depends upon the presence of specific micro-organisms in the fermentable liquids. Putrefaction was very properly looked upon as a sort of fermentation, and microscopists were led to be on the look out for the presence of some micro-organisms in the putrefying and putrefied bodies. Fuchs in 1848 announced that he had discovered bacteria in animals that had died of septicæmia. Rayer and others in 1850 announced that that they had found bacilli in animals that had died of anthrax. The climax of discovery was reached when Davaine in 1863 succeeded in inducing the disease in healthy animals by inoculation with a small quantity of the suspected organism, and thus the foundation was laid of the germ-theory of disease.

But in order that the causal relationship of a certain micro-organism with a certain disease may be established with certainty certain conditions must be fulfilled which, having been first formulated by Koch, are known as Koch's postulates. These are—(1) That the organism must be demonstrated in the circulation or tissues, fluids or solids, or both, of the diseased animal; (2) the organism so demonstrated, must be capable of artificial cultivation in suitable media outside the body of the animal, and successive generations of pure cultivation obtained; (3) such pure cultivation must, when introduced into the body of a healthy and susceptible animal, produce the given disease; (4) the organism must again be found in the circulation or tissues of the inoculated animal.

It is by the application of these tests that pathogenic micro-organisms are being distinguished from non-pathogenic ones, and the specific micro-organisms or germs of infectious diseases are being discovered. It requires considerable practical acquaintance with bacteriology to recognize the difficulty of applying these tests. There are so many fallacies which may attend these investigations, that it is absolutely necessary to exercise the greatest caution in order to avoid them, and to raise the probability into the certainty of a particular organism being the cause of a particular disease.

It must not be forgotten that bacteriology, though it has made rapid strides in the course of the last few, scarcely over twenty, years, is still an infant science in which credulity, born of anxiety and ambition to be the author of new and original discoveries, may overpower the sober scientific spirit and the critical faculty and thus land not only the young enthusiast but even tried veterans into mistakes which may prove disastrous to whole communities who may implicitly rely upon their fancied discoveries. We would cite as a most noteworthy instance the so-called positive discovery of the true micro-organism of cholera, the comma-bacillus, by Dr. Robert Koch of Berlin. "Had the diagnosis of cholera in Hamburg last summer not been delayed until 85 cases and 36 deaths had occurred because of the belief that the disease must be accompanied by Koch's comma-bacillus," writes Dr. Cunningham in his masterly paper on *The Results of continued Study of various Forms of Comma-bacilli occurring in Calcutta*, "the epidemic might never have attained the appalling magnitude which it ultimately did, and had the medical profession in Berlin not been possessed by a blind faith in the theory, we might have been spared the curious spectacle which they furnished by their refusal to admit that any cases of the disease, however otherwise indistinguishable in symptoms and mortality they might be, were of a truly choleraic nature, unless they conformed to Koch's dicta."

There are other problems than the discovery of specific germs of specific diseases which bacteriology has yet to solve. It has to do much yet as regards the origin, distribution, and mode of action of these germs. The last is the most important of all the problems which should engage the earnest attention and tax all the skill of the bacteriologist. For upon the answers to the questions, whether these germs prove deleterious by their action as mechanical irritants, or by robbing the organism of their host of some material essential to its nutrition and development, or by elaborating or secreting some toxic products, or by all these processes combined,—upon the answers to these questions will depend the true theory of the etiology of a vast number of diseases and the suggestions of the proper remedial and preventive measures against them.

The fact of immunity which a first attack of some infectious diseases confers upon the animal attacked against a second attack has raised the question of the possibility of artificial immunization which bacteriologists have taken up with the zeal and earnestness which its importance demands. We do not think, however, that the question has yet been satisfactorily solved, as regards even vaccination against small-pox, far less as regards anti-rabic and anti-choleraic vaccination. Here is another problem, most important from a prophylactic and therapeutic point of view, which bacteriology has to solve, and which can only be satisfactorily solved by long-continued and varied experiments. Here again ambition to make a discovery has led to over-zeal and undue haste which, in the best interests of science and humanity, cannot be too strongly deprecated.

The next problem, which bacteriology has to solve with more definiteness than it has done, is the problem of antiseptics. "The work hitherto done," says Dr. Klein, "has been enormous, but, I fear, of less utility than at first sight appears, for in most of it the point most prominent in the mind of the worker was to ascertain whether the particular antiseptic, mixed with the nourishing medium in a solution of definite strength, has or has not the power of inhibiting the growth of the micro-organisms. This point no doubt is of some interest, and perhaps of great interest, but whether a particular substance is an antiseptic in the proper sense of the word, i. e., whether on exposing the organisms to this substance in a solution of definite strength and for a definite period, the organisms become afterwards incapable from growing or multiplying; or still more, whether or not the substance is a germicide, i. e., capable of altogether annihilating the life of the organisms; these are questions which require special attention, and represent a wide and rich field of inquiry; but, as far as I can see, it has received only in very few instances due attention."

Such is the importance of bacteriological research, and such are the problems that are awaiting solution. While such research is being actively prosecuted in Europe and America, while their municipalities and governments have established and are multiplying bacteriological laboratories in almost every town and medical school, in India nothing up to this moment has been done by either Government or the municipalities, except what Dr. D. D. Cunningham has been doing for sometime past at Calcutta, with the niggardly monthly grant of Rs. 300 for bacteriological and other investigations in his capacity as Special Assistant to the Sanitary Commissioner with the Government of India, and what Mr. Hankin is recently doing at Agra as Chemical Examiner and Bacteriologist to the Government of the North-Western Provinces and Oudh. The Calcutta Municipality has been giving for over two years an annual grant of Rs. 7,500 for the Haffkine inoculations, but whether any bacteriological work is being done in connection with this, we cannot say.

One good fruit, which the Indian Medical Congress has borne, is the awakening of the Government of India to the importance of bacteriological research. But the way in which that Government has proposed to encourage and carry on such research is hardly worthy of an imperial Government, and is not one which might have been expected from a Government which is so lavish in its expenditure on military expeditions of questionable advantage and which can afford to throw away more than half a crore of rupees annually without the slightest compunction of conscience. In its anxiety to afford greater facilities, than at present exist, for the prosecution of bacteriological studies, the Government has resolved to establish an Imperial Bacteriological Laboratory, not at Calcutta but at Agra, which will be "not of purely local interest but one at which investigations relating to the whole of India may be undertaken." By a masterly exercise of financial skill the advisers of the Government have enabled it to achieve the feat of establishing the laboratory which is intended to serve for all India "without incurring additional expenditure!" Our readers will, perhaps, be curious to know how this has been done. The process has been simple enough. The Deputy Commissionership of the Panjab has been knocked on the head, and the small grant to Dr. Cunningham has been proposed to be discontinued! Mr. Hankin will be relieved of Chemical Analyst's work, and will be placed at the head of the Bacteriological Laboratory.

This supersession of a man who is not merely a highly trained expert in bacteriology of long standing but is a physician and a physiologist of the first rank, is on the face of it so preposterous that it is no wonder that it should have evoked the surprise and indignation of the whole medical profession in India. The reason assigned by the Government for the choice is far from satisfactory. "It has been established," its Resolution says, "by the testimony both of Dr. Cunningham, at Calcutta, and of Mr. Hankin, at Agra, that bacteriological investigations can be carried on in the plains of India in the hot weather, and the latter is of opinion that the dry climate of Agra is better adapted for the work than that of Lower Bengal. The results already achieved by Mr. Hankin and the energy and enthusiasm with which he has pursued his investigations, combined with the searching and practical character of his enquiries, eminently fit him, in the opinion of the Government of India, for the charge of such a laboratory and for the work of training the officers who may be attached to it." The italics in the above quotations are ours, and the sentence so marked suggests the question whether Dr. Cunningham's opinion was taken as to whether the climate of the plains of Bengal and of Calcutta in particular was ill adapted for bacteriological work. Dr. Cunningham, who has had special training under the most eminent masters of the subject, and who is carrying on bacteriological work all his life, is not qualified for the post, because he has too much of the sober spirit and caution of the true investigator to permit him to welcome and blindly adopt any innovation that may be advanced by any enthusiast.

The *British Medical Journal*, the organ of Mr. Earnest Hart, has come forward in its issue of the 11th inst., as an advocate of Mr. Hankin in a manner which, to say the least, is unfair to Dr. Cunningham in the extreme. Referring to some article in some Indian newspaper, not mentioned by name, but evidently meaning the *Pioneer*, (which has two articles, instead of one, on the subject, one on the 10th and another on the 28th Nov. last) the writer says "some absurd and highly retrogressive proposals are being put forward on the subject of the proposed development of the bacteriological institute at Agra." He finds fault with "the main object of the article" which is "to recommend the substitution of Dr. Cunningham for Mr. Hankin as the head of the institute in its imperial development," and loses his head so far as to say, "there could not possibly be a proposal more likely to destroy the utility of the institute or to frustrate the main object in view." In support of Mr. Hankin's claims we are told that he had "distinguished himself in Europe by quite remarkable skill and inventiveness in bacteriological research and had a most efficient training and a brilliant career before he was induced to take up the Indian appointment;" that during his short tenure of office he has far more than justified his appointment by singular ability and indefatigable energy, of which "the brilliant results of his investigations of the outbreaks of cholera at Calcutta and Lucknow, and of his study of the well waters of India as local sources of cholera," are cited as examples. Then we have flourish of certificates from Prof. Michael Foster and Dr. Haffkine in support of what the writer is pleased to call "his pre-eminence in claims and fitness for the appointment."

The certificate of M. Haffkine is significant as showing the reasons which actuated the Government or rather its advisers to prefer Mr. Hankin to Dr. Cunningham. M. Haffkine writes as follows: "With regard to the scheme of appointing Mr. Hankin from Agra as Imperial Bacteriologist for India, allow me to recall the following incident: When three years ago I landed in India, a letter from Hankin was awaiting my arrival in Bombay, advising me to come and start my work in Agra. I did not stop in Bombay and missed his letter. In Calcutta a few days after my

arrival, a telegram with several letters from Hankin were handed to me, in which he repeatedly invited me to come to Agra, putting at my disposal all bacteriological accommodations he possessed, and offering to do all in his power to induce the European residents and the natives of Agra to undergo the inoculation. It is known from my publications that it was, in fact, in Agra that the first inoculations against cholera were done in India, and that subsequently they were extended over the North-West Provinces and Oudh, the Punjab, etc. This is an instance to show how keen Mr. Hankin is in regard to everything new which may find application in the country he is serving, and the decision of the Government will be greeted as that most appropriate to the needs of India."

It is well known that Dr. Cunningham was compelled by his own researches to believe "that the comma-bacilli which occur in the intestinal tract in cases of cholera are not essentially concerned in the manufacture of the poison which induces the primary choleraic condition, so that there are no scientific grounds for regarding the procedure (Haffkine's inoculation) as calculated, in any way to affect the prevalence of the latter," though with characteristic candour he has admitted the possibility of its affecting the mortality from the disease. Mr. Haffkine, however, is so possessed with the efficacy of his inoculations that it would be superhuman in him to brook any difference with his views. He is, therefore, not to blame if he bails with satisfaction the appointment as imperial bacteriologist of one from whom he had received and from whom he expects to receive much aid in furtherance of those views.

We are quite willing to admit that what the writer in the *British Medical Journal* has said in favour of Mr. Hankin is fully deserved. But how could we ignore or overlook the superior and more pre-eminent claims of Dr. Cunningham, we cannot understand, unless it be that he is totally ignorant of the solid scientific work he has already done. For the information of those who are, like the writer, unacquainted with Dr. Cunningham's researches, we give below a list of his publications from which it will be seen that he has been incessantly at work since 1871 with some of the deepest problems which can engage the attention of the practical physician and the sanitarian.

The following publications, embodying joint researches with the late Dr. T. R. Lewis, appeared as appendices to the Annual Reports of the Sanitary Commissioner with the Government of India:

1. 1872. A Report of Microscopical and Physiological Researches into the nature of the Agents, or Agents, producing Cholera.
 2. 1874. Do. Second Series.
 3. 1875. The Soil in its relation to Disease.
 4. 1875. The Fungus Disease of India.
 5. 1876. The Oriental Sore as observed in India.
 6. 1877. Leprosy in India.
 7. 1878. Cholera in its relation to certain Physical Phenomena.
- Of the following independent publications Nos. 1-5 appeared as appendices to the Annual Sanitary Reports, Nos. 6-20 appeared in the Scientific Memoirs by the Medical Officers of the Army of India, Nos. 21 and 22 came out in the Transactions of the Linnean Society of London, and No. 23 in the Annals of the Botanical Garden of Calcutta.
1. 1871. Report on Cholera in Southern India.
 2. 1873. Microscopic Examinations of Air.
 3. 1875. Microscopical notes regarding the Fungi present in Opium Blight.
 4. 1879. On certain effects of Starvation on Animal and Vegetable tissues.
 5. 1880. On the Development of certain Microscopic Organisms occurring in the Intestinal Canal.
 6. 1884. On the relation of Cholera to Schizomycete Organisms.
 7. " On the presence of peculiar Parasitic organisms in the tissue of a specimen of Delhi-Boil.
 8. 1886. On the effects sometimes following injection of Choleraic Comma-bacilli into the subcutaneous tissues of guinea pigs.
 9. " On the Phenomena of gaseous evolution from the flowers of *Ocellularia* alismoides.
 10. " Notes from the Biological Laboratory attached to the Office of the Sanitary Commissioner with the Government of India.
 11. 1887. Note regarding the subsoil of Calcutta.
 12. " On a new Genus of the Family Ustilaginæ.
 13. " On an Epiphytic Alga occurring in the leaves of *Limnanthemum Indicum*.
 14. " On the Phenomena of Propagation of Movements in *Mimosa pudica*.
 15. " Do Comma-Bacilli, even assuming that they are the immediate cause of choleraic symptoms, really determine epidemic diffusion of cholera?
 16. 1889. On *Ravenelia sessilis* and *R. stricta*.
 17. 1890. On Milk as a medium for Choleraic Comma-Bacilli.
 18. 1891. On some species of Choleraic Comma-Bacilli occurring in Calcutta.

19. 1894. The results of continued study of various forms of Comma-Bacilli occurring in Calcutta.

20. " The Physiological action of Snake-venom.

21. 1880. On the occurrence of conidial fructification in *Chonophora*.

22. " On a new genus of Parasitic Algae.

23. 1889. On the phenomena of Fertilization in *Ficus Roxburghii*.

Here we have a veteran who has done an amount of physiological, pathological, and bacteriological work which has given him a European reputation and obtained for him the approbation of the highest scientific society in the world, the Royal Society of London, and quite recently the Stewart prize, the award of the British Medical Association itself; and yet we have the strange spectacle of the Government of India ignoring his claims in favour of one comparatively much his junior. We trust the Government will yet see fit to modify its Resolution of the 31st October last, and establish the Imperial Laboratory at Calcutta under the superintendence of Dr. Cunningham, the only man in India worthy to fill the post. As one laboratory cannot possibly meet the requirements of all India, separate laboratories should be established at least at Agra, Bombay, and Madras.

ORDERS AND ARROWS.

WHEN the captain of a ship orders some hands aloft to furl the main royal the men jump to obey, as a matter of course. A sailor can climb up on a yard without having a shilling ashore or a penny in his pocket. In fact, Jack seldom signs articles until he has used up both cash and credit.

But when a doctor—who is a sort of captain when one is laid up in the dry dock of illness—orders a patient to go abroad for the benefit of his health, it is quite another thing. A trip and sojourn away from home is an expensive prescription, and most of us can't afford it. If the doctor says it is a choice between that and the graveyard we shall have to settle on the graveyard; it is handy by, and easy to get to. But are we really so hard pushed? That is, as often as the doctors say we are? Let's turn the matter over in our minds for a minute.

Here is a case that is pat to the purpose. It concerns Mr. Arthur Whiddon Mellish, of 3, Regent's Terrace, Polsloe Road, Exeter; and for the details we are indebted to a letter written by him, dated March 7th 1893. He mentions that, in obedience to the orders of his doctors, he went to Cannes, in the South of France, in November, 1890, and spent the winter there. He also spent the following winter at the same place. He felt the better for the change; we will tell you why presently. But he obtained no radical benefit; which also we will explain later on.

It appears that this gentleman had been weak and ailing nearly all his life; not exactly ill, not wholly well—a condition that calls for constant caution. In March, 1890, he had a severe attack of inflammation of the lungs.

Now I want the reader to honour me with his best attention, as I must say in a few words what ought properly to be kept many. Shoot an arrow into the air—as straight in as you can. You can't tell where it will fall. It may fall on a neighbor's head, on your own, or on a child's, or on the pavement. Everybody's blood contains more or less poisonous elements. These are arrows, but unlike your wooden arrow they always strike on the weakest spot, or spots, in the body. If they hit the muscles and joints we call it rheumatism and gout; if they hit the liver we call it liver complaint or biliousness; if they hit the kidneys we call it Bright's disease; if they hit the nerves we call it nervous prostration, epilepsy, or any of fifty other names; if they hit the bronchial tubes we call it bronchitis &c.; if they hit the air cells we call it inflammation of the lungs, or by-and-by, consumption. And inasmuch as these poisoned arrows pass through the delicate meshes of the lungs a thousand times every day it would be odd if they didn't hit them—wouldn't it?

Now, wait a bit; It follows that all the various so-called diseases above named are *not diseases at all in and of themselves*, but merely symptoms of one only disease—namely, *that disease which produces the poison!* Good. We will get on to the end of the story.

After the attack of lung inflammation Mr. Mellish suffered from loss of appetite, pain in the chest, sides, and stomach, and dangerous constipation. He could eat only liquid food and had to take to his bed. For weeks he was so feeble and he could not rise in bed. He consulted one physician after another, obtaining no more than temporary relief from medicine. Then he was ordered abroad as we have related.

His letter concludes in these words: "Whilst at Cannes I consulted a doctor, who said my ailment was weak digestion, and that I *need not trouble about my lungs*. But I never gained any real ground until November, 1891, when I began to take Mother Seigel's Curative Syrup. This helped me in one week, and by continuing with it I got stronger and stronger, and am now in fair good health. This, after my relatives thought I should never recover. (Signed) Arthur Whiddon Mellish."

To sum up: This gentleman's real ailment was indigestion and dyspepsia, from which the blood poison comes that causes nearly all disorders and pains. The air of Southern France helped him temporarily, because it is milder than ours; it did not remove the poison. By care and the use of Mother Seigel's Curative Syrup he would have done better at home, as the result shows.

So we see that it isn't the climate that kills or saves; it is the condition of the digestion. If therefore your doctor orders you abroad for your health, tell him you will first try Mother Seigel's Curative Syrup.

A Wonderful Medicine.

BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness,

Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are invaluable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical: it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Utkoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Robinson Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Croft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We in my at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring of the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) November 30, 1895.

It is clearly that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In this he has found a civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahmin of the Brahmins—a conservation of the best of his inheritance that was nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine in the *Indian Civil Service* is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit untried by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also as unaltered that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth in sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." x Dr. H. Moore of Royal Artillery from Poona says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumfries says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Simkuta, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Panchdhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kemptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Fouzdar
Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada. *Scientific American*.

CONTEMPORARY POETRY.

WHO WOULD NOT DIE FOR ENGLAND !

THE following is the new Poet Laureate's poem on the death and burial of Prince Henry of Battenberg :—

WHIPPINGHAM—SANDRINGHAM.

February 1896.

Who would not die for England !

 This great thought,
Through centuries of Glory handed down
By storied vault in monumental fane,
And homeless grave in lone barbaric lands,
Homeless but not forgotten, so can thrill
With its imperious call the hearts of men,
That suddenly from dwarf ignoble lives
They rise to heights of nobleness, and spurn
The languid couch of safety, to embrace
Duty and Death that evermore were twin.

" Who would not die for England ! "

 Thus He said,
Who at the holiest of all English hearths,
The holiest and the highest, had been given
A seat, an English Princess for his bride,—
Now by that hearth weeping her widowed tears,
Bitter and barren as the winter rain,—
" It is not meet that I, whom this famed Isle,
This generous, mighty, and majestic Land,
Ennobled as her son, should not repay
Her splendid gift of kinship. Let me go,
Go, where they go, her world-researching race,
That slumber pillowed on the half-drawn sword,
And wake, at whisper of her will, to greet
Duty and Death that evermore were twin."

Who would not die for England !

 And for Her
He dies, who, whether in the fateful fight,
Or in the marshy jungle, where She bids,
Far from encircling fondness, far from kiss
Of clinging babes, hushes his human heart,
And, stern to every voice but Hers, obeys
Duty and death that evermore were twin.

So across the far-off foam
Bring him hither, bring him home,
Over avenues of wave—
English ground—to English grave;
Where his soldier dust may rest,
England's Flag above his breast,
And, love-planted, still may bloom
English flowers about his tomb.

Who would not die for England, that can give
A sepulture like this ! mid hamlet crofts,
And comely cottages with old-world flowers,
And rustic seats for labour-palsied limbs,
The pensioners of Peace ! I linger here,
Pondering the dark inexplicable Night,
Here by this silent grave-girt sanctuary
Whose vanished walls were reared anew by Him,
Of Princes the most princely, if it be
That Wisdom, Love, and Virtue more adorn
Sarcophagus of Kings than dripping spears,
Than wailing hearths and hecatombs of slain.
And He too died for England, He who lived
Scorning all joy save that great joy of all,
The love of one true woman, She a Queen,
Empress and Queen, yet not the more revered,
Not the more loved, for those resounding names,
Than for the lowlier titles, Gracious, Good,
The Worthiest of Women ever crowned.

Sweetest Consort, sagest, Prince ;
Snows on snows have melted since
England lost you—late to learn
Worth that never can return ;
Learned to know you as you were,
Known till then, alone to Her !
Luminous as sun at noon,
Tender as the midnight moon,
Stedfast as the steered-by star,
Wise as Time and Patience are ;
Deaf to each belittling lie,
Deaf to gibing jealousy ;
Brooding only on the goal,
And, like every lofty soul,
Scanning with a far-off smile
The revilings of the vile.

Yes, He too died for England ! thence withdrawn
Dim to that undiscoverable Land
Where our loved lost ones dwell, with wistful eyes,
And lips that look, but speak not.

 But away,
And from these soft-whispering waves that make
A dulcet dirge around the new-delved grave,
To bluff East-Anglia, where on wind-swept lawns,
The sanguine crocus peeps from underground
To feel the sun and only finds the snow ;
And, whinnying on the norland blast, the surge
Leaps against iron coast with iron hoof,
As though the hosts of Denmark foamed afresh,
Caparisoned for ravin ! And I see
A cradle, not a coffin, and therein
Another Child to England ; and, veiled Fate
Over it bent with deep-divining eyes,
And with oracular lips, like nurse inspired,
Foretelling the fair Future.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

"Another Albert shalt Thou be, so known,
So known, so honoured, and His name shall stand
The sponsor to your sportlessness until
Dawns the full day when, conscious of your soul,
Your soul, your self, and that high mission laid
On all of such begetting, you can seize
The sceptre of your will, and, thuswise armed
Against the sirens of disloyal sense,
Like to your pure progenitor abide
In God's stern presence, and surrender never
That last prerogative of all your race,
To live and die for England!"

ALFRED AUSTIN.

WEEKLYANA.

THE season closes at Calcutta on March 27, when the Viceroy starts on his journey for the summer capital. He does not run up at once. The first halt will be made at Allahabad. The dates thereafter will be Bareilly, March 31 and April 1; Hurdwar April 2; Saharanpur, the 3rd; Dehra, the 4th to 7th; Saharanpur again on the 8th. The Vice-regal party reach Simla on April 9.

THE Librarian of the Bengal Library and Keeper of the Catalogue of Books under Section XVIII of Act XXV of 1867, notices Mr. Skrine's "An Indian Journalist" in these words:—

"An appreciative biography of Dr. Sambhu Chunder Mookerjee, late editor of *Reis and Rayyet*, by F. H. Skrine, Collector of Customs, Calcutta. The book is a reprint of the articles contributed by the writer to the columns of the *National Magazine*. The publication of Dr. Mookerjee's letters and correspondence has greatly added to the interest and value of the work."

AT Holy Trinity Church, Sloane Street, on the 18th of February last, Sir John Ardagh led to the altar Susan Lady Malmesbury, widow of the late Lord Malmesbury.

MR. Krishna Govinda Gupta, Commissioner of Excise, Bengal, is gazetted to act temporarily as Junior Secretary to the Board of Revenue in addition to his own duties, with effect from the date of his taking charge of the office. It seems that there need not be any impropriety in the fusion of offices of different ranks, as in the conferment of titles. A promotion in office has recently been held to mean a lowering of pay. A Rai Bahadurship has just been conferred on a Companion of the Most Eminent Order of the Indian Empire.

MR. A. P. Handley, Chief Judge, Court of Small Causes, Calcutta, takes six months' furlough from April next. Mr. E. W. Ormond, Second Judge, on leave, has been appointed as the acting Chief Judge.

THE Currency Office Establishment in Calcutta have been exempted from service as jurors or assessors in criminal trials in places beyond the ordinary original jurisdiction of the High Court.

IN the Cortes in Lisbon a Bill has been introduced for the repression of Anarchism. It provides a penalty of from three to six months' imprisonment for the slightest disturbance of social order, followed by expulsion or transportation to Africa. The publication of newspaper intelligence regarding Anarchist attempts is prohibited, and the Lisbon police are to be augmented by 300 men.

IT is reported from Fifeshire that Miss Helen Thomson, aged twenty-five, the daughter of a retired millwright, went for a walk about five o'clock in the evening, and was not seen afterwards alive. Next morning her lifeless body with marks of violence was found by her father in the brushwood in Balgowie Quarry Park. It is suspected that she had been dragged from the highway over a five-foot stone wall into the wood and outraged, and her death was probably hastened by exposure during the night. The police arrested a young shepherd belonging to Aberdeenshire who was employed by a local farmer to watch the sheep in a field adjoining the wood where the body was found. He was brought up before the sheriff-substitute, at Cupar, charged with murder, and remanded.

BARON Ferdinand Rothschild, M.P., has been elected a trustee of the British Museum.

THE English Home Secretary has appointed a departmental committee to inquire into and report upon the system of education and moral instruction of prisoners in local and convict prisons.

LORD George Hamilton, speaking on Feb. 12 at the annual meeting of the Acton Conservative Association, said:—

"The present Government exhibited as much unanimity of opinion upon the various questions which came before them as any of which he had been a member. He himself took office with the determination to do his very best to obtain perfect equality of treatment between the inhabitants of this island and those of India, and he was specially desirous of being able to apply that principle to certain taxation which had been imposed by the late Government upon the import of cotton goods into India. There were no questions which were more dangerous to the continued unity of the empire than trade disputes. The duties imposed by the late Government were in the opinion of Lancashire and the cotton spinners of this country unjust to them. The Indian cotton spinners had a shrewd perception that the duties somewhat favoured them, and strongly supported the duties on the principle upon which they had been imposed. Now, the cotton trade in Great Britain was the largest of our industries; it employed millions of people. The cotton industry in India was growing. They thus had two great industries arrayed one against the other within the limits of the British Empire. The controversy had been getting more and more bitter and violent, and the controversialists more extravagant in their denunciations. He was therefore glad to have seen effected an arrangement which put absolutely beyond suspicion the two interests on the principle of perfect equality. He belonged to a party whose boast was that they were Unionists in everything, whether in connection with race, religion, or trade, which tended towards the closer cohesion of the unity of the empire and was a distinct gain to the great cause under which they massed themselves. (Cheers.) He might also allude to the satisfactory arrangement with France as regarded the delimitation of the boundaries of India on the extreme east and with Russia in reference to the delimitation of Indian boundaries on the north. (Cheers.) He took those two arrangements as a satisfactory omen of the future, and as an indication of the lines upon which they should go to work hereafter. He was not one of those who viewed every movement or advance of the Russian Empire with suspicion. For the past ten or fifteen years the relations of the two countries had been most friendly. Russia had most honourably and most loyally fulfilled all engagements into which she had entered with this country. With regard to Armenia the Government had been charged with neglecting their duties. But they had gone as far as diplomacy allowed. Lord Salisbury had used his unparalleled influence, and put the utmost pressure he could upon the Porte for the purpose of securing reforms in their country, and taking precautions against the recurrence of outrages. The only other step they could have taken was to have adopted acts which would have amounted to a declaration of war. But he would have been no party to sending out their fleet with the knowledge that if any disaster occurred they might have lit a European conflagration and have endangered that supremacy upon the sea upon which their national existence depended. (Cheers.)"

MICHAEL DAVITT, the ex-Fenian and ex-convict, who now sits for two Irish parliamentary constituencies, writes a letter to the *Times* in which the following passages occur:—

"Why is England at the present moment without a single friend or ally among the civilised nations of the world, if we may except the threadbare and miserable Italian State? Because of that very spirit of braggart insolence towards opponents which is voiced to-day from the stages of London music-halls up to the latest deliverance of England's Premier. Because England is a merciless bully towards the weak, and a sneak and a coward when it is a question of meeting her equals. Look at the action of the Boers at Krugersdorp and the English at Coomassie. The troops of the Transvaal met and defeated the chartered brigands of the Chartered Company. How were the vanquished treated by the victorious burghers? Did Lord Salisbury say a word in commendation of President Kruger's magnanimity towards those who attempted to steal a march upon the little Republic? Not a syllable. He found it more to his taste to indirectly defend the freebooting Uitlanders and to offer gratuitous insult to Irishmen. But how did the Salisbury expedition to Coomassie act in a similar situation? Has it not been recorded in your own columns how a Mr. Maxwell, the English Governor of the Gold Coast, compelled King Prempeh to kneel down and literally kiss his boots? Were not the Ansahs arrested 'and handcuffed' as prisoners on the same occasion, though not a single shot was fired on the English troops nor a single life lost on the part of the successful invaders?"

This is the record of your latest triumph over a 'savage' foe. How do you stand in connection with the quarrel with America, your equal, over the Venezuela question?"

Your braggart threats of a month ago were estimated at their proper value on the other side of the Atlantic. They know you of old. They remember Lord John Russell's despatch over the San Juan Island question, and the insulting defiance with which Senator Sumner's demands on the *Alabama* claims difficulty were received by English papers, notably by the *Times*. You ate the Yankee leek on both these occasions, and everybody knows you will do it again—just to oblige your 'Anglo-Saxon cousins' in the States, don't you know? The now universal English clamour for arbitration deceives no one. If you were not afraid of a war with the United States, you would not arbi-

trate, you would march an army to Caracas as you have done to Coomassie, and the brutal treatment you have meted out to a defenceless foe would be repeated towards the people of Venezuela. You have shown your teeth, but you dare not bite; and this is another reason why you are at this moment the object of hatred, not unmixed with contempt, in the eyes of France, Germany, and Russia; and this is why a leading Senator of the United States spoke of you as follows, in reply to English threats about fleets that could shell New York, Boston, and Philadelphia. 'We divide,' said Senator J. K. Ingalls, 'on protection, on silver, on the ratio question, but in our hatred of England we are unanimous. The sloppy diplomatic twaddle about kindred blood and common language deceives nobody. We feel that England is our only enemy now among the great Powers of the earth. At every crisis in our affairs we have encountered the secret or open hostility of England, and the tone of her Press has been always cynical, sneering, and contemptuous. But there will be no war. England never fights her equals.' There are over 15,000 newspapers in the United States, and it is safe to assert that nineteen-twentieths of them voice the opinions of Senator Ingalls."

**

MR. Laurence Jenkins, Barrister, succeeds Mr. Justice Pigot.

NOTES & LEADERETTES, OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Washington Senate passed a resolution by sixty-four against six votes that the United States Government should recognise the Cuban insurgents as belligerents, and requesting President Cleveland to invite Spain to recognise the autonomy of Cuba. Several leading Senators denounced in violent language the barbarism of the Spaniards and termed General Weyler, commanding the forces in Cuba, "a butcher." The Spaniards are furious at the resolution and the abuse. President Cleveland is, however, not disposed to act, inasmuch as the Consular reports show that Congress has been misled regarding the facts in Cuba. There is great popular excitement at Madrid. The American Legation is guarded, and the Government has forbidden any demonstrations. The Spanish papers are discussing the probabilities of war with America and the advisability of arming privateers. In the meantime, a fresh expedition of twenty-five thousand men has been ordered to be ready to sail for Cuba, and the training squadron has also been ordered to be in readiness.

The House of Representatives have passed a resolution in regard to Cuba, similar to the one passed by the Senate.

The Senate have passed a Bill for an increase of one thousand men in the Navy and, if necessary, to enlist the services of the Naval Militia and to charter transports.

SYSTEMATIC agitation has commenced in Germany for a large increase in the Navy.

NOTHING has yet been settled regarding President Kruger's proposed visit to England and the negotiations continue. The *Times* states that President Kruger asks that the Convention of 1894 be abrogated, and a treaty of commerce and amity be substituted. Great Britain would be recognized as the paramount Power, and a guarantee be given for the autonomy of the Transvaal, whilst the pre-emption of Delagoa Bay would be conceded to the Transvaal. President Kruger in the meantime is purchasing arms and importing Germans.

Sir John Willoughby has published letters which were exchanged on the battlefield at Krugersdorp, from which it appears that he demanded a safe conduct for the whole force on condition that he surrendered the Boer commander. The latter agreed to spare the lives of the entire force if the expenses incurred by the calling out of the Boers were paid, and the force yielded up all arms.

Mr. Chamberlain, in the House of Commons, in reviewing a series of despatches concerning Sir John Willoughby and letters showing that President Kruger was ignorant of them, declared that the imputation that the President Kruger acted in bad faith in afterwards coercing the Rand with threats to shoot Dr. Jameson, were groundless.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

IN the House of Commons, on March 2, Mr. Goschen brought forward his Navy estimates, which provide for an increase of 5,000 men, five battleships, thirteen cruisers and twenty-eight torpedo-destroyers, all to be completed by 1899 at a cost of ten millions sterling, which will be spread over three years.

The age of entry of Naval cadets into the service is to be raised one year, and training on board the *Britannia* will henceforth be abolished, and be replaced by training at a naval college ashore.

Mr. Goschen asks for £850,000 for guns and ammunition.

Three new docks are to be built at Gibraltar at a cost of two and a quarter millions. The total outlay is put down at fourteen millions sterling, to which this year's surplus will be applied.

Mr. Goschen said that the estimates were not intended to be provocative but self-defensive. He also stated that it was not intended at present to ask Parliament to vote money for a dock at Mauritius and Simonstown, but merely to ask for money for preliminary surveys. It was useless, he said, to propose the new docks in question until these surveys had been concluded.

Sir William Harcourt said that he was bound to accept the assurance of the Government that the gravity of the situation required the increased expenditure on the Navy.

KING Menelik's army has repulsed a combined attack of the Italian forces. The fight was a desperate one, and the Italians had to beat a retreat. The Italian losses were between three and five thousand men. It is believed that General Baratieri had desired to strike a decisive blow on Menelik's force before being superseded by General Baldissera. Later advices state that fifteen Italian battalions were engaged, and that General Baratieri was commanding. The Shoans completely outmanœuvred the Italians and finally charged amid their ranks, firing on the officers point-blank. The retreat which then took place ended in an utter rout. The total losses are not yet stated, but the whole brigade under General Dabormida is missing. Anti-Government demonstrations are taking place at Venice, Milan, Verona and Rovigo. Serious demonstrations, some of them of Republican tendency, and all against the continuing of the operations in Abyssinia, have been renewed in the chief cities of Italy. Signor Crispi and General Baratieri are both bitterly denounced. There is a report that the Italians have abandoned their guns.

MOST intense excitement prevails at Rome over the disaster to the Italians in Abyssinia. The garrison is confined to barracks. The Italians have lost sixty guns. Three Generals are missing and one General wounded. General Baratieri is reported to have committed suicide. Italian journals of all shades blame General Baratieri for the disaster. The Italian Government has called out the reserves of 1872, and ordered the reinforcement of six batteries of artillery and ten thousand men to be despatched to Abyssinia. General Baldissera has assumed command of the forces in Erythrea.

SIGNOR Crispi and his Cabinet have resigned. Stormy scenes took place at the opening of the Italian Parliament on March 5. The Opposition demands the impeachment of Signor Crispi. Demonstrations took place in the streets. Windows were smashed and many arrests made.

It is generally believed that the Italian defeat in Abyssinia will weaken the Triple Alliance, and lead to a regrouping of the Powers.

THE rumour regarding the proposed exchange by the Italians of Kassala for Zaila is declared to be untrue.

THE *Times*' correspondent at Cairo says that the evacuation of Egypt by the British is openly discussed there and is affecting trade. The opinion of the leading Natives is almost unanimous against any change. The Khedive is also very friendly to the British. Reuter's Constantinople correspondent says that it is believed there that the discussion on the Egyptian question will not be resumed for the present.

LORD Rosebery, speaking at the South Australian dinner, said that Federation had not advanced, but the essence thereof was the union of sympathy and interest which had been attained. He emphasized the necessity of the Navy being predominant.

AN Army Order has been issued directing that all officers elected for Parliament in future are to be placed on half pay.

ALL is up with the rule of Maharaj Rana Zulim Singh of Jhallawar. Final orders have been passed. He must leave Jhallawar and end his days in the service of his god at Benares or elsewhere. Mr. Crosthwaite, the Governor-General's Agent, Rajputana, has addressed the following letter to the Maharaj Rana. He also held a Durbar where he announced the deposition and exhorted the assembled Sardars to loyalty and obedience to the British Government.

"I am instructed by the Government of India to communicate to your Highness the decision which they have come to on the present condition of the Jhallawar State. It would be a mistake for your Highness to suppose that this decision is based solely on considerations personal to yourself. The Government of India have always been tolerant when occasion has arisen for dealing with any foolish acts of the Chiefs of Native States, and your Highness has had a full measure of that toleration. His Excellency the Viceroy restored to you the powers which your misconduct had forfeited in 1887, hoping that you would have learned to conform to the rules of conduct which are necessary for good government. He has been disappointed, and he must act on the warning which accompanied the grant of powers, and reconsider your position. The Government of India are satisfied that the condition of the Jhallawar State now closely resembles that to which it had been reduced in 1887, and that the same reasons exist for effecting a reform. The Government of India, while they respect the right of Ruling Chiefs, cannot permit misgovernment of their subjects.

They have reluctantly come to the conclusion that your Highness, by the use you have made of the powers twice entrusted to you, has proved yourself incapable of appreciating the limitations which are necessarily put upon the arbitrary exercise of personal will by a Ruling Chief in India. They are of opinion that the time has come when the inhabitants of the Jhallawar State should be relieved from apprehension of being again subjected to similar misgovernment, and they have, therefore, determined that your Highness must finally be deposed from the rulership of Jhallawar."

The orders have the sanction of the Secretary of State.

"In the House of Commons Dr. Clark, member for Caithness, protested against the deposition of the Maharaj of Jhallawar without a public enquiry. Lord George Hamilton, in reply, said that the Maharaja had been deposed for the benefit of his people, whom he was incapable of ruling, and that so long as he (Lord George) was connected with the Government of India, he would not interfere with its privileges. He added that when the papers on the subject arrived they would prove that the Government of India were fully justified in the action they had taken.

We must wait then, till the papers are published in England or the matter is taken up by Parliament, for the knowledge how Prince Zulim has deserved his fate. There is a recommendation to allow Jhallawar to revert to its parent State. But will the British Government endure the extension of any of the existing Native Principalities? Kotah's claim based on treaty to have back its own was disallowed on a former occasion. If no ruler is appointed to the State and it is not to revert to Kotah, what becomes then of Jhallawar? The British Government, through the Political Agent, now administer the State.

PROSPERO has laid down his magic garment and the tempest in the University has been allayed. On a formal application by the Registrar, the Syndicate have withdrawn their resolution on his conduct in connection with the assault on the son of one of the Syndics. The Registrar has withdrawn his resignation as also his letter to Mr. Bose. The Vice-Chancellor had a narrow escape, the Syndicate having been inclined to take notice of his irregular action in the matter of his circular letter to the Senate. The resolution appointing a committee of enquiry has been confirmed. Two members of the committee having resigned, the remaining two have been vested with full power.

At the Evening Party, at Government House, on Thursday, a respectable Indian, respectable because of the invitation to the Party, having partaken of the good cheer on the hospitable board, bethought of a memento of his visit to the great House. While leaving, he selected a bundle of cigars, when he was reminded by a European gentleman

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

that the rolled leaves were meant for all comers and not for any particular guest.

As will be found from an advertisement in another column, the annual Conversazione of the Mahomedan Literary Society will be held on Monday, the 23rd instant. Kept up with unflagging interest for thirty-two years, it is not only an occasion for the meeting of all races, the rulers and the ruled, Native Princes and notabilities of sorts in the land, but it also affords an opportunity for useful knowledge and for meeting distinguished visitors to the city of Calcutta. Of late, attempts have been made to make the entertainment truly enjoyable. Although its novelty has worn out and other competitors have entered appearance, still this old institution, for it has grown to be so, has a tradition which cannot be easily forgotten, and it will maintain its place against all odds, if only the present managers know how to proceed about the business, and fit the occasion to the time.

ACCORDING to the Health Officer, since the commencement of the year there have been, in Calcutta, 27 cases of small-pox, with four deaths, against 620 deaths during the corresponding period of last year, and 216 deaths in the same period in 1890. He does not apprehend any serious outbreak of the disease this year, and there is nothing to create alarm. Yet, he says, "I am, however, having vaccination carried out as vigorously as possible and the medical inspectors are searching for cases which may not come to the notice of the Health Department." Dr. Simpson recommends the forcible removal of all small-pox patients, male and female, to hospital. As an earnest of the power he seeks for removing "females (not being purdanashin) attacked with small-pox who shall be without proper accommodation, as determined" by himself, he removed two patients, one male and another female, from the Colvin *bustee*, because he considered that small-pox in a washerman's quarter was a great danger to public health. Last year a washerman was sent to prison for causing the spread of infectious disease, because he did not agree to the removal of his wife to hospital. This time a woman is forcibly taken away from her home without any legal authority. The Health Officer thinks he ought to have the power, and probably exercises it, in a season of no panic, in anticipation of the grant of such authority by the Commissioners and the Legislature.

THE reform of the Police has for some years been pressed on the consideration of Government and has engaged its careful attention. The Police Commission made several recommendations, some of which have been adopted. The pay of officers in the lower ranks has been raised, a competitive examination is held for selection of candidates for Sub-Inspectorships, and a police training school has been opened at Bhagalpur. The head of the Department is not deaf to the demands of the time. Mr. Henry has also sympathy for the natives and is willing to extend to them a helping hand. There was a time when members of respectable native families took service in the Police. Those days are being revived. It is a sign of the times that young Mahomedans of respectability have been induced by Mr. Henry to accept service in his Department. It is calculated to serve two useful purposes. It will raise the status of the Department and give employment to a class that finds time hang heavy on its hands. There are scions of good and old families who want appointments, as there are those who, though not in actual want, look upon Government service as a recognition of their status in society. Notwithstanding, it was difficult to persuade them to accept appointments in the lower ranks. Mr. Henry's influence has removed the stumbling block. We are glad to learn that he has conferred on such young men in Behar posts of Sub-Inspector and Joint-Inspector with prospects of rapid promotion provided they prove themselves deserving. If this new class is allowed to continue, it is hoped that, in course of time, the ordinary complaint against Police officers will gradually diminish, if not disappear altogether. It is not thought advisable to admit all sorts of candidates to open competition and, therefore, a limited number are allowed to compete for a fixed number of appointments as Superintendents. Natives have, therefore, no chance of entering this post by the door of either competition or nomination, except in due course of promotion from the lower ranks. We would suggest that at least one or two natives may be allowed to compete yearly as in the Opium Department.

The Faculty of Arts met to-day. The attendance was very full and unprecedented, for 84 members were present. Some came from distant stations. Five representatives were selected for the Syndicate. Of the old representatives, only Dr. Sircar has been re-elected, the other four, *viz.*, Messrs. Ashutosh Mookerjee, Kuli Churn Banerjee, Ananda Mohun Bose, and A. F. M. Abdur Rahman going out. Their places have been filled up by Father Lafont, Mr. Gibland, Nawab Ameer Hossein, and Mr. Risley. The meeting did not disperse without Dr. Gurudas Banerjee strongly resenting certain remarks made by Sir James Westland. The latter offered the usual explanation that nothing offensive had been meant. Messrs. Rowe and Pedler also had to declare that they had not used the offensive expression imputed to them by a member who sat close to them and who was obliged to bring it to the notice of the Chairman. Dr. Sircar, by a majority of 2 votes, was also re-elected chairman of the Faculty. The rival candidate was the Rev. E. Lafont.

THE prosecution of Mr. John Croft under the Merchandise Marks Act and the Penal Code has failed. The jury, under the lead of Captain Allison, the foreman, unanimously declared that there was nothing proven against the defendant. The Judge taking the verdict to be not guilty, discharged the accused. In the charge to the jury, the Judge seemed not to be in favour of conviction. Mr. Croft, he said, had been prosecuted before. This was the second prosecution, and it was impossible to say what other troubles were awaiting him. "The case was first begun under the Excise Act, then the present case was taken up, and if it broke down who knows what would be done next. If this was the law, it was so much the worse for those who broke it." The defence had taken the precaution to ask the Judge to examine all the respectable European wine merchants in the city and high officials who had tasted his wines and pronounced them excellent. The feeling against the accused which was very strong in the first prosecution began to evaporate and the charge in the present was, under instructions, confined to a point in which there was no legal evidence. A thorough enquiry would, it was felt, be an unusually lengthy one and drag into court men and things from the least suspected quarters. The Revenue Board, which specially watched the first prosecution and which fact spurred the Magistrate, who found the accused technically guilty of manufacture of spirits in an unlicensed place, grew indulgent as the second prosecution ripened or rather the preparations for the defence assumed alarming proportions. It was known when the jury was empanelled, if not earlier, that the prosecution would break down. A good opportunity has been lost to the public of knowing the tricks of trade. The paper on bacteriology which we reproduce elsewhere tells us that from the same kind of grape, a half dozen different wines may be obtained, and that a Rhine wine may be had from a New Jersey grape. Why may not, therefore, Scotch, French and German wines and spirits be manufactured at Calcutta?

THE death of General Ranabir Jung Rana Bahadur is a great relief to Maharaja Birshumshere. The General was the third son of Maharaja Sir Jung Bahadur, the ablest of statesmen Nepal produced, and the staunchest of allies the British Government had in India. Of all the sons of Jung Bahadur, General Ranabir Jung was unquestionably the most intelligent. His capacity for business was admitted by all. He had been, before the last massacre at Nepal, Minister-in-Chief of an extensive portion of his country and officiated several times as Prime Minister during the absence from Nepal of his uncle Maharaja Sir Ranadip Sing Rana Bahadur and was looked upon as the successor elect of his uncle in the Prime Ministership. It is scarcely necessary to recall the incidents of the revolution effected in Nepal in 1885, through the dastardly assassinations and murders by Birshumshere, the present Prime Minister, and his accomplices. Maharaja Sir Ranadip Sing was murdered while at his evening prayers. The conspirators despatched a gang to the residence of General Jaggut Jung, the eldest son of Maharaja Jung Bahadur. Jaggut Jung, and his son, Yuddha Pratap Jung, in whose veins flowed the blood of Nepal royalty, for his

mother was the sister of Prince Trailokya Bikram Shah, the father of the present King, Prithvi bir Bikram Shah, were shot like dogs by Birshumshere's men. The other sons of Maharaja Jung Bahadur would have met with the same fate, but having received timely intimation of Birshumshere's murderous plans, they succeeded in escaping to the British Residency. The treatment they received from Colonel Berkeley, the British Resident, was simply extraordinary. It was characterised by the utmost harshness. For days together the Residency was surrounded by Birshumshere's hordes thirsting for the blood of the refugees. Failing to uphold British prestige, and British honour and faith as well, Colonel Berkeley did all in his power to recognise the Government of Birshumshere. If General Ranabir and his brothers had been permitted to stay for a week at the British Residency, the Nepalese army and the people would, by that time, have been undeceived of the false rumour set afoot that Ranabir Jung had murdered his uncle Ranadip, and the punishment of Birshumshere would have followed in due course. Birshumshere knew this well. He exerted all his arts for compelling the refugees, through the British Resident, to come to British India. General Ranabir Jung, accordingly, with his brothers and cousins, were forced to leave Nepal. Since then these Nepalese noblemen are living as exiles in British India. General Ranabir, last year, had applied to Lord Elgin for an allowance, setting forth the valuable services of Maharajah Jung Bahadur during the Sepoy Mutiny as the basis of his claim. The application was curtly refused. Writing on the 30th of May 1858 to the Secret Committee of the East India Company, Lord Canning said,—"I had the satisfaction of offering to the Maharaja Jung Bahadur in full Durbar, my cordial thanks for the aid which the Government of India had received from him and from his brave soldiers, and my assurance that the friendly conduct of his Government and the exertion and successes of his troops, would be held in grateful recollection, not less in England than in India." Lord Lunsdowne, while speaking at Qetta, in October 1889, said,—"Or one thing you may be sure, the British Government.....does not forget those who have deserved well at its hands." Encouraged by these words, the son of Maharaja Jung Bahadur, in a time of deep distress, had appealed to the Viceroy of India either to allow him "to see such of the princes of India as belong to houses connected with ours or equal to ours in lineage or blood," or "that a suitable pension be granted to me by the British Government of India for enabling me to live, as far as possible, after the manner of a Nepalese nobleman belonging to the house of Maharaja Sir Jung Bahadur." The General was not allowed to visit Cashmere. As regards other places, the reply was,—"a circular order, such as you suggest, could not be conveniently issued on the subject of your visits to Native Chiefs in India; but if you give notice to the Foreign Department of your desire to visit any specified Chief, you will be duly advised whether the matter can be arranged." The pension was out of the question—"His Excellency the Viceroy is unable to entertain your prayer for the grant of a pension." Next Ranabir Jung tried to approach the Queen-Empress through the Prince of Wales who had visited Nepal or rather the terrain and had seen the General there. His Royal Highness expressed his regret "at not being able to take up his case." General Ranabir became greatly depressed. He had been living at Benares with his family. He was in the prime of manhood, apparently healthy and strong. His death has been sudden. Indeed, the intelligence of his demise has preceded that of his illness. He talked English fluently, and had been a careful reader of military histories. His conversation was delightful. He was singularly free from vanity. Maharaja Sir Luchmesswar Sing of Darbhanga used to help him largely with funds. Indeed, without the Maharaja's assistance, he would not have succeeded in dragging his existence so long in exile. He leaves a large family. Is it too much to hope that the British Government will do to them what both gratitude and generosity would dictate?

The little that Ranabir was allowed to bring away, he spent in his preparations for re-entering Nepal, where he was sure he would be hailed by the Army which was attached to him. Half an hour's delay frustrated all his plans. He made more than one attempt and had not given up his idea of returning to his own as the conquering hero. Birshumshere was in such dread of him that, when he visited Benares, for a plunge in the holy stream, he turned himself into a purdanashin to escape the ire of his cousin.

In March 1888, the General had offered his services to Lord Dufferin "for a practical and peaceful settlement of the difficulty with Tibet

The Indian Association for the Cultivation of Science.

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 11th Inst., at 6-30 P.M. Subject: Refraction (continued). Prism—Minimum deviation.

Lecture by Babu Syamadas Mukerjee, M.A., on Thursday, the 12th Inst., at 3 P.M. Subject: Analytical Conics.—Anharmonic properties of Conics.

March 7, 1896. MAHENDRA LAL SIRCAR, M.D., Honorary Secretary.

and Sikkim. Sir Mortimer Durand, then Foreign Secretary, replied, "The Government of India are sensible of the friendly disposition which prompted you to make this offer; and though they are unable to avail themselves of your help I am desirous to thank you for the good will you have shewn towards them." Though willing, pursuing the policy of his father, to help the British, General Ranabir would not do anything which would in any way detract from the independence of Nepal, and viewed with pain and disgust the conversion, by his cousin, of his country into a buffer State. He maintained his hatred for him to the last, refusing to receive from him any pecuniary assistance.

The following valued testimony to the worth of the departed comes from a distinguished European member of the Indian Civil Service: "I, too, knew General Ranabir Jung. My wife and I travelled up with him from my station to Benares on our way to Nainital in 1892, and we found him a charming companion, with polished manners and great intelligence. What a wasted life was his! Ambitious, a soldier to the tip of his fingers, warm-hearted, his were materials which few Governments would have neglected to utilise."

REIS & RAYYET.

Saturday, March 7, 1896.

THE LATE DR. REINHOLD ROST.

REUTER, to whom nothing comes amiss, did not think it fit to cable the death of Dr. Reinhold Rost. This week's mail brought this very sad intelligence to India. The first intimation of the loss of that Orientalist, for which we were not prepared and which was to us a bolt from the blue, we received in the letter we publish below. We will preface it by extracts from letters from the deceased received in Calcutta which will shew the man and his troubles leading to his death. We are extremely obliged to "W. P. D.," though he brings us sad news.

THE EXTRACTS.

1896, January 17.—I am better than when I last wrote, but cannot recover strength and spirits.

January 3.—After a long and painful illness, I am glad to be able to give you a sign of my existence and above all to wish you a happy and prosperous New Year. May your noble and disinterested efforts to promote peace, good-will and general culture be ever more successful and appreciated!

1895, July 5.—Much as I appreciate your kind letters, each gives me a sort of pang as I feel guilty that you whose time is so enormously taxed and so precious should waste even half an hour upon me. On the other hand, I am under such lasting obligations to you that I can never sufficiently shew you my gratitude; and it is but a small affair if I send you now and then a cutting that you may utilize.

Lord George Hamilton is not likely to allow himself to be led by the nose as his predecessors in office have done. If he had been Secretary of State 3 years ago I should probably still be Librarian. Now nothing can be done for me.

June 7.—You will be sorry to learn that these two years of incessant worry, anxiety and vexation have brought on diabetes, the terrible illness to which three of my best friends—Sir Henry Yule, Dr. Burnell, and Pratap Ch. Roy—have fallen victims. I am at present under the usual strict diet which may arrest the progress of the disease for a time. At any rate, it is the beginning of the end. As this result is directly traceable to the treatment I have received at _____'s hands, the world ought to know when I am gone something about it.

March 8.—The death of Sir H. Rawlinson is a great blow to me. He was my staunch friend, and I owed mainly to him my appointment to the librarian-

ship. Now all appointments are made by the grace of _____.

I have just recovered from the influenza and am still very weak.

January 11.—But what I shall soon need is remunerative work; for the catalogues on which I have been engaged since March will be completed long before midsummer. Unfortunately, my eyesight begins to fail, and my left hand is refusing to obey me, which makes writing irksome and a labour.

1894, September 28.—I will send you literary scraps as occasion offers, and write you a few lines when I think you can help a good cause or expose an abuse, but my own career has been too humble to be noticed.

August 31.—I have now, in the second half of my 73rd year, to work harder than I have done since my school days, and I may be excused for saying that I bear _____ a deadly grudge for having reduced me to this condition. However, there is no use in kicking against the pricks, and I can but work as long as my eyes can see, and my left hand can hold the pen.

September 24.—I have, like yourself, an unbounded hatred of all literary humbug and disingenuousness, just as I cherish, in the opposite direction, as unbounded an admiration of all unselfish devotion to literary research for its own sake. I simply adore men like Prof. Cowell at Cambridge who, though by far the greatest Sanskrit and Zend scholar in this country, is all but unknown outside the narrow circle of specialists, &c.

I am on good terms with Tawney whom I have known for many a long year.

On any man or question I shall at all times be most happy to give you my opinion unreservedly and to the best of my ability; this is the very least thing I could do in recognition of the noble services you have rendered me. I cannot write long letters, —my right hand had become palsied some 10 years ago, and now my left seems inclined to follow suit. Still I can dictate when I can no longer write. My literary tastes in various outlying departments which I should so much like to cultivate have to be kept under lock and key while I have to work for my bread and butter.

My cataloguing 'job' will terminate about Easter. I hope by that time my two sons will be able to earn their own living.

When I am gone, my family will be penniless, and my invalid wife will be a charge to her children, as there is no widow's pension. Most of the members of Council and the departmental Secretaries have Indian pensions in addition to their handsome salaries. I was overtaken by the superannuation rule soon after it was made, and some compensation should have been made to me; but _____willed otherwise. He is the only man living to whom I bear an implacable hatred. Even for _____who has tried to do me every possible injury I have but contempt.

February 23.—You will be pleased to learn that at last, after 14 weeks' delay, _____has placed the scheme regarding my being employed on cataloguing the printed books in Dravidian and other Indian characters before the Library Committee, and that it has been recommended. I may thus, for the next two years, by dint of working all day earn £250 per annum, which will go at least some way towards making up for the loss of £400 by my superannuation.pro-

posed that I should be paid by the number of title cards sent in to my successor, thus treating me as a literary hack, and as I am a poor man and cannot help myself, I have no option but to submit.

January 26.—Mr Tawney is doing his utmost to qualify himself by degrees for the multifarious duties and requirements of the post, fully aware as he is of his many shortcomings.

THE LETTER.

London, Feb. 14, 1896.

I am sure you and many of your readers will be grieved to hear of the death of your old friend Dr. Reinhold Rost. He went down this day week to fulfil his weekly engagement at St. Augustine's College, Canterbury. He reached the station, well apparently, but had hardly walked 200 yards before he was seized with a violent pain in the region of the heart. A passing labourer gave him his arm, but, almost immediately after, he fell to the ground and was carried to the College, where he died shortly after, without apparently recovering consciousness.

A telegram was sent to his family of his being alarmingly ill. His younger son, Surgeon Lieutenant Ernest Rost, left immediately for Canterbury, arriving at about 10 p. m., but, by that time, all was over.

His funeral took place on Wednesday, the 12th, at Hampstead cemetery, on a lovely and mild spring-day with bright sunshine, one might have thought it was mid June, instead of mid February.

The gathering at the grave was all one could desire, as a testimony of true regard for the "most eminent Oriental philologist of his day," as well as for one of the most loveable of men.

The service was conducted by the Rev. Dr. Schöll, the chaplain of the German Chapel Royal, St. James'. The India Office was represented by Sir George Birdwood, Mr. Tawney, the present Librarian, Mr. Danvers, and Mr. Wade, Sub-Librarian, who for many years had worked under Dr. Rost. St. Augustine's College by the Rev. Mr. Baggis, Ceylon by Don Wickramasinghee de Zilva, Oriental Publishers by Mr. Doubleday of Constable and Co., and Mr. Luzac, the British Museum by Professor Bendall, and among others were the Rev. E. R. Orger, the Rev. R. Gwynne, Mr. Bischoff, Mr. Waters, Mr. Pirie Duff, &c., &c.

One most pleasing feature was the presence of three messengers from the Library Department of the India Office (closed that day out of respect to the deceased) who placed a beautiful wreath upon the coffin. Another beautiful wreath was sent by the Princess Buonaparte. I enclose an obituary notice from the "Times" of the 10th instant, which you may be pleased to publish.

As soon as it was known that the family had been left with a very slender provision, a movement was at once started, with a view to bringing the name of the widow to the notice of the First Lord of the Treasury, that a grant may be made to her out of the "Civil List Pension Fund." Dr. Rost's many friends in India will be glad to hear that the movement has been most heartily responded to by many influential men representing all that is best in literature and culture. The Universities of Scotland will show the names of their two representatives in the House of Commons, the Lord Advocate and Mr. J. A. Campbell. Literature will be represented by the Rt. Hon. James Bryce, M.P., and Sir W. W. Hunter. Oriental scholarship by the illustrious Max Muller, Professor Rhys Davids, Professor Bendall, and Mr. Rapson of the

British Museum. The India Office by Sir Charles Bernard, Sir George Birdwood, and Mr. Tawney. Bombay by Mr. J. M. Maclean, M.P., for Cardiff, and India generally by Mr. Bhownaggee, M.P., and Mr. D. Naoroji.

I hope to keep you informed of the progress of the movement. It is hoped we may obtain representatives of the Universities of Oxford, Cambridge and Dublin.

In closing, allow me to say that the most prominent feature of his character was his profound humility and self-effacement. I am told by frequenters of the India Office Library, that to all alike, eminent public men like Mr. Bryce and humble natives of India residing in London for purposes of study, he was always the same obliging friend, placing at their disposal his unrivalled knowledge of Oriental languages. I am no linguist. It was only as a personal friend I had the honour of his intimate friendship for the last three years, and after more than half a century of life, and having visited nearly every country save South America, I am only speaking the words of sober truth when I say that no more Nathaniel-like a man was ever committed to the grave than my dear and most valued friend Dr. Rost, whose dust now lies in Hampstead cemetery.

I am, &c.,

W. P. D.

THE "TIMES'" OBITUARY NOTICE.

"Oriental students will learn with regret of the death of Dr. Reinhold Rost on Friday last, at Canterbury, whither he had gone on his customary weekly visit to St. Augustine's College. He was born on February 2, 1822, at Eisenberg, in Saxe-Altenburg, where his father was Archdeacon, and was educated at the Gymnasium at Altenburg and the University of Jena, graduating at the latter place in 1847. In the same year he came to this country, and shortly afterward was appointed Oriental Lecturer in St. Augustine's College. In one of his letters Dean Stanley speaks of meeting Rost at St. Augustine's, and of the deep impression made on everyone present by his immense learning and modesty. Thirteen years afterward he was appointed secretary to the Royal Asiatic Society; and in 1869 he became Librarian to the India Office, a post he held to the end of 1893, when he was retired under the recent Order in Council on superannuation. Under his unremitting care this library gradually became the most complete repository of Oriental Manuscripts in Europe, and the resort of Oriental scholars from all parts of the world. But it was not by his official labours that Dr. Rost gained his unique reputation, nor by his published works, which were far too few; but rather by the universality, the profundity, and the absolute accuracy of his linguistic attainments, and the readiness and freedom with which he placed his unbounded stores of knowledge at the unrestricted disposal of fellow-labourers. He was the most many-sided authority on Oriental philology of his day; but he always seemed more willing to work for others than for his own profit; and thus pursuing the unobtrusive tenour of his labours for close on 50 years he slowly, but surely, won not only the respect and admiration of his contemporaries for the solidity of his scholarship, but their warm affection and regard for the integrity, generosity, and modesty of his character. A full account is given in *The Times* of October 3, 1893, of Dr. Rost's services in connexion with the India Office; but his heart was always at St. Augustine's and it is with St. Augustine's and Canterbury that he will always be most fondly associated by those who knew and loved him best.

Among the works published by Dr. Rost may be mentioned a treatise on the sources of the ancient Burmese laws and a descriptive catalogue of the palm-leaf manuscripts belonging to the Imperial Public Library of St. Petersburg, 1852. He edited Professor H. H. Wilson's 'Essays on the Religions of the Hindus and on Sanskrit Literature,' which appeared in five volumes between the years 1861 and 1865; H. B. Hodgson's *Essays* (two vols., 1880) and *Miscellaneous Papers on Indo-China* (four vols., 1886-88). He also edited the last three volumes of Trubner's 'Oriental Record,' and was a contributor to the 'Encyclopædia Britannica.' He was honorary M.A. of Oxford and LL.D. of Edinburgh, and was a member of many learned societies. He was created a Companion of the Order of St. Ann in 1851, C.I.E. in 1888, Chevalier of the Order of Wisa in 1889, and Companion of the Prussian Order of the Crown in 1893. In February, 1894, in recognition of his services to Oriental literature, he received the Order of the North Star from the King of Sweden."

Everybody who knew Dr. Rost would unhesitatingly

ly admit the correctness of the testimony which the *Times* bears to his worth. He made the India Office Library what it should be, a centre of research with Oriental scholars in every part of the world. Dr. Rost always placed the stores, vast as they were, of his own knowledge at the service of others. It has been said that in this way the work he did through the minds and hands of others would be astonishing for its variety and quantity. One had only to ask Dr. Rost, and forthwith suggestions of the utmost value, with clear indications of the sources, would flow from the great scholar. A more unselfish man it would be difficult to name. He lived more for others than for himself.

It may not be generally known that the English translation of the *Mahabharata*, begun by Pratapa Chandra Roy and continued by his widow, was first suggested to the publisher by Dr. Rost. This was gratefully acknowledged by Pratapa Chandra in the prefatory notice issued with the first fasciculus of the work. That gigantic enterprise is almost completed. Dr. Rost had all along befriended it warmly. It was through his good offices that the publisher was enabled to present a copy of the English *Mahabharata* to the Queen-Empress. The English translation of Charaka also that has been begun by Pundit Abinash Chandra Kaviratna of Calcutta had Dr. Rost's hearty support. His enforced retirement, under the Treasury minute which could not properly be applied to him, from the India Office, where he was all round the most useful and the most competent man at the head of the Library, suddenly deprived him of half his income. He had not been able to make any provision for his family. This preyed upon his spirits and shortened his valuable life. It must be said in justice to the India Office authorities that Dr. Rost was allowed to complete his term for half pension. Oriental scholars visiting England used to receive Dr. Rost's hospitality. This was a heavy drain on his slender income. After his retirement, Orientalists in every part of the world combined to make up a purse for him. Learned men, however, in all countries, are never flush of cash. The purse, therefore, that was got up could not go far to relieve Dr. Rost of his anxieties.

Sweets to the sweet. It was a graceful act of the India Office to place the wreath on the grave of one whom it had forced out of its Librarianship and the world.

RECENT ADVANCES IN BACTERIOLOGY, WITH SPECIAL REFERENCE TO FOOD.

BY M. V. BALL, M. D.

Bacteriology is, comparatively, a recent science. Only within the last ten years has it received any special attention, and within this time it has been given a place in the medical colleges and become recognized as an important department of knowledge.

Municipalities are forming laboratories for bacteriological work, and governments are instituting, on a large scale, researches which must eventually be of great service to mankind. It is hardly to be expected that this subject should as yet be the common property of any but those who have made it a special study, and, therefore, a few words as to the nature of bacteria will not be out of place here.

Bacteria—from the Greek, meaning little or minute rods—is a term applied to various forms of organisms, microscopic in size, closely allied to the lower types of fungi and algae; usually containing no chlorophyl; capable, in many instances, of propelling themselves with swift motion through the liquids in which they are found, and possessing, for this purpose small cilia or flagella, like other types of microscopic plants.

They are very minute, requiring for their detection powerful lenses. Some idea of their size may be obtained from the statement that in the space of an inch from 15,000 to 20,000 can be placed side by side; but, growing together in large numbers as they do, such aggregations or colonies can readily be seen with

the unaided eye, though the individual members of these colonies cannot be recognized.

Bacteria are neither yeasts nor moulds, though possessing some of the characters of both.

The name, "bacteria," is not a good one, since other than rod-shaped organisms are collected under this group. Micrococci are globular or spherical bacteria; bacilli are the rod-shaped bacteria; and spirilli are spiral formed or twisted bacteria. The colonies of one form are not to be distinguished from the others, but under the microscope the difference in shape is readily made out.

Bacteria are quick breeders; they multiply very rapidly. From one or two germs thousands are obtained in the course of a few hours. Some one has made the calculation that a single germ, if uninterrupted in its growth, would fill an ocean with its progeny in five days; but, fortunately, it digs its own grave by the poisons it generates, and so puts a limit to its growth. Some require several days before germination occurs. Two kinds of growth are known: One, in which reproduction is a process of fission or segmentation—one bacterium dividing itself into two, and each of these again sub-dividing—in reality, a continuation rather than a reproduction. And a second kind, known as sporulation. The germ gives rise to a spore, the spore then takes on a separate existence, and, when the conditions favourable to maturation exist, it gives rise to a new germ.

Both forms of growth are utilized by the same bacterium. Under ordinary conditions it multiplies by fission when a permanent form is advantageous, or, as some think, when the soil is particularly rich, it produces spores. Spores have not been found in all bacteria; those possessing them are very resistant to all physical and chemical agencies, and withstand a high degree of heat without being destroyed.

For the different bacteria different conditions are necessary. Just as different plants require different kinds of soil and temperature, so these minute plants react differently and demand for their growth various surroundings. Some are not at all particular, and flourish on any sort of soil. They are like weeds that grow without attention; others again are as sensitive as hothouse plants, and require very carefully prepared media and a suitably regulated temperature. While some species demand a plentiful supply of oxygen, others grow only when this is excluded. Sunlight is usually destructive; an alkaline medium is better tolerated than a neutral one, and acids are usually harmful. Moisture is necessary to growth.

Bacteria are not only disease producers, they manufacture a host of products beneficial and essential to life. Life itself depends, in a great measure, upon the actions of these minute plants, which transform the complex molecules into their elements and make them fit for assimilation. If we could separate the industrial germs from the pathogenic or disease producers and domesticate the former, while we drive the latter out of existence, life would be more worth the living. This is gradually being attempted. Scientists are pointing out to us the properties of individual varieties and showing us the methods of cultivation; while hygienists and therapeutists are doing all they can to exterminate the destroyers of life; so that we can already see how, in a few years, cholera will be a rare disease, and tuberculosis will no more be counted as the cause of one-fifth of all deaths.

What advances, if any, have been made in recent years as relates to the subject of foods? This is the topic I have been asked to consider: "Bacteria in their relation to food."

First of all, I desire to take up the most important of foods, namely, water. Water is a food, because it is necessary to sustain life, and considered in this sense, air might also be classed as a food. But whether or not we call water a food, there are other reasons sufficient for us to make it a matter for consideration here.

Formerly a good water was one which came up to a certain chemical standard. The amount of chlorides and nitrates was determined, the hardness was computed and the total amount of solids ascertained. If a water did not contain more than one grain of chlorine per gallon, it was deemed potable. To-day, while chemical analysis still has an important place in the examination of water, it must go hand in hand with the biological or bacteriological analysis, and we must know what sort of living organisms inhabit or are to be found in the specimen in question.

In the early days of bacteriology much stress was laid upon the number of bacteria found in a given quantity of water, and water containing more than 500 colonies to the cubic centimeter was deemed unfit for drinking, but now it is not so much the quantity as the quality of the bacteria that is looked for. One typhoid bacillus in a gallon of water is more dangerous than one million ordinary water bacteria; in fact, it would render the water impotable, while the latter would be harmless. Thus, the water analyst of to-day must be a competent bacteriologist as well as a chemist; and to be a bacteriologist means a pathologist as well, for, in the investigation of bacteria, animals must be used for experiment, and the nature of the diseases caused by the bacteria must be known to the experimenter.

As in the earlier chemical analyses, the chlorine itself was not

considered dangerous, but simply one of the indications of faecal contamination, so in the bacterial examination, the presence of certain harmless germs may indicate dangerous contaminations. For instance, the presence of the bacilli commonly found in human faeces, which in themselves are non-pathogenic, would, of course, lead one to infer that human sewage had become mixed with the water supply.

The methods for the detection of typhoid bacilli in drinking water leave much to be desired. The examination is often undertaken too late, when the bacilli are no longer present, or have been destroyed by the ordinary water bacteria. Typhoid bacilli do not long in ordinary drinking water; and yet, if the water be contaminated with them, a whole city or district can become infected in a short time, and when suspicion is directed to the water the germs have disappeared. To a less degree this is likewise true of the cholera spirillum, which acts so quickly and is so deadly, and which usually is spread through the drinking water.

A method lately described, and which promises success, is to take a large quantity of the suspected water (2000 cubic centimeters) and add to it 2 grammes of peptone and 2 grammes of chloride of sodium. Place this in the incubating oven, and, if cholera germs are present, they will multiply rapidly, so that they can readily be detected in the course of ten to twelve hours.

Bacteric examinations have been most useful in the testing of water filters, "germ proof" filters, etc. Several filters are now in the market, which claim to be germ proof; that is to say, which are supposed to prevent the passage of bacteria through the very minute pores of the filter. These filters are made of baked clay, infusorial earth, porcelain, etc. As a rule, they can deliver a germless water only for a few days in succession, when owing to the activity of the bacteria which have collected on the surface of the filter cylinder, the pores are penetrated by the growth, and more bacteria than usual find their way into the water. This, in some cases, can be prevented by a careful cleansing, every few days, of the filter tube. All tubes are not alike, and some afford no protection at all, though they clarify the water by keeping out the grosser particles of dirt.

Filters are best tested by adding to the water, before filtration, some well known bacterium (usually the red pigment forming and rapid growing *Bacillus prodigiosus*) making cultures before and then after filtration. If under suitable precautions the germ is found present in the filtered water, the filter is imperfect. In the testing of large filtering plants, where it is not expected that the water will be perfectly free from germs, quantitative methods must be used in order to tell what percentage of bacteria is left behind.

The large filtering plants are in use in several cities, and, it seems to me, they are of doubtful value only. It is true the water is more pleasing to the eye, and, for toilet and laundry purposes, more valuable; but if the water is contaminated with disease germs, there is no surety that they will be among the 50 per cent. filtered out. They are just as liable to pass through as the others, and such a water is not safe. From the sanitary point of view, filtering plants are only valuable when the water is uncontaminated by human sewage, and to erect such a plant in our city, without paying any attention to the source of our water supply, and even allowing it to be polluted along its whole course, will hardly reduce the death rate, though it may add to the æsthetic quality of the water.

On an average, 500 deaths occur every year in this city from typhoid fever. This means at least 6,000 cases. From an economic point of view, the persons affected are the most valuable members of society, chiefly young adults between the ages of 20 and 40. The expense, in loss of time, medical attendance, etc., is at least \$100 for each case, a total cost of \$600,000 yearly from this one disease, to say nothing about the loss of life; and all because we are obliged to drink the sewage of half a dozen towns above us, and the drainings from graveyards and pigsties along the banks of the Schuylkill.

And while we are thus treated by the cities above us, we send our sewage to the towns below. Some strict measures must be put into practice, which will prevent this pollution of our drinking water.

The second important article of food, with which bacteriologists have busied themselves, is milk. A good milk must contain a certain amount of solids and fat, but it can be adulterated with far more harmful matters than water, and these other adulterations are not so easily detected.

A few hours after milking, ordinary milk has been found to contain 1,000,000 germs to the cubic centimeter. How did these get in?

If the udders of the cow are not kept clean, the first flow of milk will wash the dirt into the milking pan. If the man who milks the cow is uncleanly in his habits, using dirty hands in the operation, the milk receives this dirt. If the stall is the place for milking, and other animals are moving about, the dust raised falls

into the open pail and contaminates the fluid; and, finally, in the transportation from the farmer to the collector, from the dealer to the customer, a hundred opportunities present themselves for the entrance of bacteria, which, when once in, thrive abundantly, the milk being a rich and suitable soil for their growth.

In the markets of Halle, Berlin and Leipsic, Ranke succeeded in finding in the milk exposed for sale, considerable quantities of cow dung, which, of course, greatly increased the number of germs to the cubic centimeter—in one case up to 169,000,000.

Bolle, the milkman of Berlin, who sells 60,000 quarts of milk daily, has endeavoured to make his large establishment conform to scientific requirements. He has a competent bacteriologist, who makes frequent examinations of the product. The milk is obtained from such dairies only as are under his inspection. Separate examinations are made of the different herds, so as to trace disease to its proper source. The collected milk is filtered each day through immense sieves of gravel, which have first been subjected to a high degree of heat in order to sterilize them. The milk is forced through from below upward, and collected in proper vessels. Four thousand quarts pass through such a filter in one hour. By this means the dirt is removed and with it about 50 per cent. of the bacteria present.

While this filtered milk keeps longer than unfiltered, and is more readily sterilized, it is just as dangerous if disease germs were originally present, since, as was stated above, in connection with the filtration of water, the disease germs are just as likely to be among the 50 per cent. that pass through as to be among those that remain.

In order to render milk completely sterile, it must be subjected to such a degree of heat as will coagulate the casein and make the product undesirable in other ways. If, however, great care be exercised in the milking and sterilization be carried on at once or shortly after, a very moderate degree of heat will be sufficient to make the milk entirely sterile.

One of the bacteria that is often found in milk has very resistant spores and, therefore, if milk becomes contaminated by exposure to the dust and dirt of the air or stall, ordinary warming or heating, as is done when milk is pasteurized (so-called sterilized milk), will not suffice to destroy these spores.

Milk is often sold to us in bottles, and one would imagine that such a product was reasonably clean; but this bottling is done in a very careless way, often in the street by some ignorant delivery boy, while the street sweeper is raising clouds of dust, some of which lodges in the exposed milk.

In one dairy in Dresden, Germany, all the milk comes from stall fed or dry fed cows, experience having shown that such cows give a product that is less variable and contains fewer germs and sours less speedily than when they are fed on fresh grass. Great care is taken in the milking, and especial attention is paid to the cleanliness of the employees. After the milking the milk is placed in coolers, where it remains two hours at a temperature of 10° C. Then it is put into a centrifuge in order to separate the dirt that might accidentally have fallen in. It is now warmed up to 65° C. (pasteurized) and collected in half pint sterilized bottles, and the filled bottles again heated for one hour and three-quarters at 65° C. and quickly cooled. Such milk is reasonably sterile, and the method is the only one to be recommended.

Unless all these steps are followed, the milk cannot be considered sterile.

What danger is there in milk from tuberculous cows? This is a question which, just at present, is receiving considerable attention.

Tuberculosis is very frequent among cattle. In the slaughter houses of Berlin out of 142,000 head of cattle 21,000, or 15 per cent., were found to be tubercular. In all Prussia 10 per cent. of all the cattle slaughtered annually are found to be affected with this disease. Some veterinarians claim that 30 per cent. of all cows are infected, and that a herd cannot be found that is entirely free from the disease. From this one can readily see the importance of this question. In New York City 900,000 quarts of milk are consumed daily. Consumption is likewise a very common disease, causing from one-third to one-fourth of all the deaths among adults, and many, if not the greater number, of the diseases of children are tubercular in origin.

Is the cow an enemy to man? Are we warranted in accusing the milk of consumptive cows as being the cause of consumption in man? The last word has not yet been said on this subject. We can only give the opinions of authorities, the present beliefs gained from the knowledge at hand; and these are that if the udders of a cow are unaffected, if there is no local tuberculosis, no bacilli are to be found in the milk, the milk may be considered safe. Yet later investigations have shown that the toxic principles of bacteria find their way into the milk, that the milk of an animal rendered immune to diphtheria or tetanus has the same properties as the serum of the blood, and can protect other animals. If this is uncontroverted, then the milk of tuberculous or consumptive cows may have within it the products of the tubercle bacilli, and such milk may have the same effect upon

the human organisms as these products obtained artificially or from cultures outside of the body. The discussion on the benefits or ill effects of tuberculin has not yet been closed, and it is impossible to say, therefore, whether such milk, i. e., milk containing tuberculin, is positively harmless or dangerous.

In Paris all cows whose milk is offered for sale must be tested with tuberculin to prove their freedom from tuberculosis. Our own board of health has strongly advocated a similar test.

Tuberculin has been found reliable in the greater number of cases, i. e., if an animal showed signs of temperature rise after the injection of the tuberculin, the disease has always been found present; but the disease has been found when no rise has occurred, so that it is a positive test only. Tuberculosis is present whenever there is a rise of temperature, but it is not necessarily absent if no reaction occurs.

Because tuberculosis is so very frequent, because 2,700 deaths of adults between 15 and 45 occur every year in this city alone from this one disease, it behoves us to try every measure that holds out the slightest chance of success in reducing this awful mortality; and, therefore, if only as an experiment, it would be worth the time and money to destroy every suspicious animal and thus prevent the sale of all milk save that obtained from perfectly sound cows. Any reduction in the death rate from this disease will be step in advance, and efforts should be directed to this end at all cost.

If the milk of consumptive cows is dangerous, then cheese and butter made from such milk is likewise dangerous, and the sale of such should be equally guarded against.

In Germany, butter has been made from sterilized milk by the addition of pure cultures of certain bacteria, which have the power of coagulating the milk. Such butter has a constant flavour, and does not deteriorate so quickly as butter produced in the ordinary way.

To summarize in regard to milk we can say that, (1) a careful inspection of the dairy; (2) a close examination of the cattle; and (3) cleanliness in the transportation and sale, must be rigorously enforced to safeguard the public health.

As regards meat, little has been said or done. Meat is rarely used in the raw state, and cooking generally renders ineffective the germs likely to be found present.

In the cities of Europe, careful inspection is practised at the abattoirs and meat from diseased cattle is excluded or sold under restrictions. Meat shops are likewise kept very clean, and the meat is seldom exposed in filthy warehouses. In our own cities some of the meat offered for sale on the stands and in street shops is most unfit for food—some of it, indeed, in a state of putrefaction. Some cities have laws which make such meat liable to seizure, but these laws are self-operative.

The advances in fermentation deserve attention, for though they are not, strictly speaking, connected with our subject, yet so closely are the yeasts related to bacteria, and so similar are the methods of cultivation, that any discoveries in the one field are sure to be of value in the other. Bacteria have always been a disturbing element in industrial fermentations and expensive methods have been resorted to to prevent the entrance of disease germs—disease here meaning impure or improper germs.

The yeasts were formerly considered as few in number—as alcohol producers and non-alcohol producers; no serious efforts were made to obtain pure cultures, but the mashies and brews were kept under such conditions that the foreign germs were prevented from growing or multiplying. Beer was stored in ice cellars, whisky was subjected to special temperatures, and other elaborate measures were used which can now be dispensed with if we start with pure cultures of yeasts at the beginning and avoid the entrance of impurities from air, water, etc.

In Denmark, Hansen (and from him a school has originated) pays great attention to the cultivation of pure yeasts. Brewers can obtain from the laboratories such pure cultures and thereby insure a definite alcoholic strength, a constant flavour and a product that will not deteriorate, even under varying conditions of temperature, etc.

By experimenting with different combinations of yeasts, various degrees of bitterness and different aromas can be developed.

Wines depend very largely for their bouquet, not so much upon the grape as upon the particular germ or germs used in the fermentation of the juice. Experimenters have obtained, with the same kind of grape, a half dozen different wines by using as many different yeasts. As the pigment yeasts produce various colours, so the yeasts used in fermentation give rise to various ethers, and these ethers give the wine its peculiar bouquet.

We should expect to obtain a Rhine wine from a New Jersey grape by using the yeasts which are common in the Rhine region or on the Rhine grape. Even out of apple must a good testing wine has been produced by the use of particular cultures of yeasts.

These researches have revolutionized German brewing, and the large breweries now have competent bacteriologists in their employ, who attend to the cultivation of their yeasts.

The spaces or holes peculiar to certain cheeses are due to the evolution of gases during the ripening process. These gases are

produced by certain bacteria, and by using pure cultures of these gas-forming bacteria in the manufacture of cheese, these air spaces will always occur. The odour of cheese is likewise due to bacteria, and special flavours can thus be obtained at will by using the particular germs.

Bread made from pure yeasts will be found to be more digestible, to be lighter and to possess a sweeter flavour. Too little attention has been paid to this in baking. Mixtures of yeasts and bacteria are used, and the baking powder of the flour is blamed for poor results. Sour bread is usually due to a poor quality or impure kind of yeast. The soil out of which we obtain such important food stuffs has been studied bacterially and has been found to contain peculiar germs, which are all necessary to the growth of the plant. These are the so-called nitrogen-forming bacteria.

They convert the nitrates into nitrites, the oxidizers of organic material more necessary to the well being of vegetable life than anything else. Instead of using tons of fertilizers, the agriculturist of the future will cover his fields with cultures of the nitrogen germs and obtain better results. We will even have special germs for special plants. The science of agriculture is yet in its infancy, if we may believe that promises held out to it by bacteriology. Even at present the agricultural colleges are equipping themselves with laboratories for bacteriological research.

Thus I have tried to show that the recent advances in this science are as nothing compared with what may yet be expected; that in these germs, microbes and bacteria, mankind has deadly foes and also important friends; that we must do all we can to rid ourselves of the former and make the latter our willing slaves.—*Scientific American Supplement*, Nov. 30, 1895.

WHY NOT LIVE A CENTURY?

"IN the coming time," said a famous English poet, "a man or woman eighty or one hundred years old will be more beautiful than the youth or maiden of twenty, as the ripe fruit is more beautiful and fragrant than the green. These ripe men and women will have no wrinkles on the brow, no grey hair, no bent and feeble bodies. On the contrary they will have perfect hearing, clear eyesight, sound teeth, elastic step, and mental vigour."

Does this sound absurd and impossible? Why should it? People over one hundred years old are frequently met with in these days, as they have been as far human records go back. A man is of no real value until he is past fifty and gained control of his passions and acquired some practical wisdom. After that he ought to have from fifty to seventy-five working years before him. Whoso dies short of one hundred (bar violence) dies of his own folly or that of his ancestors, one chief thing, however, we must learn. What is it? Take an illustration—such as we see multitudes of on every side.

Mr. Richard Leggate of New Bellingbroke, near Boston, Lincolnshire, is a man now somewhat over seventy. He is a farmer, well known and highly respected in his district. In the spring of 1891 he had an attack of influenza from which he never fully recuperated. The severe symptoms passed away, of course, but he remained weak. No doubt food would have built him up, provided he could have eaten and digested it. Yet here was the trouble, his appetite was poor, and what little he took, as a matter of necessity rather than of relish, seemed to act wrong with him. Instead of giving him strength it actually produced pain and distress in the sides, chest, and stomach.

Then again—which is a common experience—he would feel a craving for something to eat; yet on sitting down to a meal, in the hope to enjoy it, the stomach would suddenly rebel against the proceeding, and he would turn from the table without having swallowed a mouthful.

Nothing could come of this but increasing weakness and it wasn't long before it was all he could do to summon strength to walk about. As for working on his farm, that to be sure, was not to be thought of. He had a doctor attending him, as we should expect. If the services of a learned medical man are ever needed they must be in such a case—when nature seems to be all broken up, and the machinery runs slow, as our family clocks do when we have forgotten to wind them at the usual hour.

Well, Mr. Leggate took the prescribed medicines, but got no better. He asked the doctor why that was and he appeared to be puzzled for an answer at first. Naturally enough a doctor doesn't like to admit that his medicines are doing no good, because he expects to be paid for them; and then there is his professional pride, besides.

However, he finally said, "If my medicines fail to make you better it is owing to your age." That idea was plain as a pikestaff, and if the patient had never got any better afterwards, why who could dispute what the doctor said? Nobody, of course. It would look just as though Mr. Leggate were really going to pieces from old age. But something subsequently happened which spoils that easy theory of the case. What it was he tells us in a letter dated February 3rd, 1893.

"After doctoring several months without receiving any benefit, I determined to try Mother Seigel's Curative Syrup. I got a bottle from Mr. G. H. Hanson, Chemist, New Bellingbroke. After taking the Syrup for a week I was much better. I had a good appetite, and what I ate digested and strengthened me; and by the time I had taken two bottles I was well and strong as ever. You may publish this statement if you think proper. (Signed) Richard Leggate."

So it proved, after all, that Mr. Leggate was not suffering from old age (at seventy? Nonsense!), but from indigestion and dyspepsia. When Mother Seigel's great discovery routed that, he felt "well and strong as ever."

Now for the moral: It is not Father Time who mows people down thus early in life; it is the Demon of Dyspepsia. Keep him away—and barring accidents—you may live a century.

THE MAHOMEDAN LITERARY SOCIETY OF CALCUTTA.

The thirty-second Annual Conversazione of the Mahomedan Literary Society of Calcutta will be held at the Town Hall, on Monday, the 23rd instant, at 9-30 P.M.

A. F. M. ABDUR RAHMAN,
Honorary Secretary.

ALLAN'S ANTI-FAT
PURELY VEGETABLE, Perfectly Harmless.
Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into Fat, sold by Chemists. Send stamp for pamphlet.
Botanic Medicine Co.,
8, New Oxford-street,
London, W.C.

CAUTION!

It having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (*vis.*, 4 annas, 8 annas or 9½d, 12 annas or 1s. 1½d. and Rs. 2 or 2s. 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes, the prices have been obliterated and the boxes represented to be of higher value than they really are.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that was nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unimpaired by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but presents the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Saubikata, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kimpotee says:—A Corporal offered Rs. 30 for the very same watch, Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

WESTERN INDIA TRADING CO., BOMBAY.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

CALCUTTA, SATURDAY, MARCH 14, 1896.

WHOLE NO. 216.

CONTEMPORARY POETRY.

ROBERT BURNS.

A fire of fierce and laughing light
That clove the shuddering heart of night
Leapt earthward, and the thunder's might
That pants and yearns
Made fitful music round its flight :
And earth saw Burns.

The joyous lightning found its voice
And bade the heart of wrath rejoice
And scorn uplift a song to voice
The imperial hate
That smote the god of base men's choice
At God's own gate.

Before the shrine of dawn, wherethrough
The lark rang rapture as she flew,
It flashed and fired the darkling dew :
And all that heard
/With love or loathing hailed anew
A new day's word.

The servants of the lord of hell,
As though their lord had blessed them, fell
Foaming at mouth for fear, so well
They knew the lie
Wherewith they sought to scan and spell
The unsounded sky.

The god they made them in despite
Of man and woman, love and light,
Strong sundawn and the starry night,
The lie supreme,
Shot through with song, stood forth to sight
A devil's dream.

And he that bent the lyric bow
And laid the lord of darkness low
And bade the fire of laughter glow
Across his grave,
And bade the tides above it flow,
Wave hurtling wave,

Shall he not win from latter days
More than his own could yield of praise ?
Ay, could the sovereign singer's bays
Forsake his brow,
The warrior's, won on stormier ways,
Still clasp it now.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

He loved, and sang of love : he laughed,
And bade the cup whereout he quaffed
Shine as a planet, fore and aft,
And left and right,
And keen as shoots the sun's first shaft
Against the night.

But love and wine were moon and sun
For many a fame long since undone,
And sorrow and joy have lost and won
By stormy turns
As many a singer's soul, if none
More bright than Burns.

And sweeter far in grief or mirth
Have songs as glad and sad of birth
Found voice to speak of wealth or dearth
In joy of life :
But never song took fire from earth
More strong for strife.

The daisy by his ploughshare cleft,
The lips of women loved and left,
The griefs and joys that weave the web
Of human time,
With craftsman's cunning, keen and deft,
He carved in rhyme.

But Chaucer's daisy shines a star
Above his ploughshare's reach to mar,
And mightier vision gave Dunbar
More strenuous wing
To hear around all sins that are
Hell dance and sing.

And when such pride and power of trust
In song's high gift to arouse from dust
Death, and transfigure love or lust
Through smiles or tears
In golden speech that takes no rust
From cankering years,

As never spake but once in one
Strong star-crossed child of earth and sun,
Villon, made music such as none
May praise or blame,
A crown of starrier flower was won
Than Burns may claim.

But never, since bright earth was born
In rapture of the enkindling morn,
Might godlike wrath and sunlike scorn
That was and is
And shall be while false weeds are worn
Find word like his.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Above the rude and radiant earth
That heaves and glows from firth to firth
In vale and mountain, bright in dearth
And warm in wealth,
Which gave his fiery glory birth
By chance and stealth.

Above the storms of praise and blame
That blur with mist his lustrous name,
His thunderous laughter went and came,
And lives and flies ;
The roar that follows on the flame
When lightning dies.

Earth, and the snow-dimmed heights of air,
And water winding soft and fair
Through still sweet places, bright and bare,
By bent and bye,
Taught him what hearts within them were :
But his was fire.

ALGERNON CHARLES SWINBURNE.

—The Nineteenth Century.

WEEKLYANA.

A SUPPLEMENT to the *London Gazette* of Friday, February 14, contains the following letter from the Queen to the Right Honourable the Secretary of State for the Home Department :—

“OSBORNE, Feb. 14, 1896.

I have, alas ! once more to thank my loyal subjects for their warm sympathy in a fresh grievous affliction which has befallen me and my beloved daughter, Princess Beatrice, Princess Henry of Battenberg.

This new sorrow is overwhelming, and to me is a double one for I lose a dearly loved and helpful son, whose presence was like a bright sunbeam in my home, and my dear daughter loses a noble devoted husband to whom she was united by the closest affection.

To witness the blighted happiness of the daughter who has never left me, and has comforted and helped me, is hard to bear. But the feeling of universal sympathy so touchingly shown by all classes of my subjects has deeply moved my child and myself, and has helped and soothed us greatly. I wish from my heart to thank my people for this, as well as for the appreciation manifested of the dear and gallant Prince who laid down his life in the service of his adopted country.

My beloved child is an example to all in her courage, resignation, and submission to the will of God.

VICTORIA, R. I.”

By her Majesty's command a full record of the ceremonial attending the arrival of the remains and the sepulture of Prince Henry of Battenberg was issued by the Lord Chamberlain's department, on gray foolscap with broad black edging. A plan of Whippingham Church, with the allotment of seats, is appended.

IN the House of Lords, on February 20, the Earl of Pembroke (Lord Steward of the Household) brought up and read the following message from Her Majesty :—

“I thank you sincerely for your loyal and dutiful address, and especially for your expressions of sympathy with me and my dear daughter, the Princess Beatrice, on the death of my beloved son-in-law Prince Henry of Battenberg. The assurance of your participation in the general feeling of sorrow for my bereavement has given me very great consolation.”

WE read in an English paper that “Yvette Guilbert has returned to Paris from America, where she made £8,000 chiefly by singing nigger and English ditties.” Not a pleasant association for Englishmen ! It is akin to dogs and natives.

THE normal span of human existence is not three score and ten, but, according to Sir Benjamin Ward Richardson, five score and ten. He thinks that seven out of ten average people would, if they took proper care of themselves, attain that age.

REGULATION No. II of 1896—a Regulation to amend the Law for the Suppression of Crime on the Frontiers of Upper Burma and the Hill District of Arakan—extending to the Upper Chindwin, Pakokku and Mmbu Districts, and to the Hill District of Arakan, and coming into force at once—provides :—

“3. In the event of any frontier tribe, clan (meaning any

sub-division or section of a tribe) or village (meaning village-community and including a group of village) acting in a hostile or unfriendly manner to the British Government or raiding on any other frontier tribe, clan or village under the protection of the British Government, the Deputy Commissioner may, with the sanction of the Commissioner and subject to the control of the Local Government, detain all or any members of the hostile or unfriendly tribe, clan or village, detain or confiscate their property, debar members of the tribe, clan or village from access into British territory, and prohibit British subjects from all intercourse with the tribe, clan or village.

4. No action shall be taken in the case of any tribe, clan or village under section 3 until after the Deputy Commissioner shall have, in such manner as the Local Government may, by general or special order, direct, specified by name, and indicated the position of, the tribe, clan or village against which action is to be taken, and prescribed the limits in British India beyond which members of the tribe, clan or village shall be debarred from passing.”

HERE is a Proclamation, in the Foreign Department, by the Governor-General in Council :—

“Fort William, the 4th March, 1896.

No. 469-E.—Whereas Saw Hsari, heretofore Myosa of the Keng Cheng State, by contumaciously refusing to obey orders lawfully addressed to him by duly empowered British officers, and otherwise impeding the exercise of Her Majesty's authority within the said State, has justly forfeited all right and title to the exercise of any authority within Her Majesty's Dominions. Know all men and it is hereby proclaimed and declared that the Governor-General in Council, with the sanction and approbation of the Secretary of State for India in Council, is pleased to order that the said Saw Hsari, heretofore Myosa of Keng Cheng, shall not henceforth exercise any authority or jurisdiction in any part of Her Majesty's possessions or sphere of influence.”

The head and front of Myosa's offending is that he fled from Mongsin when it was occupied by British troops and has not, after being called upon, re-appeared since, though the district has passed under French control. It is explained that the proclamation is necessary, as a portion of territory over which the proclaimed chief exercised control lies west of the Mekong,—an explanation which itself requires explanation.

IT is Gazetted—

“1. With the sanction of the Secretary of State for India, the Governor-General in Council is pleased to notify that, from the 1st April, 1896, the following changes in the organisation of the Indian Medical Services will have effect.

2. The medical services of Bengal, Madras and Bombay will be amalgamated into one service under the direct administrative control of the Government of India.

3. The Surgeon-General with the Government of India will be the head of the amalgamated Indian Medical Service, and his designation will be Director-General of the Indian Medical Services.

4. No change will be made in the conditions under which officers of the Bengal, Madras and Bombay Medical Services, appointed before the second examination in 1896, are serving ; promotion will continue to run on their respective lists, and the sphere of their employment will remain as at present, except in cases of emergency, when it may be desirable to employ them temporarily beyond it. In time of war all officers who can be spared from civil duties will be employed as the exigencies of the service may demand.

5. From the date of the second examination in 1896, Surgeon-Lieutenants will be recruited for the amalgamated Indian Medical Service, and the appointments will be made on one general list. Subject to the requirements of the service, officers will be allowed choice of Commands according to their position on the list as determined by the combined results of the preliminary and final examinations. The officers appointed to this list, although ordinarily employed within the Commands to which they may be posted, will be liable to employment in any part of India according to the exigencies of the service. The subsequent transfers to civil duties will ordinarily be allotted, so far as the requirements of the service will allow, to the provinces within the limits of the Command to which the officers were originally posted.

6. The present Surgeon-Generals with the Governments of Madras and Bombay will retain their claim to rank, pay, and pensions under existing rules. The question of the continuance of these privileges to their successors in office will be reserved for future consideration.

7. The Surgeon-Generals will be restricted to the exercise of the functions of Administrative Medical Officers and Civil Inspector-Generals of Hospitals in respect to the Civil Medical Staff and Civil Medical Institutions in the Presidencies of Madras and Bombay, respectively. They will cease to exercise any control over those sections of the existing medical establishments of Madras and Bombay which are composed of officers employed with the army, or over the reserve of 25 per cent. for leave and casualties, the administration of which will be conducted directly under the orders of the Government of India.

8. The post of Secretary to the Surgeon-General with the Government of Madras or Bombay will be retained for the present incumbents of the office of Surgeon-General with those Governments. On a vacancy occurring in the post of Secretary to the Surgeon-General, Madras or Bombay, it will only be filled by an officiating officer, and when the present Surgeon-Generals vacate their appointments, their successors will not have Secretaries but only Personal Assistants.”

It having been decided that the Presidency and Post Office Savings Banks should be amalgamated, and the Post Office organisation being more economical than the other system, the Government Presidency Savings Bank will be closed from the 1st of October, 1896. In the meantime, no new accounts will be opened in any of the Presidency Saving Banks. The transfer of existing accounts will be made gradually between April and September. All transfers will be made to the Presidency Post Office, with liberty to depositors to apply for transfer of their accounts to Post offices of their choice.

THE services of Mr. G. E. Manisty, Officiating Accountant-General, Bengal, being replaced at the disposal of the Home Department, Mr. R. E. Hamilton, Accountant-General, Punjab, comes to Bengal. Mr. A. G. Chuckerbutty, Deputy Accountant-General, acts as Accountant-General, Punjab.

MR. A. Forbes having been granted furlough for eight months, Mr. J. A. Bourdillon, Commissioner, Burdwan Division, acts as Commissioner of the Patna Division, and Mr. C. E. Buckland, from the Bengal Secretariat, officiates as Commissioner of the Burdwan Division, Mr. C. W. Bolton, temporary Additional Commissioner, Patna Division, replacing Mr. C. E. Buckland as Secretary in the General, Revenue and Statistical Departments. With his transfer Mr. Bourdillon has resigned the membership of the Bengal Legislative Council.

MR. Ambika Charan Sen, Officiating Magistrate and Collector, Puri, will act as District and Sessions Judge of Cuttack, while Mr. F. E. Pargiter is away on leave.

TO SIR ALEXANDER MACKENZIE, K.C.S.I.,
LIEUTENANT GOVERNOR OF BENGAL.

All hail, thou rightful heir of Banga's Kings !
The happy throne, that erst was stranger-filled,
Recalls its golden wont. See, joy doth gild
Each face, and light each eye ; with rapture rings
From million throats one burst of loud acclaim ;—
To see thee, laurel-crowned, return once more
From Peishwa's land, and Ava's rubied shore,
To where thou saidst of old,—"I'll conquer fame !"
Come, royal wanderer, the house restore,
Our East loves best the son in father's place :
Rough-wrench her treasured custom,—tear-drops pour
From her sad eye, and glide adown her face !
Now, shot with beams of joy, and dim no more,
The tear-drops weave the glorious rainbow's radiant grace !
B. C. MITRA.

March 2, 1896.

NOTES & LEADERETTES, OUR OWN NEWS

&
THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

HER Majesty has arrived at Cimiez. The Emperor of Austria will prolong his stay in the Riviera, in order to visit the Queen. It is reported that he desires to promote a reconciliation between Great Britain and Germany.

CHINA has refused the offer of a loan from a French Syndicate, although the same is backed by the French Government. Negotiations for a loan were made between the Chinese Government and an Anglo-German Syndicate. The preliminary contract has been signed at Peking. It provides that the Customs service shall remain unaltered.

LORD Lansdowne, in a memorandum relating to the Army Estimates, says that recent events in Africa render it impossible to reduce the Egyptian garrison during the current year.

THE Venezuela Blue-book, just published, contains elaborate replicas of the ancient Dutch and Spanish maps, which show generally that the British are the lawful successors of the Dutch. The British

claim rests upon the effective possession of the country in dispute by the Dutch and British for over two centuries. The American press, commenting on the Venezuela Blue-book, asks that if the British case is so good then why not arbitrate ?

REPORTS about the Italian disaster say that a whole brigade was annihilated after a most heroic resistance. The enemy numbered a hundred thousand men. King Menelik is advancing slowly towards Adigrat. The roads to Kassa are still open. In this dilemma, Italy has opened peace negotiations with Menelik. The *Times'* correspondent at Cairo states that two large Dervish forces are advancing on Kassa, and that raiding parties at Dongola are preparing for a descent on Egypt. The same correspondent states that a disaster at Kassa will revive the Mahdist movement, especially in the direction of Suakin and Tokar.

THE *Novoe Vremya* has opened a fund in aid of those wounded in Menelik's army in the late battle with the Italians.

VIOLENT anti-American demonstrations have taken place in many towns in Spain, and a state of siege has been declared at Valencia.

COUNT Goluchowski, the Austrian Foreign Minister, has arrived at Berlin for the purpose of conferring with Prince Hohenlohe regarding the situation and specially relative to Italy. He has had two long interviews with the Emperor William. The *Cologne Gazette* states that Germany and Austria are determined loyally to support their ally.

THE new Italian Cabinet has been formed as follows :—The Marquis Rudini, Premier ; General Ricotti, Minister of War ; Signor Brin, for Marine ; the Duke Sermoneta, for Foreign Affairs ; and Signor Branca for Finance.

FOR his Asiatic explorations, Prince Henri of Orleans has been appointed a Chevalier of the Legion of Honour.

MR. Goschen, replying to certain criticisms in the House of Commons on the Navy Estimates, said that the policy of Government was to have a force sufficient to defend the interests of the Empire in all parts of the globe. The present programme, he said, was settled in November last, and it was therefore absurd to suppose that it was the outcome of the events in Venezuela and the Transvaal. Great Britain, he added, had now nearly as many ships in commission as all Europe put together.

SIR Richard Webster, opening the case for the prosecution of Jameson, made a temperate speech, and described the departure of the expedition, which, he said, had clearly been long prepared. He recognized the personal gallantry of Jameson and his officers, and proved that Colonel Grey had told the men they were going straight to Johannesburg to maintain British supremacy in South Africa. Witnesses were called who confirmed this. The prisoner was remanded for a week on bail.

THE Commons, by a majority of eighty-five votes, have passed a resolution in favour of the opening of Museums and Art Galleries on Sunday.

THE *Times'* correspondent at Odessa states that the despatch of Russian troops to the Far East actively continues, although the Russian force there already exceeds ninety thousand men.

THE Washington Congress is disposed to drop the Cuban affair.

THE Sultan has conferred the Order of Imtiaz on M. Nelidoff. This is regarded as cementing the tacit Russo-Turkish agreement.

MR. Chamberlain has appointed Colonel Sir Richard Martin Commandant-General of Bechuanaland and Rhodesia and Deputy Commissioner of South Africa. The *Standard* considers that this appointment is a serious curtailment of the privileges of the Chartered Company.

THE *Times* strongly condemns the proposal of Government to grant a retiring allowance of eighteen hundred pounds a year to the Duke of Cambridge in addition to his existing emoluments. The grant, it states, is contrary to regulations, and to the decision of the late Government, in which Mr. Balfour at the time acquiesced. The *Times* recommends the Duke to decline the allowance beforehand. Mr. Campbell Bannerman has given notice that he will bring forward a motion in the House for the rejection of the proposed vote.

SIR Henry Brackenbury's Volunteer Bill, which became law last Thursday, enlarges the powers hitherto exercised by the executive of demanding the service of citizen-soldiers in times of civil commotion. Their liability to be ordered to a distance from their hearths and homes has always been a sore point with volunteers. During the "boom" excited at the beginning of this century in England by Napoleon's threatened invasion, the Colonels and Staff of a newly raised regiment waited on the great William Pitt and urged that, though they had no desire to shirk their responsibilities, they entertained a strong objection to being sent to Ireland where it was proposed to employ them. "Very well, gentlemen," said the sarcastic Premier, "I will advise His Majesty to direct the modification of your commissions by inserting a proviso that you are not to be despatched beyond the seas—except in case of actual invasion."

THE Conversazione of the Mahomedan Literary Society has been unavoidably postponed from the 23rd to Monday, the 30th March.

DURING his last days in the Bengal Secretariat, Mr. Buckland was engaged in a graceful act. As in the Board of Revenue, in the Secretariat he wanted to keep the clerks straight by heavy fines. The extra saving to the Government in the Secretariat came up to a large figure. When it was decided that Mr. Buckland was to take up the Commissionership of the Burdwan Division, he repented of the hardness of heart which had prompted him to order the imposition of fines indiscriminately on one and all, and set himself to do them right. There was the difficulty to redraw the amounts of past years. He, however, succeeded, and he leaves the Bengal Office with many blessings for the good act. Mr. Buckland is a Civilian of the old type. His kindness for his subordinates and, indeed, for those whom he once regards as his own, is remarkable. He is ever ready to push their interests and fight for them, if need be, like a hero. There are many men in the public service whose making is entirely due to Mr. Buckland's influence sturdily exerted on their behalf. Kind, however, as Mr. Buckland is, inefficiency and humbug have no chance with him. Himself able and energetic, he has a quick eye for detecting idle and incompetent men. Mr. Buckland understands the *Bhadracharya* of Bengal thoroughly. Hence his remarkable success in raising subscriptions in aid of public movements.

THE Sub-divisional Officer of Ranaghat has called a public meeting of the friends and admirers of the late Babu Surendra Nath Pal Chowdry "to express sorrow at his untimely death and consider what steps should be taken to perpetuate his memory for the valuable public services rendered by the deceased."

AN Indigo-planter, of the name of Mr. A. J. Shillingford, had been bound over by the Deputy Magistrate of Purneah to keep the peace. The High Court (Justices Hill and Rumpin), on motion, after hearing both the petitioner and the Crown, have passed the following orders:—

"It appears to us that the order of the Deputy Magistrate of Purneah, binding the petitioner over to keep the peace, cannot stand. There appears to be no evidence upon the record from which the inference can justly be drawn that Mr. Shillingford, the petitioner, is likely to commit a breach of the peace, or to do any unlawful act which is likely to cause a breach of the peace. Assuming it to be established that persons in his employ have behaved in a somewhat high-handed manner towards the villagers of Sowrin, there is nothing whatever to connect Mr. Shillingford with their proceedings, or to show that he either directed or sanctioned them. The rule must be made absolute, and the order complained of set aside."

Here, according to such lights of the law as Mr. Westmacott, there has been a miscarriage of justice. The High Court, by insisting upon an impossible standard of evidence, have reversed a very wholesome order of the subordinate Magistracy. The Magistrate and his

Deputies must know more of what evidence is actually obtainable in this country and what not. They have the extraordinary capacity of snuffing criminals within ten miles of their catchery and auguring intended crimes by observing the faces of the accused. They can, with perfect conscientiousness, convict every person placed before them by the Police. Surely, Sessions Judges and Divisional Benches of the High Court should not be permitted to review the proceedings of Executive officers acting judicially and arrive at conclusions different from theirs. It is said that Sir Charles Elliott had a very short Bill drafted by one of his favourite Secretaries, in consultation with some of his Divisional Commissioners. Its object was to abolish the Indian Evidence Act, to declare that as conclusive proof which the District Magistrate or his Deputies would call so, and to convict all persons sent up by the Police. Sessions Judges and the High Court might afterwards acquit, but then the prestige of the Executive required that there should be conviction in every case. The very fact of the Police sending up a man should be regarded as conclusive proof of guilt. The late Lieutenant-Governor used to keep this draft before him, engrossed on parchment in letters of gold, to kiss it and hug it with affection at least half-a-dozen times in course of twelve hours, and never to go to bed without first carefully placing it under his pillow. Busy in whispering censures to this or that official, for he was extremely averse from letting the public know anything about their peccancy, he had no time for having the Bill formally introduced. While he made over charge to his successor, he was on the point of handing over that precious document, but entertaining grave doubts about its favourable treatment by Sir Alexander Mackenzie, Sir Charles Elliott chose to take it away. By the bye, we hear that Sir Alexander Mackenzie has knocked on the head his predecessor's scheme of connecting all District and Sub-divisional head-quarters with Belvedere by the telephone. Sir Charles had great partiality for this new invention inasmuch as it afforded him the best possible medium for communicating his censures to subordinates without keeping any record behind and without anybody else being acquainted with what was said.

MR. R. D. Mehta, if anything, is a practical man. He does not take up a duty which he does not understand or for which he is not fitted. Nor is he a sleeping partner in any business. He qualified himself by regular study before he accepted the Honorary Presidency Magistrateship. As an instance of his activity, read his opening address at the Alipur Local Board:—

"Gentlemen—As this is the first meeting of our Board, let me thank you, one and all, very cordially, for electing me as Chairman. This is the third time you have honoured me with your confidence and with your co-operation. I hope, it will be possible for me to make myself worthy of the trust reposed on me. I see some new faces. I cordially welcome them to this Board, and I am quite sure that I will receive from them the same measure of support which I have uniformly received from my old colleagues, some of whom I am happy to be able to greet once more at this meeting. In the election of your Vice-Chairman you have shown marked judgment, for from him, as from my old colleagues, I have received unfailing support and sympathy. I need hardly remind you that ours is an important Board, the second in the Presidency Division, in respect of territorial jurisdiction and occupying a prominent place among other Local Boards in respect of population, for ours includes an area of 802 sq. miles with a population of over 5,31,000. I may say that in the discharge of our duties we have always received a very considerable measure of sympathy from the Government. Whenever there was a difficulty I took the liberty of approaching His Honour the Lieutenant Governor himself, and I say with absolute truth that I received nothing but sympathy from Sir Charles Elliott. I am sure that from Sir Alexander Mackenzie, who is known to be so great a friend of Local Self Government, we shall receive a similar, if not, indeed, a warmer, degree of consideration. In conclusion, I desire to say that small as may be our power and the opportunities of serving our fellow countrymen, we can only hope to pave the way for the enlargement of those powers and those opportunities by doing our best in our limited sphere of usefulness, and I am sure when I make an appeal to you in that behalf, I feel that I do appeal to men animated by sentiments such as inspire us all at the present moment to do our duty according to our lights and with a single-minded desire to uphold the interest committed to our

care. Already the Government has given us the credit of being a useful Board, and my humble self has been associated in the compliment thus paid to this Board. I trust that in future we shall not only maintain but add to the good name we have already acquired.

With these words, gentlemen, we shall now proceed to the business of the day."

THE following tribute of gratefulness, paid by Protap Chandra Roy, the publisher of the English translation of the Mahabharata, to Dr. Rost on the occasion of his decoration with the Order of the Indian Empire, is taken from the wrapper of the 37th fasciculus of the translation:—

"The (London) *Times* in its issue of Sunday, January 15, 1888, referring to the decoration of Dr. Reinhold Rost with the Order of the Indian Empire, says,—

'Who that favours Oriental studies has not been at one time or another indebted to Dr. Reinhold Rost, of the India Office Library, and will fail to congratulate the worthy Librarian on his well-deserved decoration of the Indian Empire? That his own knowledge is immense does not matter so much, for it is not his Trübner's grammars or his masterly linguistic contributions to the *Encyclopædia Britannica*, his Indo-Chinese essays, or any other profound and mystical learning, that commends Dr. Rost to the many, but his unfailing courtesy, the never-tiring unselfishness with which he ransacks the stores of his brains or his shelves on behalf of the enquiring or studious visitor. He has made the India Office Library what it is, a centre of Oriental research and scholarship for all Europe.'

"The above is no empty compliment that the great journal pays to the learned scholar. The *Times* is not given to paying compliments. It is the truth and nothing but the truth. The courtesy of Dr. Rost is not limited by considerations of proximity or distance, creed or color. It was his encouraging words that first led me to seriously think of an English translation of the Mahabharata, and it is his sympathy and friendship, unchanging and stable, that have supported and cheered me amid all my distractions. Honour to such a man is honour to Oriental scholarship. Yet how inadequate that honour! No man has worked more unselfishly in the cause of Oriental research than he. In this respect he is the exact prototype of an Indian Pundit of Navadvipa, Vikramপুর, Mithila, Benares, Maharashtra, or Dravida. Utterly forgetful of what is due to themselves or their families, perfectly unmindful of what would befall those they leave behind after they themselves are gone, such men work on for work's sake, with a simplicity in worldly affairs that draws tears from every eye from feelings the like of which man rarely experiences in life. Government may honour them, as, indeed, it does, with titular distinctions of C.I.E. or Mahamahopadhyaya, or a grateful public may erect a bust or statue, or designate a temple, pagoda, or large tank after them, for purposes of living or posthumous honour. But it would be more in keeping with the fitness of things, if, instead of such distinctions, provision were made for those near and dear to them so as to make the former independent of the exertions of the latter in life.

The following is a translation of the Sanskrit verses :—

By adorning thee, the Sovereign has adorned Learning.
This title, O friend, only emphasizes thy adornments !

O puissant one, decorated art thou with endowments that are rare !
Agreeable by nature, the Moon stands not in need of any decoration.

O thou of great intelligence, what learned men are there on earth that are not well-versed in the scriptures and the Veda, and that do not shine in knowledge ?

The virtues, however, that are seen in thee, *viz.*, universal friendship, sincerity, and a large heart, are rare possessions in the world !

Let destruction overtake thy foes ! Let growth visit thy friends.
Let stable Prosperity be thine ! Let Tranquility of soul allay thy heart's fever !

Be thou as long-lived as Markandeya, and ever engaged in doing good to the world !

Growing in Prosperity with the deities themselves, do thou shine in Glory when Heaven becomes thine !

BABU JUDU GOPAL CHATTERJEE, who describes himself as a "Poet and Author," Bibu Nishi Kunta Chackraverti, who is a much humbler individual, for he speaks of himself as only an "Assistant, Bengal Secretariate," and three other gentlemen whose descriptions do not occur, invite public attention to the feats of an astrologer "of a high order." The name of the great man who has "brought over" this prodigy of astrological learning, has not been omitted. "The Pundit on examining the palm of man, can very accurately tell the past and future events of his life." Without at all objecting to the grammar and logic of this short announcement, one may ask the "Poet and Author" as to how proficiency in palmistry can be viewed as evidencing high astrological attainments. Poets may not be authors; so also authors may not be poets. In the case of Babu Chatterjee, there is a happy combination of both poetry and authorship. As such, he will be able to answer the question proposed. Then, again, as to the great astrologer's feat of "very accurately telling future events" of a man's life, who is to certify the accuracy? Is it the astrologer himself, or the Poet and Author? Bibu Jadu Gopal, it should be known, is a writer and compiler of school books.

OUR leading article in this number is an English translation of a critique on M. Barthelemy-Saint Hilaire in French from the pen of the renowned Orientalist, M. Barth. It has been specially written for *Reis and Rayyet*. The curse of Babel has fallen with peculiar severity on the votaries of literature, for the graces of style are not reproducible in a translation. For all that, the reader will, we hope, mark the entire absence, in the critique, of what Mathew Arnold calls Provincialism and which, according to that critic of undoubted ability, generally characterises English prose, particularly, in the department of criticism. With what delicacy has the true estimate been put forward of M. Barthelemy-Saint Hilaire's writings in different branches of literature ! Nothing has been said that is not true, and yet the manner of saying it is unobjectionable. When the great American scholar, Dr. Whitney, died, ours was the only Indian journal which tried to come out with a fitting obituary notice. So little is the interest felt in India in the lives and works of world-great Oriental scholars that Reuter may be almost excused for his omission to wire the death of Dr. Reinhold Rost. In our last we gave a detailed account of the posthumous honours done to Dr. Rost at his funeral. We are glad to find that the narrative has excited a mournful interest in this country. When intelligence arrived of the death of M. Barthelemy-Saint Hilaire, one of the Calcutta dailies published an extract from the *Men of the Time* without indicating the source. That is all that the Indian press has done towards noticing a life, a considerable part of which was past in the study of India, past and present.

REIS & RAYYET.

Saturday, March 14, 1896.

BARTHELEMY-SAINT HILAIRE.

INDIA has lost one of her best friends among us in the person of Jules Barthelemy-Saint Hilaire, who was suddenly carried off by death on the 24th of November 1895, at the advanced age of 90. (He was born in Paris on the 19th of August, 1805). Without being an Indianist in the proper sense of the word, he always gave to the past and present of your country a large place in the interests and manifold pursuits of his long and laborious career. It is well-known that this career was not solely devoted to learned research, and that, at different times, public affairs and politics took up a considerable portion of it : in fact, he began with politics, and with politics he wellnigh ended. When still quite young, we find him, from 1826 to 1830, on the staff of the "Globe,"

a journal which had gathered round it the *élite* of the liberal youth of the day, and, on the 28th of July 1830, we find him among the signatories of the famous protest of the journalists against the royal ordinances,—a protest which decided the fall of the elder branch of the Bourbons. He had then been for several years attached to the ministry of Finance, where he remained until 1838. But in 1833 he withdrew from journalism and militant politics, in order to devote himself more completely to learning. In 1834 he was appointed Tutor in French literature at the Ecole Polytechnique; on the 6th of January 1838, he was called to the chair of Greek and Latin philosophy at the College de France, and on the 23rd of March 1839 he entered the Institute as a member of the Academy of Moral and Political Sciences, where in 1889 was celebrated the 50th anniversary of his reception. Except for a short period of four months, in 1840, when he filled the office of head of the Council of the minister of Public Instruction under his friend and master Victor Cousin, the philosopher, the reign of Louis Philippe was thus for him a sort of truce during which he confined himself to teaching and study. The revolution of 1848 called him forth for some time from this life of calm: he was successively Secretary General to the Provisional Government, and Deputy for the Department of Seine-et-Oise to the Constituent Assembly and the Legislative Assembly: the *Coup d'Etat* of the 2nd December 1851 abruptly sent him back to it. He protested bravely against the violation of the laws, refused the oath to the new *regime*, and resigned his chair at the College de France. In 1855 he accompanied Ferdinand de Lesseps to Egypt, a journey the experiences of which he recorded in his "Letters on Egypt," first published in the "Journal des Debats," and afterward collected in one volume (1856); and down to 1858 he was a member of the Commission to study the cutting of a canal through the Isthmus of Suez. But it was not till 1869, when the Empire attempted to become liberal, that he re-entered public life, as Deputy for Seine-et-Oise. The terrible events of 1870 found him in the breach. He did not leave Paris till the armistice; and, reelected Deputy for Seine-et-Oise to the National Assembly, he became, on the 16th of February 1871, Chief of the Council of President Thiers, whose trusty confidant and right hand he was up to the time of his resignation of the Presidentship on the 24th of May 1873. He remained the devoted friend of M. Thiers and was his testamentary executor, as he had been that of Victor Cousin. On the 10th of December 1875 he was elected Senator for life, and from the 23rd of September 1880 to the 10th of November 1881 he was minister of Foreign Affairs in the Ferry cabinet, and, in this capacity, he prepared and organized the protectorate over Tunis. This was the end of his public life. He had entered it with the enthusiasm of youth; he had opposed Governments better than those he had experience of afterwards; and finally he saw himself set aside by the Government of his choice. In troubled times this is the usual fate of liberal and moderate men, and all his life he was a liberal and a moderate, an optimist, too, somewhat short sighted at times, inclined to judge men by himself, by no means a politician such as democracies produce, but, above all, a man of wisdom, high rectitude and integrity, accepting the burden of public affairs as a duty, and ever ready to return to his private studies, without the least selfish regret. For himself personally, there was hardly any change in passing from

the one to the other, pursuing both, as he did, with equal disinterestedness.

It is precisely this unselfish devotion and this high moral inspiration which constitute the unity of this beautiful life. As in politics, so in science, Barthélemy-Saint Hilaire was a wise man, much more a man of wisdom than a man of learning. He cannot be classed either among Hellenists or professional philosophers. In spite of his worship of the memory and the ideas of Victor Cousin, who continued to be his ideal in philosophy, as Thiers was in politics, he was not a slave to the system of his master and friend, any more than to any other system. He was, above all, an honest man, a man of great good sense, great knowledge, and great sincerity, whom his strong spiritual and Christian conviction, of a turn, rather moral than metaphysical, may have rendered severe to whatever wounded his conscience, but who endeavoured to estimate with kindness the doctrines of the past, and to draw from them good practical lessons for the individual and for society. This is not the place to enter into details regarding his philosophical works. The principal one was his great translation of Aristotle, the work of his life, begun in 1832, and continued up to his death. Of the old treatises, the "Politics" appeared in 1837, the "Rhetoric," last, in 1872. But in the interval, and in the years that followed, he was ever busy revising his work, preparing new editions of it, enriching it with memoirs on special points, on the fragments and the newly-discovered treatises: only a few days before his death he read, to his *confrères* in the Academy, the last paper on his philosophy. Round this work, which offers matter for criticism in detail, but which is imposing from the greatness of its proportions, and the perseverance of its effort, are grouped various less considerable publications, in which he explores other regions of history and philosophy, and of which I only mention the principal ones: "On the Alexandrian School," preceded by an "Essay on the method of the Alexandrian Philosophers and Mysticism," 1845; "A report to the Institute on the competition opened for the comparison of the moral and political philosophy of Plato and Aristotle with the doctrines of the greatest modern philosophers," 1854; "The philosophy of the two Amperes," 1866; translation of the "Meditations of Marcus Aurelius," 1876; "On Metaphysics, its nature and rights in its relations to Religion and Science," 1879; "On Philosophy in its relations to Science and Religion," 1889; "A Study of Francis Bacon," 1890. Another treatise on philosophy—political philosophy—is his appeal and warnings "To the French Democracy," 1874. Lastly, to his long studies on Greek thought we may add his "Translation of the Iliad, in verse," 1869.

As Barthélemy-Saint Hilaire appears to us in his philosophical works, such, too, we find him in his publications on India. The lines he has left in this other

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.
(Session 1895-96.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 18th Inst., at 6.30 P.M. Subject: Lenses and their applications.

Lecture by Babu Srinadas Mukerjee, M.A., on Thursday, the 19th Inst., at 3 P.M. Subject: Analytical Conics.—Homography and Involution.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

March 14, 1896.

field of study are not always very deep, but they are broad and traced by a persevering hand. I have already said that he was not an Indianist, nor did he attempt to pass for such, although he possessed a very respectable knowledge of Sanskrit. He had begun the study of it in 1823 under Eugene Burnouf, whose pupil he was always proud to have been, and of whose life and works he wrote a touching notice (1852), the best we have of the great philologist. It is nonetheless true that most of his labours in this field were done at second-hand, and rest on translations. But they are numerous and solid. They attest vast information at a time when this was not easy to acquire, and they bear the same stamp of practical wisdom and broad benevolence, which is the distinctive mark of all that came from his pen. They are thus perfectly personal. They were also useful in their day; several of them are still so, and it is not saying too much to affirm that, during a long period when those studies were not widely spread, Barthelemy-Saint Hilaire was, in his way, an initiator. Only in his last years, when materials had accumulated to such an extent, and become so complicated as to overwhelm the most laborious specialist, did he at times shew himself not quite so conversant with the precise existing position of questions. Nearly all his works on India appeared in the "Memoirs" of the Academy of moral and political sciences, and the "Journal des Savants," a monthly periodical published in common by the three Academies, of Inscriptions and Belles-Lettres, of sciences and of moral and political sciences, to the editorial staff of which Barthelemy-Saint Hilaire belonged for nearly half a century. Only a few have been reproduced separately, and to collect them all, the last forty-three years of the Journal especially would have to be ransacked, one by one. They extended over all branches of Indian study, from that of the most ancient monuments to the results of contemporary statistics. I limit myself to the mention of the most important: "A Review of Burnouf's Introduction to the History of Indian Buddhism," 1846; "An account of the works of M. Eugene Burnouf," 1852; "First Memoir on the Sankhya Philosophy" (in the "Memoirs" of the Academy) 1852. Very remarkable for the time, and still useful at the present day, this work is one of those into which Barthelemy-Saint Hilaire has put the greatest amount both of personal criticism and personal research; "On the Vedas," 1853-54, with reference to the texts and translations published by Langlois, Max Müller, Wilson, Stevenson, Benfey, Weber; "On Vedic Grammar and the Prāṭicakhyas, 1854; "On Buddhism and Buddhist Pilgrims," 1856; "Buddha and his Religion"; published separately in 1859; 2nd edition in 1862; "The Buddhist Apologues," 1870-71; "Memoir on Kanada, the author of the Vaiśeṣika system, or the system of the difference and particularity of beings"; "British India, its present position and future," published separately in 1887, based principally on the data of the census of 1881; another series of articles published in 1894, in which the author discusses the results of the census of 1891, has not been reproduced in a separate volume; "The Yoga of Patanjali" (with reference to Rajendralala Mitra's edition), 1895; the third and last article appeared a few days before his death. He welcomed with joy the generous undertaking of the late Pratapa Chunder Roy, to translate the Mahabharata. He obtained for this work a grant, altogether exceptional,

from the French Government, and to the translation he on several occasions devoted extensive articles, the last of which, alas! in 1895 was an obituary notice. Articles of the same period, on the Ramayana, were weaker; in spite of his robust health, his 90th year began to weigh heavily upon him. But what never waned was his deep love for India and her people. In reading him, you can discern this clearly, but how much more noticeable was it when you heard him talk! Memories and reflections then came thronging in crowds, and flowed from his lips as from a living fountain. He was full of admiration and respect for the work pursued by England in India, and fervently desired that no complication from without or from within might come to interfere with its peaceful and fruitful development. Of all his oriental publications, only two are unconnected with India: his "Letters on Egypt" (1856) which are the record of a journey, and his book on "Mabomet and the Koran" (1865) which is also probably an echo of it.

Barthelemy-Saint Hilaire was never married, and he has left no near relations. His vigorous old age knew neither infirmities nor suffering. On the very day before his death he was present at a sitting of the Academy.

A. BARTH.

LITERATURE OF BENGAL.

III.

TO THE EDITOR.

In my last letter I made some remarks on the dates of birth and death of Chaitanya. In the present I shall deal with the birth-date, as usually given, of Raja Ram Mohan Roy. That date, in my humble opinion, is a fiction.

Students of Bengali literature are not unaware of the fact that there is a dispute about the exact date of birth of Raja Ram Mohan. Three conflicting opinions have been put forth in print. Some of our countrymen, headed by the Rev. Dr. K. S. Macdonald, are of opinion that Raja Ram Mohan Roy was born in 1780. Another class, headed by the late Kisori Chand Mittra, and at present by Mr. R. C. Dutt and Babu Nagendra Nath Chatterjee, the Bengalee biographer of the Rajah, hold the year 1774 as the correct date. Lastly, a third class, headed by the late Mr. C. H. A. Dall, hold the year 1772 as the real date. The correct view I shall give below, supporting it by such evidence as is still obtainable.

I must, at the outset, heartily thank Pandit Mahendra Nath Roy Vidyanidhi,---the biographer of Akshaya Kumar Dutta--- for directing my attention to the results of his investigation into the matter. His well-written article on Raja Ram Mohan Roy, published in the *Sravan* number of the Bengali monthly magazine, *Janmabumi*, will be my guide in the present letter. Pandit Mahendra Nath is a distant relative of the Rajah and his opinion is, no doubt, entitled to respect.

The first date, *viz.*, that put forward by the Rev. K. S. Macdonald, rests on no evidence that can be regarded satisfactory. It may, therefore, be rejected without hesitation. The second date, *viz.*, that put forward by Mr. R. C. Dutt and others, can be shown to be incorrect by proving the correctness of the last one which was accepted by Mr. C. H. A. Dall. The following letter, published in the *Indian Mirror* of the 18th January, 1880, on the subject, will be of great use in determining the question. It is, therefore, transcribed below:---

"There need be no doubt, whatever, as to the year and the month in which Ram Mohan Roy was born. His son Rama Prasad Roy, Vakil of the Sudder Court, made the matter perfectly clear to a circle of visitors and clients in 1858, at his residence, the well-known house of his father in Calcutta. Kisori

Chand Mittra was present as also Dr. Rajendralala Mitra and I was one of the listeners. I put his words on record at the time and here they are :---“ My father was born at Radhanagar near Krishnaghur, in the month of May, 1772, which, according to the Bengalee era, is the month of *Jaittha* 1179, I asked for the day, and Rama Prasad replied that he could not tell it without consulting the horoscope, which at that distance of time, it was not easy to find.” After this, it need not be surmised that Ram Mohan was born in 1774 or in 1780. We need not guess, since we have the highest authority for saying that he was born in May 1772. --Yours, &c., Dall.”

Learning that the life-story of Raja Ram Mohan Roy in the *Encyclopædia Britannica* was from the pen of Miss Collete, Pandit Mahendra Nath Roy Vidyavidhi addressed a letter to her on the subject, from which I extract the following lines :---“ As far as I remember, it exactly tallies with the date, 22nd May 1772, as given in your letter to me. I shall esteem it a great favour, if you kindly inform me definitely of the authority on which you rely.” The letter is dated 16th August, 1891. In reply Miss Collete wrote :---“ the date of the Raja's birth is the 22nd May, 1772. This fact came to me from Babu P. B. Mukerjee of Rajshahi College, who had it from Babu Rabindra Nath Tagore who had it from Babu Lalit Mohan Chatterjee, great-grand-son of the Raja,” &c.

Listen now to what Babu Lalit Mohan says :---“ I have heard from my grand-father, the late Babu Radha Prasad Roy, the first-born son of the celebrated Ram Mohan Roy, that his father died in the 62nd year of his life, date and month unknown.” Raja Ram Mohan died in the year 1833, in his 62nd year, according to the English calculation. Therefore, when he died, his age was 61 years and some months, because when we say that a particular gentleman is in his 30th year we mean that he has already passed his 29th birth-day and is 29 years old, omitting the months in excess. Deducting 61 from 1833, we get 1772 as the real birth-date of Raja Ram Mohan. Pandit Mahendra Nath made a mistake in his article in calculating the date from the data contained in the letter of Babu Lalit Mohan. He forgot the difference between the English and Bengali methods of computation. This reminds me of the question raised by the Commissioners of the Civil Service Examination in the case of Mr. Surendranath Banerjee. Mr. Banerjee's statement was accepted when the difference between the two methods of computation was explained.

From the above it will appear that the year 1772 is the correct birth-date of Raja Ram Mohan Roy. The year 1774 is an imaginary one, put forward by Mr. R. C. Dutt and others. It rests on no evidence. The day, 22nd May, may not be accurate, but the year 1772 is correct.

In page 137 of *Literature of Bengal* Mr. Dutt writes :---“ He (Raja Ram Mohan Roy) was born at Radhanagar in the District of Hooghly in 1774, the year in which Warren Hastings became the first Governor-General of India, and the Supreme Court was established.” I am at a loss to understand the significance of these allusions. Many other incidents occurred in that year in Indian or even in Bengal history. Does Mr. R. C. Dutt mean to point out particularly that Ram Mohan Roy was born in the year rendered memorable in Bengal by the appointment of Warren Hastings as the first Governor-General and the establishment of the Supreme Court? Warren Hastings trod all the ten commandments under foot in the game for empire, and the Supreme Court under Sir Elijah Impey soon distinguished itself as a tribunal whose justice was something worse than an invasion by Genghis Khan or Tamerlane. As already said, the significance of the allusions is not very intelligible. It is probably a mere stage “aside” introduced with the object of showing the writer's familiarity with Indian history. This sort of indulgence in “asides” is sometimes carried by Mr. Dutt to a ridiculous extent.

Was it not he who spoke of Runglal Banerjee as “a poet and Deputy Magistrate?”

Then, again, in page 138 of his book, Mr. Dutt says :---“ Ram Mohan's father was Ram Kanta Rai, a petty Zamindar, who had served under the Nawabs of Moorshidabad, and had witnessed their fall.” In page 12 of the biography of Raja Ram Mohan Roy by Babu Nagendra Nath Chatterjee, appears a passage of which the following is a literal translation :---“ Brojobenode (the grand-father of Raja Ram Mohan) held a respectable post under Serajuddowlah, the Nawab of Moorshidabad, but on account of some ill-treatment which he received at his hands, he resigned his post and passed his days at home.” In page 1 of the Biographical sketch, written by the Rev. Dr. Carpenter, appears the following :---“ His (Ram Mohan's) grand-father resided at Moorshidabad and filled some important office under the Moguls, but being ill-treated by them towards the end of his life, the son (Ram Kant Roy) took up his abode in the District of Burdwan where he had property.” The passage quoted is quite unintelligible. The grand-father was ill-treated by his master. No mention is made of what he did in consequence of that treatment. But, instead, we are told of what the son did owing to the harshness of which the father was the object. The truth is, the life of Raja Ram Mohan Roy, written by these authors, is a *debris* of facts. Imagination has filled up many details. It is a pity that these narratives still pass for a life of one of our best men, who was the leader of a mighty movement for religious and social reform. In future, I shall show in detail how the landed property of the ancestors of Ram Mohan Roy came into their possession and how they came to settle in Radhanagar.

S. C. SANYAL.

THE DHULIA RIOTS.

The following Resolution has been issued by the Bombay Government :--

Bombay Castle, 12th November, 1895.

From the reports received by Government it appears that the District Magistrate had ordered that, during the Ganapati festival, only two instruments of soft music should be played by Hindoos when passing mosques in procession in the town of Dhulia, as it was ascertained by him that such an order would be in accordance with the local custom. Several Hindoo processions had passed mosques during the festival without serious trouble, but on Sunday, the 1st September, when a Ganapati procession approached a mosque, which had, as a measure of precaution, been surrounded by a small force of armed Police under the command of a Police Inspector, a crowd of Mahomedans, who had been concealed within, lined the walls of the mosque compound, and assaulted the Police with stones and flourished their sticks with shouts of “Din! Din!” One of these men managed to leave the mosque compound by the east door, where the District Magistrate was standing at the time, and struck at the Mamlatdar, who was also there, but was promptly arrested. The District Magistrate then arrested two more men in the doorway and entered the compound, when he was attacked with sticks, but was not actually struck, as he was sheltered by the archway over the door. The Police outside the compound, at the north end, then fired on the Mahomedan crowd, killing four on the spot and wounding a number more. About the same time the District Magistrate, not knowing what the Police at the north end were doing, called to those who had been with him at the east door to enter the compound, and they thereupon also opened fire. All opposition was at once in consequence put down, and the District Magistrate came out of the compound and ordered the Police to stop firing.

2. The first point for consideration has reference to the District Magistrate's order as to the playing of music. He says it was according to what he believed, after due enquiry, to be the custom. Government see no reason to doubt the correctness of the District Magistrate's decision as to custom, for that decision was based on careful local enquiry. The District Magistrate was right in assuming that, to insist on the observance of custom, as ascertained by an enquiry, is in accordance with the orders of Government.

3. The next point is whether the Police were justified in firing on the mob. It is difficult to be absolutely certain as to the actual circumstances, but it appears that the compound was crowded and the walls were lined with Mahomedans armed with sticks, as evinced by the eighty-three sticks collected there afterwards, and shouting “Din! Din!” and pelting the Police with stones of which two sack loads were picked up. The uproar

must have been great. The Mamlatdar had been assaulted and the District Magistrate was inside the compound with the riotous Mahomedans and in considerable danger of being mobbed. Indeed, it may well have appeared to the Police that he was in danger of his life. At the north end of the mosque compound were posted some armed Police, and from where they were they could apparently see the assault on the Police, and on the Mamlatdar near the east door, and on the District Magistrate after he had entered the compound. One of them—but who it was it is now impossible to ascertain—opened fire and the rest followed. The Police at the east of the compound, hearing the District Magistrate call to them, and hearing the others firing, fired also. There appears to be no doubt that the Police fired to protect the District Magistrate and themselves, and to prevent the mob of Mahomedans swarming out of the mosque and overpowering them, and Government concur with the District Magistrate and the Commissioner, C. D., that no blame can be attached, in the circumstances, either to the man who fired the first shot or to the other men of the Bhil Corps, whose action appears to his Excellency the Governor in Council to have been warranted by law. The consequence of the firing was the immediate suppression of a disturbance, which, unless checked at the outset, might have had still more terrible and generally disastrous results.

4. The reports before Government show that on the 5th July the Mahomedans in or connected with this very mosque objected to a Hindoo procession passing with any music at all, and that trouble was prevented by the District Magistrate chaining the door of the mosque on the outside; that on the 20th August there had been a dispute about the music question before another mosque; that on the 21st August the Hindoos held an indignation meeting; and that on the 26th August the Mahomedans also held a meeting, at which they are alleged to have threatened a disturbance if music was not stopped before mosques. Therefore, though the District Magistrate and the Superintendent of Police did not apprehend an attack on the Hindoo procession, there were present at the mosque, on the afternoon of the 1st September, thirty-three armed Police, some sowars, the Chief Constable, the Police Inspector, the Mamlatdar, the Deputy Collector, and the District Magistrate himself. These precautions, as the event showed, were sufficient to enable the disturbance to be checked at the outset, but his Excellency the Governor in Council considers that, knowing the tension of feeling between the Hindoos and Mahomedans, the District Magistrate would have shown wiser judgement had he insisted on the presence of another European officer, *viz.* the Superintendent of Police; while as regards the movements of this officer, the time selected to absent himself for the inspection of an outlying post was certainly ill-chosen. His Excellency the Governor in Council, however, cordially acknowledges the firmness and cool courage of Mr. Cumine in dealing with the riot, and his untiring and successful exertions for the preservation of the peace after it.

5. The loss of life was deplorable, but it appears that only those who had assembled with the obvious intention of interfering with the liberty of others and of defying order were killed and wounded.

6. Copies of this Resolution should be forwarded to the Secretary of State and the Government of India.

B. W. VIDAL,
Acting Chief Secretary to the Government,

THE CONVOCAION OF THE ALLAHABAD UNIVERSITY.

THE VICE-CHANCELLOR (MR. CONLAN'S) ADDRESS.

* * *

And now I have a few words for those who have received their diplomas to-day; and to them I say, if you or any of you labour under the impression that this closing scene of your academical career also marks the completion of your education, you make a very serious mistake which, if preserved in, will soon obliterate your present record. Let me assure you that the course you have just completed will be of value to you only if it teaches you that you have but just begun to tread the path of knowledge, that the road which lies before you is long and intricate, and that it must be pursued with inflaming devotion if you are to take your stand eventually in the ranks of educated men. No doubt the diplomas which I have handed you to-day bear testimony to the possession by you of qualities which lead to the goal I have just indicated and encourage the hope that you will not abandon the culture of your minds because you have obtained the degrees which you have striven to gain; but the temptations to relaxation—temptations to which only too many before you have succumbed—are not to be despised, and I make no apology for warning you earnestly against them. If you are to profit by what you have already acquired, you must go on steadily adding to your stock of knowledge, for the moment you call a halt, deterioration will set in and you will move backwards instead of forward until you lose

every step of the advance you have now made. As an incentive to exertion let me tell you that it is being said, I am afraid deservedly, in high places and elsewhere that the students of our Colleges and the graduates of our University, when tested in the various employments which fall to them by reason of their academical success, fail to exhibit that knowledge of the English language which is justly expected from men who have enjoyed their advantages. It is asserted that both in speech and writing many of our students and graduates betray a lamentable ignorance of the language in which for the most part, they have acquired the knowledge which is their boast: and comparisons are instituted which tend to cover our whole system of education with contempt. Now this is a state of things which ought not to continue, and it rests with you and men like you to wipe out the reproach. But to do so you must make up your minds to work for the sake of working, for the sake of convincing men who can judge that the education you have received is not a sham, and that its best effect has been to implant in you an honest desire to increase by continuous efforts the comparatively small amount of knowledge which you have brought away with you from your respective Colleges.

And not only must you go on adding to your knowledge, but you must be careful to preserve and increase that submission to discipline which you have been taught in the institutions to which you once belonged. The youthful mind, released from the control which was necessary in the class-room and the boarding-house, is apt to believe, and to act upon the belief that all discipline may be safely put aside with the note-book and the text-book, and to give itself up to the enjoyment of a so-called emancipated existence. It seems an accepted truth to many whom our Colleges and Schools have sent out into the world that, once the necessity for scholastic discipline ceases, those who were subject to it may and, indeed, ought to indulge, if they are to prove their enlightened manhood, in intellectual license of every description; in tilting without reflection and principles at institutions which appear obnoxious and in demanding reforms which commend themselves to their unformed judgment. This course of procedure, evidenced by writings and speeches, violent in character and thoughtless in composition, results entirely from the absence of moral discipline. It cannot be too strongly impressed upon you that intellectual without moral training in the youths of a community only half prepares them for a life of true usefulness, and is a fruitful source of danger to the community itself; for whilst the former may be aptly compared to the motive power in a ship which urges it along in the direction of its port, moral training is represented by the ballast in that ship which keeps it steady in its course. It is well to be equipped with learning for the voyage that is now before you, and it is well that you should increase that stock of learning whilst the voyage is in progress, but it is better still that you should cultivate your moral nature so that you may be able to apply your knowledge to the best advantage of yourselves and the community to which you belong. And this task, nobler in its character and more beneficent in its effects than any committee to human beings, is a task which you must undertake and perform for yourselves. In the acquisition of such learning as you possess, you have had the help of accomplished professors and masters, and from them also you have learnt the rudiments of moral discipline; but to make that discipline perfect, to make it the rule of your lives, you must trust to your own efforts alone. You have read the lives, you have witnessed the career of men whom the world respects and honours, and I will venture to say you have found none such who lacked the moral attributes which go to constitute a sound mind and an exalted character. It is to these men you must look for an example, it is from them you must learn how to cultivate your judgment. If you do this, you may be confident of attaining to what is the aim and end of the education that has been imparted to you, for you will then possess not only the knowledge which enables men to take part with credit in the affairs of life, but the trained moral faculty which qualifies them to guide those affairs with prudence and success.

ARMENIAN AND MUHAMMADAN WOMEN.

An Armenian lady, Dr. Margarit Melik Belgarian, recently delivered a lecture in Vienna which, says the *Literary Digest*, will be read with interest by all students of the woman question. She described the condition of the Armenian and Muhammadan women in Anatolia. The lady, who is a descendant of an ancient princely family of Armenia, has studied in Berne, Zurich, and Salzburg, and made a short stay in Vienna upon her return to her own country. Speaking of the condition of Armenian women, she said:—

Everything you see in an Armenian house has been made by the woman. The cotton from which the Armenian woman makes clothes is given to her in the raw. To obtain silk, she must raise silk-worms. The colours used in dyeing she prepares from plants in forest and field, and thus the brightly-coloured garments and

the handsome rugs and hangings for which Armenia is noted are produced. The men have nothing to do with all this. On the other hand, the Armenian women are absolutely free from all work requiring great physical exertions. The men cut wood and carry loads. The men, too knead the bread. Even in the poorest families the girls are regularly spoiled. The parents may be starving; but they take care of the daughters "A girl," they will say "is like a rosebud, and cannot develop into full bloom without much care." To an Armenian woman the brother is a veritable knight and guardian angel. The Armenian girl receives no dowry; indeed, the bridegroom must contribute to the wedding expenses, and furnish the bridal dress. In her home the Armenian wife and mother rules supreme; even the grown one will do nothing without her consent.

Turning to the condition of Mohammadan women especially among the Kurds, Dr. Belgarian said:—

The Muhammadan woman is no member of women's strights club, but she is as emancipated as any. She is above all, very brave, and knows how to handle arms and horses. It is a real pleasure to see her ride a wild horse and generally she has a child tied to her back. The country is very hilly, and she races down inclines where many men would lose their equilibrium—especially those who are not Prohibitionists. Such a woman is not only a man's right hand, but his right and left both. What could he do without her? She cooks, spins, rides, keeps house, does everything. If she is attacked by robbers. She fights courageously. But woe to her husband if he stays away from home a long time and returns without booty. Any piece of wood is handy to give him a reminder, for the Muhammadan woman respects no man that is not brave. When a young man proposes, the girl asks. How many caravans have you robbed? or "How many horses and weapons did you bring home?" We often hear that a Muhammadan girl has been carried off, but that is not so awful as you think. They have been carried off by their lovers, generally with the parents' consent, if the bridegroom is poor, for a wedding is very costly.

HORSES OF THE SAHARA.

The three most esteemed races in the Western Sahara are those of Haymour, Bou Gharch, and Merizigui; the first being generally bays, the second whites, and the third grays. The favourite colours are white—"take the horse white as a silken flag, without spot, with the circles of his eyes black"—black—"he must be black as a night without moon and stars"—bay—"the dark red one said to the dispute, stop there"—chestnut—"desire a dark shade; when he flees beneath the sun it is the wind. The Prophet was partial to chestnuts" (which may account for some of the fine old crusted humour of the Koran). Grays also are much in demand—"the gray of the wild pigeon", lighter in colour on the head than on the body; the piebald no self-respecting Arab will have—"flee him like the pestilence, for he is own brother to the cow." The horses that fetch the best prices are those with no white beyond a star on the forehead, or a narrow blaze down the face, or a snip on the muzzle. If he has several white spots three is the fashionable number; if he has white stockings he must have them on the off forefoot and the near hindfoot; one foot at least must be stock- ingless. "Never buy a horse with a white face and four stockings, for he carries his winding sheet with him." In earlier times the estimate as to colour was rather different. The Prophet, for instance, said, "If thou would'st go to the war, purchase a horse with a star on the forehead and stockings on all his legs with the exception of the right forefoot;" and if the white were no overdone he must have looked remarkably well on his chestnut mount. According to Abd-el-Kader, "the fleetest of horses is the chestnut; the most enduring the bay; the most spirited the black; the most blessed, one with a white forehead."

The ordinary Arab of the Sahara prefers a mare because of the profit to be made out of her produce, because also she does not neigh in time of war and is less sensitive to hunger, thirst, and heat, and also because she can feed on any thing; she will graze on the same herbage as the sheep and camels, and requires no one to watch her. The foal is weaned in the sixth or seventh month, and is then taken possession of by the women. Much of the docility of these horses of the Desert is owing to this. On the journey and the campaign it is the rider who sees to his horse, but under canvas and in the times of peace it is the wife who superintends and feeds her husband's mount. She brings him his foot in the morning and tends him and washes his mane and tail; she grooms

him and gives him the bread dates and other dainties, going out herself to gather for him the herbs with tonic and nutritive properties needful for his well being. Curiously enough, she often gives the horse 'couscous', or even meat cooked and dried in the sun. Many of them give the horse camels milk to drink, and some never give green food to the war horses. In summer the horse is not watered until three in the afternoon; in winter he is watered earlier, say from noon to one—in accordance with the proverb, "in the hot season put back the hour of the watering place and put forward that of the nosebag; in the cold season put forward the hour of the watering place and put back that of the nosebag." Twice a year, in August and September, and in December and January, the horses are watered only every other day.

The colt is not bridled until he is two years old. At first the bit is covered with undressed wool so as not to hurt him, and "to allure him to docility by the saltish flavour of which he is so fond." Saddling follows, and when he is about two and a-half years old he is mounted, after a preliminary experience of carrying a pack saddle with two baskets of sand gradually added to until they are of the same weight as his intended rider. He is always shod on his two forefeet, and in stony districts on all four, the shoes being kept ready made and always put on cold. They are of light, soft, pliant metal, those on the forefeet having only three nails on each side, the toes being never fastened and the feet being neither pared nor shortened. One foot is never left shod and the other bare, for if a foreshoe is cast the rider takes off both hind shoes and puts one on the forefoot, and if only the forefeet are shod, the remaining shoe is at once taken off. The shoes are joined at the heel and follow the curvature of the frog.—*Leisure Hour.*

WHY NOT LIVE A CENTURY?

"IN the coming time," said a famous English poet, "a man or woman eighty or one hundred years old will be more beautiful than the youth or maiden of twenty, as the ripe fruit is more beautiful and fragrant than the green. These ripe men and women will have no wrinkles on the brow, no grey hair, no bent and feeble bodies. On the contrary they will have perfect hearing, clear eyesight, sound teeth, elastic step, and mental vigour."

Does this sound absurd and impossible? Why should it? People over one hundred years old are frequently met with in these days, as they have been as far from records go back. A man is of no real value until he is past fifty and gained control of his passions and acquired some practical wisdom. After that he ought to have from fifty to seventy-five working years before him. Who dies short of one hundred (bar violence) dies of his own folly or that of his ancestors. One chief thing, however, we must learn. What is it? Take an illustration—such as we see multitudes of on every side.

Mr. Richard Leggate of New Bolingbroke, near Boston, Lincolnshire, is a man now somewhat over seventy. He is a farmer, well known and highly respected in his district. In the spring of 1891 he had an attack of influenza from which he never fully recuperated. The severe symptoms passed away, of course, but he remained weak. No doubt food would have built him up, provided he could have eaten and digested it. Yet here was the trouble, his appetite was poor, and what little he took, as a matter of necessity rather than of relish, seemed to act wrong with him. Instead of giving him strength it actually produced pain and distress in the sides, chest, and stomach.

Then again—which is a common experience—he would feel a craving for something to eat; yet on sitting down to a meal, in the hope to enjoy it, the stomach would suddenly rebel against the proceeding, and he would turn from the table without having swallowed a mouthful.

Nothing could come of this but increasing weakness and it wasn't long before it was all he could do to summon strength to walk about. As for working on his farm, that to be sure, was not to be thought of. He had a doctor attending him, as we should expect. If the services of a learned medical man are ever needed they must be in such a case—when nature seems to be all broken up, and the machinery runs slow, as our family clocks do when we have forgotten to wind them at the usual hour.

Well, Mr. Leggate took the prescribed medicines, but got no better. He asked the doctor why that was and he appeared to be puzzled for an answer at first. Naturally enough a doctor doesn't like to admit that his medicines are doing no good, because he expects to be paid for them; and then there is his professional pride, besides.

However, he finally said, "If my medicines fail to make you better it is owing to your age." That idea was plain as a pikestaff, and if the patient had never got any better afterwards, why who could dispute what the doctor said? Nobody, of course. It would look just as though Mr. Leggate were ready going to pieces from old age. But something subsequently happened which spoils that easy theory of the case. What it was he tells us in a letter dated February 3rd, 1893.

"After doctoring several months without receiving any benefit, I determined to try Mother Seigel's Curative Syrup. I got a bottle from Mr. G. H. Hanson, Chemist, New Bolingbroke. After taking the Syrup for a week I was much better. I had a good appetite, and what I ate digested and strengthened me; and by the time I had taken two bottles I was well and strong as ever. You may publish this statement if you think proper. (Signed) Richard Leggate."

So it proved, after all, that Mr. Leggate was not suffering from old age (at seventy? Nonsense!), but from indigestion and dyspepsia. When Mother Seigel's great discovery routed that, he felt "well and strong as ever."

Now for the moral: It is not Father Time who mows people down thus early in life; it is the Demon of Dyspepsia. Keep him away and—barring accidents—you may live a century.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Streets, Westminster, London, S. W.

A Wonderful Medicine.

BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness,

Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are in valuable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical: it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal. 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." Dr. H. Moore of Royal Artillery from Poonamallee says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdun says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Re. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Samkutia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HURTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

VOL. XV.

CALCUTTA, SATURDAY, MARCH 21, 1896.

WHOLE NO. 717.

CONTEMPORARY POETRY.

A FATHER'S ADVICE TO HIS SON, ON LEAVING HIS HOME FOR CALIFORNIA.

Farewell, my son, the hour has come,
The solemn hour when we must part ;
The hour that bears thee from thy home,
With sorrow fills thy father's heart.

Farewell, my son, thou leav'st behind
Thy mother, sisters, brothers dear,
And goest the far-off land to find,
Without one friend thy way to cheer.

Alone thou leav'st thy vine-clad cot,
Thy childhood's lawn, thy natal bowers ;
Sweet scenes, that ne'er can be forgot,
Where life has passed its sunniest hours.

When far away in distant lands,
Mid California's golden streams,
Where brightly shine those yellow sands,
Oft will *Sweet Home* come o'er thy dreams.

Thy father's counsels, prayers, and love,
Pursue thee through thy dangerous way
And at the mercy-seat above,
Implore his son may never stray

From that straight path where virtue guides
To purest, noblest joys on high,
Where God in holiness resides,
And springs perennial never dry.

Remember his omniscient eye
Beholds each devious step you take—
That you can ne'er his presence fly,
At home, abroad, asleep, awake.

On California's sea-beat shore,
Where the Pacific rolls his tide,
Where waves on waves eternal roar,
You cannot from his notice hide.

He holds you *there* upon his arm,
Encircled with his boundless might,
Preserves you safe from every harm,
'Mid brightest day and darkest night.

Let this great truth be deep impressed
Upon the tablets of thy heart—
Be cherished there within thy breast,
And from thy memory ne'er depart.

If strong temptations round you rise,
Where sin's deceitful smiles betray,
This *thought* will prompt you to despise
The course that leads the downward way.

When fascination spreads her charms,
But to allure, beguile, destroy,
Think, then, a father's faithful arms,
Are thrown around his wandering boy,

To keep him from the fatal snare
Spread to entrap his youthful feet,
And lead his heedless footsteps where
Pale ruin holds its gloomy seat.

What pangs must rend thy father's soul,
To find his counsels all are crossed,
Are set at nought, without control,
And his beloved son is lost !

Oh ! think what mourning, anguish, grief,
Would bathe thy kindred all in tears,
That one dear youth, in life so brief,
Should cloud in night their future years.

Should those bright hopes that gild thy sky
And cast their splendours on the west,
Fade on thy sight, grow dim and die,
And heart sink down with gloom oppressed—

Should sickness chain thee to thy bed,
In California's distant land,
No brothers there to hold thy head,
Nor sister take thy trembling hand—

Just then, my son, that guardian Power,
Whose eye beholds the sparrow's fall,
He'll watch thee in that lonely hour,
Whose gracious care is o'er us all.

Then, if beneath the evening star,
Beside the great Pacific's wave,
Thou find'st an early tomb afar,
His grace will there thy spirit save.

Or if, upon thy safe return,
Thou find'st no more thy father here,
Pay one sad visit to his urn,
Drop on his dust one filial tear.

May God's rich blessings on thy head
Descend in showers of heavenly grace,
And keep you safe where'er you tread,
As we here end this fond embrace.

So live, my son, while here you stand
On time's bleak, ever-changing shore,
That we may reach that better land
Where sons and fathers part no more.

J. D. G.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

WEEKLYANA.

ON Thursday, March 19, Sir James Westland presented his Financial Statement for the year 1896-97. We give the official summary:—

"The Statement begins by announcing the restoration of the Famine Insurance Grant with effect from date of its suspension. The amount however will for the present be taken at Rs. 1,000,000 instead of Rs. 1,500,000, this amount being considered on a review of fifteen years' transactions to make sufficient provision for present needs.

The accounts of 1894-95 closed Rs. 259,000 better than the Revised Estimate of the year, but as the restoration of the Famine Grant involves an additional charge of Rs. 557,000 the result on the whole is a surplus of Rs. 693,000 against Rs. 991,000 estimated last March.

The result in the Revised Estimates for 1895-96 is that after paying the charges of the Chitral Expedition, Rs. 1,750,000 besides £16,000 in England, and restoring the Famine Grant to the extent mentioned, and repaying the Provincial contributions, aggregating Rs. 405,000 levied in 1894-95, there is a surplus of Rs. 951,000. Of this great improvement in the financial position, Rs. 1,436,000 is ascribed to smaller charges for exchange, as 1368*d.* have been realized against 1309*d.* originally estimated, and English Expenditure was £249,000 less than estimate; Rs. 197,000 arises from better opium revenue, and Rs. 676,000 from short payments under the same head, the crop having again been short. There are improvements of Rs. 243,000 under other Principal Revenue heads, and Rs. 462,000 savings under ordinary Army Expenditure, prices during the year having been favourable.

The Government base their Budget Estimates for 1896-97 on a 133*d.* rate of exchange, being desirous of avoiding all speculation as to the maintenance of the better rates established during the last two months.

At this rate the estimates show a surplus of Rs. 463,000. Compared with last year's estimates, there is a falling-off in Land Revenue of Rs. 276,000 due to unfavourable agricultural prospects, and in Customs of Rs. 333,000 due to reduction in scale of Cotton Duties. Railways also will produce slightly less net earnings; but other Revenue heads show considerable improvements, and the Expenditure shows little increase. A special grant of Rs. 495,000 is made for Army Mobilization, chiefly purchase of animals and material for transport, and a thousand reserve artillery horses.

A large programme of Railway Capital Expenditure is laid down, namely, Rs. 7,270,000 on State Lines, including East Indian and Assam-Bengal Railways, besides Rs. 1,150,000 advances to Bengal-Nagpur and Indian Midland Railways for their extensions. These figures do not include other Companies' construction.

It is announced, with the usual reserve, that the Secretary of State proposes to draw for £16,500,000 and that a Rupee Loan of four crores will be raised in India."

The same day that the Finance Minister made his statement, the *Times* was enabled to speak on it. Reuter reports under date London, March 19, that the *Times* commenting on the Indian Budget, says that there is much to be proud of in the management of the Indian finances, and adds that when India has just struggled back into financial safety, it would be inexcusable to plunge her again into a deficit to gratify Lancashire.

The omniscience of "the giant of the press, whose might can make or unmake a reputation," is marvellous. The *Englishman* could only issue in the evening a supplement containing the Statement made in the forenoon. But the far distant *Times* reviewed it the same day.

It had, however, transpired here that there would be an Indian loan and no fresh taxation.

LORD Elgin starts on his spring tour on Friday, the 27th of March, at 6-3 P.M., Calcutta time, arriving at Simla on Thursday, the 9th of April, at 4 P.M. visiting en route Allahabad (March 28 and 29.) Bareilly (April 1 and 2), Hurdwar (April 2), Saharanpur (April 3 and 4 and 8), and Dehra Dun (April 4 to 8). The departure from Calcutta, the arrival at Simla and the visits to the intermediate places will be all private. At the railway stations where halts of one hour and upwards will be made, one Civil Officer and (if a military station) one Military Officer are required to meet the Viceroy, and to report themselves to the Military Secretary. Viceregal salutes will be fired at all terminal stations (that is, where the Viceroy enters or leaves the special train) where artillery is quartered, both on arrival and departure. An officer's guard of British troops, whenever available, will be mounted on the house or tent where the Viceroy takes up his quarters. If British troops are not available, the guard will be furnished by Native troops under the command of a British officer. The party accompanying the Viceroy on tour will consist of the Countess of Elgin, Lady Elizabeth Bruce, H. Babington Smith, Esq., Private Secretary, Colonel A. G. A. Durand, C.B., Military Secretary, Brigade-Surgeon-Lieutenant-Colonel B. Franklin, Surgeon to the Viceroy, Captain S. H. Pollen, Aid-de-Camp, Captain E. Fitz Clarence, Aid-de-Camp, and F. W. Latimer, Esq., Assistant Private Secretary.

DR. Chantemesse, of the Pasteur Institute, has, it is said, discovered

an anti-typhoid serum, after the first injection of which, in three instances, the disease passed at once through the ordinary stages and the patients entered into a state of convalescence.

IT is reported from Prague that Professor Maydl, of the Czech University, opened the abdominal cavity of a young man, aged nineteen, a scholar at the Technical College in Brünn, suffering since his childhood from a growth extending from the backbone downwards, and found between the spine and intestines the undeveloped form of a child, without a head, but with discernible extremities covered with fat and grown over with hair. The suggestion of the professor is that the lump is a twin child, which grew into the lower part of the body of the child that was actually born. The lad has since died.

WHEN the interior of the human system is not impervious to photographic rays of light, it is small matter that your letter can be read unopened. The Paris correspondent of the *Standard* says that two journalists, M. Henry Jerzuel and M. Henry Lapauze, of the *Gaulois*, have clearly and legibly photographed a letter of the well-known journalist, Alexandre Hepp, through its envelope.

IN Madras, at the Egmore Presidency Magistrate's Court, a man was fined two rupees for having exhibited to public view an obscene figure, which was put up to keep off "the evil eye" from his building under construction. On this the *Madras Mail* remarks—"old native superstitions die hard, even in the Presidency towns." But what is the origin of the superstition? Will fines kill it? It bespeaks a national character which is not confined to our brethren of the South. With all our advancement under British rule, with our so-called patriotism, there is still the necessity to divert the neighbourly "evil eye."

SIR Arthur Elibank Havelock, K.C.M.G., the new Governor of Madras has been created a Knight Grand Commander of the Most Eminent Order of the Indian Empire. Lord Wenlock, whom Sir Arthur has succeeded, also started with that dignity. Lord Connemara was, however, not made a G.C.I.E., till he had held office for six months. Sir M. E. Grant Duff when he began belonged to neither of the two Orders. Only towards the close of his career in India, he was admitted to the Exalted Star as a Grand Commander.

MR. W. H. Grimley has been Gazetted a Member of the Board of Revenue, L. P., from the 31st March, when the Hon'ble Mr. D. R. Lyall, C.S.I., retires from the British service or sinks into that of the Kuch Behar State, Mr. C. R. Marindin, Magistrate and Collector, Shahabad, acting for Mr. Grimley as Commissioner of the Chota Nagpur Division.

BY the middle of next month, there will be a temporary vacancy in the Commissionership of the Bhagalpur Division, when Mr. G. Toynbee takes 2 months' leave. The Commissioner Mr. W. B. Oldham, C.I.E., from Chittagong, comes to Bhagalpur, and Mr. F. H. B. Skrine goes to Chittagong as Commissioner, his place in the Calcutta Custom Office being taken by Mr. E. N. Baker on furlough.

THE Municipal Commissioners having accepted Mr. H. C. Williams on his own terms, he has been Gazetted Chairman of the Calcutta Corporation from the date on which he joins the appointment, probably from the 14th April when Mr. J. G. Ritchie goes on furlough for 19 months, having resigned his present post and reverted to his regular service as a Magistrate and Collector of the second grade.

Before his departure Mr. Ritchie will entertain the Commissioners who will return the compliment.

MR C. W. Bolton has replaced Mr. J. A. Bourdillon both in the Bengal Secretariat and the Bengal Legislative Council.

MR. P. O'Kinealy having obtained extraordinary leave for one year, Mr. A. M. Dunne officiates as Standing Counsel for the Presidency of Fort William in Bengal.

NAWAB Ahsaunllah Khan Bahadur, C.I.E., has given fresh proof of his liberality and public spirit by payment of Rs. 15,000, to the Joint Committee of the District Board and Municipality of Dacca, for the improvement of the Buriganga and other rivers of the district.

CHOLERA having abated on the river route from Goalundo, the notification suspending the emigration of all natives of India from the districts of Bengal to the labour districts of Assam, has been withdrawn.

MR. Herbert Roberts, M.P. gave notice, for February 24, of the following question in the House of Commons :—

"To ask the Secretary of State for India, if his attention has been called to the charges brought by the political agent at Jhallawar against the Maharaj Rana of that State, accompanied with a recommendation to the Viceroy for his deposition; if so, what action has been taken by the Government of India with regard to these charges :

Will His Highness have every opportunity afforded to him to defend himself publicly from these charges before any definite action is taken with regard to the recommendation for his deposition :

And, will the Secretary of State lay upon the table of the House any papers and correspondence relating to this difficulty in Jhallawar."

In reply Lord G. Hamilton said :

"My answer to the first part of the first question is in the affirmative, and to the second part that the reports of the political agent as to the oppression existing have been examined on the spot by the newly-appointed agent to the Governor-General, whose report is under the consideration of Lord Elgin. The Maharaja will be allowed every opportunity of submitting his reply to these charges. As soon as I have received the final decision of the Viceroy I will consider if papers relating to this subject can be laid upon the table of the House."

Mr. Roberts has also given notice of the following motion :—

"India (political resident at Jhallawar).—To call attention to the recent differences between the political resident at Jhallawar and the Maharaj Rana of that State; and to move, That, in the opinion of this House, the arrangements under which political residents are selected and appointed are unsatisfactory and require careful reconstruction."

.*.*

IN the House of Lords, Lord Stanley of Alderley had the following question on the paper :

"To ask the Under Secretary of State for India what steps have been taken to bring the practice of the Appeal Court of Bengal into harmony with the law and the practice of the Appeal Court of the Madras Presidency, by directing the Appeal Court of Bengal to communicate to a lower court the fact of its having reversed a sentence of the lower court, so as to prevent the abuse now existing in cases of persons who have been subject to a criminal charge, and fined by a lower court, and who have obtained a reversal of such sentence from the Appeal Court, of being subjected to some months' delay, and to the payment of additional stamps, in order to recover the amount of fines wrongfully paid by them. He said that he had reason to believe that the ground of the complaint to which the question referred had now been removed. He desired to tender his thanks to the present Secretary of State for India and his predecessor for the steps which they had taken in the matter.

The Earl of Onslow: I am not aware what authority the noble lord has for the suggestion that the practice of the High Court of Bengal is not in harmony with the law. I believe it to be a universal rule throughout India that all orders passed in appeal shall be forthwith certified to the court below. When, therefore, the refund of a fine has been ordered, there ought to be no difficulty in obtaining repayment from the Treasury. Instructions were sent to India some time ago to make enquiries as to the practice obtaining in the various provinces, and to pass such orders as might be found necessary to secure prompt relief in such cases. The Government of India issued a circular on the subject in June last, and the Secretary of State expects to receive their final report shortly."

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

ON March 13, the Emperor Francis Joseph paid a visit to Her Majesty the Queen at Cimiez. The Vienna papers regard the interview as important, reflecting the old Anglo-Austrian friendship and community of interests in the East. The Queen has appointed the Emperor of Austria to a Colonelcy in the King's Dragoon Guards.

IN the House of Commons, on March 13, the Hon. W. St. John Brodrick, Under-Secretary for War, brought forward the Army Estimates, and said that England's readiness for war had recently greatly improved, and that plans were prepared for every emergency to rapidly mobilize the fleet and for the army to co-operate.

THE Dongola expedition has been decided upon. Brigadier General Kitchener commands it which will be composed of five black battalions and seven Egyptian battalions of Artillery and Cavalry, comprising 8,000 men of all arms.

The *Times* says that the advance on Dongola is the first step towards the reconquest of the Upper Nile, at least up to Khartoum, from barbarism. The French press regards the expedition as a pretext for deferring the British evacuation of Egypt. A communique to the French press states that M. Berthelot, Foreign Minister, has pointed out to Lord Dufferin the serious consequences thereof. An active exchange of views is going on between Paris and St. Petersburg.

The Egyptian Cabinet have asked the Egyptian Debt Commission for a credit of two and a half million francs towards the cost of the expedition. All the Powers, except France and Russia, have assented. France contends that the assent of all the Powers is necessary. Great Britain holds differently. It is also semi-officially stated that the Congo State has formed a camp on the Nile and made a proposal to France for defensive co-operation against the Dervishes. The *Times* states that the occupation of Abu Hamed must follow the occupation of Dongola. It hopes that the advance on Akasleh is but the first step of a forward policy in Egypt, of which the Soudan is the key. Great Britain, it adds, cannot afford to let the Soudan pass into the hands of a civilized or semi-civilized Power.

The Conservative papers approve of the expedition to Akasleh. The Liberal papers demanded full information on the subject, and strongly oppose the re-conquest of the Soudan.

In the House of Commons, on March 16, Mr. Curzon, replying to Sir William Harcourt, said that it was known some weeks ago that a strong force of Dervishes were advancing on Kassala and other points, and also that reinforcements were advancing on Dongola.

It is believed, he said, that 10,000 of them are already threatening Kassala, and a Dervish victory would constitute a serious danger not only to Egypt and Italy, but to the cause of European civilization, and hence the military advisers of Egypt in London had decided that an advance on Akasleh was necessary, which might ultimately extend to Dongola. It was not expedient, however, to disclose plans at present.

The Government were convinced that their action would have the twofold effect of relieving the Italians at Adowa and Kassala and of saving Egypt from events which might assume formidable dimensions.

Mr. Labouchere, after this statement, moved that the House should adjourn to discuss the expedition which, he said, was merely an excuse to remain in Egypt.

Sir Charles Dilke seconded the motion, and denounced the advance of the Egyptians as inopportune.

Sir William Harcourt warned the Government that a British occupation of the Soudan would be fatal to the peace of Europe.

Mr. Balfour said that it would be of the greatest benefit to the Soudan if the allegiance of the Arab tribes was transferred to a Government which was acting under English influence. The Government, he said, had no intention to occupy Darfur.

The motion on being put to the vote was rejected by a majority of 142.

In the House of Lords, Lord Salisbury said that the advance towards Dongola had been undertaken after communicating with the Egyptian and Italian Cabinets, and that the former urged the dangers that would arise from the advance of the Dervishes.

The Italian Government have expressed their pleasure at the forthcoming Egyptian expedition, and the Senate passed a vote of thanks for the sympathy towards Italy expressed in the House of Commons. Marquis Rudini made a statement in the Chamber in which he said that the Italian Government would reject any peace proposals incompatible with the dignity of the nation. Meanwhile they would continue hostilities in Abyssinia, but would do nothing to weaken the European position of Italy. In no case would they abrogate their protectorate over Abyssinia. He then asked the Chamber to vote a credit of 140 million lire.

THE *Times* correspondent at Pretoria states that President Kruger is considering the despatch of Mr. Chamberlain of the 4th February, suggesting whether it would be possible to abrogate the Convention of 1884 on the franchise being granted to the Britishers, Great Britain guaranteeing the autonomy of the Transvaal.

THE Socialist members of the Reichstag during a two days' debate have revived the charges against Herr Peters, alleging that while he was Commissioner of German East Africa he ordered the hanging of his Negro mistress and her lover and was guilty of other cruelties. The Government have promised a fresh enquiry into his conduct.

AN edict has been signed at Peking sanctioning the opening of the West River.

SIR Michael Hicks Beach, speaking on the introduction of a motion in the House of Commons by Mr. Whiteley in favour of an international agreement to secure a stable ratio between gold and silver, said that Government were anxious to confer with foreign countries either by a conference or by negotiations as to the best means of alleviating the evils affecting Great Britain and India through the fall in the value of silver. He feared, however, that the prospects of the agreement were not brilliant, anyhow Government would accept no change in the gold standard of Great Britain. The motion was eventually adopted.

LORD George Hamilton, replying to a question put by Sir Seymour King in the House of Commons, said that it had been decided that the Chord Line between Moghul Serai and Barakhur should be part of the East Indian Railway system, and the first instalment from Moghul Serai and Sherghutty to Gaya had been entrusted to the East Indian Railway. The Government had no present intention of constructing any other line between Moghul Serai and Calcutta.

AT a debate in the Reichstag the Foreign Minister said that Germany was obliged to join France and Russia against Japan not from any hostility to Japan or partiality for China, but solely to guard her own interest. The young and energetic Japanese nation, which had shown a sharp sword by sea and land, might count on the protection of Germany and he hoped soon to place Germany's commercial relations with Japan on a firm basis.

THE Viceroy will hold his last public reception of the closing season at Calcutta on Monday next, in the gardens of Government House, from 5-30 to 7 P.M.

LAST night, Lord Elgin entertained at dinner the two retiring members of his council, Sir Alexander Miller and Sir Henry Brackenbury. After dinner, the Viceroy invested the military member with the insignia of the Star of India of which he has been made a Knight Commander.

LADY Mackenzie being indisposed, the Lieutenant-Governor unexpectedly left with her for Darjeeling on Wednesday. He is, however, expected back to Calcutta next Wednesday.

THE rate of exchange for the adjustment of financial transactions between the British and Indian Governments for the year 1896-97, has been fixed at 1s. 1½d. the rupee.

THERE being no rates on churches, frankincense, the gum olibanum of commerce, burnt therein, has been properly exempted from import duty

BEFORE Influenza has gathered its last victim in Calcutta, Cholera has raised high its head. The number of deaths, last week, from all causes, was 350, against 332 and 332 in the two preceding weeks. Of this, about one-third or 101 was from cholera. The rate of mortality from this cause is rising rapidly, the numbers for the two previous weeks being 75 and 43. To add to the panic thus caused, small-pox has made its dreaded appearance. Week before last, there was one death from this disease, last week the number had quadrupled.

IN the usual place will be found an advertisement of the India General Steam Navigation Co. Ltd., offering "very favourable" insurance rates for goods carried by them.

REGARDING the validity of certain codicils of Sir William Mackin-

non's will, the Edinburgh Court of Session has decided that, after the Free Church revised its creed, Mackinnon distrusted its orthodoxy, and therefore the legacies to the Church aggregating to £55,000 sterling were cancelled.

Sir William Mackinnon's testamentary charities have really been princely. There are men in Bengal who still remember the days when William Mackinnon was the owner of a single country boat. Fortune smiled on him. He fully deserved the fair goddess's smiles. To the native clerks of his Calcutta and Bombay offices of ten years' standing and above, he left a legacy of a full lac of Rupees. The Free Church loses its legacy, but the decision will not go unchallenged, we may be sure. The Church litigant is not a strange sight.

IN the *Calcutta Gazette*, Part I, (containing "Orders and Notifications by the Lieutenant-Governor of Bengal, the High Court, Government Treasury, &c.") of March 11, 1896, p. 288, we read:—

"Government of Bengal,—Marine Department.

The 9th March 1896.

No. 26 *Marine*.—Whereas it appears that the estimated income of the Commissioners for the Port of Calcutta under Act III of 1890, from 1st April 1896 to 31st March 1897, after deducting therefrom the estimated expenditure for the above period, will be insufficient for the payment of the sums which, under the provisions of the said Act, are payable during the year to the Secretary of State for India in Council and to holders of debentures under the said Act, it is hereby notified that from the 1st of April 1896 the Port Commissioners will charge upon all goods landed from or shipped into any sea-going vessel lying or being within the limits of the port, whether such goods shall or shall not be so landed or shipped at any dock, wharf, quay, stage or jetty belonging to the Commissioners, in addition to, or other than those prescribed by any scale of tolls, dues, rates and charges now in force, a toll which shall approximate four annas per ton, except for export coal, the charge on which shall be 2 annas per ton, and on bunker coal, which shall be free. Goods transhipped within the port are exempt; also ballast, with the exception of dressed stone. For the purpose of levying such toll on miscellaneous general cargo landed or shipped at the Kidderpore Docks or at the Jetties, the Commissioners will follow the schedules of charges prescribed for the Docks and the Jetties and charge one-fifth of the rates therein specified; but where the landing or shipping charge is in these schedules levied on the ton by weight, then the special charge under this notification shall be four annas per ton. For the purpose of levying such toll on goods landed or shipped over the inland vessels' wharves or otherwise than through the Docks or Jetties, the ton shall be reckoned at the actual weight where such is ascertainable. Where the weight is not declared, then the ton shall be reckoned at the respective weights and measurements given in the schedule in force for the inland vessels' wharves.

No. 27 *Marine*.—The following Resolution of the Government of India, sanctioning certain alterations in the first clause of the existing form of agreement with Indian seamen employed in foreign-trade ships, is published for general information.

A. D. MCARTHUR, Colonel, R. E.,
Secy. to the Govt. of Bengal."

Verily, the *Gazette* needs a regular editor. The printer-editor will not do. The *London Gazette* has its editor. Why then not the *Gazette of India* and the Provincial Gazettes?

Is Notification No. 26 valid? Is it any authority for the Port Commissioners to make the extra charge, or does it bind the ship-owners and agents to pay the same? Is it any notification or order by the Lieutenant-Governor, or by the High Court, or by Government Treasury, or by another? Evidently, it is no part of No. 27, which alone is signed, if a printed name be a signature, and bears some evidence of authenticity. That mark of authority properly belongs to the second, which is quite distinct from the first and refers to a different matter. There is nothing in the notification to shew that it has the sanction of the Lieutenant-Governor. It may after all be a notice by the Port Commissioners themselves. But its appearance through the Marine Department of the Bengal Government clashes with such supposition. Who then sanctions the extra charge and who notifies it?

A MEASURE has been passed in the House of Lords which cuts the English law of evidence at the root. The Bill called the Evidence in Criminal Cases Bill was, on Feb. 20, on the motion of the Lord Chancellor, and with the cordial support of Lord Herschell, read a second time. It amends the law by allowing any person charged with an offence to give evidence on his or her own behalf, and also by making the wife or husband of the person so charged a competent witness. It was explained that the measure was urgently required to correct the anomalous state of the existing law and to remove the grievous practical injustice often experienced in its administration, that it had repeatedly received the sanction of their lordships, and the

Lord Chancellor hoped that when it reached the other House time would be found to pass it this session. On the 24th of February, the Bill passed through committee with some slight amendment, suggested by Lord Russell of Killowen, to the clause making accused persons competent witnesses. Three days after, on the 27th of February, the Bill was read a third time and passed.

The Indian law has already made an advance in the direction indicated, but it has not been always favourably received. If the other House pass the measure, the Indian courts will receive an impetus. Sir Barnes Peacock, the Chief Justice of Bengal, we believe, first laid down that in a criminal case a wife was a competent witness against the husband. The Indian legislature accepted the ruling and incorporated it in the Code. Another innovation empowered the Magistrate to examine the accused. Prompted by English instincts, the High Courts in India would not allow the free exercise of the power. In *Empress vs. Chinibash Ghose* sentenced by the Sessions Court of Hooghly to death for murder of a woman of the town, the Bengal High Court remarked :

"We observe in this case that before the evidence for the prosecution was recorded, the prisoner Chinibash Ghose was subjected to a very searching cross-examination. Now under section 250 of the Code of Criminal Procedure, the court may from time to time, at any stage of the case, examine the accused personally, but it has been held by the Madras High Court (vol. I. p. 199) that the Sessions Judge is not competent to subject the accused to severe cross-examination, and that the discretion given by the law is not to be used for the purpose of driving the accused to make statements criminating himself, and that it can only properly be used for the purpose of ascertaining from the accused how he is able to meet the facts standing in evidence against him, so that these facts should not stand against him, unexplained."

We have not the text of the proposed English law before us. If there are no safeguards, a prisoner will not only be free to give evidence on his own behalf but may be driven by severe cross-examination to incriminate himself.

THE high priest of Thensophy in Bengal, as also of every brand-new creed that the ingenuity of man or woman may devise, is, it seems, brushing up his knowledge of Jewish literature for, as is believed, delivering better regulated attacks, in behalf of his faiths, against the Christian religion. Having come across a Jewish chronicle he quotes it wonderingly, and exultingly too, for some coincidences his disordered imagination has discovered between the incidents narrated and the career of Mr. F. H. Skrine at Calcutta. Poor soul, he is still smarting under the hiding he received from Mr. Skrine in the matter of the Viceroy's verandah. The truth is, Mr. Skrine saved the reputation, if not the very existence, of the Calcutta Corporation endangered by the constitutionalism of our patriotic orators. They had expected that the Viceroy of all India would come down on his knees and humbly pray their august selves in proper form for permission to build a new house that has become a desideratum in view of the growing needs of the empire. The spectacle would have been highly gratifying to the patriotism of some of the City fathers. Unfortunately for their self-love and self-glorification, Mr. Skrine intervened and brought the authors of the attempted *contretemps* down to their own level. Among others, the high priest of all new Dispensations, in particular, was made, more than any other among his compatriots, to feel his own littleness.

Mr. Skrine leaves Calcutta amid the regrets of the mercantile community. There is hardly a trading firm in the metropolis that has not found his supervision of the Customs Department fraught with facilities to business in many directions. It may be fairly said that he has, in ten months, effected such reforms in the Customs administration as could be hoped for in as many years, considering the ingrained conservatism of Indian officialdom. His success is admitted by such judges as Sir Alexander Mackenzie and Sir James Westland. Chittagong is a large division with great possibilities. We have little doubt that Mr. Skrine will make a very successful Commissioner. Few Englishmen possess such experience of the native character as Mr. Skrine. He can detect humbug and snobishness at once. Noddledom has very little chance with him. He can see a man through and through. He believes, one may be sure, in the correctness of Dr. Johnson's definition of patriotism.

A CORRESPONDENT of the *Times of India* has the following on the Neem or Margosa :—

"The Neem or Margosa tree, *Asadracta Indica*, belongs to the

order Meliaceæ, Linn., Syn., *Decandria Monogynia*, and is found more or less abundantly throughout the peninsula of India. All parts of the tree are bitter and nauseous to the taste; this is especially noticed in the bark, the bitterness being accompanied with some astringency, which is very permanent.

For many centuries the N-em tree has been held in the highest esteem by the natives of India, who have applied every part of it to some medicinal use; thus the bark has been regarded as an excellent tonic and antiperiodic, the seeds and the oil obtained from the pericarp (pulp) as an anthelmintic, the bark of the root as an emmenagogue; the gum, which exudes plentifully, as an aphrodisiac; and the leaves, in the form of poultice, as a valuable local application to ulcers, inflammations, sinuses, and cutaneous affections.

The *Taleef Sheriff*, of which there is a translation by George Playfair, (Calcutta, 1833,) contains a very lengthened account of its virtues, of which I shall content myself with a brief summary, reserving a large space for the consideration of its virtues as observed by European practitioners. The author of the *Taleef Sheriff* states from personal experience that it proves most useful, exhibited internally in juram (elephantiasis?), white leprosy, cutaneous eruptions, and scabies; and he quotes the case of a man, whose whole body was white from leprosy, who in forty days was cured by its use. To old and obstinate ulcers and to fistula, the local application of the leaves (a decoction of the leaves or of the bark being given internally at the same time) is highly spoken of. The addition of salt was found to aid its efficacy. The leaves heated and applied to swellings and boils in some cases resolved them, in others expedited suppuration, and in all were beneficial. Fumigation with the decoction of leaves proves useful, it is said, in the same way, and the water of this decoction is useful in cleansing foul ulcers and removing pains (rheumatic) from the joints. The seeds, bruised and applied to the head, will cure headache; their juice acts as a vermifuge; the juice of the leaf-buds introduced into the eye will cure night-blindness. The oil of the leaves as prepared by Hakims is very efficacious in sinuses and otorrhœa. I have used it often with success here."

Mr. U. C. Dutt, in his Sanskrit *Materia Medica*, has the following on the same subject :—"This useful tree is indigenous to India and is cultivated all over the country for the sake of its bark, leaves, and fruits. These have been used in Hindu medicine from a very remote period. The bark is regarded as bitter, tonic, astringent and useful in fever, thirst, nausea, vomiting and skin-diseases. The bitter leaves are used as a pot-herb being made into a soup or curry with other vegetables. The slightly aromatic and bitter taste which they impart to the curries thus prepared, is much relished by some. The leaves are moreover an old and popular remedy for skin-diseases. The fruits are described as purgative and emollient and useful in intestinal worms, urinary diseases, piles, etc. The oil obtained from the seeds is used in skin-diseases, and ulcers."

There are other virtues in the tree. The twigs cleanse the mouth and preserve and strengthen the teeth. In the popular belief, the whole tree imparts health to a house. At any rate, the flowers perfume it. It is, therefore, not strange, that the tree is, to some extent, held sacred, in that it is seldom cut down, or, if cut down, its wood is never burnt as fuel by a good house-holder. In many parts of Bengal, the Neem is regarded as the favourite tree of the goddess *Vishalakshi*, or she with large, expansive eyes, probably another name of Sitala, the presiding deity of small-pox. It is a pity that European practitioners do not use the products of this tree more largely.

WE take the following from the *Times of India* :—

"A young German Orientalist, the Rev. Joseph Dahlmann, S. J., has just published in Berlin a learned monograph of the great Indian epic of the Mahabharata, which is likely to arouse the interest not only of Sanskritists, but of all interested in the history of ancient civilization in India. Father Dahlmann has well kept up the learned traditions of his Order, and is an Oriental scholar of great promise. He has laboured at the Avesta and Pahlavi languages as well as at Sanskrit, and is a contributor to the encyclopædic work on the two former languages now being prepared by various European scholars under the editorship of Drs. Geldner and Geiger. Chinese also has attracted his attention owing to the famous narratives of the pilgrims from China which throw a valuable light upon the India of the fourth and sixth centuries. A few years ago he published a work, characterized by wide research and great philosophical ability, on the labours of Catholic missionaries for the preservation of the languages and literatures of Asia, Africa, and America. He is at present at work upon an annotated German edition of the Mahabharata, and the monograph to which we have alluded is, properly speaking, an introduction to this great edition. It is entitled 'The Mahabharata considered as an Epic and a Law-book, a problem in the history of ancient Indian literature and civilization.' His chief object in it is to show that this Epic is not a mere conglomeration of heterogeneous elements produced during widely-differring epochs, but one harmonious whole written at one period. There are two elements in this poem, the epic and the didactic. But according to Father Dahlmann the two are so closely interwoven as to be almost inseparable, the didactic element, or that which contains the law portion, being predominant. This, it may be seen, is against the view upheld by many scholars, who maintain that the two portions are separate and were written at different times. But our author sees no diversity of style and language throughout the work, and the so-called contradictions he shows to be rare and only apparent. He ingeniously shows that the intimate union of the epic and the legal elements appears first in the

tragic contests between the chief legal heroes; the external and material contest becomes in his view an ideal one between right and wrong, and in this contest thus dramatically conceived, old saws and sayings are interwoven about the mysterious nature and self-assertion of law. He points out the hitherto little observed fact that Indian speculation turned early towards law, and was embodied in wise saws and sayings. In judging the relation between poetry and law, it is of decisive significance that the dramatic structure and development of the poem closely coincides with the idea of this kind of legal wisdom digested in ancient proverbs. Of peculiar interest in this connection are the author's remarks on the Pandava family. In Draupadi, the common consort, he sees the symbolisation of the unity of property in the undivided family. In the second part of his work he considers the question of the date of the poem, which he fixes at the fifth century at least before Christ; and his discussion of the value of the testimony of Buddhacharita and Panini in this connection is very striking. The religious and scientific as well as the social and economical conditions of the fifth century are clearly mirrored in the poem, which reflects the life and condition of the people even more truly than other national epics. In the final part some characteristic laws about marriage and inheritance are brought together. In short, Father Dahlmann endeavours to prove that the Mahabharata is in form and contents like one of the ancient metrical law-books. This is a novel view and is likely to arouse lively controversy. Dr. Bühler, whose disciple Father Dahlmann is, is known to hold different views on the subject."

It is difficult to judge of the merits of Father Dahlmann's new work from the above account. If the account is correct, it is plain that the theory put forward by the writer is not at all a novel one. There are many readers of the Mahabharata in the East who choose to regard it in this very light. The narrative of the events leading up to the battle and of the battle itself, is taken as a grand allegory. According to these men, the battle of Kurukshetra is the spiritual battle that the Soul has to fight before it succeeds in achieving emancipation. The heroes on both sides represent so many passions. Draupadi is the mind, and Krishna is the soul in its wisdom and holiness. Father Dahlmann is treading the old ground in thus interpreting the great work, supposed to have been written as a whole by Vyasa. When, however, we are told that the reverend Father does not see any diversity of style and language throughout the work, we cannot help thinking that his knowledge of Sanskrit is not deep. The story of Nala and the philosophical sections in the Sánti Parva from the same pen? The difference between the style of Addison and Bacon, or of Macaulay and Carlyle, is not more marked than the difference between the style of the purely narrative portions of the great epic and its didactic portions. There is abundant internal evidence to prove that old narratives were dove-tailed in the work as it proceeded from the pen of its author. Every episode is introduced with the well-known line "Atrápyudáharantimam itihásam purátanam," i. e., "in this connection the following old story is referred to." In the didactic and legal portions, many verses occur that one meets with in Manu. The slight differences of reading decidedly show that the form in which they occur in the Mahabharata is more ancient. This lends great strength to the theory that the Manu-Samhita we now possess is based upon an ancient compilation from which the author or authors of the Mahabharata quoted freely.

THE Englishman says:—

"We believe it is not denied, by the greatest enthusiasts for Lord Ripon's scheme of local self-government, that the municipal affairs of Calcutta have been grossly mismanaged by the Native Commissioners who form the large majority of the municipal body. The chief contention upon the Native side is that the Babu class has a constitutional right to misgovern the city if it chooses. The letter from 'Citizen,' which appeared in our correspondence columns the other day, proves the fallacy of the argument. It will be difficult for the Bengali municipal orator in future to claim that his election is 'broad-based upon the people's will'; for the statistics show that he has been elected by a mere handful of voters, whose numbers bear no relation whatever to the total population. Neither can he profess to represent the wealth, far less the enterprise of the city, for the tax-paying list declares the enormous proportion in which these qualifications belong to the European minority. Our correspondent has rendered an important service by exposing the arbitrary manner in which the Europeans have been excluded from any share in the government of Calcutta. It certainly reflects small credit upon the Government of the day that it could not disfranchise them at least with some appearance of fairness. It may be contended that it is now too late to remodel the municipal constitution so as to ensure, as our correspondent suggests, that at least half of the Commissioners shall be Europeans. We do not think it is too late. The results of the change have been to render the municipal body a laughing stock, and to paralyse every effort of those who have the real good of the community at heart. It is impossible that this state of things can continue. Apart from the weighty considerations urged by our correspondent in favour of preserving British ascendancy in municipal as in Imperial affairs, the public health has over and over again been shown to be threatened by the lethargic spirit in which all sanitary and kindred questions are approached. Recurring incidents like the verandah dispute may

be left out of account. They are irritating for the time, but nothing more, as obstreperous Commissioners always subside before any manifestation of official displeasure. Some day however, they may go too far, with disastrous results to their corporate existence. It would be a kindness to them—and to us—to prevent this catastrophe. The Government has sufficient data for interfering if it sees fit. There is mismanagement enough to render an alteration expedient, and there is reason enough on the European side to render it just."

If our contemporaries were aware of, or had studied, the history of the present constitution of the Calcutta Corporation, it would not have made the complaint about the European minority. When in 1876, at the instance of the Indian League, in the teeth of the opposition of the members of his legislative Council, the Justices of the Peace who composed the Corporation, and the British Indian Association, Sir Richard Temple gave the city an elective Municipality, the Europeans not only took no part in the agitation but studiously kept away. It was not till the appointment of Mr. S. E. J. Clarke as Secretary to the Bengal Chamber of Commerce, that the European community were roused from the torpor into which they had fallen. They have since resumed their political activity and taken part in important public movements, sometimes even initiating them. In the framing of the Municipal constitution, enough room was left for European representation. The law has since been amended to give greater verge to that community. If there has been any exclusion, it is not due to the law, but to those who complain. In a conference on the Bill which became law as Act IV of 1876, Sir Stuart Hogg, the Chairman of the Corporation and member in charge of the Bill, said that neither the European nor the native community wanted the reform. He was sure the Europeans disliked it and he believed the Hon'ble Kristodas Pal and his political associate Dr. Rajendralala Mitra, for instance, who so vehemently opposed the new constitution, would be lost to the Corporation. The reply was that he of course knew better his European brethren and could speak for them, but he was wrong in his estimate of the Indians he had named, as the event proved, for they were the first to offer themselves as candidates for election. The official Europeans accepted the law when it was passed, but the non-officials continued in their old indifference. Mr. Reynolds offered himself a candidate and was not above canvassing. Read his letter to a voter:

"4, Harrington Street,
August 28, (1876).

To.....
Sir,—If you have not already given or promised your votes in Ward No. 16 (Badamtollce) at the ensuing municipal election, I beg to request the favour of your voting for me.

I have been asked, both by native and European gentlemen, to stand as a candidate; and I believe it is generally admitted to be desirable that there should be some European Members among the elected Commissioners.

If I am elected, my utmost efforts shall be used to promote the best interests of the town.

I enclose a voting paper, I shall be much obliged by your filling it up in my favour, and returning it to me, if you are inclined to vote for me.

Yours obediently,
H. T. REYNOLDS,
(Offg. Secretary to Government.)"

We need not say that Mr. Reynolds was elected and he was a useful and respected member of the Corporation. The letter also shows that natives were anxious that Europeans should be returned. The same feeling survives to this day. It is ungenerous of the *Englishman* to insinuate that the Babu is not for the European, or that the Europeans have been excluded. If they do not come forward, the blame of their non-representation cannot rest on other shoulders. Of all Anglo-Indian papers, however, the *Englishman* has the shortest memory, when the end in view is vilification of the children of the soil.

REIS & RAYYET.

Saturday, March 21, 1896.

FREDERIC PINCOTT.

THERE has lately passed away, in India, an indefatigable and modest scholar, Mr. Frederic Pincott, personal intercourse with whom had been enjoyed, here in England, by many Hindus and Muhammadans, especially natives of the Upper Provinces, and whose name has become honourably associated with Hindu literature. Of poor and humble origin, and indebted to external circumstances for only a meagre education, he was a person whose career, failing his strenuous ambition for self-improvement, would pro-

bably have deserved no memorial. Considering, therefore, what he accomplished, under difficulties, as a linguist, some account of his literary achievements is justly his due.

From his early youth he followed the vocation of a printer, which, in consequence of the reorganization of the establishment where he was last employed, he recently relinquished, to earn a livelihood mainly by his pen.

It was just thirty years ago that he introduced himself to me. At the printing-office to which he was then attached he had, by his quickness of eye and retentiveness of memory, approved himself highly serviceable in dealing, as a compositor, with the languages of India. The aspect of the strange characters with which he was constantly busied mechanically, piqued his curiosity, he told me, to ascertain what they represented to the ear. On my providing him with the necessary books, he not merely, before long, realized his wish, as regarded Telugu and Tamil, but made some progress in gaining acquaintance with their elements. Meanwhile he had likewise learned the Arabic and Devanagara alphabets. At my instance, laying Telugu and Tamil aside, he applied himself seriously to the acquisition of Urdu and Hindi. At these he toiled, year in and year out, in all his spare hours, which were solely at night, until he had read, and read critically, many hundred pages of the one and several thousand pages of the other. His invariable custom, from the first, was to note down methodically, as he proceeded, everything in vocabulary and construction that he met with, supplementary to the information furnished by the best dictionaries and grammars. Sanskrit next engaging his attention, he prosecuted the study of it, so far as to read the *Rig-veda*, with his habitual diligence, and with no inconsiderable success; and then he passed on to Panjabi. In French he was proficient, and he knew a little Latin.

In 1870 I compiled my *Hindi Reader*, for the use of selected candidates for the Indian Civil Service. Something additional in Hindi was, however, required for them; but, as I had already sunk a couple of thousand pounds, or thereabouts, by my interest in oriental matters, I was indisposed to part with any more of my substance gratuitously. Hearing me name Kanva Lachhman Singh's translation of the *Sakuntala* as a work I would have edited, if I had had encouragement to do so, Mr. Pincott proposed to undertake the task; and I lent him, for that purpose, my copy of it, probably the only one then in England. His edition, a handsome small quarto, came out in 1876. Its execution is meritorious, and, as was his desert, his venture proved remunerative. His next publication, issued in 1880, was a translation, more helpful to the incepting student than any of those which had preceded it, of the Sanskrit *Hitopadesa*. In 1882 appeared, destined to reach a third impression, his valuable *Hindi Manual*, which, like his *Sakuntala*, was at once adopted as a textbook by the Civil Service Commissioners, and remained so until Hindi was struck out from the list of languages prescribed by them. And then followed six or eight Hindi school-books, all of them printed in India, ending with a "Life of Queen Victoria," published last year at Bankipur.

In evidence of Mr. Pincott's untiring assiduity, mention should likewise be made of his Hindi translation, for a religious society, of a book which, in its new dress, is quite equal, in compass, to the "Prem-sagar." This was task-work; and so was his

editing a thick volume, in the Roman character, of the Urdu version of the "Alif Laila," as was, too, his minute "Analytical Index to Sir John W. Kaye's History of the Sepoy War, and Colonel G. B. Malle-son's History of the Indian Mutiny."

Several articles were contributed by him to the *National Review*, and others to the *Journal* of the Royal Asiatic Society, of which he was a member; and he was also author of four or five pamphlets, and of numerous book-reviews in newspapers.

But what was, to Mr. Pincott, as a scholar, more than anything else a source of complacency, was his familiarity with the scriptural records of the Sikhs. Few Europeans can have pored as he did over the pages of the "Adi-granth," the fruits of his researches on which he intended to embody in an elaborate treatise. This enterprise, for which he had made copious notes, he reserved as occupation for the leisure he hoped would by and by be at his command.

About five months ago he went to India, in connexion with the promotion of a commercial project. He wrote to me from Bombay, from Faizabad, and finally, from Calcutta, on the 4th of December. At that date he was well. His last letter concludes with these words: "I hope now to make a success of cultivating rheumatism; and, if I do, a few years will bring me back to England, with sufficient accumulations to end my days in the peaceful study of my books. This is, indeed, something to work for and to hope for. And another hope I have is, that you may live and preserve your health, so that we may enjoy communication with each other during those peaceful days." Just after Christmas he was struck down by fever, and lingered till the 7th of February. His age was fifty-nine or sixty.

As a husband, a parent, a friend, and in all other social relations, he was everything entitled to commendation. Estimated scholastically, he possessed much merit, despite his occasional shortcomings, those which are inevitable to an autodidact. Peculiarities like those scattered over "The Laws of Language," in writing which he co-operated, in 1874, with Count de Godes-Liancourt, are, however, discernible with less and less frequency in his subsequent performances. In him Indian literature has lost an enthusiast whose labours and whose example are to be remembered with respect.

FITZEDWARD HALL.

"CRITICISM AS THEFT."

BY PROFESSOR WILLIAM KNIGHT.

Some years ago I contributed an article to this Review on 'Criticism as a Trade.' This brief sequel to it I call 'Criticism as Theft.'

It is a somewhat grave charge to make against even a subsection of our nineteenth-century Literature that it contravenes the spirit of the eighth law in the Jewish Decalogue; and, if made, it must be justified by evidence. I bring no 'railing accusation,' however, against the noble army of modern critics, who, day by day, week by week, and month by month, write to satisfy a modern demand. The true critic fulfils a singularly great function in the world of Letters, and he is quite as needful--alike to his contemporaries and successors--as is the original author, be he poet, novelist, philosopher, man of science, or divine. The severe censorship of the Press is absolutely necessary to prevent our Literature from becoming a rabbit-warren of commonplace, or a Sahara of mediocrity and irrelevancy. I raise no objection to it, however scathing it may be, if it is based on knowledge, and is discriminative, just, and wise.

What we owe to our best contemporary reviewers I have already indicated, and I shall try to state it more appreciatively later on. No one who has an eye for excellence can be blind to the merit of their work; but what our age seems unfortunately to demand in the continuous turning out of a set of articles that are

neither original, nor distinctive, nor genial, nor learned, nor instructive, nor 'up to date,' but which merely satisfy the morbid and pampered appetite of the hour, which for the most part craves for novelty. The comment which follows should therefore perhaps be directed against the spirit of the age we live in, rather than against the work of any individual writer belonging to it. The Age demands the article, and our modern Press supplies it; but it does not follow, because the Age desires what its railway-bookstalls chiefly supply, that the latter is the best thing for it. Demand always regulates supply, but the supply quickens the demand. The two things are closely kindred; and are related as cause and consequence. The one invariably feeds the other. If our highest wisdom lies in following the verdict of the many, and of the hour--if it is to be found in accepting a policy decided by the mere 'count of heads,' raising (as some have done) the 'masses' above the 'classes,' as our superiors in insight, so long as that insight coincides with their own--it doubtless follows that we should receive the literary judgment of the uneducated with the same difference with which we accept their votes at the polling-booth. If our age demands what an enlightened judgment condemns, it may possibly have to be submitted to, for the time being; but the demand would certainly be lessened were the critics of the day open-eyed enough to see it, and courageous enough to resist it.

There can be little doubt that far too much is written nowadays, by 'all sorts and conditions of men.' The list of new books advertised week after week by the publishing houses of Great Britain, the Continent, and America is stupendous, and almost baffling. There never was anything like it heretofore. It may be one result of our extended methods of modern education, and the evils which it has created will probably cure themselves before long. Meanwhile, our English Literature--as it is mirrored in the long advertisement lists issued by our publishing firms--is undergoing an extraordinary change. For the few dozen 'Books of the Season' which used to interest our grandfathers, we have now not only hundreds, but thousands. One who is tolerably well in touch with this continuous stream of tendency--the evolution of new books--is constantly met by the question, 'Oh, have you seen so and so?' or, 'You should read so and so. It's the best book of the year.' They are works--perhaps belonging to his own department--of which he has never heard, and which, perhaps, he will never see. The printing-presses of the last decade of this nineteenth century was producing books, at such a rate and of such dimensions, that no one can possibly keep pace with the many-sided 'output,' can even remember the names of the books and their authors, far less be familiar with their contents; and librarians, or members of 'library committees'--Town libraries or University ones, it is all the same--have to confess, with dismay, that it has become an extraordinarily difficult thing to winnow the wheat from the chaff.

It is true that this vast increase in the number of new books published week by week is a partial justification of the multitudinous criticism which overtakes them; especially since there is so great an increase of trivial, pretentious, and useless books. At the same time, the majority of these criticisms are worse than the books they criticise, and do no good to their readers or their authors, or to the public.

Time out of mind it has been found that books of original merit, and of permanent value to the world, have been ignored in their day, but have become to after-ages objects of supreme interest. While they exercised no influence in their own time--and were pecuniarily worthless to their author--they have occasionally fetched large sums at the auction-sales of the future. On the other hand, the 'Book of the Hour'--which most persons read, and of which nearly every one speaks--is often buried, at no distant date, amongst the *débris* from which it knows no resurrection. Of these two extremes, the latter will probably be found to be most characteristic of the close of the nineteenth century. In every department of

effort we are suffering from the vast amount of trivial production--in other words, from swarms of *ephemera*, and from the avidity with which the public welcomes the most sensational and even the most ghastly tale of the hour.

In addition to this, the state into which our contemporary literature has been brought by the multiplication of its daily, weekly, and monthly magazines, is so bewildering that no one can adequately follow it throughout. I remember the day when the bare notion of starting a weekly paper to be called *Tit-Bits* was thought to be the *ne plus ultra* of literary degradation. Nevertheless, the paper issued under that title is currently believed to have yielded a fortune to its owner. Some years ago I asked at an English railway-station bookstall for this extraordinary product of the time, when the boy who sells for Smith ran up to the carriage door and said, 'No, sir, sold out, sir; but here's *Ally Sloper*, sir. It's far better; I sells a lot more o' them, sir.' The literary pabulum supplied to the travelling public at our railway-bookstalls is a sad disclosure of the taste of the day. It goes without saying that it is a sheer waste of money to buy, and a greater waste of time to read, the 'shilling shockers' which are the ordinary stock-in-trade at many a railway station. The melancholy thing is that so many new periodicals are started by publishers merely to please the public, and to make profit by descending to its level, instead of endeavouring to educate the multitude, by inviting it to ascend a few steps above the platform on which it stands. It is the easiest thing in the world to write down to the taste, and the sympathy, of the half-educated proletariat; but such writing is--let the word be taken literally--degradation. There are at the present moment scores of papers, journals, magazines, reviews--whatever they may be called--produced simply 'to please the public,' but not to inform, or to teach, to educate or to elevate; and this, it must be owned, is one of the least valuable results of the activity of the modern printing-press.

In the same connection it may be worth mentioning--and all honour to American enterprise and originality for attempting it--that a good many years ago the Alton and Chicago Railway Company issued--as a supplement to their monthly time-tables--the poems of Robert Browning, beginning with *Sordello*. I remember how much the poet was struck with the copy I once showed him. Had the experiment been tried in England it is doubtful if the ordinary railway traveller would have read any one of the poems from the beginning to the end.

It may at first sight seem surprising that any one should object to the work of those clever censors of the press who vigorously, if unmercifully, put down the many-sided ignorance, the manifold pretence, the arrogance and egoism of all who imagine that they are born to be 'writers of books.' When one realises the fact already alluded to, viz, the scores of volumes issued week by week from our British and American printing-presses--books which had never any right or title to exist--it is quite unnecessary to raise the question as to what will be the verdict of the twentieth century upon them. It is a real kindness to posterity for the literary reviewer to kill many of these books, whether he makes use of a tomahawk or not; and it would be far better for the world if the majority of the volumes which annually appear never saw the light. One effect of the diffusion of the 'higher education' of men and women has been that we have now hundreds and thousands of writers where we only had dozens before this 'higher education' began. We have a modern literary swarmery, as we have a modern social proletariat.* One result inevitably is that the quality of the work deteriorates, while its quantity increases; and we have numerous dashing writers of 'books for the many'--like the dexterous scribes of political leaderettes--instead of the well-informed, the calm, the strong, the incisive, and thoroughgoing writers of the past. When the history of 'English Periodical Criticism' has to be written--and it well deserves to be written--there is reason to believe that the present age will not be that of its chief glory.

The truth is that the function of the modern critic is a singularly ill-defined one. Who is to define it? is a question not easily answered, but it may surely be taken for granted that a thorough knowledge of the subject written about is essential to any adequate criticism. Nevertheless it is a quite notorious fact that when asked to review a book sent to him for the purpose--and presumably sent because the recipient is considered an authority, or a quasi-authority (if not an expert) on the subject--some reviewers have

* A well-known writer and reader of books for a publishing firm lately ventured on the statement that he thought there were probably one thousand clever young women in our country who were quite well able to turn out the ordinary and most readable English novel of the period; but, as to these books being 'Literature,' that was a very different question. A publisher recently told me that he received so many offers of volumes of verse, and of novels, from beginners--mostly, young girls--that he would require to keep a special 'reader' if they had all to be examined with care. It was only possible to glance at most of them. In the same connection I may quote a sentence which Tennyson once wrote, 'I receive a stanza of verse sent to me for every five minutes of my life, but very seldom a volume of good wholesome prose.'

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1895-96.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 25th Inst., at 6-30 P.M. Subject: Optical Instruments.

Lecture by Babu Syamadas Mukerjee, M.A., on Tuesday, the 24th Inst., at 3 P.M. Subject: Analytical Conics.--Homography and Involution on Conics, on Thursday, the 26th Inst., at 3 P.M. Subject: Analytical Conics.--Tangential Equations.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charges for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

March 21, 1896.

contented themselves with cutting open the table of contents and the preface, and—without reading the book itself—proceeding to review it. At the sale of a large Library of Books, which had been sent for review to an 'expert,' who, for many years, wrote long and most dexterous literary notices for a daily newspaper of celebrity and importance, it was found that the pages of very few were cut, while some of the books and their authors had, by this critic of the hour, been brilliantly 'cut up'! Sometimes a book is sent for review to one who is on the occasional staff of a paper, and he has, on a sudden, to 'get up the subject' discussed, to consult his authorities, or—as an editor once told me was a common habit—to read every other notice of the book which had already appeared! before he wrote his own. The 'little knowledge' thus acquired is too often thrust into the fore-ground of the notice produced. Surely such reviewing is theft.

It is a self-evident and elementary truth that an author who adds anything of value to the literature of the world is entitled to receive a reward for his labour. If the return of that reward is prevented by capricious, or ignorant, or reckless criticism, the critic has stolen from the author, quite as truly as if he had robbed him of his purse. He has robbed him of the legitimate value of his brain-work; but it is only criticism of the reckless and unenlightened order that does this. A critical 'notice,' written to display mere dexterity or nimbleness of wit, ingenious repartee, power of sarcasm or of rejoinder, is not criticism at all. Suppose a nimble-witted person skims a book; turning its pages in a listless mood, he finds some information that is new to him. He notes this, and goes on to read more. He finds some errors, and then proceeds to use the information, which he has received from the book itself, against its author; just a clever surface society-talker, wholly ignorant of a subject, can often 'pick the brains' of one who knows it, while he is speaking, and give him back in a torrent of verbosity the very ideas he was slowly and modestly expressing, as if they were the talkative thief's familiar property. Surely this is even worse than the use of an arrow, winged by feathers taken from a bird it killed, against another of the same species.

An eminent literary friend was recently induced to subscribe to an agency—which sends reviews of books, in the form of 'newspaper cuttings,' to their author—on the pre-payment of a certain sum of money. He told me that, amongst thirty notices of his book, only two showed any real knowledge of the subject. This was not because of any want of competent critics in the country who were familiar with the subject in question. On the contrary, there were hundreds; but the book had been given out, for the most part, to the journalistic hacks, and so it had 'fallen among the thieves.'

Of the numerous ways in which our modern criticism has deteriorated, the following may be mentioned. By the editor of a weekly paper of great merit and distinction—devoted to a special branch of knowledge—I was asked, some time ago, if I could find for him a critic whose duty it would be, first, to find out the 'Book of the Week,' i. e. the most important of all those issued by the various firms for that particular period; and, secondly, to give, not a critical estimate of it—that was too much to expect, and not indeed to be desired—but a skilful digest of its contents, a summary of what it said, for the benefit of the readers of this delightful weekly Journal. As the phrase went, 'Let him tear out its heart, that is all we want;' and a very liberal allowance was to be given for this weekly literary anatomy, or rather vivisection. The idea apparently was this. Our subscribers won't read the best 'Book of the Week,' but they must know something about it, so as to be able to talk of it with a fair show of knowledge, if the book in question happens to be mentioned in the society-conversation of the day. Now this sort of thing—putting people off with a scratch summary, or rough analysis, of a book which they never intend to read (or can read)—is a treble literary theft. It takes from the author, it hurts the publisher, and it defrauds the public. The sale of the very best book must be injured, by every such 'tearing out of its heart.'

The same thing applies to the common practice of giving long 'extracts,' in the daily and other papers, of what the critic considers the most important passages in the magazine-articles of the month. Editors and proprietors may very reasonably complain that their Magazines are not bought, as they otherwise would be, because the best things in them are thus exhibited to the public beforehand in such 'reviews of reviews.'

But the chief moral theft thus committed is not from the authors of the books, or from their articles, but from the public. The public is deprived of the opportunity of knowing, in its integrity, what some of the ablest writers of the time have had to say to it, and have tried to unfold in their books. The public, instead of receiving the wholesome nourishment of genuine 'corn and wine,' are fed on a sort of watery intellectual bread-berry, which has been made doubly unwholesome from the amount of spice which it contains. The books reviewed are pilfered by the critics, and the public thinks that it is

well informed as to what it does not really know, even in fragment. It is notorious that half-knowledge is often worse than total ignorance; and, in many of our modern reviews, we find writers presuming to speak oracularly, yet wholly unaware that their quasi-knowledge is of less value than that which it tries to supplant.

This literary theft which is so common is, however, partly due to the sensationalism of the hour its numerous phases, e. g. to the morbid demand for early extracts in the morning papers, on the very day of issue, from any work—the publication of which has been announced for some time—instead of letting sober-minded people wait patiently until the book itself can be seen and read.* Such scraps and fragments are, at times, wholly misleading. They can be extracted so as to falsify the real drift and purpose of the book. At other times they are altogether indefinite. Usually they satisfy the casual reader; while, most unfortunately, they give him a biased opinion of the subject, and of the book in which it has been discussed.

It is consolatory, however, to remember that, in the long run most authors get their due. Some may have been overlooked for a time by literary accident, or from peculiarities of style and treatment, which made their works 'caviare to the general.' But, in all cases, the Verdict of Time is just; and there is far less chance than ever before that, in the twentieth century, the merits of any good writer will be overlooked, or that an original one will be (even for a time) ignored. The very multiplicity of modern criticism prevents this. On the other hand, there is great risk that the professional critic, undertaking too much work, may review many books without reading them; and that, unless he is somehow discovered, and just sentence passed upon him, he will often return a biased verdict on the literature that passes through his hands. Opportunity may even continue to exist for the display of small-mindedness and partisanship in the future. Many a review—philosophical, political, scientific, theological, and literary—has hitherto been tainted with this bias. An *a priori* judgment has been passed on the merits of a book which the critic had not read. It has been judged by its title, its contents, its preface, or its author's name. Every literary man must have seen scores of such notices, pert, opinionative, shallow, useless; or, on the other hand, fulsome, and therefore worse than useless. They are a disgrace to journalism; and unfortunately some persons who have no other vocation—or who have failed in one or more—fancy that they can, as a sort of *dernier ressort*, be one of the critics of the hour! 'Have you never learned the art,' a distinguished literary official once said to me—he was speaking satirically—'Have you never learned the art of reviewing a book you haven't read? It's very easy; as easy as it is to examine on a subject you know nothing of!' This was more than twenty years ago. I was amazed, and declined to believe that such malpractices were within the limits of possibility. Since then I have been occasionally undeceived.

As everyone knows, Great Britain, America and the Continent of Europe possess many very able 'Critical Reviews'—issued monthly and quarterly—which give to the world some of the best writing of the age; but these Reviews are sometimes handled by the weekly Press very much as the weekly journals are dealt with by the daily newspapers. Extracts by way of sample are given, which are—to all intents and purposes—thefts from the periodicals in which they first appeared; and many readers are led to expect so full, and true and good a summary of all the best things that are to be found in contemporary periodicals that they never think of looking at the originals whence these extracts have been taken. Such procedure surely justifies the title of this article, 'Criticism as Theft.'

It is perhaps easier to say what the critic's function is not than to state what it is. The difference between advertising the supposed 'book of the hour' by a string of commonplace phrases and vague compliments, and estimating its worth judiciously, is obvious enough; but it is difficult to know the purpose of many of the 'press notices' which are extracted from reviews and appended to the advertisements of new books. The other day I happened to take up a book which had neither a preface, nor a table of contents, nor an index, but which had been favoured with 'a few press notices,' amongst which I found the following: (1) 'The latest book of which

* One recalls Carlyle's indignant protest, 'Is a thing nothing because the "Morning Papers" have not chronicled it? or can a Nothing be made a Something by ever so much bubblement of it there?'

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials, and newspaper press notices, will be sent post free on applications. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Streets, Westminster, London, S. W.

* This is often neither more nor less than piracy, and is pursued by people who never make even a pretence to criticism.

people are talking : this new book is very much up to date.' (2) 'Ere long every body who is anybody will read it.' (3) 'Eminently readable, and we should say will be read.' (4) 'The book is a novelty in the best sense of the term.' Of what possible use can such notices be, either to the author, the writer, or the public ? To my mind they are worse than useless ; and are nearly as bad as that coterie-reviewing, which has played such havoc with books of real merit written by outsiders to the ring.

But the thefts of criticism are not seen only in the appraisal of literary work. They may be detected in reviews of the Art, the Drama, and the Science of the period.

As to Art in particular, is it not a fact that some critics are (without any exaggeration) hirelings ? It is well known---although perhaps only a reflection of the spirit of the hour---that many writers are invited to attend private views in studios before they write their notices of the pictures of the year. From the way in which such things are arranged, impartiality in criticism is impossible. This, of course, does not apply to artists of established fame. They would decline to be 'interviewed' by any salon critic. But there are many others who have been asked to allow the interviewer, and the critic, to come, with a sort of literary kodak, and to send out to the world a preliminary photograph of what is in store for the novelty-hunters of the season. The fulsome praise of the interviewer is much worse than his censure ever is, and it does more harm ; for all genuine merit is, in the long run, sure of recognition ; but the temporary loss and pain, caused to those whose work is passing through the ordeal, are incalculable. Many an artist of rare merit has been stung to the quick by the glib and petulant notices of his work which have appeared in the journals of the day. Doubtless some may have been the better for a severity that was unjust, if it called forth new energy lying latent. That goes almost without saying ; just as, at a University examination, a young man who knows his subject, but is thrown out by some accident of the examination, or whim of the examiner, says to himself, 'I am not defeated, I know the subject, I shall go in again ;' and he does so, and passes. So it is with many a worker in Art. But, on the other hand, some artists have been killed by the flippancy of unjust reviewing. As was said of John Keats :---

How strange, the mind, that little fiery particle.

Should let itself be snuffed out by an article.

But so it is. Over and over again the rarely delicate artist, the originator of new ideals, with his sensitive temperament, smarts under the lash of public criticism, and succumbs to the odious treatment of the pachydermatous reviewer. It is a notorious fact that many an original author has been prematurely killed by the barbed arrows of contemporary criticism. Perhaps, on hearing of it, one of these critics may think, 'That is the Author's look-out, not mine ; I am merely the literary judge and censor of the hour.' There cannot be a doubt, however, that posterity, as well as the author, has often suffered grievous wrong in this way. There are the wasps and the gadflies, as well as eagles of criticism.

I have alluded in the previous paragraph to the indiscreet praise of reviewers as worse than their ignorant fault-finding. This deserves more than a passing notice. Every ultra-enthusiastic, and still more every indiscriminate, puff of a book written by a friend is a fraud on the public. This is sometimes done so recklessly as to warrant the severest possible rejoinder. Some writers have been known to solicit reviews of their books. They, happily, share the fate of those who solicit academical degrees. But another hypothetical case may be mentioned. Suppose a college lecturer has a distinguished and favourite pupil, a docile, receptive, assimilative hero-worshipper. He publishes a book, and his teacher writes a letter in which he says that he doubts if anything so good has been written on the subject. Is this fair either to the writer of the book or to the public ? No doubt his teacher is able to see more in a pupil than the outside world, or the random writer of reviews ; but, in his case, impartiality and a just verdict are almost impossible.

In the matter of indiscriminate praise on the one hand, and biased censure on the other, the modern English critic of the Drama will be found to have erred quite as much as the critic of Literature, or Philosophy, or Science. It is needless to particularise instances of unfair judgment in any department ; but, whenever jealousy exists in any school or coterie, in any profession or social circle, unjust criticism will be its outcome ; and all injustice is theft, although it cannot be overtaken by the law. The robbery of a just reputation is much more serious than is the theft of money, or of material property ; and the unjust praise, and the false dispraise, of the critic is one of the worst kinds of theft that this world has had to endure.

I return to the remark with which I started. I do not disparage the function of the genuine critic ; that is to say of the man who has sufficient knowledge of the matter in hand to have an opinion worth recording, and who has a high standard of honour and of honesty in the expression of it. On the contrary, I magnify it in every possible way. The just, clear-sighted, impartial, trenchant critic, who knows how and when to use his rapier, how and

when to put his sword into its sheath, who knows that there is a time to keep silence, and a time to speak, a time to expose and even to slay, as well as a time to appreciate and to praise, is a great public benefactor. The literature of the world would soon become an undifferentiated mass of puerilities were it not for the winnowing process by which the wheat is separated from the chaff ; and it is a real kindness to teach those who have no vocation for authorship that they ought not to write books. But the qualifications of the critic are as great, and are perhaps rarer, than those of the original author. Chief amongst them is a knowledge of the subject discussed, as full as, if not fuller than, that of the author ; next, the power of sifting materials, and a sense of proportion ; in addition, judicial impartiality and the power of appraisal, of which fair-mindedness is the dominant note ; and, finally, the readiness to appreciate what is new, if it be a genuine development of tendencies which have been lying latent for a time. It is the function of the true appraiser to discover merit under guises which at first conceal it. As Robert Browning put it---

If what shall come with the season's change

Be a novel grace, and a beauty strange,

the genuine critic should be the first to discern it.

Without such preliminary diagnosis---accurate, appreciative, and thorough---the acutest and most nimble-witted criticism, be it scientific or literary or philosophical or political or religious, is absolutely worthless. With it, and after it, the severest possible censure, or the most enthusiastic (if discriminative) praise, are the greatest gifts which a critic can bestow, alike on his contemporaries and his successors.

---The Nineteenth Century.

WHY NOT LIVE A CENTURY ?

"IN the coming time," said a famous English poet, "a man or woman eighty or one hundred years old will be more beautiful than the youth or maiden of twenty, as the ripe fruit is more beautiful and fragrant than the green. These ripe men and women will have no wrinkles on the brow, no grey hair, no bent and feeble bodies. On the contrary they will have perfect hearing, clear eyesight, sound teeth, elastic step, and mental vigour."

Does this sound absurd and impossible ? Why should it ? People over one hundred years old are frequently met with in these days, as they have been as far human records go back. A man is of no real value until he is past fifty and gained control of his passions and acquired some practical wisdom. After that he ought to have from fifty to seventy-five working years before him. Whoso dies short of one hundred (bar violence) dies of his own folly or that of his ancestors, one chief thing, however, we must learn. What is it ? Take an illustration---such as we see multitudes of on every side.

Mr. Richard Leggate of New Bolingbroke, near Boston, Lincolnshire, is a man now somewhat over seventy. He is a farmer, well known and highly respected in his district. In the spring of 1891 he had an attack of influenza from which he never fully recuperated. The severe symptoms passed away, of course, but he remained weak. No doubt food would have built him up, provided he could have eaten and digested it. Yet here was the trouble, his appetite was poor, and what little he took, as a matter of necessity rather than of relish, seemed to act wrong with him. Instead of giving him strength it actually produced pain and distress in the sides, chest, and stomach.

Then again---which is a common experience---he would feel a craving for something to eat ; yet on sitting down to a meal, in the hope to enjoy it, the stomach would suddenly rebel against the proceeding, and he would turn from the table without having swallowed a mouthful.

Nothing could come of this but increasing weakness and it wasn't long before it was all he could do to summon strength to walk about. As for working on his farm, that to be sure, was not to be thought of. He had a doctor attending him, as we should expect. If the services of a learned medical man are ever needed they must be in such a case--when nature seems to be all broken up, and the machinery runs slow, as our family clocks do when we have forgotten to wind them at the usual hour.

Well, Mr. Leggate took the prescribed medicines, but got no better. He asked the doctor why that was and he appeared to be puzzled for an answer at first. Naturally enough a doctor doesn't like to admit that his medicines are doing no good, because he expects to be paid for them ; and then there is his professional pride, besides.

However, he finally said, "If my medicines fail to make you better it is owing to your age." That idea was plain as a pikestaff, and if the patient had never got any better afterwards, why who could dispute what the doctor said ? Nobody, of course. It would look just as though Mr. Leggate were really going to pieces from old age. But something subsequently happened which spoils that easy theory of the case. What it was he tells us in a letter dated February 3rd, 1893.

"After doctoring several months without receiving any benefit, I determined to try Mother Seigel's Curative Syrup. I got a bottle from Mr. G. H. Hanson, Chemist, New Bolingbroke. After taking the Syrup for a week I was much better. I had a good appetite, and what I ate digested and strengthened me ; and by the time I had taken two bottles I was well and strong as ever. You may publish this statement if you think proper. (Signed) Richard Leggate."

So it proved, after all, that Mr. Leggate was not suffering from old age (at seventy ? Nonsense !), but from indigestion and dyspepsia. When Mother Seigel's great discovery routed that, he felt "well and strong as ever."

Now for the moral : It is not Father Time who mows people down thus early in life ; it is the Demon of Dyspepsia. Keep him away and---barring accidents---you may live a century.

INDIA GENERAL STEAM NAVIGATION Co., Ltd.

IMPORTANT NOTICE.

The undersigned beg to give notice that they are prepared to insure at very favourable rates, upon F. P. A. terms only, all and any goods (with the exception of Tea) shipped by steamer and flats to or from any station on their Inland Services.

For further particulars apply to—

KILBURN & Co.,
Managing Agents.

CALCUTTA:

4, FAIRLIE PLACE,
The 12th March 1896.

ALLAN'S ANTI-FAT

PURELY VEGETABLE, Perfectly Harmless.
Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into fat. Sold by chemists. Send stamp for pamphlet.

Botanic Medicine Co.,
2, New Oxford-street,
London, W.C.

CAUTION!

It having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (*viz.*, 4 annas, 8 annas or 9½d, 12 annas or 1s. 1½d. and Rs. 2 or 2s. 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes the prices have been obliterated and the boxes represented to be of higher value than they really are.

Sole Wholesale Agents for India, Burma and Ceylon.

G. ATHERTON & CO.,
3, NEW CHINA BAZAAR STREET,
CALCUTTA.

NOTICE.—Should any difficulty be experienced in obtaining supplies the Agents will be happy to forward sample boxes at above Rupee rates plus *V. P. P. Charges and Postages.*

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "*An Indian Journalist*," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—The *Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—The *Muhammadan*, (Madras) Oct. 5, 1895

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—The *Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—The *Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Sankutia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kanpotee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Fouzdar
Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.
Scientific American.

CALCUTTA, SATURDAY, MARCH 28, 1896.

WHOLE NO. 718.

CONTEMPORARY POETRY.

THE LAST WALK.

BY B. SIMMONS.

OH lost Madonna, young and fair,
O'er-leant by broad embracing trees,
A streamlet to the lonely air
Murmurs its meek low melodies ;
And there, as if to drink the tune,
And mid the sparkling sands to play,
One constant sunbeam still at noon
Shoots through the shades its golden way.

My lost Madonna, whose glad life
Was like that ray of radiant air,
The March-wind's violet scents blew rife
When last we sought that fountain fair.
Blithe as the beam from heaven arriving,
—Thy hair held back by hands whose gleam
Was white as stars with night-clouds striving—
Thy bright lips bent and sipped the stream.

Fair fawn-like creature I innocent
In soul as faultless in thy form—
As o'er the wave thy beauty bent,
It blushed thee back each rosy charm.
How soon the senseless wave resigned
The tints, with thy retiring face,
While glassed within my mournful mind
Still glows that scene's enchanting grace.

Ah ! every scene, or bright or bleak,
Where once thy presence round me shone,
To echoing Memory long shall speak
The Past's sweet legends, Worshipped One !
The wild blue hills, the boundless moor,
That, like my lot, stretched dark afar,
And o'er its edge, thine emblem pure,
The never-failing evening star.

The lawn on which the sunset's track
Crimsoned thy home beside the glen—
The village pathway, leading back
From thee to haunts of hated men—
The walk to watch thy chamber's bay
'Mid storm and midnight's rushing wings—
—These, these were joys, long passed away,
To dwell with Grief's eternal things.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

My lost Madonna, fair and young !
Before thy slender-sandalled feet
The dallying wave its silver flung,
Then dashed far ocean's breast to meet ;
And further, wider, from thy side
Than unreturning streams could rove,
Dark Fate decreed me to divide—
To me, my henceforth buried Love !

Yes, far forever from thy side,
Madonna, now forever fair,
To death of Distance I have died,
And all has perished, but—Despair.
Whether thy fate with woe be fraught,
Or Joy's gay rainbow gleams o'er thee,
I've died to all, but the mad thought
That what was once no more shall be.

'Tis well :—at least I shall not know
How time or tears may change that brow
Thine eyes shall smile, thy cheek shall glow
To me in distant years as now.
And when in holier worlds, where Blame
And Blight, and Sorrow, have no birth,
Thou 'rt mine at last—I'll clasp the same
Unaltered Angel, loved on earth.

—Blackwood's Magazine.

WEEKLYANA.

ATHENS has set up a statue of Lord Byron with the pedestal inscription "Hellas to Byron." The King of Greece unveiled it. Of fine marble, it is the gift of the late M. Skylitsis and the work of the late French sculptor Chapu who could not give it his finishing touch.

THE students of Princeton University, New Jersey, burnt the King of Spain in effigy and dragged the Spanish flag through the street and tore it up in the centre of the college quadrangle.

OWING to heavy rains, the Tigris overflowed its banks in Mesopotamia, drowning, among others, a nomad tribe of six hundred Arabs.

A PROPOSITION allowing women to take the B.A. degree was rejected by the Oxford University as represented by its congregation.

THE Judicial Committee of the Privy Council have reported on the validity of unmixed and mixed marriages in Malta. They have advised that the unmixed marriages celebrated in Malta by English clergy, Presbyterian ministers, and Wesleyan ministers are valid, as also mixed marriages by ministers other than those of the Roman Catholic Church. They are also of opinion that marriages celebrated by non-Catholic ministers, contracted in good faith, but in such circumstances that the validity of the ceremony may be open to question, should be validated by legislative declaration.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

THE personal estate of the late Lord Leighton has been sworn at under 50,000*l.*, and that of the late Alexander Macmillan, head of the publishing firm of that name, at 180,000*l.* The net value of the estate belonging to the late Sir Julian Goldsmid, Bart., upon which duty has been paid at the rate of 8 per cent., amounts to 1,093,493*l.* 11*s.* 6*d.*

THE Stanhope Gold Medal has been awarded by the Royal Humane Society to E. A. Hatton, of Dover, who, on March 3, 1895, rescued J. Smith, carpenter, *Danbar Castle*, who was washed overboard at sea off the coast of South Africa. The ship was under steam, running ten knots an hour, there was a fresh head wind with a high sea, darkness was setting in and the water was swarmed with sharks.

THE following obituary notice of Dr. Rost is from *Luzac's Oriental List* :—

"One of the greatest and most distinguished of our Orientalists has passed away in Dr. Reinhold Rost, who expired at Canterbury on February 7th. Rost, who was born at Eisenberg on February 2nd, 1822, devoted himself to the study of the Old Testament and the Oriental Languages, reading with Stücker and Gildemeister. In 1847 he came to this country, and in 1850 was appointed Professor of Oriental Languages at St. Augustine's College at Canterbury, where a large number of pupils were enabled to benefit by the rich store of his learning. Not only the Indo-European languages, but also Arabic and Syriac formed the subject of regular lectures, and it was never without the greatest satisfaction that he expressed himself on his good fortune in having been actively engaged in educational work. Fortunately he never quitted his post as a lecturer and examiner, although in 1863 fresh duties called him to London on his appointment as Secretary of the Royal Asiatic Society. On June 24th, 1869, he became Librarian of the India Office and held this important position till 1894, when by the law of superannuation he was forced to retire. Besides some contributions to an earlier volume of the *Journal of the German Oriental Society*, we owe to Dr. Rost new editions of Horace Hayman Wilson's *Work* (Essays and Lectures on the religions of the Hindus, [1861-5]), and of Hodgson's *Miscellaneous writings on Indian subjects* (1880) and *Papers relating to Indo-China* (1886). He also published a *Collection of simplified grammars* and for some years conducted Trübner's *Record*, during which time in my papers in that periodical were written by himself. Special attention and care he bestowed, since its very beginning on *Luzac's 'Oriental List'* and the publishers can here only express their sincere acknowledgments for the many valuable contributions which have regularly appeared from his pen. But it is not in these various papers and articles that Dr. Rost's influence as a scholar was confined; his personal qualities, his self-denying devotion to every literary enterprise within the field of Oriental research, his unbounded kindness and readiness to help, will ever be remembered by all those who were fortunate enough to meet him. And there is hardly one Oriental scholar who has come to this country with the intention of working at the vast collections of the India Office or the British Museum, who is not in some way or other under obligation to Dr. Rost, hardly one who has not taken back with him the happiest remembrance of his home-life and hospitality.

Science has lost in him one of her most distinguished representatives, England one of her best workers, his family and his friends an *anima candida* in the purest sense of the word."

"J. S. C." writes in the *Academy* :—

"Dr. Rost has not long survived his retirement from the India Office. He died, very suddenly, on Feb. 7, at Canterbury, whither he had gone on duties connected with St. Augustine's College. He had just completed the seventy-fourth year of his age.

Reinhold Rost was born in 1822 at a little manufacturing town in the Duchy of Saxe-Altenberg, where his father was a Lutheran minister, holding the office of Archdeacon. After being educated at the Gymnasium in the capital of his native state, he proceeded to the neighbouring University of Jena, where he graduated as Ph.D. in 1847. Having already determined to devote himself to Oriental studies, he came at once to England, the great storehouse of Sanskrit MSS. His first post was that of Oriental lecturer at the missionary college at Canterbury, with which he remained associated till the last. For a short time he acted as Secretary to the Royal Asiatic Society; and in 1869 he was nominated Librarian to the India Office, in succession to Dr. Fitzedward Hall, who survives him. This is one of the few posts in England that may be regarded as an endowment for Oriental research. The official duties are not heavy; but the collection of MSS. is one of the largest in the world, and their custodian is necessarily brought into contact with students of all countries. In addition, he acts as adviser in philological matters to the Secretary of State for India, who still dispenses some of that literary patronage in which the old Company was so profuse.

Dr. Rost will long be remembered as the ideal librarian to the India Office. If he left it to others to catalogue and edit the MSS., this was not through incapacity for either task, but because he thought himself better employed in placing his materials and his knowledge at their disposal. Though primarily a Sanskritist, he had to consider the claims of Arabic and Persian, of Pali, Burmese, and Sinhalese, of Tibetan and Malay, and of countless vernaculars. Of all those languages we have mentioned, he possessed a competent knowledge; and he had further to give his attention to questions relating to archaeology, ethnology, and Indian history. In brief, Dr. Rost elected to turn himself into an Oriental encyclopædia, which no one ever consulted in vain. Through his initiative, MSS. were lent freely to foreign scholars; and it is hardly too much to say that on the continent he was regarded as the steward of Oriental knowledge in

England, to whom every one appealed for assistance and advice. This feeling was strongly expressed in a testimonial presented to him in 1892, when it was rumoured that he was to be retired compulsorily from his post. Frenchmen joined with Germans in testifying to the kindness and impartiality which he had always displayed towards fellow-students. The Government allowed him one year more of office, and of work, but he was superannuated—sorely against the grain—in 1893.

Dr. Rost wrote little under his own name. His first publication was, we believe, an essay on the Hindu sources of Burmese law (1850), and he also compiled a catalogue of the palm-leaf MSS. in the Imperial Library at St. Petersburg. He was content to be known as the editor of H. H. Wilson's *Selected Works*, of Brian Hodgson's *Collected Papers*, and of four volumes of *Miscellanies* relating to Indo-China. In conjunction with Nicholas Tübner, he planned and edited a series of *"Simplified Grammars"*; and for some time he conducted *Trübner's Oriental Record*, now continued by Luzac & Co. But his modesty did not deprive him of all public recognition. Edinburgh made him LL.D., and Oxford conferred on him the rarer distinction of honorary M.A. He was an honorary or corresponding member of many learned societies, on the Continent and in the East. Prussia, Russia, and Sweden gave him decorations; and our own Government appointed him Companion of the Indian Empire in 1888."

Dr. Rost was a man who pursued learning for its own sake. If he were otherwise minded, he could have created a halo of literary fame around his name on which he might have grown fat and prosperous. Besides regularly writing for *Luzac's* monthly, Dr. Rost occasionally perpetrated small articles for the *Athenæum*. We do not think that it is full justice to the deceased to say that "if he left it to others to catalogue and edit the MSS., this was not through incapacity for either task, but because he thought himself better employed in placing his materials and his knowledge at their disposal." He had never, we believe, in all the variety of his official duties, to resort, like many better known to fame, to the aid of other savants. If the cataloguing of the oriental MSS. at the India Office had to be entrusted to specialists, it was because Dr. Rost had absolutely no time for the work.

THE *Athenæum* writes :—

"Prof. Cowell, of Cambridge, who has just completed his seventieth year, was presented on birthday with his portrait, which has been painted at the cost of fifty-six of his old pupils and others who in maturer years have continued to work with him at any of the numerous languages—Sanskrit, Persian, Pali, Old Welsh, to say nothing of Italian and Spanish—in which the veteran professor is thoroughly versed. The portrait is the work of Mr. C. E. Brock, a rising young artist, who has painted several Cambridge scholars, including the Master of St. John's, Dr. Jebb, and Dr. Sandys. It will be placed in the Hall of Corpus Christi College. The presentation was made by the Master of Christ's College on behalf of the subscribers. Prof. Cowell made an admirable reply, which ended with a characteristic Sanskrit 'śloka' of his own composition. The translation, also by the professor, may be appended :—

High on his rock the lonely scholar stands,—
A mountain pine that spreads no sheltering shade :
Rather grow old amid fresh student bands,
A banyan with its native colonnade."

The professor has still many pupils in India who love and cherish his name. They also should come forward and give a sign of their regard for the man who loved his flock and loved to teach.

MADRAS had a Duke for its ruler. At the present moment, a son of a Duke is on the personal staff of the Governor. Lord Herbert Scott, a younger son of the Duke of Buccleuch and a nephew of Lady Lansdowne, is A.-D.-C. to Sir Arthur Havelock.

THE Lieutenant-Governor returned to Calcutta on Wednesday. His was not an uninterrupted journey from Darjeeling. The ordinary mail train in which he travelled had to be detained at Porada for a goods train from Gorakhpur had been derailed at Halsa, the next station. The *Englishman* reports :—

"Mr. Adie, the District Traffic Superintendent, and Mr. Pughe, the Inspector-General of Railway Police, who were escorting the Lieutenant-Governor, at once went off in the engine to the scene of the accident, and seeing that it would be several hours before the line could possibly be cleared, wired to Kanchrapara for a 'special' to take the passengers on to Calcutta. In the meanwhile the Lieutenant-Governor and party and the other passengers proceeded to Halsa, where they had to wait on the platform for nearly three hours. The first train to arrive on the Calcutta side of the accident was a goods with a few third class carriages attached. These were detached at once and took the passengers on to meet the 'special.' His Honor the Lieutenant-Governor travelling in the break van, and the rest of the passengers, including their servants, in the third-class carriages, Mr. Adie himself driving the engine, and Mr. Pughe acting as guard. The 'special' was met at Bogula and got in to Sealdah at 12-45 P.M., thus making up more than an hour and-a-half from Halsa."

When Governors travel by ordinary trains, it is an advantage to the public in many ways.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

MR. CURZON, in reply to a question in the House of Commons, on Mar. 20, said that no information had been received by the Government regarding the construction of a railway from Nertchinsk to Vladivostock and Port Arthur via Taitsihar by the Russo-Chinese Bank. In view of the great increase in Japanese trade with China, Mr. Brennan, the British Consul in Canton, had been instructed to visit the treaty ports in China, Japan and Korea, and to report on the manner and extent to which British trade had been affected by the late war. Meanwhile, it would be premature to consider the proposal to appoint a commercial Attaché at the British legation at Tokio.

In reply to other questions, he said that the Government were making representations to China regarding the terminal tax on British goods in the Southern provinces, and were pressing for the strict observance of paragraph 29 of the Treaty of 1858. The Government, he said, were also negotiating for ports open to trade where Consuls may reside on the West River.

It is reported from Peking that, yielding to French pressure, Imperial orders have been sent to the Governor of Kwangsi to construct a railway from Lungchow northward. The French thus neutralize the expected British advantages by the opening of West River by diverting the traffic towards Tonkin.

MR. CURZON, replying to a question in the House of Commons, said that he proposed to issue a reminder to all Consuls abroad of their duty and instructing them to forward samples and details of foreign articles displacing British ones in their districts. Replying to a further question, he said that the Government were awaiting the views of France regarding the foreign treaty of rights in Madagascar.

TELEGRAMS from Yokohama state that the rebels have attacked the Japanese troops near Fusan, and that, after continuous fighting, the rebels were repulsed. Several Japanese have been murdered in the districts in Corea. Warships have been despatched to the scene of action.

REPLYING to Mr. Morley, Mr. CURZON said that it was proposed to resort only to the smaller Egyptian Reserve Fund for the Dongola Expedition. This fund, he said, can be disposed of by the majority of the Powers under the decree constituting the Reserve Fund.

The debate on the Egyptian question was resumed on the 20th of March when Mr. Morley introduced a motion to reduce the foreign vote for the purpose of directly challenging the policy of the Government in respect to the Dongola Expedition. He asserted that the reasons given by the Government were the flimsiest and only re-opened the occupation question again.

Mr. Chamberlain said that the vast majority of Englishmen were convinced that England's work in Egypt was not yet complete, and that it would be dishonourable to leave the country until it was. The majority of members of the House of Commons had also determined that the British should remain in Egypt until their withdrawal was safe. He had no reason to doubt that Russia and France would finally give their assent to using the Egyptian Reserve Fund for the Expedition, which, he said, aimed at no great operations in the desert, but the building of a railway to Akaseh, which meant that Egypt was going to remain wherever she went. Mr. Balfour, in winding up the debate, announced that the cost of the Expedition would be entirely defrayed out of the Egyptian funds, and affirmed that there was nothing in the action of the British Government to excite the smallest suspicion of any Frenchman, and that the demolition of the power of the Mahdi would remove an insuperable barrier to the withdrawal of British authority in Egypt. The motion on being put to the vote was rejected by 288 against 143.

THE CAISSE de La Dette has voted half a million towards the Dongola

expedition. The Russian and French delegates opposed the vote and lodged a protest, after which they withdrew. The French Bondholders' Committee immediately instituted an action against the Caisse.

THE Italian Chamber of Deputies, on Mar. 21, voted by a large majority a credit of one hundred and forty million lire to continue the war with Abyssinia. The Marquis di Rudini said that the friendship with Great Britain which would henceforth be traditional completes Italy's alliances. Friendship, he added, was inspired by a feeling prompted by mutual interest, and Italy had testified to the value she attaches to it by agreeing to advance from the Egyptian reserve the funds for the Dongola expedition.

On the 25th, ex-Minister Blanc made an important speech in which he said that the contingency of the Italian evacuation of Kassala had led to definitive public proofs of an alliance with Great Britain which was founded on an effective community of interests extending to the security of Italy as a maritime Mediterranean Power.

Duke Sermoneta concurred in M. Blanc's remarks but said that the alliance was one of sentiment. He observed that in the event of the reconquest of the Soudan the Italians must relinquish Kassala. The Marquis Rudini dwelt upon the friendship with Great Britain, and said that the Government would continue the war if unable to conclude an honourable peace.

THE Sultan is irritated against the Khedive and England because he was not consulted regarding the Dongola expedition, and has reproached Mukhtar Pasha for not preventing it. He has appealed to France and Russia to intervene, and has asked for the good offices of Germany. Representations have also been made to Lord Salisbury. It is said that this action is due to the counsels of Russia and France.

The latest news is that a very friendly exchange of views has taken place between Lord Salisbury and the Turkish ambassador regarding the expedition.

PRINCE Ferdinand is going to Constantinople to pay homage to the Sultan, and afterwards goes to St. Petersburg.

THE American Senate have re-committed the resolution in favour of American intervention in Cuba. There is renewed excitement in Spain over the Cuban question. The Spanish newspapers say that it would be better to have war with America than American interference in Cuba.

THE Indian rupee has been admitted into circulation at Mozambique.

A REUTER'S correspondent at Capetown in a telegram of the 26th March, states that a rising has taken place in Matabeleland in the Inseza and Falabusi districts, and that a number of Whites have been massacred, as well as Mr. Bentley, the native commissioner.

The Whites are flocking into Bulawayo and Gwelo for protection.

Seventy-five volunteers with a Maxim gun have been despatched to the scene of action.

Later news states that the mounted patrol had a sharp fight with the Matabeles five miles from Bulawayo on the 26th.

LORD ELGIN left Calcutta on his journey to the summer capital yesterday afternoon. He does not visit Allahabad but goes direct to Bareilly.

NOW that the offices of the Government of India are leaving Calcutta for Simla, the *Statesman*, in a leader not devoid of force, summarises the principal arguments against the annual exodus. Apart from its cost, which is always officially put down at a figure very much lower than the actual, the interruption to work that is inevitable, and the isolation it involves from the centre of public opinion, are powerful arguments against the continuance of the practice. By far the strongest argument, however, was furnished some time ago by Sir Alexander Miller. In a letter to a Calcutta journal, in answer to our review of his now celebrated lecture on the origin of the jury, Sir Alexander made the confession that at the summer capital of the British Indian empire he could not obtain a copy of Howell's *State Trials* for verifying a reference. No more humiliating confession

could come from the legal member. Considering that the work named is by no means rare, and the necessity there always is for books of reference for conducting the government, no stronger condemnation could be pronounced upon the practice of making Simla the capital of India for nine months of the year. We publish elsewhere "A Plea for Calcutta: A Question of the Hour" from the pen of the late Dr. Sambhu C. Mookerjee. Though written in 1876, these twenty years have made no change in the policy of shifting the capital.

At the sitting, on Thursday, the 19th of March, of the Supreme Legislative Council, the Law Member presented the report of the Select Committee on the Bill to amend the Code of Criminal Procedure, 1882, otherwise known as the Jury Bill, intended to further emasculate the system of jury trial in India. It was at one time understood, as it was semi-officially announced, that the Bill would be dropped. With the return, however, of Government to Calcutta, the Bill was revived. The most objectionable clause, which provided for the requiring of special verdicts on issues of fact, was eliminated. The other portions of the Bill were accepted by the Select Committee with very little amendments. The new section added by them extending by six months the period of exemption from attendance of a common-sensical juror is a doubtful advantage. The material alteration relates to section 327 of the existing Code. The Committee report—"we have endeavoured to place it beyond dispute that it is not necessary that a verdict should be actually perverse in order to justify its being made the subject of a reference to the High Court, and further that it is the bounden duty of the High Court on receiving such a reference to take fully into account the opinion of the Sessions Judge as well as that of the jury and the evidence on which both should be based." The section as amended runs thus:

"If in any such case the Sessions Judge disagrees with the verdict of the jurors, or of a majority of the jurors, on all or any of the charges on which the accused has been tried, *and is clearly of opinion that it is necessary for the ends of justice to submit the case to the High Court*, he shall submit the case accordingly, recording the grounds of his opinion, and, when the verdict is one of acquittal, stating the offence which he considers to have been committed."

Whenever the Judge submits a case under this section, he shall not record judgment of acquittal or of conviction on any of the charges on which the accused has been tried, but he may either remand the accused to custody or admit him to bail.

In dealing with the case so submitted the High Court may exercise any of the powers which it may exercise on an appeal; *and subject thereto it shall, after considering the entire evidence and after giving due weight to the opinions of the Sessions Judge and the Jury*, acquit or convict the accused of any offence of which the jury could have convicted him upon the charge framed and placed before it; and, if it convicts him, may pass such sentence as might have been passed by the Court of Session."

The italics are the alterations made. They replace the words "so completely that he considers it" and "but it may" respectively.

On Thursday, the 26th of March, when the Council met for the last time at Calcutta, the Bill was taken into consideration and passed without any discussion or amendment.

The Code has already been amended empowering the Local Government to appeal to the High Court from an original or appellate order of acquittal passed by any lower court. The present amendment authorizes an intermediate appeal by the Sessions Judge when he differs from the jury or disagrees with them.

THE House of Commons has resolved upon the opening of Museums and Art Galleries on the day of rest. Sunday has ceased to be a *dies non* in India. A memorial has gone up to the Viceroy praying that an Act be passed declaring Sunday to be both a legal *dies non* and a public holiday on which none may be compelled to work or to attend to official duties other than those which the Act may specify.

IN the House of Commons, on Thursday, March 5, Mr. Herbert Roberts asked the Secretary of State for India:

"If he is now able to lay upon the table any papers or correspondence relating to the disputes between the Government of India and the Maharaja Rana of Jhalawar; and is it the intention of the Government to grant the request of His Highness that the charges brought against him by the Political Agent shall be made the subject of a public inquiry, in which he may have the advantage of legal advice."

Lord George Hamilton:

"I must invite the attention of the hon. member to my reply on Feb. 24. Until I have received by mail the final orders and papers from the Indian Government relating to the case, I cannot say what papers I can produce. I am informed by telegram that

the inquiry has resulted in the deposition of the Maharaja Rana, and that this decision has been made known in Jhalawar. The charges brought against His Highness have been fully explained to him, and his written answers received. There has been no restriction upon his seeking advice, and the inquiry has been conducted according to the usual practice, which I am not disposed to modify."

Dr. Clark wished to know

"Whether the noble lord the Secretary of State for India had any further information to give the House with reference to the deposition of the Maharaja of Jhalawar. He also wished to know whether Indian Princes were to be deposed without fair trial or any inquiry being made into the charges brought against them. This was a very serious matter, affecting the loyalty of a large number of our fellow subjects in India. He had heard the facts of the case, and he maintained that independent rulers ought not to be deposed as the result of a secret inquiry."

Lord G. Hamilton said that

"It was perfectly true that the Maharaja of Jhalawar had been deposed. He was deposed in 1884 by Lord Ripon, but subsequently he was partially reinstated with limitation to his powers. That limitation was withdrawn two years ago. In consequence of the state of affairs which had since arisen it was necessary in the interest of good government that he should be deposed. When papers arrived from India he believed it would be seen that the Indian Government had no alternative but to act as they had done."

For Dr. Tanner's enquiry when the papers were expected, Lord G. Hamilton said he could not answer.

It is not likely that the papers will be published while the interest in Jhalawar lasts, or until Prince Zalim has sunk into nothingness. From the replies of the Secretary of State, it does not appear that the prince has been deposed for good, or that he will not be restored once more to power. He also says that the prince was informed of the charges against him, that he was free to consult his advisers, that he gave his written replies to the charges, that the explanation was not deemed sufficient, and that he deserved the sentence passed on him. Lord G. Hamilton accepts both the finding and sentence of the Government of India. At any rate, he is not disposed to question or modify, if he has not already confirmed, them. It is difficult to suppose that the Government of India could act on their own responsibility in a matter of this kind. At the same time it is not impossible that the view derivable from papers by the mail may be different from that formed on telegraphic messages. It is best therefore to wait till the publication of the papers. But how long? Prince Zalim may have deserved his fate. It must, however, be patent to all that he has been justly punished.

MR. JOHN A. BRIGT writes to the *Times*:

"I am glad that Mr. Labouchere has asked a question about the statue of my father in the central hall of the Houses of Parliament. I am reluctant to say any thing unpleasant to those who subscribed towards it with a desire to do honour to my father's memory or anything to the distinguished sculptor who made it, but it is so totally unlike my father in almost every respect that to look at it is painful to my brothers and myself. I think the committee who ordered it would have done much better if they had given the commission to the only living sculptor who had made a statue of my father from life or, failing him, to some one who had often seen my father. I believe that in this case the sculptor had never seen him, excepting once from a distance, and that he had to make what likeness he could from photographs. He might possibly have been more successful if he had felt that motifs from some member of my family would have been of service to him, but apparently he did not. The result is a figure which if it was not so painful for me to see, I should call grotesque."

The same is the case with the marble figure at the junction of College Street and Harrison Road, Calcutta. Though unveiled by the Viceroy, it is no likeness of him whom it is intended to honour. As a false representation it ought to be removed and replaced by a true one. The bust of the native Judge at the Calcutta Small Cause Court was so renewed. The so-called statue of Kristodas Pal may represent anybody other than a Bengali or Hindu. Of the known persons in Calcutta, it most counterfeits in features the Attorney Baboo Ashutosh Dutt. He or his family may buy up the statue, thus enabling the family and friends of the late Kristodas Pal to look upon his like or likeness again in another figure.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

AFTER preparations made, it is a disappointment that the Conversazione of the Mahomedan Literary Society is not to be held this year. It was to have come off on Monday next. On Wednesday last, the Calcutta Corporation informed the Society that, "in the present state of the roof of the Town Hall the building should not be used for public meetings of any kind either on the upper or the lower floor." The next place thought of was the Dalhousie Institute, but it could not afford the necessary accommodation for the various exhibits and experiments. Another suggestion was the Indian Museum. It too had to be abandoned, for it was not possible that the Trustees could agree to its new use. There being no other available building which the Society could think of, the members have most reluctantly been obliged to abruptly put a stop to the entertainment. Accordingly,

"The Committee of the Management of the Mahomedan Literary Society regret to state that

The thirty-second Annual Conversazione fixed for Monday the 30th instant cannot therefore be held at the Town Hall and as there is no other suitable place where it could be held, the Committee of Management have, with very great regret to announce that the Conversazione is postponed *sine die*."

This inability to hold the Conversazione is a positive loss to the public of Calcutta. It is here that the newest discoveries in science are exhibited and explained to the ordinary public. This year, as a special novelty, there would have been an exhibition of the latest inventions in agriculture and sericulture. The Society has been unremitting for the last 31 years in its efforts at general instruction and cultivation of good feelings between the different communities. Let us hope the unexpected breakdown, at the last moment, of the *soiree* will be more than made up next year. It is, indeed, a disgrace to the Calcutta administration that the Town Hall is not fit for use during the season, as there is no other place for a large gathering. We understand that the Lieutenant-Governor of Bengal, the patron of the Society, has expressed through his Private Secretary his regret at the postponement of the annual entertainment under such circumstances.

A DEVASTATING fire, breaking out in a *busti*, committed great ravages on Tuesday last at Kidderpore in the southern suburbs of Calcutta. With a high wind blowing, and not enough water available, the engines could not extinguish the rapidly advancing fire till it had completed its work of destruction and purification. The Police have calculated the loss of 102 huts in Watganj and 1,125 tenements in Ekbalpur. In all, six *bustis* have been completely burnt and 6,000 persons rendered homeless. The scene of destruction and desolation covers an area of about a mile in length and 600 yards in breadth. Three women and four children lost their lives, and a number of cattle, chiefly cows, were burnt. The visitation has evoked public and private charity. Of the public bodies, the Chamber of Commerce, as befitted their position, took the lead, and held a meeting at their rooms to consider measures for the relief of the sufferers. They formed committees to raise subscriptions and render relief. Mr. Risley represented the Bengal Government. He expressed the sympathy of the Lieutenant-Governor who, he said, had been greatly shocked at the extent of the disaster and was prepared to make a grant from the Provincial funds. The Nawab Bahadur of Murshidabad was the first to subscribe Rs. 250. The Maharaja of Darbhanga has offered Rs. 2,500. An anonymous sympathiser has forwarded a cheque for Rs. 5,000.

ON Monday next, at 4-30 P.M., there will be a free public meeting, at the British Indian Association rooms, under the presidency of Raja Peary Mohun Mukherjee, C.S.I., in connection with the question of Medical Reform in India. Dr. K. N. Bahadurji of Bombay, who has studied the subject and has the knack of explaining matters lucidly in a few words, will address the meeting. It will be a treat, indeed, to hear him.

THE Indian Association gave, on Thursday last, an afternoon-Evening Party to the native members of the Viceroyal Council from Madras and the Central Provinces. Rai Bahadur Ananda Charju could not be present as he left for Madras the same afternoon. But Rao Sahib Bulwant Rao Bhushkutay was there. It is satisfaction to know that our Calcutta people are beginning to learn the duties of hospitality.

THE Chairman of the Calcutta Corporation has issued invitations for a Garden Party, at his residence, 21, Loudon Street, on the 1st of April, to meet the Lieutenant-Governor.

REIS & RAYYET.

Saturday, March 28, 1896.

RAGHUNATH SIROMANI.

THE FOUNDER OF THE NAYA SCHOOL OF NAVADWIP.

IT is to be regretted that the people of India never paid much attention to the claims of either history or biography. The Puranas, and the two great epics, *viz.*, the Mahabharata and the Ramayana, are believed to contain some biographical accounts of kings, heroes, and Rishis. But those accounts exist in such a form, in other words, they are so indissolubly mixed with poetic exaggerations, that the true facts are difficult to find out. Some years ago, a Bengali critic of some pretensions observed that, perhaps, this neglect of history and biography has not been altogether baneful. His argument was that the world gains nothing from the small beer that makers of history and biography delight in chronicling; that, after all, no advantage is to be reaped from a detailed account of the campaigns of Asoka or the wars of Alexander; that if Ferishtah had omitted ten out of the twelve famous expeditions of Mahomed Ghazni, in India, men would not have lost anything. The Puranas, according to the critic, do contain biographical accounts. Only the quintessence of the lessons to be drawn from biography is enshrined in them. The life, day to day, of no chaste woman may occur in those books, but the chastity of Savitri has been recorded there in undying letters. The true utility of biography consists in the models of character it presents for imitation. Hence, he observed, no useful purpose is gained by recording all the acts of even the greatest man of any age or country. He read, he thought, he ate, he slept, he moved from place to place, he did good to some, and injured others. The details of his dinners, or slumbers, or journeys, do not deserve to be recorded. The curiosity is morbid that the world manifests in such particulars. The very name of the hero may, according to him, be allowed to be forgotten. It is only with an account of his virtues that we are concerned. Many such accounts occur in the Sanskrit epics and the Puranas. As biographies, therefore, they are better, because the useful only has been retained, than even Boswell's Johnson which is full of frivolous details.

Plausible as the above view is, it is essentially incorrect. Mere accounts of virtues can never engage the interest of mankind. They must necessarily assume the character of didactic precepts or abstract disquisitions. Example is more efficacious than precept. Burke finely said that "Example is everything. Example is the school of mankind, and they will learn at no other." Ten sermons on the sacredness of animal life cannot move the heart so powerfully as the ten lines of Sterne where he tells the story of the dead ass mourned by its owner at the village inn. Take up any biography and see what the difference is between such a book and an

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1895-96.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 1st April, at 6-30 P.M. Subject: Optical Instruments (continued).

Lecture by Bibu Syamadas Mukherjee, M.A., on Thursday, the 2nd Inst., at 3 P.M. Subject: Analytical Conics.—Reciprocal Polars.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAT. SIRCAR, M.D.,

Honorary Secretary.

March 28, 1896.

abstract disquisition, in the chastest style, on all the cardinal virtues, from the pen of an eloquent writer. The curiosity is not morbid that man feels in the doings of men raised above the common level. The anecdotes illustrative of Johnson's impertinence and arrogance and narrowness and unseasonable wrath are not without their usefulness. They serve to explain the anatomy of the man's mind. In an account of Johnson's life they are as necessary for the purpose of bringing out his virtues as shades are necessary to set off the lights of a picture. Then, again, the shortcomings of great men serve as warnings to others, even as their merits operate as examples for imitation. They are beacon lights showing the dangers ahead.

Every student of Indian literature and history must, therefore, deplore the total absence of materials from which biographies can be constructed of eminent Indian scholars of former times. Who is there that would not like to know more of the life of that brilliant Bengali logician, Raghunath Siromani of Nadia? As long as the Naya School of philosophy will be honoured in India, so long will Raghunath's name be remembered with veneration. He may be looked upon as the founder of the great university of Nadia or Navadwip. It was Raghunath who first won for that university the privilege of bestowing titles. The commentaries he wrote on the Naya are held in the highest esteem. Kant himself, if he had known the man would have honoured him for the vigour and subtlety of his intellect. Yet, sad to reflect, we know almost nothing of that great thinker, beyond a few incidents which rest on tradition and about whose genuineness there is considerable doubt.

Raghunath lost his father while he was three years old. His father was a very poor Brahman. At his death, accordingly, he could leave nothing for the support of his widow and child. The widow, seeing no other means for rearing her son, was obliged to depend upon eleemosynary alms. By this, however, she could not make the two ends meet, although she was diligent in her daily rounds. The poor woman at last became a serving maid at a *Tole* (*chatuspathi*). She used to wait upon the students. Her occupation was to rub and scrub the mud-floors of their rooms, to scour the brass utensils belonging to them, to do their marketing, to make the fires needed for their cooking, to wash their clothes, and, lastly, to sweep the yard. Her earnings as a serving woman barely sufficed to keep her and her little child alive.

One day, when Raghunath had attained his fifth year, his mother sent him to the *Tole* for fire needed for her own cooking. A student was cooking his food. The Brahman students in large *Toles* did and still do their own cooking. There is no disgrace for a Brahman in preparing his own food. In fact, the rules of purity require it. *Swahastapaka* is always laudable. One unable to cook one's food may take food cooked by one's *swagotra*. A *swahastapachin* is looked upon as purer than a *swagotrasin*. The student, when asked by Raghunath, brought out of the oven a quantity of fire with his iron ladle, and, as a practical joke, said,—“Here, boy, take what you want.” Raghunath had brought no vessel of earth or iron with him. He was not, however, to be non-plussed. He joined his little palms together, took up a quantity of dust, and requested the student to place the living charcoals on it. The incident was observed by the other students.

They all admired Raghunath's readiness. Their Professor, Vasudeva Sarvabhauma, heard of it and resolved to teach young Raghunath. Vasudeva asked the widowed mother to give the child to him. She was delighted at the idea that thenceforth her child would not only be fed and clad, but also educated, by a Pandit like Vasudeva. The child was transferred to the care of Vasudeva who began to treat him as his own.

Raghunath was endued with extraordinary intelligence. Within a short time he succeeded in mastering Sanskrit grammar and law. It is said that, while labouring with the Sanskrit alphabet, Raghunath gave great trouble to his teacher. He enquired why *ka* should be the first letter and not *kha* or *ga*. This obliged his instructor to explain to him, even at that stage of his study, the organs and the efforts necessary to pronounce the several letters. A child who had to be taught the difference between palatals and gutturals and labials and dentals and nasals, while still engaged with his letters, could not be instructed in grammar and law by an ordinary teacher. Vasudeva had to summon all his learning for explaining to his pupil even the most ordinary aphorisms of grammar. When the *smritis* were taken up, the task became still more difficult.

After Raghunath had studied grammar, poetry, rhetoric, and the *smritis*, he took up *Naya*. Soon enough he finished the few treatises that were then current. It should be observed that in those days, of all the universities in India, that of Mithila alone was famed for the thoroughness with which *Naya* was taught in it. To keep up the supremacy of Mithila, the Pandits of that university took great care to prevent their students from taking away with them manuscripts bearing upon the *Naya* philosophy. When a student completed his studies and passed the final public examination, he received a title such as Tarkalankara; Tarkabhusana, Tarkapanchanana, Nayalankara, Nayabhusana, &c. Leave was granted to him to return to his native province and open a *tole*, but then his baggage was carefully searched so that it was impossible for any one to take away from Mithila a single work on *Naya* or a single commentary. Vasudeva had finished his study of *Naya* in Mithila. Endowed with an extraordinarily retentive memory, he had got by heart the contents of every work on *Naya* that he had read. Dismissed by his preceptor with the title of *Sarvabhauma*, he came home, and the first thing he did was to reproduce the treatises on *Naya*. This enabled him to open a *tole* in Nadia with the object of teaching *Naya* better than others, along with the other branches of learning such as grammar and poetry and rhetoric and law. There were preceptors in *Naya* before Vasudeva in Nadia, but none of them had been so famous as he. The fact is, Vasudeva derived great advantages from the books he had reproduced from memory before setting himself up as a teacher. Raghunath, having finished the works on *Naya* which his master had reproduced, found that to become a thorough master in it, he should have to go to Mithila. Besides, he was resolved to win for his *alma mater* the privilege of granting titular distinctions. Not that the Nadia Pandits did not confer titles on their students who completed their courses under them; but then the titles they gave were not recognised in Mithila or any other part of India. Unless and until a Nadia Pandit could vanquish one of the great teachers of Mithila, the privilege of Nadia

to grant titles could not be undisputed. Moved, therefore, by the generous impulse of becoming a thorough master of Naya and of winning for Nadia the undisputed privilege of granting titles, Raghunath, with the blessings of Vasudeva and of the other venerable teachers of Nadia, started for Mithila.

It is not difficult to imagine what the thoughts were of the young student as he journeyed on to that ancient and famous seat of Naya philosophy. Communications in those days were very difficult. After great trouble, Raghunath reached Mithila and got himself admitted in the *tole* of Pakshadhara Misra, the most famous of the Mithila preceptors. It is said that Pakshadhara had more than a thousand pupils. Raghunath joined the very last class. Within a few days he succeeded in attracting attention. He was able to vanquish in disputation all the advanced pupils of Pakshadhara. His fame spread all over Mithila as the brightest of all the students of Naya that had ever visited the country of Janaka. Raghunath challenged the accuracy of the comments that were current in Mithila on the Gautama Sutras. This led the great Pakshadhara himself to enter into a disputation with him.

The day was fixed for that grand intellectual gladiatorship which was to terminate in the victory of Raghunath and of his *alma mater*. Learned Mithila took an interest in the disputation that can be easily imagined. Raghunath was blind of one eye. His fellow students made themselves merry over this fact. The senior professors, however, trembled for the reputation of their university. The disputation was conducted with sobriety on both sides for two days. On the third day, however, Pakshadhara, finding himself beaten, had recourse to abusive declamation. He represented that Raghunath was an impostor in learning, that he had not been able to penetrate the system of Gautama, that, in fact, his arguments were so shallow as not to deserve reply. The assembly broke up with shouts of derision directed against the poor friendless student from Bengal. The prospect before him was utterly cheerless. Dismissed from Mithila with ignominy, where could he go and set himself up as a teacher? Life seemed to him to be a burden. How would Nadia receive him? How could he show his face to his own loving teacher, the venerable Vasudeva? Conscious of his own powers and fully persuaded of the insincerity of Pakshadhara, the indignation he felt was extreme. In the maddening frenzy of the hour, he resolved to do a desperate deed. He would first kill Pakshadhara Misra and then put an end to his own existence. He had taken no food that day. He felt no appetite. Evening came. He did not light his little room, but sat brooding over his wrongs. Midnight came. Every one had retired to rest. Raghunath silently issued from his chamber, armed with a deadly knife. Slowly he proceeded to the house of Pakshadhara. The season was autumn. The moon was at her full. We will not endeavour to depict his thoughts. It was a fit of madness that had seized him. The enormity of his intended crime, one may be sure, was not present to him. The house was reached. Pakshadhara was lying on a mattress, on the terrace of the house, his wife sitting beside him. Raghunath managed to enter and creep up the stair-case. He heard voices. Pausing to listen, he caught the words. The wife, struck by the beauty of the moon, admiringly asked her husband as to whether there could be anything

brighter. Pakshadhara was silent. Offended at this, she repeated her question, when Pakshadhara, roused from his reverie, replied, saying,—“I have seen something brighter than the autumnal moon. The splendour of the intelligence of a student from Bengal, by name Raghunath, overshadows the splendour thou admirest!” The knife dropped from Raghunath's hands. He ran and threw himself at the feet of his preceptor and confessed, with convulsive sobs, the crime he had planned. Pakshadhara raised him from the suppliant posture, and embraced him with tears of affection. The next day all Mithila was summoned. In the presence of all the professors and students, Pakshadhara fully confessed that he had been beaten by Raghunath and that Raghunath's views were undoubtedly correct. The title of Siromani was conferred upon him. He was allowed to take away what manuscripts he chose. The privilege of Nadia of bestowing titular distinctions was recognised.

Congratulations poured on Raghunath from his fellow students as also from all the great preceptors of Mithila. Hearty was the welcome that awaited him at Nadia. Old Vasudeva embraced him with tears in his eyes. It was the proudest moment of Vasudeva's life. He soon after started for Benares to end his days in that sacred city. High though the fame was of Raghunath as a *Naryayika*, he was as poor in earthly goods as a church mouse. With such assistance as he could get, he set up a *tole*. Students flocked to him from every part of India. Unable to build a house, he used a large cow-shed belonging to one Hari Ghosh as his lecture-hall. The din of voices was very great in that shed all day long, in consequence of the disputations of his pupils. To this day, any place where a large number of people congregate and talk aloud is spoken of as a “Hari Ghosh's gowal” (gowal meaning cow-shed.)

Of Raghunath's later life we have no details. He composed thirty commentaries on the Naya system of philosophy. They were far superior to those then existing. All of them are now studied at Nadia. Later Pandits have commented on his commentaries and kept his interpretations alive. In fact, Nadia to this day retains her supremacy in Naya. The great teachers of Mithila are gone. Students desirous of mastering the Naya philosophy flock to Nadia from every part of India. The supremacy of Nadia is entirely owing to Raghunath. “Dhiman Raghunath Siromani” (the highly intelligent Raghunath Siromani) is the appellative by which he is cited to this day everywhere in India.

A PLEA FOR CALCUTTA.

A QUESTION OF THE HOUR.

Which is the capital of India? The question may well be resented as suggesting a doubt that is not. Is there a doubt? Sikh and Sikh, Mogul and Maharatta, Parsee and Pathan, have none—have had none, these hundred years. Ask sober historians—ask disinterested foreign travellers; ask dull statisticians—ask geographers; do they give any uncertain sound? Listen to indifferent Goa and Tranquebar and Pondicherry! With them all, the Government of India is the Government of Calcutta. For the rest, benighted Mull or aspiring Duck never seriously contests the *status quo*, however bitterly the one may complain of his lot, or the other lose no opportunity of preferring, for the future, the claims of his favoured abode. Why, indeed, ask? Look around and—confess!

Neglected of course Calcutta has been for a series of years; all but most shamefully divorced without offence, on a frivolous pretence. Neglected, while she has put forth all her resources—developed all her capabilities—made the most of her great advantage of situation, and abated all its drawbacks, setting her house in order and beautifying it, at great expense of toil and trouble and substance, sinking her *stridham* (*peculium*) and perhaps im-

poverty-stricken her children for ever, to fit it for the reception and permanent residence of her Lord Saheb. Yes! she has made proper harbour for his barks---his men-of-war, merchant-men, and pleasure-yachts---has provided landing places for his embarkation and debarkation, jetties and wharfs and warehouses and counting-houses for his commerce with the world, and bureaus for the administration of his vast estates in *her* right---the right of the Great Mogul's daughter, his wife---has in ten years conjured up a fairy city, pulled down houses and opened shady squares and paved arcades and perfumed groves---raised palaces in stucco or stone in forms fantastic---laid out parks and gardens and green walks and embowered retreats---put up statues in every corner and lighted up the whole, night after night, all to please her Lord! For he, base man, leaving a few miserable discontented small fry of agents to look languidly after the estates as may be, beyond the master's eye, like a veritable Koolin---lord of a hundred consorts---roams the country over, now flirting with the immodest wench with her tinsel airs, Lucknow, in the mock-Kaiser Bagh, now to the interesting elderly widow, Agra, whispering tenderness in the moonlight under the Taj, now courting that used up proud old queenly termagant, Delhi, whose embrace is death, and anon, in sheer disappointment or sad satiety, retreating in haste from the world to shut himself up within the everlasting hills, and the eternal snows, in the shadow of the Almighty Himself---not alas! to pray in sack-cloth and ashes, but---but. Neglected indeed, but not repudiated yet. By all law, human and divine, Calcutta is the lawful wife---the true and only capital of India.

Time was when Calcutta was better regarded. When she was, indeed, indispensable. When the Lord Saheb was a raw and unknown and uncared for knight, without the present aristocratic or high-Brahmanic pretensions. When he had not conquered the dames of the North, when his addresses would have been rejected with scorn as the crazy aspirations of a sturdy but penniless adventurer without connections. It was his first easy success with the famous brunette of Bengala indeed, that urged on his ambition to universal empire in the East; his connections here that facilitated his views against the other Peria.

Calcutta has no doubt, manifold imperfections---her own manifest disadvantages. It was not the best site to found a city on. Calcutta was a child of necessity. Not in pleasure or in pride was the idea conceived, nor even in fair weather carried out. It was a heaven of a place compared to Injelli, at the mouth of the river where the English held on to Bengal, after being forced to shut up shop at Hooghly and flee. Deadly as the Salt Water Lake might have proved in that century, to the hard-drinkers, voracious eaters, and day-sleepers of the period, the Lake as a nuisance has been almost suppressed. Lord Wellesley rendered Calcutta a tolerably habitable city of palaces.

Calcutta has had her detractors. Lord Ellenborough contemptuously spoke of the "Commercial Capital of Bengal." It may well be doubted whether his Lordship realized the full import of his words. Those who have no great respect for the deceased Governor-General may even urge that the haughty loneliness of the Laws which he inherited, and which probably cost him his domestic happiness, was ill able to sympathise with the larger interests of the profane vulgar; while the strange femininity of his soul which preferred epaulettes to plain clothes and delighted in the theatrical, hankered for the historical. But take the proud scoffer at his word! Even such as he puts it, the position of Calcutta is not one to despise. To be the port and emporium of that kingdom of the Indian Continent which was the nucleus of the British possessions---which maintained the Court of Delhi and supplied the successors of the Moguls with the sinews of war to make the whole empire their own---that Bengal which has made up, from her abundance for the annual loss by reckless conquests and imprudent responsibilities selfishly or ambitiously undertaken---is not exactly a fitting butt of statesmanlike derision. More to the point was Lord Hardinge's disappointment. "I must go back to Cairo," said the simple soldier, after his first week at Government House, "I must go back to Cairo to see the East!" That, however, came of Calcutta being the British capital in the East---a European city planted in the midst of Asia. For the rest, it came of driving about Government-Place and the Esplanade, or sailing straight up the grand Wellesley Road---through fields and orchards, straggling hamlets and uninhabited wastes---to Barrackpore and back. Or, if he had ventured out of the English settlement in the true Eastern direction, he might have seen a few mosques and *Mandirs* to remind him of the quarter of the globe he had been exiled to, of his own free choice. But these architectural monuments are but the prominent drapery of the East---not of its essence. *That* consists in its profound sincerity and humanity and repose---a sincerity which is above taking superfluous pains to conceal and varnish vanity as if it were a grave reproach of our poor human life---a humanity which does not despise the meanest, which postpones beauty and comfort to benevolence---a repose which gives happiness under the greatest trials---all together causing that exhibition of squalor and dirt side by side

with barbaric pearl and gold, and of great works run to decay, which so disgusts the restless European, with his veneers and French polishes and portland cement to look like stone and his shirt-frills and cuffs of paper sold separately from shirts. Now, this essence of the East Lord Hardinge might have inhaled, if properly directed by his Baboo instead of his A. D. C---within a mile or so of his residence.

Calcutta, indeed, is at once a European and an Asiatic city. That, for all human purposes of the present, including even æsthetic, is an advantage over her prouder rivals up the country. Calcutta is the modern Delhi---the Indraprastha of the Kali Yuga---the Empire City of the British World in the East---the seat of England as the greatest Asiatic Power.

Yet is Calcutta continually taunted as a City without a past or a future.

On either side the idea is a grievous wrong to Calcutta. She has, God knows, need to apologise for enough substantial shortcomings to be able to bear an unmerited odium. But first as to the worst imputation. No worse abuse than the curse of death! Life may be supported without a pedigree, but the threat of death is such that one must look about. But, is there ground for alarm? The Government of India has, indeed, proved faithless to its Lakshmi---Goddess of Fortune; and statesmen have generally lost their heads. What then? Calcutta does not wholly depend upon the smiles of power. Calcutta has indeed been systematically neglected for a great many years, and of late almost deserted. Yet she has not been reduced. She has been rising, steadily if slowly. She has, during all this neglect, been cleansing and beautifying herself at enormous cost. If not the political capital, it will be enough if she remains the commercial emporium of Bengal, styled by the great Aurungzebe, the Paradise of Nations. Is there any danger to that alternative prospect? There, I should hope, under Providence, the youthful Queen of the East is tolerably safe.

From time to time, indeed, we are troubled by the auguries of envious outsiders, and the fears of too pessimist insiders, that the Hooghly below the town is silting up, that the Mother of Waters---holy Ganga---shall soon leave the City of Palaces in the lurch, as so many cities have before been forsaken by their guardian Naiads. I believe there is no ground for such an apprehension within some generations to come. The calamity when it does impend, may surely be avoided, or at least to some extent abated, if not indefinitely postponed, by human ingenuity. With the progress of science the impossible has more than ever been abolished; and even the ruder engineering of the past has succeeded in diverting the course of streams. The Suez Canal which has changed the climate of the Egyptian desert and the commerce of the world ought to make us hopeful. Our ancestors did not easily sink under difficulties. The remains of stupendous public works shew how manfully, and not unavailingly, they grappled with the disadvantages of climate and soil. We, their degenerate descendants of these latter days, less accustomed to see man control the grander forces of Nature, are profoundly impressed with the truth that there is no power like divine power. We are prepared meekly enough to resign ourselves to the inevitable, when it does overtake us. Not before that evil time, however, will we listen to the tempter. Not before that will the prophet of evil drive us to give up our legitimate claims. Nevertheless, we shall not be let alone. The minds of our citizens are unsettled by all manner of suggestions and rumours. It is a mercy that the chief owners of Calcutta---the Mullicks, Bysaks, &c.---are not adepts in deciphering letter-press. They knew not a thousandth part of what they were hourly threatened with, or they might have committed suicide, or at least quickly disposed of their properties for a song and gone to end their days in holy retirement at Brindaban.

This Age prides itself upon being the Positive Age. It is not to be done out of its wits by any metaphysical farrago, or to be bequiled by any alluring speculative prospect. How it deceives itself! Look at the thousand and one grounds, good, bad, and indifferent,---tan impracticable and imaginative for one prosaic and sober---for removing the capital to---the Lord know where! It might be Blazes, for anything that the proposers particularly cared. A thousand and one places were pointed out in almost all parts of India, each of which would incontestably make not only a better capital than Calcutta, but absolutely the best. But, for better or for worse, it seems essential, in the view of the agitators, that the experiment should be made, and at once. It is the misfortune of India that European political speculators, hardly excepting even any Anglo-Indian ones in their wildest dreams, their most foolhardy measures, incur no personal risk for themselves or their own.

The whole map has been ransacked to supply a plea for humbling the pride of Calcutta, and all manner of queer suggestions have been made. Some would take us up above the clouds in the Himalayas in Tartary---for Simla is Tartary rather than India. The wiser Mr. Smith of the *Friend of India* was more kind; he was convinced that an unheard of village among the Ghonds is

Nature's Capital of India.* Others would have it higher up; some in the Dehra Doon, some in the Doab. The go-a-head Punjabees of course set their heart upon Lahore, but might put up with Delhi. And Delhi, doubtless, is the historic capital of India--the true City of Palaces as of the Peacock Throne--the Paradise on earth which has inspired the song of poets of all climes. Russophobists, in anticipation of the inevitable advance into Central Asia, would move towards the Frontier. Others, on a variety of reasons, historical, topographical, sanitary, military and so forth, would take nothing less than the City of Akbar--the Great Mogul, *par excellence*. Bombastes Furioso of the West cries himself hoarse for Bombay--the queen of harbours, in direct communication with Europe. But his satisfaction at the unique possession is short-lived, for soon others, on all his grounds, and many more, set up the claims of Kurrachee. The do-nothings and know-nothings and care-nothings of the Services--the triflers whom all play, and no work has demoralized--would as I have said, locate the capital up above the clouds, and make-believe to govern Supreme from the peaks of Chinese Turkestan.

With a host of publicists like Sir George Campbell the capital ought to be any where--Poona, Nagpore, Umball, Delhi, Agra, Allahabad--but Calcutta. Such speculators, however, in their vanity of innovation or lust for symmetry, forget the obvious. Thus, the advantages of a central position are counterbalanced by the dangers of possible isolation--the attractions of mountain air and scenery are, of course, an irresistible diversion from work. Did the foreign politics of the Empire demand the moving of the seat of Government west-ward, Delhi or even Lahore would be a faint hearted compromise. Why not go the whole hog and start shop or rather stall at heart! Under such a view, Kurrachee, which is also a harbour in the Arabian sea, as being nearer to Khelat, would seem entitled to preference over Bombay. As to proximity to Europe, the capital may better at once be removed to Aden or Alexandria. For that matter, indeed, our concern is vain; has been rendered superfluous by the calm wisdom and disinterested policy of Great Britain. The capital *de facto* of India for some years past has been London, and the growing disposition is to perpetuate the unblushing arrangement. Strategically, economically, socially and historically, Calcutta is, nevertheless, the true capital. Calcutta and no other! Bombay would leave the Empire too far in the rear. Calcutta commands Bombay as being on the way to Europe. Bombay would be a more efficient auxiliary than a powerful mistress. History has ratified the conclusion of *a priori* reasoning as to Bombay's usefulness as a subordinate administration in time of trouble. For, with for less incentive to exertion than the Panjab, whose own safety was at stake, Bombay rendered invaluable service to the Empire in the crisis of 1857. History has yet to disprove the presumptions against Bombay's superiority as seat of Supreme Government. With regard to moving higher up, in view of recent events and those coming events which have cast their doleful shadow before--the capital may be too near the frontier, and, of course, in danger from surprises. Higher up, in fact anywhere in Northern India, more particularly towards the Panjab, it would be liable to attack. I refer not to external foes alone. Danger may arise where least looked for--in the very province. Among a material and excitable people, Government could not repose in the unclouded serenity of Lower Bengal. Government in such a locality could not divest itself of the possibility of being cut off from communication with the provinces and the mother-country. Such a capital would be exposed, if not to sudden capture, at least to constant panics,--so fatal to sound administration or calm policy. But if a change to Agra or Delhi or Lahore may have its honest, however more or less modest, recommendations, Simla is utterly indefensible. This, to begin with, not in India: It is "out of humanity's reach." It is a place more suited to the cloister-life of pensioned Emperors than to hurry and bustle of actual administration. It is fit retreat indeed for "monarchs retired from business." Such, at all events, the envy (if you will) of the scorched plains will always imagine the Hills! If it is not a Land of Lotus Eaters, where life itself is an exertion, it is admittedly a delicious Capua where business is an impertinence. Separated by hundreds of miles and by great geographical barriers, from the people and the country for whom Government exists and who maintain it, Simla can never be a natural seat of power--never ought but a capital *per force*--more *zid*. Government in such a phantastic situation, so dissociated from the nation, so far above all mundane interests, so far beyond the reach of advice or influence of every kind, unless it be that of the moon, to which it is so much nearer, must tend to be, even in the best hands, spasmodic, abnormal. So radically false a position, so anti social without the elements for a mutual understanding between the Governors and the governed, may, possibly, produce a philosophy of the unconditioned, but not a useful sympathetic human rule.

Government from such a place must be a series of leaps, more or less, in the dark. Nothing can compensate the want of the criticism of a free and instructed press and the co-operation of an

intelligent public--the advice of independent public men. These advantages cannot be had for the asking; they cannot be improvised even at the fiat of absolute power. They grow at natural seats of government, under favourable conditions; or *where* they spontaneously grow, Governments make their seats. Government to be sound and efficient must needs sympathise with the people, as it must, in some measure at least, depend upon its sympathy. This sympathy comes of contact and communion. Cut off from sympathy, Governments must be doubly a failure. Sympathy on the one side blunts the edge of folly and absolute wrong, as on the other, it receives folly and wrong even with kindness. Sympathy is often a better enlightener of the statesman's mind than stiff "proud reason." This inestimable two-fold advantage can be had only at such a place as Calcutta or Bombay. They are not available in anything like equal quantity or of so good a quality at any of the dozen and one places proposed, which have no commerce of their own, or are not, on independent grounds, the seat of a thriving, intelligent, leisured population. Least of all are they to be thought of in connection with such an out-of-the-way region as Simla.

The same remark applies to a travelling Government. An equestrian politician or a movable column of administration would be a worse sham than the ruler who "Far in a wild, unknown to public view, from youth to age a revered Hermit grew." The difficulties of carrying on the huge and complicated machinery of a modern state by functionaries oscillating between camp and bivouac are so enormous as almost to shame the most enthusiastic of our Anglo-Indian Abipones. The alleged advantage, for a peripetetic Downing Street, of thorough acquaintance with all parts of the Empire, of sympathising with, and drawing the sympathy of, all races and provinces, is a mere pretence. Under the interrupted exigencies of daily business there is no time, in such journeyings, for communion or knowledge. The false lights in which, under such circumstances, facts must present themselves, are more misleading than mere ignorance.

A locomotive Government or a Government skulking the greater part of the year from its true Head Quarters, must necessarily be an ignorant one in the regular sense. Its coolest, most protracted deliberation might appear hasty, for its mature decisions must often be formed on insufficient data. The Government of India has been fitly called a government of paragraphs. So it is, of necessity, under present circumstances. Even the Government of Russia, whose procedure one might suppose more simple as her forms ruder, is no less so as Mr. Schuyler tells us. Every civilized government must needs be a gigantic court of record. The anomaly of such a court, great or small, divorced from its records is a type in miniature of the immeasurable absurdity of the Government of India pretending to administer India from the table-land of Kashmir or the borders of the desert of Gobi, with all its archives left thousands of miles far behind, on the shores of the Bay of Bengal. The official sophists who, goaded on by influences which cannot be avowed, to the desperate defence of an untenable position, talk grandly of the telegraph and the railroad having rendered distance of no account, deceive themselves. So far as one important element in right government is concerned, these powerful motors of matter and mind--steam and electricity--have practically no influence. They cannot supply the absence of libraries and record rooms. It is hardly necessary to insist on the value of these. Modern administration is, for the most part literary work--modern statesmanship, in each instance, argument on a particular history. Not a step is, or can be, taken without blotting quires of foolscap or spilling printer's ink. The events and incidents, the successes and failures, the thoughts and arguments, the wishes and even the very musings of each day are carefully storied and preserved for future guidance and use. These monuments of the past prevent waste of energy, time, brain, and of course money, all which might be better employed. *Res judicata* is a plea not oftener heard in courts of justice than in the great court of politics. We are warned against founding mistakes, told not to trouble ourselves about exploded theories, or to go in search of proved will-o'-the-wisps. Above all, we need to keep clear of vested interests. At any rate, it is most important to know the state of facts, of every question. Hence the need of unsightly dusty shelves in every office, spacious lumber rooms in every department, vast repositories at every capital. These neglected treasures of the Government of India are only at Calcutta. They are not, and cannot well be, transported to any other place, not to say Simla. But beyond these special depositories of a voluminous lore, a modern government is ever in need of general literature of all kinds--from pamphlets of the hour and ocravos of the day to folios of the past. Government in these days, to be not only satisfactory, but barely instructed, must be continually assisted by well informed men and well-stocked and ever-supplied libraries. Not to speak of such men, who must always abound only in cities with great natural advantages, steam could not transport, as required, collections of books or papers, nor electricity reproduce their contents; if they could, they could not supply the means of reference at large store-houses. How often have the most

* See Art. "Amarkuntak, the capital of India."

deliberate consultations of Simla been discredited by their *prima facie* absurdity! How often has the most undoubted cleverness gone for nothing, in that proud Olympus! How often have the most brilliant minutes admired in the Hills been laughed at in down country for crudity! How often have we had to lament the ignorance which has detracted from the practical value of the most humane proceedings conceived and matured in the lone heights of the Himalayas. The Government of a great and distant empire by a handful of foreigners aliens in everything but the common humanity, unacquainted with the language, manners, customs, feelings and traditions of the people, never brought in familiar social contact with them, and, as regards the chief ruler, not remaining long enough in the country for tolerably superficial acquaintance with the country, is peculiarly exposed to the weakness and vices of ignorance. It is a crime to increase wilfully, that is without ample necessity, the normal certainties of that ignorance, as the Government has been doing by keeping itself out of the way of all help, of all books, of its own records. That Government is itself sore at the Secretary of State's interference with its own functions. It urges that the Government on the spot is a better judge of matters than the minister in London. The Minister laughs at the pretension! The reasoning might have some chance, coming from a Government of Calcutta, or, in right earnest, of anywhere in the plains--anywhere in India. The Minister knows that the Government is *not* on the spot. If the Governor-General can govern India through the telegraph from Simla, it is but a slight stretch of the pretension to govern with the same instrument from London. I believe that the Secretary of State at the India Office is better able to do justice to Indian questions than a peripetetic Viceroy wandering over the country, portmanteau in hand, and finally lost, the greater part of his time, in the clouds, surrounded by a few rolls of paper, a book or two, beyond the reach of opinion, necessarily at the mercy of his loudest colleague, or of a somewhat long-memoried clerk at head quarters. These successive Governors General who have succumbed to the blandishments of Simla little know how much they have contributed to degrade their high office; how they have supplied Home politicians with arguments for making the whole administration of India, with its details and patronage, an appanage of the Home Government of India; how they are playing into the hands of British Statesmen without a political conscience.

So far from Government at Simla being advantageously placed to initiate a sound policy at home,--or to direct active operations on the frontier, its familiarity with model administration by ukases of Deputy Commissioners, under the law of Military Squires, is a positive evil and may yet end in disaster. The non-regulation air of the neighbouring provinces--must be hurtful to a constitutional ruler. Already Simla threatens to overturn the entire glorious fabric of British constitutionalism, while the Government there labors under the permanent risk of being any moment cut off from the sources of its strength. Calcutta, on the contrary, is a power in the midst of men, enlightened and courageous enough to advise honestly, whose opposition itself must have a purifying strengthening effect on the half a dozen lone old gentlemen who govern. Calcutta is in fertile, industrious, easily governed Bengal which has made up for so much folly, extravagance, and loss. With a well disposed population able to support armies, Bengal may, at the worst, be maintained by British valour and statesmanship, against the rest of India and the world, and the British should never forget that Fort William is the last stronghold of their dominion in the East as it has been the first. As for all the talk about the demands of frontier policy, the work may be done more coolly, surely, firmly, from a distance than at or near the frontiers. *There* all sense of proportion is apt to be lost, even the correct relations of things missed. We should take care to be not too far off. With the magic wire to pull and all ready, and the iron horse in full harness hissing impatiently at the door, Calcutta is as near the remotest corners of the Empire as need be, in spirit and sufficiently distant in the flesh for serenity of thought and conduct as well as substantial safety. And then, from the war some people talk, it would seem as if all our frontiers are converged to the North West. No! India like other countries has boundaries in all directions of the compass, and vulgar wisdom commands us to look behind as well as before. The Empire seems destined to develop or at least to be recollected, more surely in a direction different from, indeed opposite to, that of Central Asia. The proud old empires of Burmah and China are restless under the wrongs we have inflicted on them, or the indignities to which we have put them, and Calcutta is the best and most natural base of operations against them. Nor are our most formidable enemies in the future expected by land. For such a contingency Calcutta is extremely well situated. It is just the London in the East of a great naval power like Great Britain. We need scarcely point out the impolicy of shifting the seat of government with every change of frontier, or every addition to its possessions. A capital is not only a city--a mere cluster of houses, the however magnificent--but a moral entity--a being of power,

calling up associations, exercising a spell by its very name. A capital perpetually on the wing--on the *qui vive* to pack up for another province on every change of fortune, can never settle down into such a glorious institution--such a dearly beloved personage as Paris or Vienna. Such a capital for the British in the East, Calcutta had very nearly become when the unstatesman-like mania for Simla and Ootacamund and the Lord knows where else, born of ease and indulgence, unchecked by effective public opinion, shook it to its centre.
--*Mookerjee's Magazine.*

HOW DID THE THIEF GET IN?

YOU wake up some morning and miss your watch, your purse, your best clothes and other valuables. Yet neither you nor any member of your family heard a sound during the night. Neither is there a sign of how the thief got into the house nor by what road he decamped. You rush round and tell the police, and also decide to keep a dog and a shot gun. You will let thieves know they mustn't come fooling around your premises after this. A sensible procedure. Meanwhile your watch, your money, &c., are gone. Quite so.

Now suppose I should tell you that the thief who stole your property never entered your house at all; that he was born in it; had lived twenty years in it; never had been out of it till he went off with your things, albeit not a soul of you had ever seen or heard of him. What would you say to me? You would call me an idiot and threaten to have me sent back to the asylum. But don't be too sure.

"Later on," says Mr. Heakin, "rheumatism struck into my system and I had pains all over me. I was confined to my bed for three months with it and could not dress myself. In this general condition I continued for five years. One after another I was treated by *fourteen* doctors in that time, but their medicines did me little or no good. At one time I went to the Infirmary at Shrewsbury, where they treated me for heart disease; but I got worse and feeling anxious, returned home."

How he was finally cured we will mention in a minute. First, however, about his rheumatism. Every intelligent person knows that rheumatism and gout (its twin brother) is virtually a universal ailment. It does its cruel and body-racking work in every country and climate. No other bodily causes so vast an aggregate of suffering and disability. Whatever will cure it is worth more money in England than a gold mine in every country.

But does rheumatism "strike into" the system as a bullet or a knife might strike into it? No Rheumatism is a thief who steals away our comfort and strength; but it is a thief, as I said, who is *born in the premises*. In other words, it is one--and only one--of the direct consequences of indigestion and dyspepsia. And this is the why and wherefore: Indigestion creates a poison called uric acid; this acid combines with the chloride of sodium to form a salt; this salt is urate of sodium, which is deposited in the form of *sharp crystals* in the muscles and joints. Then comes inflammation and agony, otherwise rheumatism. Thus you perceive that it doesn't come from the outside but from the inside--from the stomach. Our friend's cold, caught in the mine, didn't produce his rheumatism, it clogged his skin and so kept all the poison in his body instead of letting part of it out.

Here is our very good friend Mr. Richard Heakin, of Pentrelyn, Salop, who expresses an opinion in this line. Let us have his exact words. He says: "*Rheumatism struck into my system.*" Of course we understand that he speaks after the manner of men. You know we talk of being "attacked" by this, and the other complaint, as though diseases were like soldiers or wild beasts. "Doesn't make any odds," do you say? Beg pardon, but it does--heavy odds. *For it teaches us to look in the wrong direction for danger.* Do you see now?

Thirteen years ago, in the spring of 1880, whilst working in the Roman Gravel Lead Mines, Mr. Heakin took a bad cold. He got over the cold, but not over what followed it. He was feeble, without appetite, and had a deal of pain in the chest and sides. His eyes and skin were turned yellow, and his hands and feet were cold and clammy. Frequently he would break out into a cold perspiration, as a man does on receiving a nervous shock caused by something fearful or horrible. He was also troubled with pain at the heart and had spells of difficult breathing--what medical men call asthma.

Mr. Heakin adds: "I was cured at last by Mother Seign's Curative Syrup, and without it I believed I should have been dead long ago."

Very likely, very likely; for this thief, although he may wait long for his opportunity, isn't always satisfied to run away with our comfort and our money; he often takes life too.

INDIA GENERAL STEAM NAVIGATION Co., Ltd. IMPORTANT NOTICE.

The undersigned beg to give notice that they are prepared to insure at very favourable rates, upon F. P. A. terms only, all and any goods (with the exception of Tea) shipped by steamer and flats to or from any station on their Inland Services.

For further particulars apply to--
KILBURN & Co.,
Managing Agents.

CALCUTTA:
4, FAIRLIE PLACE,
The 12th March 1896.

ALLAN'S ANTI-FAT

PURELY VEGETABLE, Perfectly Harmless.
Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into fat. Sold by Chemists. Send stamp for pamphlet.

Botanic Medicine Co.,
8, New Oxford-street,
London, W.C.

BEFORE AFTER

A Wonderful Medicine.
BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are in valuable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European Residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical: it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Bixington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmy days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahmin of the Brahmins—a conservation of the best of his inheritance that was nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man. Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dindrum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Silt Inspector from Sankutta, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purnadhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kumottee says:—"A Corporal offered Rs. 30 for the very same watch, Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government Medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases. Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

CALCUTTA, SATURDAY, APRIL 4, 1896.

WHOLE NO. 719.

CONTEMPORARY POETRY.

THE SOLDIER LAD.

(From the Swedish of J. L. Runeberg.)

My father was a soldier young, as handsome as could be ;
At fifteen years he shouldered arms, at seventeen man was he :

His world entire the field of fame,
Rejoicing wheresoe'er he came,
In hunger, frost, in blood and flame—

He was my father, he !

A child was I when he marched off, departed peaceful days ;
I recollect his haughty step, I dream of him always :

His hat and plume, his sun-burnt hue,
The shadow which his eyebrows threw,
Can never vanish from my view,

So steadfast was my gaze.

And when our army, facing round, advanced, the news was brought,
How brave he was, how strong he was, how stubbornly he fought ;

And then how he a medal gained,
Then two, it soon was ascertained,
" How happy it would be to stand

Beside him ! " thus I thought.

Then winter fled, with lusty spring the snowdrifts disappear ;
Then news was brought : of glorious wounds is dead thy father dear !

I cannot what I felt explain,
Was proud, but soon was sad again ;
Three days my mother wept and then

Was laid upon her bier.

Beside his standard fell my sire on Lappo's bloody plain ;
The first time, it was said, he blenched—he ne'er did so again.

For King Gustavus and his land,
My grandsire perished sword in hand,
His father died at Willmanstrand ;

Was one of Charles's men.

Such were my forefathers : for aye they bled, from sire to son ;
Indeed they lived a gallant life, a glorious death they won.

Oh, who would creep, an aged thing !
No, take the field in life's warm spring,
And die for Honour, Country, King ;

'Tis thus it should be done !

I'm nothing but a beggar lad, by other folk am fed ;
No home or relative have I, because of parents dead.

But grumbling is not my desire,
I daily grow up higher and higher ;
The son of such a doughty sire

Can never want for bread.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

And should I live till I am grown, and fifteen years complete,
The self-same hunger, self-same strife, and self-same death I'll meet :
Where bullets sing and thickest fly,
I also shall be present, I,
The same career to seek and try ;
My father's life repeat !

H. S.

—The Illustrated Naval and Military Magazine.

WEEKLYANA.

PHOTOGRAPHY has, as our readers are already aware, found a fresh development in the discovery of Professor Wilhelm Conrad Roentgen. By radiation or his X rays he has enabled the human sight to look through darkness. The light penetrates various opaque substances rendering them transparent, such as ebonite, carbon, vulcanised fibre, copper, aluminium, and iron. The photographs of human hands and feet show the shape of the bones with their joints.

The following lines are from *Punch* :

O Röntgen, then the news is true,
And not a trick of idle rumour,
That bids us each beware of you
And of your grim and grave-yard humour.

We do not want like Dr. Swift,
To take our flesh off and to pose in
Our bones, or show each little rift
And joint for you to poke your nose in.

We only crave to contemplate
Each other's usual full dress photo ;
Your worse than "altogether" state
Of portraiture we bar in toto !

The fondest swain would scarcely prize
A picture of his lady's frame-work ;
To gaze on this with yearning eyes
Would probably be noted tame work.

No, keep them for your epitaph,
These tombstone souvenirs unpleasant ;
Or go away and photograph
Mahatmas, spooks, and Mrs. Besant.

THEY have enriched (or shall we say endangered?) the Madras Botanical Garden with a Burning Tree from Burma. The name is a misnomer, for the tree stings rather than burns. Beneath the leaves are stings, which pierce the skin which, again, secretes a fluid with a burning sensation. The irritation may last for a long time, even for months. The effect is sure on damp days or when the affected part is bathed in water. The Burmans are in dread of the tree. They fly from it if they smell its peculiar odour. Chancing to touch it, they fall on the ground and roll over with shrieks. Under its bite dogs yelp and run, tearing the part stung.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

A horse coming in contact with it, also runs mad, biting everything in its way. A missionary at Mandalay, while investigating the effect of the leaves, suffered from agony for several weeks, an occasional darting pain in his finger lasting for ten months. May not the juice or the tincture of the leaves be a remedy for burns or the bite of scorpions?

THE *Scientific American* of February 22, 1896, reports that a large aerolite exploded with a vivid flash and a loud report over the city of Madrid, at 9-30 in the morning of Feb. 10, when buildings were shaken and many windows shattered. The concussion was so severe that the partition wall of the United States legation building collapsed and nearly all of its windows were broken. The Madrid Observatory report states that the explosion occurred twenty miles above the earth.

THE success of Japan in the late war with her Continental neighbour China, and the enormous war indemnity have spurred her to greater activity in the improvement of her military resources. The Japanese are going to build a dry dock at the naval port of Kure, 464 ft. long, 69 ft. wide and 42 ft. deep, a dimension which would admit a 15,000 ton battleship. They have made arrangements with the firm of Sir W. G. Armstrong & Co., Newcastle, England, for the erection of a steel foundry in Japan on the following terms: 1. The material shall for the present be imported from England. 2. Of the workmen to be employed, 20 per cent. shall be English and 80 per cent. Japanese. 3. When a new arm is invented in England, it shall be manufactured at the works in Japan. 4. For a stated number of years the Japanese Government shall give a fixed subsidy to the company. 5. On the expiration of the period the works shall be sold to the Japanese Government.

THE Queen has been graciously pleased to nominate and appoint His Excellency Nubar Pasha, G.C.M.G., to be an Honorary Knight Grand Commander of the Most Exalted Order of the Star of India.

THE Government of the North-Western Provinces have been empowered to appoint any Subordinate Judge, being a member of the Provincial Civil Service and a Native of India of proved merit and ability, to be also an Assistant Sessions Judge.

SIR F. W. R. Fryer, K.C.S.I., goes on leave of 3 months and 15 days from the 18th April. During the period, Mr. D. M. Smeaton, C.S.I., Financial Commissioner, will officiate as Chief Commissioner, of Burma.

BABOO Khogendra Nath Roy has been made a Presidency Magistrate for the town of Calcutta.

THE last number of the *Empress* gives the portrait of Mr. F. H. Skrine, the late Collector of Customs, who has just left us. It is followed by an account which we reproduce:—

"Francis Henry Bennet Skrine, Esq., C.S., our popular Collector of Sea Customs, is the scion of an ancient Somersetshire family, lords of the manors of Warleigh and Claverton, in the beautiful valley of the Avon, near Bath. He was educated at Blackheath School and passed the Indian Civil Service examination by open competition in 1868, arriving in India in November 1870. He received his first appointment of Assistant Magistrate of Rajshahi under Mr. Wilfred Heeley. After the usual vicissitudes undergone by junior officers, he found himself in charge of the Chuadanga Sub-division in Nuddea, where he obtained the thanks of Government for a system of embankments constructed in order to preserve the country from floods. In 1877 he volunteered for famine service in Madras, for which he received the special thanks of the Madras Government; but the exposure and overwork caused a complete breakdown, necessitating a very long period of furlough at home. On his return in 1881 he was posted to Jessore, and served successively as officiating Magistrate of Murshidabad, Gaya, Howrah, Tipperah, Birbhum, Rangpur, Shahabad, and Bhagalpur, officiating as Commissioner of the latter Division before his departure for Europe on furlough in 1894. His services attracting the attention of Government, he was placed on special duty to prepare for the Secretary of State for India a memorandum on the condition of rayyets and the labouring classes during the decade ending with 1891. In nearly all the districts in which he served he has left permanent memorials of his stay,—a great drainage canal at Rangpur and perfectly-installed water-works at Arrah being some of the more important ones. His services in the Calcutta Custom House are too well known to need recapitulation; and now he has earned a well-merited promotion to the Commissionership of the Chittagong Division, which he is on the eve of joining. Outside the sphere of official duty, his time is well employed in the public interest. He is the Secretary of the Bengal Branch of the Lady Dufferin Fund, the Vice-President of the Sailors' Home, and an active member of the Corporation of Calcutta and the Port Commission: and, notwithstanding his multifarious avocations, he finds time for a considerable amount of literary work. In 1887 Mr. Skrine married the youngest daughter of Colonel Stewart of Ardyvorlich, the head of a well-known Highland family, and has one son."

It is a meagre record of a life full of events and incidents which has yet to be written. The transfer of Mr. Skrine, though on promotion, is a distinct loss to Calcutta. His administration of the Customs Department was vigorous. The many reforms he introduced in the brief space of ten months, if maintained, will be a great convenience to the trade of Calcutta. In spheres other than official, his energy and activity were equally marvellous. He always delighted to do good, not only to his own countrymen but to the children of the soil. He helped in no small degree to make the stay of "Mark Twain" at Calcutta agreeable to him. Wherever he has been, Mr. Skrine has left his mark. His sympathies for the natives and his efforts to improve them have endeared his name to this country. If there were a dozen European officials like him, the British rule would have been more popular. It may be truly said of him that he is a battalion himself. Before leaving for Chittagong he gave a dinner to the superior subordinates of the Custom House, an account of which will be found elsewhere and which shews the man in one of his many phases.

GOVERNMENT has at last acceded to the prayer of the Memons to be recognized as thorough Mahomedans. The following Bill has been introduced in the Suoreme Legislative Council:—

"Whereas there is in the Presidency of Bombay and elsewhere a class of persons known as Memons, and questions have from time to time arisen as to the law by which such persons are in certain particulars governed;

And whereas some of such persons consider that they are, or desire that they should be, governed in those particulars by the Muhammadan law as established in the Hanafi School;

And whereas it is expedient to provide a procedure whereby the applicability of that law to such persons in those particulars may be placed beyond dispute;

It is hereby enacted as follows:—

1. (1) This Act may be called the Memons Act, 1896; and (2) It shall come into force at once.

2. (1) When any Memon who has attained his majority has declared in manner next hereinafter provided, that he desires to be governed by the Muhammadan law as established in the Hanafi School, that law shall thereupon, any custom to the contrary notwithstanding, apply to him, and to his children (if any), being minors at the time of such declaration or born thereafter, and to all property of which he or they shall then be or thereafter become absolutely entitled, in each part of British India, in the same particulars and to the same extent as it applies in the same part of British India to other Muhammadans and their property.

(2) No declaration made as aforesaid shall be capable of being revoked.

3. A declaration to take effect under section 2 shall be made by a written instrument signed by the declarant and in the form set forth in the schedule or in a like form, and shall,—

(a) if made in any part of British India in which the Indian Registration Act, 1877, is for the time being in force, be registered under that Act during the lifetime of the declarant; and,

(b) if made elsewhere, be executed before, and authenticated by, a notary public or a Court, Judge, Magistrate, British Consul or Vice-Consul or representative of Her Majesty or of the Government of India.

4. When declarations under the foregoing provisions have been made by a Memon and by any one of his sons, the Muhammadan law as established in the Hanafi School shall thereupon, any custom to the contrary notwithstanding, apply to all the lineal descendants of such son in the same manner and to the same extent as to other Muhammadans governed by it in the same part of British India.

5. Nothing in this Act shall be construed—

(1) to prevent any person being or becoming subject to any form of the Muhammadan law in any manner other than that herein provided; or

(2) to affect the rights of any member of a declarant's family other than such children and lineal descendants as are referred to in sections 2 and 4.

SCHEDULE.

FORM OF DECLARATION.

I, A. B., son of C. D., being a Memon and of the age of not less than years, hereby declare that I desire to be governed, to the extent provided by the Memons Act, 1896, by the Muhammadan law as established in the Hanafi School.

Given under my hand this day of , 18 A. B."

Originally of Hindu extraction, the Memons have taken to Islam. They believe themselves to be Mahomedans and are anxious to be governed by the Mahomedan law. But the courts having held in some

Here is an English translation of the above :—

I.

Who is there that will not sing the praises of him who continually enhanced his fame by his disinterested readiness in serving others, who was a receptacle of all kinds of knowledge, who was blessed with high intelligence, who was devoted to Truth, who in forgiveness equalled the Earth herself, who in impartiality resembled the clouds, who in gravity came up to the Ocean, and who was graced with dozens of other virtues?

II.

Thou wert angered with him, O goddess of Fortune, at the thought that, endued with intelligence, he persistently paid his adorations to her that is thy rival in thy lord's love. As the consequence of thy wrath, Misery marked Dr. Rost as her own.

III.

Do not give way to wrath, O goddess with the lotus for thy throne! Thy rival, shining in heavenly splendour, deserves the tribute of adoration from every one of exalted soul. Thine are the gems known as *Sankhu* and the rest. Are they, however, the peers of the treasures that Knowledge bestows?

IV.

Ever disposed to teach the world by books, even this is the foundation of his high fame, *viz.*, that he readily placed his own rich stores at the disposal of struggling merit and instructed mankind more through others than himself.

In view of the prevalence of disease and distress due to absence of rain, the Bengal Government have revived their remarks about the water supply in the resolution on the working of the District Boards during 1894-95, and have urged the Commissioners of Divisions to see that the instructions contained therein are carried out:

"In order, however, to secure that something, however little, should be done every year, it seems to His Honour that every District Board might properly set apart at least the sum of Rs. 5000 a year for the improvement of water-supply to be spent either in the digging or improvement of wells, or in the excavation or restoration of tanks to be reserved for drinking purposes only. The amount suggested is rather more than double the amount actually spent during the past year; but it is very small when compared with the urgency of the want and the extent of the area to be served. The Boards will doubtless find means of making the money go as far as possible by enlisting the aid of voluntary Committees, as is done in Noakhali, or by distributing their allotments in the form of grants-in-aid of village funds, as is suggested by the Commissioner of the Presidency Division."

In the Circular No. 20 L. S. G. dated Calcutta the 2nd of April 1896. from Mr. Risley to all Commissioners of Divisions, fresh suggestions are made to meet the immediate wants :—

"Complaints have reached Government that owing to the unusual dryness of the season, the ordinary sources of water-supply in several districts are becoming exhausted or reduced: that people have to go long distances to fetch drinking water; and that the use of polluted tanks and wells is likely to lead to outbreaks of epidemic disease. I am accordingly to request that the District Boards in your division may be urged to take at once such action as may be possible to relieve the existing distress. What that action should be will depend to a great extent on the nature of the soil and the sources from which the ordinary supply of drinking water is derived. When the soil is loose and sandy, it is believed that use may with advantage be made of Norton's tube-wells, which have been found to work well in several districts of Bengal, and have yielded specially satisfactory results at Snidpur."

Where tanks have dried up, it is suggested that wells be sunk in the beds of the tanks, or where wells are failing, it may be useful to run galleries out from the bottom so as to increase the area of infiltration. For laterite and clay soils where tube-wells cannot be sunk or for places near the sea where the water is brackish, the letter makes no suggestion. It is left to the District Boards "to consider what measures, if any, can be adopted at once with the object of increasing the available water-supply or guarding against its pollution."

The letter concludes with an offer of loan for carrying out the objects indicated :—

"I am also to invite your attention to section 4 of the Land Improvement Loans Act of 1883, and to request that it may be made readily known in all the districts of your division that loans will be readily given under the rules in force to individuals or to bodies of villagers binding themselves jointly and severally under section 9 of the Act for the construction of wells, tanks and other works for the storage, supply, or distribution of water for the use of men and cattle employed in agriculture."

THE tenth Annual Report of the Bengal Branch of the Countess of Dufferin's Fund has been out some time. There can be no doubt that the Lady physician's report places the utility of the Victoria Hospital in a clear light. It brings relief to a very large amount of suffering endured by a peculiarly helpless class. The number of in-patients increased from 304 to 520 in the year under report, that is, more than 70 per cent. There was a fall in the number of out-patients, due, as the Committee explain, to the greater care exercised in restricting the benefits of the hospital to the class for which it was founded. The receipts, in 1895, were Rs. 13,000, of which no more than Rs. 3,171 represent subscriptions from the public. The expenditure was Rs. 14,900, including nearly Rs. 10,000, the cost of maintaining the Victoria Hospital. Other recurring charges are Rs. 1,065 on the Surnomoyi Hospital, where young female Christians receive a sound medical training, and Rs. 1,620, representing grants to branches in the interior, subordinate to the Committee. The excess of expenditure over income was met by appropriating extraordinary receipts which should be added to the invested funds. The Committee think that an accession of about 2 lacs to the invested funds is urgently needed. It is not to the wealthy alone that they have appealed. "Every one who has the welfare of his fellow creatures at heart may fairly be invited to contribute, according to his means, to an organisation which has evinced so great a capacity for promoting it." The Committee rightly observe that in a province like Bengal, there are many residents who can individually defray the entire expenditure of the fund without curtailing a single personal luxury. Unfortunately, it requires some education, of the heart if not of the head, to feel for distress that is not always exposed to the sight. The manner, again, in which some men back out of promises of help deliberately made, is astonishing for effrontery. A titular Raja, having earned from the English press the high compliment of being a second Mæcenas by a promise, not kept, of substantial aid to a literary undertaking, and who, without compunction, has broken similar promises made to others, had, it is no secret, offered a lac of rupees to this very fund. A very hasty and very inconsiderate promotion, however, of the individual to a higher grade in the supposed peerage of the realm, at once absolved him from this and other liabilities he had voluntarily incurred. We think the fact is not unknown to the Lieutenant-Governor. The audacity of the man in question, as also of the clever official who has been backing him since some time, passes belief, for at this moment a scheme is being hatched for wheedling Sir Alexander Mackenzie into a visit to the man's country residence. We hope the Lieutenant-Governor will be able to maintain his dignity.

THE City College wants a building. The managers, headed by Mr. A. M. Bose, have issued a printed appeal. Sir Alexander Mackenzie has very kindly allowed his name to be used in the connection. It is satisfactory to note that Kumar Upendra Chandra Chowdhury, the son of the late Raja Hurrish Chandra Chowdhury of Mymensing, has responded to Mr. Bose's appeal by subscribing Rs. 5,000. Was it not Raja Hurrish Chandra that contributed about half-a-lac of rupees towards the Industrial polytechnique of the Indian League? That handsome donation was followed by Rs. 6,000 in aid of a local hospital and dispensary. The son is endeavouring to imitate the liberality of the father. He has recently been elected a Life Member of the Countess of Dufferin's Fund. An eminent official, who knows something of the country, referring to a donation of the Kumar to a poor struggling Sanskrit scholar, has paid him the graceful compliment of saying "I wish that there were more of your fellow countrymen who thought of something beyond their own silly ambitions."

THE Kumar (who purchased 20 copies of the book) having sent a copy of the Life and Letters of Dr. Sambhu C. Mookerjee to Sir John Budd Phear, the retired Indian Judge, has received the following letter in acknowledgment :—

"My dear Sir,—Pray, accept my very cordial thanks for your kind letter and your very agreeable present of Mr. Skrine's Life of Dr. Sambhu Chunder Mookerjee. My own personal acquaintance with Dr. Sambhu Chunder was slight. I only remember meeting him once or twice at Baranagore. I have, however, seen enough of 'Reis and Rayyet' to recognise the editor's great ability, and his extraordinary command of good nervous English, and I look forward to reading his Life and Letters with pleasure and profit."

I quite agree with you in looking upon the publication of this book

as a valuable effort at narrowing the social gulf between the two races and as expressive of a growing community of interest and sympathy, so difficult to foster. The prejudices and faults of my own countrymen, perhaps, do more to block the way of progress in this respect than any other cause, but the diversity in the social and domestic habits of the two peoples must always, I am afraid, do much to keep them apart. Still I am sanguine that even these barriers, strong as they are, will not always blind the two sides to a generous perception of each other's merits. And I like to think that the cultivated among your countrymen and my own have already come to know and esteem each other much more justly, than was the case 30 years ago, when I first became interested in this momentous question.

With reiteration of my best thanks for your kind letter and thought of me, I am, my dear Sir, yours sincerely,

J. B. PHEAR."

No one is entitled to speak with greater authority on the all-important question of bridging the gulf between the two communities in India than Sir John Budd Phear. In the midst of his harassing official duties as a Judge of the Calcutta High Court, he found time to cultivate the acquaintance and friendship of many natives of Calcutta and the suburbs. As president of the Asiatic Society, the Bethune Society, the Bengal Social Science Association, and other Societies, and as chairman or lecturer or speaker at many meetings temporarily called in this or that connection, Sir John did solid work in this direction. As a Judge, an official, or a citizen, he knew no distinction between Government and the people, between European and native. His hospitable board was free to all comers. By his attentions to the native, as by his independence on the Bench, he incurred the displeasure of his colleagues and superiors. He showed how possible it is for even eminent officials to mix freely with the natives of India, to help them with sympathy and advice, and even co-operate with them in their struggles for improvement in many directions. In his noble work, he was materially and willingly assisted by his good lady who loved the natives as much as he, if not more. If after Sir John's departure from India the work had been taken up by others with even a tenth part of his enthusiasm, the result by this would, without doubt, have been satisfactory. We are enabled by the kindness of a friend to add two more letters—one from Lady Phear and the other from Sir John Phear written in Calcutta in 1876 when they retired from India. To begin with the Lady:—

"My dear Sir,—I thank you very much for the extremely handsome present which you have sent me, and which, if I may venture to say so, is far larger than the occasion needed or than I in any way deserve. The lovely views of Rajputana and Guzrat will often remind me of my wanderings in India although I hardly needed such a souvenir to remind me of friends whom I shall unfortunately leave behind me.

I assure you that both Mr. Phear and myself are most deeply touched at the kindness shewn to us on all sides, and at the warm and earnest-hearted feelings which have found voice amongst the ladies and gentlemen of this country since it has become known to them that we are going away from India. Neither Mr. Phear nor myself can bear to think that we are going away from this country for good and all, but wherever we are our sympathies will always be with our Bengali friends, many of whom I some day hope to welcome to my English home.

I thank you most sincerely for the kind wishes expressed in your letter towards Mr. Phear and myself.

The parting from all our work and interests here causes us many a bitter pang, but the kind wishes of our friends, yourself amongst the number, will help to lessen the sorrow we feel at leaving the country.

If you would write your name in the book which you have so kindly sent me, it will add greatly to its value in my estimation."

Sir John wrote:

"My dear Babu * * *—I hope I need hardly tell you that your letter of yesterday's date is exceedingly agreeable to me. Mrs. Phear and myself cannot be otherwise than most highly gratified at having evoked such kindly feelings towards us as those which you express. It is with great regret that we part from many friends, yourself among the number, whom we have been so fortunate as to make in this country. We trust that for some, at any rate, the parting is only for a time, you, for instance, might very well some day come to England to see us, and we shall look forward to your doing so. We promise to give you a hearty welcome and to do our best to prove to you that time and distance are powerless to make us forget the days of our sojourn in Bengal and the friendships which date there. Accept the regards of Mrs. Phear and myself, and believe me, &c."

THE Garden Party, on April 1, of the Chairman of the Corporation went off well. Mr. Ritchie was attentive to his guests and had a word for every one of them. The attendance was not large, but the lengthened stay of the chief guest, the Lieutenant-Governor, made up the omission, if omission it was in this trying weather. The noticeable features of the outdoor entertainment were the waving of big hand punkahs, which the host with an eye to the comfort of the guests had provided, and the eagerness of some of the Municipal Commissioners and their servants to make the acquaintance of the next

Chairman of the Corporation. At the Party it was decided that the Commissioners would take the Chairman and the Lieutenant-Governor to a cruise on the river on Saturday next.

FOR the present cholera epidemic it has been resolved by the Municipal Commissioners of Calcutta to appoint four medical inspectors, professing two opposite systems of faith. Two of them are of the old and two of the new school. The resolution was carried unanimously. Statistics should be carefully kept of the results achieved under each system.

REIS & RAYYET.

Saturday, April 4, 1896.

CHOLERA AND HOW TO PREVENT IT.

THE cholera epidemic in Calcutta and its suburbs is gradually assuming an intensity that forces a careful inspection of our habits and surroundings. Last year the metropolis suffered from a dreadful epidemic of small-pox. This year it is the visitation of cholera. Perhaps, for the next year, it would be something else productive of equal havoc. With big municipal offices, one especially for an health officer and his assistants, it is a surprise that no instructions are issued, in such distressing times, about our sanitary necessities. The chief of the health department is engaged in editing the "Indian Medical Gazette" and in Haffkinism; his first assistant finds a peaceful security in his clerical business. A medical inspector trained by Dr. Warden in the elements of chemical analysis is now the municipal analyser. There are medical inspectors, besides him, but what sort of inspection they make is known only to themselves. The bustees and the tiled huts, generally the places inhabited by poor men, require particular attention. Though, however, the outbreak of cholera has been pronounced, yet one seldom sees a medical inspector in any of the infected localities. Under the rules, subordinate attendants are to supply information: if the superior officers think fit, they may then inspect. How far the rule is observed will appear from the fact that even in cases of death they do not always make their appearance.

It should at the outset be stated that cholera is a preventible disease. The Hurdwar Kumbh Fair of 1891, proved to certainty that if precautionary measures are taken there is little chance of the epidemic breaking out, even if surrounding localities are infected. The report of the epidemic, in Germany, of 1894, confirms this view. In spite of the prevalence of cholera in eastern and western Russia, army manoeuvres on a large scale were held and no case occurred of the fell disease. Isolation cannot be practised in a large town for the claims of inland and river traffic. Other sanitary precautions should be taken. The opinion which finds favour, at present, is that cholera poison is not imbibed from the air but that it comes

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1895-96.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday the 8th Inst., at 6-30 P.M. Subject: Optical Instruments (continued).—Human Eye.

Lecture by Babu Syamadas Mukerjee, M.A., on Thursday the 9th Inst., at 3 P.M. Subject: Analytical Conics.—Theory of Projection.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAT. SIRCAR, M.D.,

April 4, 1896.

Honorary Secretary.

through food and drink. For this reason it is necessary to take a survey of the vehicle through which it is borne.

The articles which form our diet, are vegetables, fish, flesh, milk and water. Vegetables are generally well boiled or fried and so the mischief does not come from them. Fish and flesh are sources of danger. The tanks in the immediate suburbs of Calcutta, upon which we depend for our supply of fish, are generally distinguished by scarcity of water. For this the fish have to feed on mud and dirty water. Clothes contaminated by cholera poison are, again, washed in them. Most of the tanks are thus vitiated, for most of the places are suffering from this disease. Railway-borne fishes of the *hilsa* and other species are no better, for rivers also are dry. The only safety lies in the consumption of small fishes which can be well-fried or boiled for destroying any poison that might lurk in them. Little *batas*, *chugrees* (prawns) and *kor* fishes may be good. Large fishes, even when dressed in small pieces, are not always safe, for they can hardly be well boiled or fried. The inner portions of even small pieces remain almost untouched by the heat required for their purification. The use of decomposed fish is always dangerous and leads to sad results.

As for flesh, the different varieties supplied by the Municipal market may be better than those of other bazars. The decomposition in flesh, unless advanced, is difficult to detect. It is rather easy to find it out in fish. In vegetables it is the easiest thing to see. Again, in the hot season the wholesomeness of meat depends on the small quantity of fat that it contains. The difficulty of cooking meat is greater than that of cooking fish. For this reason great caution ought to be taken to use it for food when cholera is around us. It is not advisable to use tinned meat or fish, in which there is good chance of decomposition, for having been prepared several months before consumption. Cases are not rare, even in England, of persons suffering from the poisoning effects of preserved meat and fish. The cleanliness of the flesh and the fish, as also of the sellers, is not at all of the required measure. The butchers and their places of business are the most abominable. Only in the Municipal market is some care taken, by repeated washing, to prevent the bad odour issuing from the stalls. The worst nuisance occurs in Machooabazar and some other places.

The sweets sold in the bazar are a good vehicle of infection. The slovenly way in which they are prepared, their exposure to dust, their staleness which is scarcely regarded by purchasers, the rancid *ghee* used in their making are great objections to their use. No attempt is made to preserve them free from contamination. The display which the vendors make of their articles, is objectionable, for by this they come in contact with all kinds of foreign substances. During night time, and especially in the period before and after *dewali*, the consumer does not know how many insects are devoured by him. Surely, some kind of innovation has become necessary for preserving our food from dust and flies, especially when it is known that these are carriers of most objectionable materials, both large and microscopic, including the different kinds of bacilli.

The filtered water we drink in Calcutta is the best at present available. It has defects which can be remedied. The depository tanks want thorough in-

spection at least twice a year before and after the rains. The animal cells, finding there a safe place for breeding, furnish the inhabitants of the town with a good supply of toxins. For this reason, it is safe always to refilter the hydrant water in a Pasteur-Chamberland filter. For those who cannot afford this apparatus, it is easy to prepare a filter of two or three earthen vessels placed one above the other, the water coming through a small hole in the upper vessel containing large and fine sand. Still easier it is to place the water in an earthen jar, and after depositing it for a day, to transfer the upper half gently and gradually to another pot, for use. The remaining half containing the solid residue, should be thrown away and the vessel well cleaned and dried before being refilled.

The use of unfiltered water for culinary purposes should be deprecated. The danger lies in bearing the cholera virus to our food, directly from the Hooghly water. Persons have been seen to be attacked by the disease just after bathing in the river during a cholera epidemic. This kind of water can be used for washing latrines, or for other purposes unconnected with food, or for scouring the vessels we use for preparing our food.

In many cases, tank water is the cause. But in Calcutta, where almost all the private tanks have been or are being filled up, those belonging to the Municipality remain to threaten human life by spreading infection, and no care is taken of them. The Amherst and the College Square tanks are used for washing dirty clothes and vessels. Even bathing is allowed. Of the bathing platforms it may be said that they can spread the same danger. Clothes containing all kinds of infection are washed in the reservoirs. Some modifications in construction and use are necessary to prevent contamination.

Good drinking water is as much needed in towns as in rural areas not provided with water works. At present Bengal is suffering from a water-famine. In Hooghly, Burdwan, Bankura, Birbhum, the scarcity is greatly felt. The tanks are almost all silted up. They are unable to provide any water for drink. In many places, that element so necessary for human life, has to be fetched from distances of two to three miles. Men, as well as animals, are paying heavy penalties for a transgression of sanitary laws in this direction. The silting up of tanks is due to want of local energy and money. The well-to-do generally resort to places provided with comfort, leaving their rural habitations. The rapid transmission has been made possible, by railway communications, to chief towns supplied with most of their necessities. Formerly, when railways were unknown, the wealthy used to attend to the re-excavation of tanks for both themselves and others. Their sympathies at present are more with towns than their rural homes. The good old Hindu feeling of providing water to the needy has almost disappeared. We are in the midst of a period of transition which has unsettled almost all our old ideas without even retaining the good. In this predicament, any wrong movement of the authorities would drive us from a bad to a worse position. The Sanitary Drainage Act is, therefore, productive of effects not at all desirable. The real want is a sufficient supply of good drinking water in almost every place, urban or rural. Cholera and malarious fever, the two great scourges of humanity, can be checked by only an abundance of good water. Even in water-logged places these diseases prevail. Instead of checking them by direct means

a small and distant cause only was sought to be remedied by legislation.. The reclamation of bogs and marshes can yield enough revenue, but it is incompetent to remove the dreaded foe. Water, the chief pabulum of our blood, is wanted. Sir Alexander Mackenzie gave the right hint in opening the Howrah water works. Good tanks are indispensable where bigger schemes are not feasible. They are to be protected from pollution. Re-excavation of tanks is not impossible from the funds of local or district boards. Wealthy men ought to come forward to relieve this water-famine. The protection of tanks can be left in the hands of the authorities, village punchayets or other agencies. At any rate, something ought to be done for the supply of good drinking water. Words are unnecessary to make it more impressive.

The milk supply is another fruitful source of disease. No care is taken for keeping cows in a clean or healthy state. The manger is scarcely washed even once during a day. The hands of the milkmen and the udders of the cows are never bathed before milking. The rail-borne supply has other mischiefs. The milk is often mixed with tank water soiled with cholera discharges or other nuisances. The only means of safety that can be adopted is to boil the milk well by mixing with it a sufficient quantity of hydrant or any other good water.

From the washerman, again, infection is carried to his customers. The precaution which can be adopted is to expose the clothes to the sun before use. In the rainy season, the fire can replace the sun. Heat is the best disinfectant. In the proposed *dhobi-khana* rooms should be constructed to store the clothes for final distribution to the owners, for if they are allowed to be taken to the *dhobi's* house, all possible mischief may arise.

Personal cleanliness should be observed at all times. Those who are in the habit of using silk, coarse or fine, should bear in mind that it requires constant washing as often as do cotton clothes.

In a case of cholera, before calling in a medical man, the first thing to be attended to is to administer four or five drops of tincture camphor, to be repeated after every stool for three or four times. Chlorodyne is a mischievous treatment, for it is a patent medicine and the medical practitioners are not expected to know its composition. In such a dreadful disease nothing should be ignorantly prescribed. Medical authorities in England have pronounced against it. It is said to contain opium and hydrocyanic acid, among others. Opium is objectionable in cholera, for it has the power to suppress urine. The preparation of tincture camphor is very easy. In an ounce of rectified spirit, four pice worth of pure camphor will dissolve within a short time to form the requisite mixture. The vehicle to administer it, is either sugar candy or *batasa* (small sugar cakes) grooved in the middle. The free distribution of this medicine may be recommended, through the police and the post office. Surely, the Local Government ought to rise superior to ancient prejudices and spend something on this head, for it is a tried remedy.

Cholera stools should be so disposed off as not to lead to any contamination. In Calcutta they are to be thrown into the house drainage pits which should be flushed immediately. The clothes and bedding of a patient should not be used again before washing and drying them well. Much importance should not be set on the suggestion of burning them. In places where there are no under-ground sewers, all

ejected matter should be thrown at a safe distance. Near a well, cholera washings are positively injurious, for percolation may carry them to the water. Even into rivers the dejecta should not be thrown for possible infection to the bathers. As for disinfecting rooms, the burning of sulphur is disagreeable to the patient. Hot lime rubbed on the floor is the best deodoriser. Pits and other places outside the rooms, can be disinfected with phenyle or carbolic powders. The sick room must be well ventilated and no crowd admitted. Any strong smell may produce difficulty of respiration. In cases of collapse hot water bottles to the extremities are necessary. No water ought to be allowed for drink and no food given at the onset of the disease. The room ought to be free from other clothing than what is necessary for the sick. Talking or any kind of unnecessary noise should be avoided. It has been seen frequently that the relatives of patients ask the opinion of the medical attendant in the patient's hearing. Such practice should not be allowed. It would not be judicious either for the doctor or for the relatives of the sick to talk on the subject of his illness before him. Any opinion about the gravity of the case should be expressed outside the room and to the persons nearly related to the patient.

Letters to the Editor.

LITERATURE OF BENGAL. IV.

BIDYAPATI.

DEAR SIR---I shall now try to solve the problems connected with the birth-date, birth-place, and parentage of the Poet, Bidyapati, who is commonly regarded as the Chaucer of Bengal, though some take him for a Bihar man and, therefore, as having little to do with Bengali or Bengal. At one time the problems seemed insoluble for their difficulty. But after a prolonged enquiry, attended with much trouble, I have got a copy of the worm-eaten *Panji*, which contains a few incidents of the life of the Poet. This book, according to Mr. R. C. Dutt, is an authentic history of Behar and began to be written in 1248 Saka, i. e., 1325, A. D. But "Echo from the hermitage of Adwyaita Acharjya" says, in *Reis and Rayyet* of the year 1888, "they (the Maithils) have a very big book, nearly 560 years old, entitled the *Panji*, containing the pedigree of the kings and Brahmins of Mithila." My object in reproducing these is to give every argument a hearing. The following Sanskrit verse appears in the very first page of the *Panji*, from which one will be able to calculate the exact date from which the *Panji* began to be written :--

"Shakay Sri Hari Singha Deva nripati bhuparkyatulayah jani,
Tashmadyantamitayahabdakay dijanai *Panji* probandha krita"
From the above shloka, it is clear that the *Panji* began to be written in 1248 Saka, (1326 A.D.) during the reign of Raja Hari Sing.

I shall at the outset refer to the materials that are regarded as relevant to the enquiry as also to the opinions that are current.

(1) In the year 293 of the era of Lakshman Sen, Raja Siva Sing gave the village of Bispi to Bidyapati Thakur, which is still possessed by Banamali Thakur and Badarinath Thakur, the present descendants of the Poet. (*Vide Panji* and Tarkaratna's edition of Bidyapati, page 2.)

(2) The descendants of Bidyapati have preserved a manuscript copy of the *Srimat-Bhagavata*, written by him on palm leaves in 342 L. era (1379 Saka or 1457, A. D. *vide Panji*.)

(3) Bidyapati's *Durgabhatrarangini*, (composed by order of Rupanarayan, the son and heir of Raja Bhairava Sing) was written during the reign of Raja Bhairava Sing, which commenced in 402 L. era, (1432 Saka or 1570, A. D. *vide Panji*.)

(4) Raja Siva Sing ascended the throne of Mithila in 339 L. era, corresponding with 1369 Saka or 1447 A. D. (*Vide Literature of Bengal*, p. 27, and *Panji*) and died in 343 L. era, 1373 Saka or 1451, A. D. *vide Panji*, (Tarkaratna's edition, p. 3.)

(5) Some hold that he first saw the light in Bhursoot in Jessore in Saka 1355 and died at Navadwip in Saka 1403, and that his name was Basanta Roy, Bidyapati being only a title, conferred upon him by Raja Siva Sing in recognition of his merits.

(6) In page 43 (footnote) of *Khitisbabanshabali charita*, it is said that Bidyapati was a native of Chatna in the district of Bankura.

(7) A paper in the August number of the *Bengal Magazine*

for 1874 says that Chandidas is known to have been a native of Birbhum, and Bidyapati must have lived in some neighbouring district; secondly, a teacher of the Vishnupur school has, after much local enquiry, learnt that Bidyapati was a native of Chatna in the district of Bankura and was a courtier of a petty Raja there named Siva Sing; that Bidyapati was a Brahman by caste has sometimes been disputed, but admits of no doubt. He used to be called Bidyapati Bhattayacharya.

(8) In *Reis and Rayyet* of August 18 of 1888, Babu Jogesh Chandra Mookerjee writes:—"I find in a journal that he was born at Sitahati in 1315 Saka and died at Cutwa in 1403 Saka."

(9) The Bengali hebdomadal *Somaprakasha* of the *Pous* 10, 1929 Samvat (1872, A. D.) says that Bidyapati, who was the son of Bhabanunda Roy, a Brahman by caste, was born in 1355 Saka and died at Navadwip in 1403 Saka at the age of 48. His real name was Basanta Roy, Bidyapati being his title. His work goes by the name of *Basanta Kumar Kavya*.

(10) The late lamented Raj Kristo Mookerjee wrote an article on Bidyapati in the *Jaisa* number of *Banga Darshan* of 1282 B.E. It was afterwards collected in his *Nana Prabandha*. He says, "Bidyapati was a native of Mithila and was a Brahman of that place. He was a courtier of Raja Siva Sing who ascended the throne in 1368 (*sic*) Saka. Therefore Bidyapati saw the light about the year 1340 Saka, that is, 50 or 60 years before the advent of Chaitanya. Raja Siva Sing gave him the village of Bispi, which is situated near the present railway station of Barh on the E. I. Railway in Behar. The descendants of the Poet are still living in that village. Other accounts of the Poet will be found in the Sanskrit work the *Panji*." (*Vide Nyayaratna's Discourse on the Bengalee Language*, p. 21).

I think there are no other opinions current. It should be stated that the late Raj Kristo Mookerjee was the first scholar who gave to his countrymen a connected account, however meagre, of Bidyapati. In ascertaining the birth-date of the Poet, the English or the Hindu Era should be settled first from which the era of Lakshman Sen began to be reckoned. The whole question hinges upon it. On this the following data are available.

(1) In page 94 of *Gouray Brahman*, the author Babu Mohim Chandra Majumdar, says,—"The present Saka era, 1797, is equal to 767 of the present Lakshman era; therefore, the era of Lakshman Sen must have commenced in 1030 of the Saka era."

(2) Pandit Panchanan Tarkaratna, in his edition of Bidyapati, says,—"the Lakshman era commenced in 1030 Saka."

(3) In page 27 of *Nana Prabandha*, the late Raj Kristo Mookerjee writes,—"At present (at the month of *Jaisa* of the B. S. 1282) the year 767 of the Lakshman Era is extant in Mithila. Its corresponding Saka era and English year are 1797 and 1874 respectively. Therefore the Lakshman era commenced in 1030 Saka or 1107 A. D."

(4) The last, though not least, is the opinion of Dr. Rajendralala Mitra, who writes, in page 256 of his *Indu-Aryans*, Vol. II., "And lastly we have the fact that the era (of Lakshman Sen) is still current (in Tirhoot), and in the present year (1878, A. D.) reckons 771. The Pandits of Tirhoot reckon the era to be a luni-solar month of Magha, and it must have, therefore, commenced in January 1106, A. D."

Another archaeologist treads on the same path. Pandit Hara Prasad Shastri says, in page 45 of his *School History of India*, "There is an era current in Mithila which goes by the name of his (Ballal's) son Lakshman Sen, and which commenced from 1119, A. D. (lines 4-7)."

As regards (1) and (2), I have nothing to say. The calculations are justifiable. The Lakshman era commenced in 1030 Saka. Regarding (3), (4) and (5), I have to say a good deal. Raj Kristo Mookerjee fixes 1107, A.D. as the current English year from which the Lakshman era commenced, by deducting 767 from 1874. But the Doctor Mitra not only deducts 771 from 1878, but to show his erudition, originality, and profound antiquarianism, and to impress the reader with the idea that he was a most accurate archaeologist lessens the number 1107 by one more. Raja Rajendralala Mitra was a very superficial scholar. His want of acquaintance with Sanskrit, at first hand, was a stumbling-block in his way. He made the calculation most perfunctorily. Instead of adding 1 to 1107, he deducted it from that number, and thus arrived at an incorrect result. I shall show the error by an example. Suppose an era has commenced in January 1890. Therefore, in 1890, its age would be represented by 1, in 1891, by 2, in 1892, by 3, in 1893, by 4, in 1894, by 5, and so on. Now if we deduct 5 from 1894, we get 1889 as the commencing year of the era, which is manifestly incorrect. It may thus be seen that one will have to add one after deducting 5 from 1895 for arriving at the correct result. Again, to calculate the corresponding English year of a Bengalee era is not so easy. The months should be taken into account. The corresponding English year of the Saka 1030 may be 1108 or 1109, if months be taken into account. The year 1108 ends in the month of *Pous* of the year 1030 Saka and the 1109 commences in the same year. But here as we have to deal with years and not months, we

may fix rightly the year 1108 A. D. as the correct year from which the Lakshman era commenced. This calculation is corroborated by the fact that if we deduct the number 78 from 1108, we get the Saka era 1030 from which the Lakshman era ran. Pandit Hara Prasad's calculation is incorrect and should, therefore, be rejected.

A few words on the former opinions: In 293 L. era, (1323 Saka and 1401 A.D.), the Poet got Bispi from Siva Sing. The bard must have made his mark when the royal favour was shown to him, and one will be justified in presuming that he was at least 20 or 25 years old at the time, that is, he was born between Sakas 1398 and 1203. The year 1303 may, therefore, be taken as the probable birth-date of Bidyapati. I have said that Bidyapati's *Durgabbakti Tarangini* was written during the reign of Raja Bhairava Sing which commenced in 1432 Saka or 1510 A.D. The Poet must have lived at the time. Now if we fix the year 1438 Saka (1516 A.D.) as the probable date of death of Bidyapati, our supposition will not be incredible or erroneous. The *Panji* does not contain the exact dates of birth and death of the Poet. Bidyapati, therefore, was a centenarian.

As regards the Poet's birth-place, there is much confusion. Pandit Panchanan Tarkaratna published an epigram in his edition of Bidyapati, which is as follows:--

Janama data mor Ganapati Thakur,
Mithili deshakarū bhasha,
Pancha-Gouradhipa Siva Singha bhupa,
Kripakari layinijapisha.
Bisafi gram, dankarala muja,
Rahata hi layinija pasha.
Lachima-charana dhyanaṇ kavita nikasai,
Kabi Bidyapati vana.

The above passage cannot be found in any edition of the collected works of the Poet. It is found in the carefully preserved manuscript, written by the forefathers of Srijuta Haradhan Dutta Bhaktanidhi of Badangunje in the Hugli-Jahanabada district. The passage, quoted above, and written by Bidyapati himself, disposes off the numerous opinions about the birth-place of the poet. From it, it is evident that Bidyapati was a native of Behar. In the *Panji*, we find the following genealogy:--

1 Bishnu Sarma 2 Haraditya 3 Dharmaditya 4 Debaditya 5 Dharishwar 6 Joy Datta 7 Ganapati 8 Bidyapati 9 Harapati 10 Ratidhar 11 Raghunath 12 Bishwanath 13 Pitambara 14 Narayana 15 Dinamani 16 Tula 17 Eknatha 18 Bhayia 19 Nanilala and Phanilala 20 Banamali, son of Nanilala, and Badarinath, son of Phanilala. These two are the present living descendants.

Here is the genealogy of the kings of Mithila, in the *Panji*:--

1. Rameshwar Thakur (1301-1321)
2. Vogeshwar Thakur (1321-1325)
3. Hari Thakur (Hari Sing) (1325-1349)
4. Vobeshwar Thakur (Bhaba Sing) (1349-1387)
5. Deva Sing (1387-1447)
6. Siva Sing (*alias* Rupanarayan) (1447-1451)
7. Nara Sing (1474-1475) (married Rani Dhirmati, the daughter of Raj Pandit Rameshwar.)
8. Dhira Sing (1475-1510)
9. Bhairava Sing (1510-1524)
10. Rupanarayan (Rambhadra).

The twenty-three years' interval between the reigns of Siva Sing and Nara Sing was the reigns of Queens Padmabati and Luckhi Devi, the widows of Raja Siva Sing, and Biswas Devi, the widow of Padma Sing, brother of Siva Sing. Nara Sing was the son of Hara Sing, the brother of Deva Sing, the father of Siva Sing.

Mr. R. C. Dutt states a few facts regarding Bidyapati accurately in page 27 of his *Literature of Bengal*. The corresponding English year of 293 L. era is 1401 A.D., and can not be 1400, as Mr. Dutt makes it. The corresponding English year of Saka 1369 should be 1447 and not 1446, as has been shown above. Mr. Dutt says,—"we further learn from *Panji* that Siva Sing had three wives, Padmavati, Lakhima Devi and Biswa Devi, who after the death of their husband, successively reigned for 18 months, 9 years, and 12 years." But a different version appears in the *Panji*. The name of the last queen is Biswas Devi and not Biswa Devi. Biswas Devi was the wife of Padma Sing, brother of Raja Siva Sing and not the wife of Raja Siva Sing. After the death of Luckima Devi whose reign lasted from 1453 to 1462, Biswas Devi, then a widow, reigned from 1462 to 1474. Nara Sing next ascended the throne of Mithila. Siva Sing died childless, and the kingdom was governed by his two wives Padmavati and Lakhima successively from 1451-1453 and from 1453-1462. After him came the widow of Padma Sing who died without any issue. She was succeeded by Nara Sing, the surviving heir of the family.

It would seem that Bidyapati played the part of a modern poet laureate in the courts of Rajas Deva Sing, Siva Sing, Nara Sing, Dhira Sing and Bhairava Sing of Mithila, successively. His father, Ganapati was also a worshipper of the Muses. Bidyapati's contemporary was Chandidas. Chandidas cannot be regarded as an imitator of Bidyapati as Mr. Dutt says. No doubt, Chandidas wrote on the same subject and painted the same

picture, but contemporary poets seldom steal from each other. Besides one of the two lived in Behar, while the other lived in Bengal at a very great distance. Printing was unknown. Those inventions which have facilitated communication, were also unknown. The two poets wished to meet once and they met after many difficulties. The works of the one could not be known to the other readily. It was no case of Browning reading a copy of Tennyson's work, having got it as a present from his brother poet or purchased it of his publishers; or Tennyson reading Browning's work having got it by the same means. However popular Bidyapati might be, it took many years before copies could be multiplied of his songs. Under the circumstances, the remark that Chandidas imitated or plagiarised Bidyapati, would be as true as to say that Shakespeare imitated Marlowe and vice versa. It is a baseless assertion.

Babu Trailokya Nath Bhattacharya has brought out an excellent biography of Bidyapati. While endorsing every point of the pamphlet, I think it is my duty to point out errors which he has committed. In calculating the corresponding English and Hindu years from which the era of Lakshman Sen began to be reckoned, he takes the copper-plate (mentioned in his book) as the basis of his calculation. The last line of the plate cannot be the same as that which appears in Bhattacharya's book. The gentleman who first found the plate had not succeeded in interpreting the line correctly. Mr. Bhattacharya should know that the last letter of the Bengalee era must coincide with the last letter of the Samvat era. This is a trick from which the dates can be calculated correctly. I will show the correct form of the plate from the following list:---

Samvat. E.	Saka. E.	B.E.	L.E.
1952	1817	1302	787 present year.
1832	1797	1282	767
1558	1523	808	293
1165	1030	515	beginning of L.era.

From the above it is evident that the last line of the plate can not be other than "San 808, 1323 Saka, 1458 Samvat." This exactly tallies with the version of my Behari friend who has so generously sent me a copy of the *Panji*. The last line of Mr. Bhattacharya's plate is the following:---"San 807, Samvat 1455, Saka 1321." I think there are no commas in the original plate. Again, the last letter of the Samvat is markedly different from the last letter of the Bengalee era. That the discoverer of the plate had not succeeded in reading the line correctly admits of no doubt. There is another way of proving the proposition. If the years in the last line of the plate be correct, its difference from the current years must be equal, which is impossible from the following:---

Samvat E.	Saka E.	B. E.	
1952	1817	1302	the present year.
1455	1321	807	
497	496	495	

I earnestly request Mr. Bhattacharya to think of the matter more seriously. His method of calculation, which appears in the page 14 of his book, is ridiculous. Then again while admitting that the reign of the three Queens occupied 23 years, Mr. Bhattacharya fixes 1450 as the commencing year and 1470 as the ending year of their reigns. Where are the additional three years?

The following is the list of Sanskrit works, composed by our Poet:

- (1) *Purusba Pariksha*
(composed by order of Raja Siva Sing.)
- (2) *Sbaiba Serbaishya Sara*
(composed by order of Rani Biswas Devi.)
- (3) *Bivaga Sara*
(composed by order of Raja Nara Sing alias Darpya Narain.)
- (4) *Ganga Bakyabali*
- (5) *Dana Bakyabali*
- (6) *Durgabbakti Tarangini*
(composed by order of Rupararayan, the son of Bairava Sing.)

FREDERIC PINCOTT.

Sir,---The obituary notice of poor Frederic Pincott, from the pen of Dr. Fitzedward Hall, in *Reis and Rayyet* of the 21st of March, is, indeed, a simple act of justice to the memory of a good man and sound Orientalist. It is very kind of Dr. Hall to write such a notice and equally kind of you to publish it. Mr. Pincott was, as is truly observed by Dr. Hall, an indefatigable worker. His is another bright example of the pursuit of knowledge under difficulties. His interest in India was not confined to her languages or literature. He truly felt for the Indian people and did his best for improving their material condition. For about the last 4 years, Mr. Pincott was engaged in publishing a monthly trade journal, entitled "Mirror of British Merchandise and Hindustani Pictorial News," in Hindi, Urdu, Bengali, Tamil and English, for inviting the attention of the people of India to the value of many

Indian products required for European and American consumption. The journal is a unique one. Printed on excellent toned paper, the short articles teemed with solid information. Miscellaneous topics of interest were sometimes discussed. I have a copy before me of number 23, Vol. I, for October 1892. Besides very interesting advertisements, the subjects treated of are 1. Manchester cotton goods, 2. A new departure in mercantile policy, 3. The Penrhyn Slate quarry, 4. Mountain climbing, 5. Cholera germs, 5. The Punjab Trade Association, 6. The Industrial Association of Western India, 7. The Shariff of Wazan, 8. Oriental Congress, 9. Our frontispiece, 10. Gold in India, 11. The Crystal Palace, 12. Poverty in the midst of Plenty, 13. Locomotive Engines in the World, 14. Diffusing coal vapours in rooms, 15. Catalogue of bulbs, 16. The Jaffa and Jerusalem railway, 17. Morocco, 18. African trade, 19. Uganda, 20. Cutlery, 21. Fruit Trade, and many others. Few Indian journals noticed it or the good it was silently doing. Now that Mr. Pincott is dead, I do not know whether it will be continued.

Mr. Pincott took an active interest in the English translation of the Mahabharata published by Babu Pratapa Chandra Roy. Almost every month he used to write to Babu P. C. Roy, and since the latter's death, to me, enquiring about various particulars connected with India. On learning how the widow of Babu P. C. Roy felt a difficulty in issuing the 3 fasciculi of the English translation of the Mahabharata that would complete that publication, Mr. Pincott drew Professor Max Müller's attention to it. The latter thereupon wrote to various persons, requesting them to do what they could for removing that difficulty.

The project Mr. Pincott had formed of reha cultivation was a grand one. It will interest his friends to know that the arrangements he made were completed before his death, so that the money he has sunk, upwards of a lakh and a half of Rupees, is safe. It will yield to his heirs a proper return. The object he had in view was, as explained by Dr. Hall, to earn a sufficiency, so that he might be able to pass the remainder of his days in lettered ease in England, as also to teach the people of India a new industry. The poet has said that "the best laid schemes o' men and mice aft gang agley;" but the schemes themselves prove the men. There was a practical bent in Mr. Pincott's genius which deserves the highest commendation. Most of his publications proved eminently successful, as noticed by his friend in *Reis and Rayyet*. If he had lived a few more years to prosecute his studies in Sanskrit, he would undoubtedly have left his mark on the history of Oriental scholarship.

Mr. Pincott's energy was remarkable. When he came to India, he was about 60 years of age. He was of strong physique, and the hue of health in his face would strike even a casual observer. His features were certainly handsome, and his voice was strong and deep. His powers of conversation were great. It was a pleasure to talk with him. No man could pass ten minutes with him without catching a portion of his energy. While talking to me of his project of reha cultivation, he said that it was certain to succeed, and that in a few years he would be better known in India than any European had been, and that reha would be as popular as jute or cotton.

A labour of love, on which Mr. Pincott was engaged, was a complete Index to the English translation of the Mahabharata. The suspension of this valuable work will be viewed, no doubt, as a calamity to the cause of Oriental learning.

AGHORE NATH BANERJEE,
Manager, *Dattatraya Bharata Karyalaya*.

THE NEEM TREE.

Sir,---I have read with great pleasure your almost exhaustive note on the *Neem* tree, in your number of March 21. The fact is not generally known that the flowers of the *Neem* yield a peculiarly agreeable perfume, and that the breeze that blows through the twigs and leaves of the *Neem* becomes so purified as to improve the health of the house whose inmates breathe it constantly. The Hindu physicians value the *Neem* so greatly as to ascribe especial virtues to that specimen of *Guduchi* or *Gulancha* (*Tinospora cordifolia*, syn. *Menispermum coratfolium*), which twines round the branches, or spreads itself upon the top, of the *Neem*.

The *Gulancha* is an effective febrifuge. That which grows on the *Neem* is still more so.

I am not sure that you are correct in your identification of

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Vishalakshi. The word, as you explain, means "the large-eyed one." But *who* is she? In certain portions of the Hooghly District, the inferior Brahmans in charge of the idols called *Vishalakshi* placed upon masonry platforms by the foot of the Neem, regard the goddess as a form of Durga. The *mantras* recited in course of worship would seem to support this view. There is a celebrated image of *Vishalakshi* near Ghattal. The goddess stands on a lion and is worshipped during the days that Durga is worshipped.

Will any of your readers throw further light upon the subject?
BHARGAVA.

CUSTOMS DINNER.

MR. SKRINE ON AN UNPOPULAR SERVICE.

• Mr. Francis H. Skrine, the retiring Collector of Customs, entertained the superior staff of his establishment at dinner last night at M. Bansard's Hotel de Paris, Dhurrumtollah. The table was decorated with flowers kindly furnished by Mr. A. Burrup, and by Babus Hem Chunder Mukherji, Alokimohan Raha, and Gokul Chunder Goswami of the Statistical Department, which gave nearly as much pleasure as the more substantial adjuncts of the feast. The guests comprised Messrs. H. Dawson, Superintendent of the Preventive Service; Messrs. R. Amos, A. P. and C. C. Bonnaud, H. Bradbury, A. Burrup, C. A. Tweeddale, R. Mendietta, H. Erskine Girard, J. Watson, Boughton Chambers, Wolferstan, S. S. Cooper, F. W. Newton, H. R. Clark, G. G. Vanspall, A. Matthieson, P. Moore, Etheridge, McKennah, Smart, MacMillan, Miller, and Captain Maffin.

Mr. Skrine, in rising to propose the toast "Success to the Administration of the Customs Department," said: My toast is one to which all my guests will join in doing honour, for it implies success to our noble selves. Each of us is a wheel in a huge machine, and it is within our power to throw it out of gear or to increase the efficiency of its working. I have called you together in order to promote the latter desideratum. A dinner is my excuse because we Englishmen have long since made up our minds that nothing good or durable can be effected without a preliminary banquet, and in view of the benefits flowing from friendly intercourse out of office hours, I trust that this may be the first of a series of annual meetings of the kind. It may be deemed presumptuous in one who, ten months ago, did not know the difference between a manifest and a bill of entry to expatiate on the principles which should govern the administration of our great office. But we all know that onlookers often see more of a game than the players. A fresh mind, and one free from prejudices, may be brought to bear on entirely new functions with great advantage to the State. It is on this principle, to compare great things with small, that our Board of Admiralty at home is constituted. It includes a "Civil Lord" who in the course of official cruises of inspection is apt to admit ruefully that, though a Briton is popularly supposed to rule the waves, he cannot always resist their effect on his own stomach.

Well, gentlemen, the first thing that has struck me is the invincible nature of our duties. However tactfully they may be performed, they can never be anything but a clog on the wheels of commerce. Hence, if we do our duty we can never really be popular. I read with some uneasiness a reference to my humble self the other day as "our popular Collector," and began to fear lest I had been, after all, too easy-going. But an antidote was at hand in a column and a half of elephantine satire in another paper. Yes, gentlemen, even a Native print, couched in what its conductors fondly suppose is English, has its uses. Like the skeleton at Trimalcion's splendid banquet, it reminds us that we are mortals. The odium attaching to our office is as old as civilisation. In the New Testament "publicans," meaning Customs authorities, are bracketed with sinners. All classes seem to regard an evasion of our dues as a proof of smartness rather than of moral obliquity. There is, probably, no one present who can lay his hand on his heart and say that he has never smuggled. I certainly cannot do so. Having a hostile public to reckon with we must "gang warily" if we would not "make the band play," as official slang has it. I have always felt it a great help in guiding my steps aright to imagine myself labelled with a ticket conspicuously inscribed "public servant." An officer of the Customs House is the servant of every taxpayer and owes him the same courtesy and consideration as he owes to his own superiors. This is an unimpeachable view of our relations with the trading classes; but how often is it ignored! "Jacks in office" are rarer in this country, in spite of the organized calumny of the Native press, than elsewhere—the United States and the continent of Europe for instance. But we should all of us be the better for keeping this golden rule in mind. It may be acted on without the sacrifice of an iota of self-respect or of the just claims of Government.

Our own position, however, is not the only factor in the problem. That of the public with whom we deal must also be kept in mind. Now, the merchants of Calcutta are second to no body

of men in culture, hospitality, and public spirit; and yet they work under most trying conditions. The climate of Calcutta unduly stimulates while it exhausts the vital functions. The great development of communications has led to "cutting" and to competition, often grossly unfair on the part of foreign rivals, for whose benefit rather than our own we appear to have accepted the burden of empire. Make allowance for the "black care" which sits behind the Anglo-Indian merchant, and remember that he is in the same plight as ourselves, who have certainly not come to India for change of air.

How far my own efforts have conduced to the greasing of the wheels of trade I leave you to determine. Strenuous efforts have been made to check the importation of fraudulent goods, and the wholesale counterfeiting of British marks. Many needless formalities have been swept away. A classification list has been issued enabling importers to discern, almost at a glance, the duty payable on any given article. A scheme involving great labour for reorganizing the establishments has been submitted to Government. Our Provident Funds have been placed on a new basis. But much remains to do ere the Custom House can be considered to be in line with modern requirements. We are living in a period of transition when "white wings" are finally giving up the struggle with steam, and we must relax no effort in order to lessen the detention of vessels in port. What has been done is due largely to the advice and co-operation of you, my colleagues. In bidding you farewell, I may say with perfect truth that I look back with pleasure on our intercourse, and that I cherish the warmest wishes for the future success and happiness of you all.—The *Englisbman*, March 31.

HOW DID THE THIEF GET IN?

YOU wake up some morning and miss your watch, your purse, your best clothes and other valuables. Yet neither you nor any member of your family heard a sound during the night. Neither is there a sign of how the thief got into the house nor by what road he decamped. You rush round and tell the police, and also decide to keep a dog and a shot gun. You will let thieves know they mustn't come fooling around your premises after this. A sensible procedure. Meanwhile your watch, your money, &c., are gone. Quite so.

Now suppose I should tell you that the thief who stole your property never entered your house at all; that he was born in it: had lived twenty years in it; never had been out of it till he went off with your things, albeit not a soul of you had ever seen or heard of him. What would you say to me? You would call me an idiot and threaten to have me sent back to the asylum. But don't be too sure. "Later on," says Mr. Heakin, "rheumatism struck into my system and I had pains all over me. I was confined to my bed for three months with it and could not dress myself. In this general condition I continued for five years. One after another I was treated by *fourteen* doctors in that time, but their medicines did me little or no good. At one time I went to the Infirmary at Shrewsbury, where they treated me for heart disease; but I got worse and feeling anxious, returned home."

How he was finally cured we will mention in a minute. First, however, about his rheumatism. Every intelligent person knows that rheumatism and gout (its twin brother) is virtually a universal ailment. It does its cruel and body-racking work in every country and climate. No other malady causes so vast an aggregate of suffering and disability. Whatever will cure it is worth more money in England than a gold mine in every country.

But does rheumatism "strike into" the system as a bullet or a knife might strike into it? No Rheumatism is a thief who steals away our comfort and strength; but it a thief, as I said, who *is born in the premises*. In other words, it is one—and only one—of the direct consequences of indigestion and dyspepsia. And this is the why and wherefore: Indigestion creates a poison called uric acid; this acid combines with the chloride of sodium to form a salt; this salt is urate of sodium, which is deposited in the form of *sharp crystals* in the muscles and joints. Then comes inflammation and agony, otherwise rheumatism. Thus you perceive that it doesn't come from the outside but from the inside—from the stomach. Our friend's cold, caught in the mine, didn't produce his rheumatism, it clogged his skin and so kept all the poison in his body instead of letting part of it out.

Here is our very good friend Mr. Richard Heakin, of Penrith, Silop, who expresses an opinion in this line. Let us have his exact words. He says: "*Rheumatism struck into my system.*" Of course we understand that he speaks after the manner of men. You know we talk of being "attacked" by this, and the other complaint, as though diseases were like soldiers or wild beasts. "Doesn't make any odds," do you say? Beg pardon, but it does—heavy odds. *For it teaches us to look in the wrong direction for danger. Do you see now?*

Thirteen years ago, in the spring of 1880, whilst working in the Roman Gravel Lead Mines, Mr. Heakin took a bad cold. He got over the cold, but not over what followed it. He was feeble, without appetite, and had a deal of pain in the chest and sides. His eyes and skin were tinted yellow, and his hands and feet were cold and clammy. Frequently he would break out into a cold perspiration, as a man does on receiving a nervous shock caused by something fearful or horrible. He was also troubled with pain at the heart and had spells of difficult breathing—what medical men call asthma.

Mr. Heakin adds: "I was cured at last by Mother Seigel's Curative Syrup, and without it I believed I should have been dead long ago."

Very likely, very likely; for this thief, although he may wait long for his opportunity, isn't always satisfied to run away with our comfort and our money: he often takes life too.

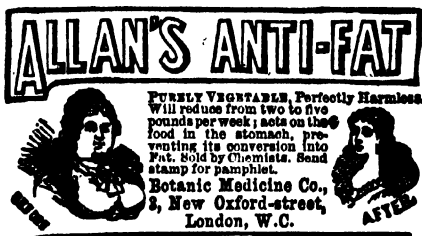

INDIA GENERAL STEAM NAVIGATION Co., Ltd.

IMPORTANT NOTICE.

The undersigned beg to give notice that they are prepared to insure at very favourable rates, upon F. P. A. terms only, all and any goods (with the exception of Tea) shipped by steamer and flats to or from any station on their Inland Services.

For further particulars apply to—
KILBURN & Co.,
Managing Agents.

CALCUTTA :
4, FAIRLIE PLACE,
The 12th March 1896.

ALLAN'S ANTI-FAT
PURELY VEGETABLE, Perfectly Harmless.
Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into fat. Sold by Chemists. Send stamp for pamphlet.
Botanic Medicine Co.,
2, New Oxford-street,
London, W.C.

CAUTION!

It having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (*viz.*, 4 annas, 8 annas or 9½d, 12 annas or 1s. 1½d. and Rs. 2 or 2s. 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes the prices have been obliterated and the boxes represented to be of higher value than they really are.

Sole Wholesale Agents for India, Burma and Ceylon.

G. ATHERTON & CO.,
3, NEW CHINA BAZAAR STREET.
CALCUTTA.

NOTICE.—Should any difficulty be experienced in obtaining supplies the Agents will be happy to forward sample boxes at above Rupee rates plus *P. P. Charges and Postages.*

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corst, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmans—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness. —*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality. —*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." Dr. H. Moore of Royal Artillery from Poonamallee says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdim says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Re. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Saunkutia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless real solid gold watch Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

36, Lower Chitpore Road, Fouzdari
Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

CALCUTTA, SATURDAY, APRIL 11, 1896.

WHOLE NO. 720.

CONTEMPORARY POETRY.

RECOLLECTIONS.

I.

AH! Summer time, sweet Summer scene,
When all the golden days,
Linked hand in hand, like moon-lit fays,
Danced o'er the deepening green.

When, from the top of Pelier down,
We saw the sun descend,
With smiles that blessings seemed to send
To our dear native town.

And when we saw him rise again
High o'er the hills at morn—
God's glorious prophet daily born
To preach goodwill to men—

Goodwill and peace to all between
The gates of night and day—
Join with me, love, and with me say
Sweet Summer time and scene.

II.

Sweet Summer time, true age of gold,
When hand in hand we went
Slow by the quickening shrubs, intent
To see the buds unfold.

To trace new wild flowers in the grass,
New blossoms on the bough,
And see the water-lilies now
Rise o'er their liquid glass.

When from the fond and folding gale
The scented briar I pulled,
Or for thy kindred bosom culled
The lily of the vale.

Thou without whom were dark the green,
The golden turned to gray.
Join with me, love, and with me say
Sweet Summer time and scene.

III.

Sweet Summer time, delight's brief reign,
Thou hast one memory still,
Dearer than ever tree or hill
Yet stretched along life's plain,

Stranger than all the wond'rous whole,
Flowers, fields, and sunset skies—
To see within our infant's eyes
The awakening of the soul.

To see their dear bright depths first stirred
By the far breath of thought,
To feel our trembling hearts o'erfraught
With rapture when we heard

Her first clear laugh, which might have been
A cherub's laugh at play—
Ah! love, thou *canst* but join and say
Sweet Summer time and scene.

IV.

Sweet Summer time, sweet Summer days,
One day I must recall;
One day, the brightest of them all,
Must mark with special praise.

'Twas when at length in genial showers
The spring attained its close;
And June with many a myriad rose
Incarnadined the bowers.

Led by the bright and sun-warm air,
We left our indoor nooks;
Thou with my papers and my books,
And I thy garden chair;

Crossed the broad, level garden walks,
With countless roses lined;
And where the apple still inclined
Its blossoms o'er the box,

Near to the lilacs round the pond,
In its stone ring hard by,
We took our seats, where, save the sky,
And the few forest trees beyond

The garden wall, we nothing saw,
But flowers and blossoms, and we heard
Nought but the whirring of some bird
Or the rooks' distant, clamorous caw.

And in the shade we saw the face
Of our dear Mary sleeping near,
And thou wert by to smile and hear,
And speak with innate truth and grace.

There through the pleasant noontide hours
My task of echoed song I sung;
Turning the golden southern tongue
Into the iron ore of ours!

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

'Twas the great Spanish master's pride,
The story of the hero proved ;
'T was how the Moorish princess loved,
And how the firm Fernando died.

O, happiest season ever seen,
O, day, indeed the happiest day ;
Join with me, love, and with me say
Sweet Summer time and scene.

v.

One picture more before I close
Fond Memory's fast dissolving views ;
One picture more before I lose
The radiant outlines as they rose.

'Tis evening, and we leave the porch,
And for the hundredth time admire
The Rhododendron's cones of fire
Rise round the tree, like torch o'er torch.

And for the hundredth time point out
Each favourite blossom and perfume—
If the white lilac still doth bloom,
Or the pink hawthorn fadeth out ;

And by the laurel'd wall, and o'er
The fields of young green corn we're gone ;
And by the outer gate, and on
To our dear friend's oft-trodden door.

And there in cheerful talk we stay,
Till-deepening twilight warns us home ;
Then once again we backward roam
Calmly and slow the well-known way—

And linger for the expected view—
Day's dying gleam upon the hill ;
Or listen for the whip-poor-will,
Or the too seldom shy cuckoo.

At home the historic page we glean,
And muse, and hope, and praise and pray—
Join with me, love, as then, and say
Sweet Summer time and scene I

—The Dublin University Magazine.

WEEKLYANA.

THE *Illustrated Naval and Military Magazine*, a monthly journal devoted to all subjects connected with Her Majesty's land and sea forces, in its new series, Vol. VI., No. 22, October 1890, wrote thus of Ayesha, the daughter of the Kexholm Regiment :—

"On the 20th June, so we are informed by the *Vsemirnaya Illustratsia* of St. Petersburg, the Kexholm Regiment of Grenadiers celebrated the leaving school of Ayesha, *alias* Maria Konstantinovna at Warsaw, where she was educated at the cost of the late Tzarina.

In 1877 this regiment, after the fall of Plevna, pursued the army of Suleiman Pasha through the passes of the Balkans. Notwithstanding the humane treatment accorded them, the panic-stricken inhabitants of Turkish origin abandoned their homes in crowds, fleeing in the direction of Constantinople. The greater part of the road from Philippopolis to Adrianople was strewn with the stiffened corpses of men, women, and children lying among the dead bodies of horses, bullocks, broken-down carts, and all sorts of rubbish. In the midst of this fearful scene, a non-commissioned officer of the military train, named Savenka, remarked a dying woman, who by signs drew his attention to a ragged little girl, her daughter, who was sitting beside her, starving and half-perished with cold. The child being no more than five years old, it is not surprising that she was totally ignorant of her own origin and history, further than that her name was Ayesha. She only knew that the dead woman was her mother, and that her father was a soldier, who, as it would appear, had been slain in action. She had no knowledge as to their place of residence.

Until the close of the war, Ayesha remained with the baggage train under the care of Captain Petersen. On the return of the regiment to Warsaw, the child was christened Maria, with the cognomen of Konstantinovna, from her godfather Konovaloff's christian name, the surname of Kexholm being added in remembrance of the regiment which had rescued her. A subscription was then made among the officers for a small fund to assure her future, and its management was confided to a committee of trustees chosen from among them. Her portrait subsequently attracted the notice of the late Emperor

Alexander II., and having ascertained from the colonel of the regiment the above details, he promised to use his influence with the Empress to obtain the girl's admission into one of the governmental institutes for the education of females. In 1880 she was installed in the Alexander-Maria Institute at Warsaw as a pensioner of the Empress, where she has completed the curriculum in a highly successful manner. This event was celebrated with high religious ceremonies and brilliant festivities by this regiment of Finlanders, which may well be proud to add this act of humanity to the roll of its martial deeds."

The account is accompanied by a portrait of attractive appearance, which lends additional interest to the daughter of the Kexholm Regiment. We long to know what became of her after leaving school. We shall be obliged to any correspondent who may supply the information.

..

THE *Times* writes :—

"In connection with the approaching Millenium Exhibition, Professor Vambéry, of the Budapest University, delivered a lecture in Vienna on the history of the Hungarian nation, which he traced to a band of Asiatic nomads. He went on to say that Hungary had invariably formed an insurmountable barrier against the barbarism of the East. Had it not been for her stubborn resistance to the Turkish hordes the progress of West and Central Europe would have been retarded for hundreds of years. Owing to Hungary's perpetual readiness for war the intellectual condition of the country had remained behind. During the past two centuries this had been remedied. There is scarcely any trace left of his Asiatic extraction in the modern Magyar."

We published in our issue of the 8th of February last the prospectus of, as it is called, the Millennial Festival of Hungary. It also appeared subsequently in the *Gazette of India*, with, what we think, an uncompromising passage (as in the prospectus) against the Turk, considering that "His Imperial Majesty the Sultan will send (to the Exhibition) the precious relics of those of His illustrious Predecessors on the Ottoman Throne who, in the past, have materially influenced the destinies of Hungary." The festivities will commence on May 2, when the Exhibition will be inaugurated by the Emperor Francis Joseph.

.

THERE are in London 483 newspapers and 1,357 in the rest of England. Wales has 100, Scotland 226, Ireland 169 and the British Isles only 20, making a total of 2,355. Besides these, there are 2,097 magazines, of which 507 are religious publications. Mr. Henry Sell in his "The World's Press" estimates that £4,000,000 a year is spent in advertisements, and that 1,500,000,000 copies of newspapers are sold in London alone.

..

In the Swiss canton of Schwyz they are for vivisection for purely scientific purposes. Vivisectionists profess no other purpose.

..

HERE is a remedy for a black eye :

"There is nothing to compare with the tincture or strong infusion of capsicum annuum mixed with an equal bulk of mucilage or gum arabic, and with the addition of a few drops of glycerine. This should be painted all over the bruised surface with a camel's hair pencil and allowed to dry on, a second or third coating being applied as soon as the first is dry. If done as soon as the injury is inflicted, says the *Medical Progress*, this treatment will invariably prevent blackening of the bruised tissue. The same remedy has no equal in rheumatic sore stiffneck."

Capsicum has been successfully tried in rheumatism in India for a long time.

..

SIX sanitariums have been opened in Germany for treatment of consumptives with constant exposure to cold air. The air is passed through the bed room at night, and during the day the patient is kept in the open air. It is said that pure cold air quiets cough, lessens the temperature, arrests night sweats, improves the appetite and modifies or arrests the course of the disease. The efficacy of the treatment is not yet accepted.

..

THE Government of the N.-W. Provinces and Oudh have issued fresh rules regarding the submission of petitions and their disposal. They are :

1. A petition must be properly authenticated by the signature of the petitioner ; it should be submitted through the head of the office or department to which (if any) the petitioner belongs, and the forwarding officer should submit the petition with an expression of his opinion through the usual official channel.

2. A petition must be written in intelligible, respectful, and temperate language.

3. If a petition is an appeal from, or is connected with an order passed by, a subordinate authority, copies of the orders passed in

the case must be submitted; similarly if the petition is one for mercy or pardon, or is connected with a judicial decision, copies of decisions of the courts should, except in the case of capital sentences, be submitted.

4. Petitions against orders punishing or upholding orders of punishment of Government servants must be submitted, unless satisfactory explanation is given of the delay, within six months from the date of such orders.

5. Petitions will not be accepted from one person on behalf of another unless supported by a duly executed and stamped power-of-attorney. The only exception to this rule is the case of persons in jail or other duress whose petitions may be submitted by the officer in charge of the jail or other place of duress or by any near relative.

A power-of-attorney will not be required from a Barrister-at-Law enrolled and practising as an Advocate, nor in the case of lunatics or others where the circumstances render execution of a power-of-attorney impossible. When a lunatic or minor is under authorised guardianship, petitions to Government on his behalf should be presented by his authorised guardian.

6. A petition presented to the Lieutenant-Governor of the North-Western Provinces does not require to be stamped under Article 1 (c), Schedule II of Act VII of 1870. As it is not possible to make a distinction in the case of petitions presented to the Chief Commissioner of Oudh every petition presented to the Government will be accepted on plain paper.

7. A copy of a document referred to in Articles 6, 7 or 9 of Schedule I, Act VII of 1870, or in Article 22 of Schedule I, Act I of 1879, and accompanying a petition to Government must bear the stamp of the value indicated in the above Articles.

8. Section 6 of Act VII of 1870 absolutely prohibits the receipt of documents not duly stamped. Every such document will be returned to the sender. A petition enclosing a copy not duly stamped will ordinarily, if the consideration of the unstamped document is essential, be returned to the sender with a direction that orders cannot be passed unless it is resubmitted with the copy duly stamped.

9. A petition of any of the following descriptions will also be ordinarily returned to the sender:—

- (a) One in which the provisions of rules 1, 2, 3, 4 and 5 have not been observed;
- (b) When the petition relates to a subject on which the petitioner can apply for redress to the courts of law, or amounts to an appeal against a decision or order of a court of law, these being matters in which the executive Government does not interfere;
- (c) When it relates to a subject on which the local authorities or the Head of a Department are competent to pass orders, and no previous application has been made to them.

10. An officer forwarding a petition under rule 1 should see that the orders regarding authentication, stamping of documents, &c., are observed.

11. Rule 7 applies to copies accompanying petitions to the Government of India, submitted to this Government for transmission to the Government of India.

In elucidation of rule 7, quotations are made from Act VII of 1870, Schedule I, *ad valorem* Fees, numbers 6, 7 and 9, and from the Indian Stamp Act, 1879, Schedule I, Stamp duty on Instruments (Section 5), number 22. Petitioners to Government labour under great disadvantages. The stereotyped order "Declines to interfere" is their despair. And they are further handicapped. The N.-W. P. and Oudh Government stoop to limitation. For one concession made, they impose several expensive restrictions. The patriarchal government is no longer to be the rule. Every petitioner must appear either himself or herself or employ a lawyer, and every document sent up must bear a court fee or a stamp. The documents indicated in the extracts from the Court Fees and Stamp Acts are "copy or translation of a judgment or order not being, or having the force of, a decree; copy of a decree or order having the force of a decree; copy of any revenue or judicial proceeding or order not otherwise provided for by Act VII of 1870, or copy of any account, statement, report, or the like, taken out of any civil or criminal or revenue court or office, or from the office of any chief officer charged with the executive administration of a division; copy or extract certified to be a true copy or extract by or by order of any public officer and not chargeable under the law for the time being in force relating to court fees." The charges, as fee or stamp duty, are four annas, eight annas, one rupee, and four rupees, and eight annas for every 360 words or fraction thereof. We take it that the rules require authenticated copies of documents and that no copy or extract or original for which no court-fee or stamp duty is payable will be refused for want of stamps. The rules are circulated by the Chief Secretary to all heads of Departments, Commissioners of Divisions, and District officers, N.-W. Provinces and Oudh; and managers of newspapers and periodicals; and Secretary, Bar Library, Allahabad. Is it intended that extracts from newspapers should also bear stamps?

LAST year there passed through the Suez Canal 3,352 ships, of which 2,386 were English, 296 German, 191 Dutch, 185 French, 78 Austrian, 63 Italian, 41 Norwegian, 35 Russian, 33 Turkish, 28

Spanish, 6 Japanese, 5 American, 2 Egyptian, 2 Portuguese, and 2 Nicaraguan.

THE Hon'ble Mr. H. J. S. Cotton goes on three months' leave at the end of this month. The Hon'ble Mr. C. W. Bolton, Secretary in the General Department, will act the Chief Secretary, the Hon'ble Mr. Fincaue, Secretary to the Board of Revenue, acting as Secretary to the Bengal Government in the General, Revenue and Statistical Departments, and Mr. F. A. Slack, Magistrate and Collector, Saran, officiating as Secretary to the Board of Revenue.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

A RELIEF party, the number of which is uncertain, after saving several outlying Whites, was attacked and massacred by the Matabele. A later telegram says that the Matabele have massacred altogether two hundred Whites. Bulawayo and Gwelo are now impregnable. The revolt is principally confined to the Matoppo Hills. Mr. Cecil Rhodes left Fort Salisbury for Gwelo and Bulawayo with an escort of 150 men. He is down with fever. Two hundred Soudanese, who were engaged by Mr. Rhodes at Port Sud on his way out, have landed at Beira and been despatched to Bulawayo. The Hon'ble Maurice Gifford has been seriously wounded north of Bulawayo. His Horse, on April 7, engaged and drove back the Matabele. The party returned to Bulawayo on the 9th. They were hotly engaged twenty miles northwards, when the reliefs reached them. It is estimated that Gifford's men killed two hundred and fifty Matabele. Two Whites and several Friendlies were killed. Three fierce onslaughts were made by the Matabele, who were finally repulsed with a loss of hundred killed. More fighting is expected.

IN the French Chamber of Deputies, on April 2, M. Bourgeois read successive despatches received from Great Britain promising to evacuate Egypt. He insisted strongly on the international character of the Egyptian question. After an excited debate a vote of confidence in the Government was adopted by a majority of 96. The Senate, however, by a majority of seventy, have passed a vote of want of confidence in the foreign policy of the Government, and have also deferred voting the Madagascar credit. Nevertheless, M. Bourgeois and the Cabinet have decided to remain in office.

The *Times*' Paris correspondent states that M. Berthelot resigned because Baron Mohrenheim, the Russian Ambassador, objected to his making any statement in the Chamber regarding the Egyptian question without consulting Russia beforehand.

THE *Temps* states that King Humbert first proposed the Dongola expedition to Great Britain and Germany simultaneously.

Mr. Leonard Courtney, addressing the electors of Bodmin, said that the Dongola expedition was in the highest degree impolitic, and that if Great Britain really desired the welfare of Egypt she would not waste her resources needlessly by provoking a savage enemy.

The *Times* in discussing the employment of Indian troops at Suakin says that it would be a natural incident of the long existing connection between India and Africa. It proceeds then to consider the positions of the Indians in Africa, and declares that the matter must form part of a general settlement. Great Britain, when she remembers the services of her Indian soldiers in Africa, will not permit them to be deprived of the status of the British subjects. The *Daily News* states that Indian troops are being held in readiness to sail for Suakin if necessary. But, we see, no regiments have yet been warned in India for the service.

The House of Commons has resumed its sittings after the Easter vacation. The Hon. G. Curzon, replying to a question by Sir Ashmead Bartlett, said that the Government had entered into no engagement with the Powers not to advance beyond Dongola.

THE entire garrison of Kassala made a sortie in aid of an outpost at Sabderat, and defeated the Dervishes, who were 5,000 strong.

The Dervish loss was heavy, but the Italians lost only 100 killed and wounded. The fighting lasted for four hours. The garrison, on the 3rd inst., attacked and partially captured the Dervish forts at Tuctuf. The Italian loss was ten officers and three hundred men. The Commandant was confident of capturing the remainder of the Dervish positions next day, but was ordered to evacuate. General Buldisera has ordered the garrison to evacuate Kassala and retire to Agordat. The evacuation appears to be uncertain. Colonel Stevan's column, which recently arrived with supplies, was ordered to withdraw, but it is not known if the garrison accompanied it.

THE Dervishes have advanced as far as Mograkeh, within twenty miles of Akasheh. The Friendlies occupy a position opposite Akasheh. The Friendlies near Suakin have defeated the Dervishes. A strong Dervish force threatens Fort Habb on the Red Sea and another force has arrived at Kokriab. This will necessitate the despatch of another Egyptian battalion to Suakin. Dervishes have also appeared at Tamanieb, near Suakin. Those at Tuctuf have retreated across Atbart to Asobit, leaving their wounded and a number of mules laden with corn. Telegrams from Massowah state that King Menelik is negotiating with the Dervishes, and sending gifts to them.

THE material for a narrow gauge railway to be laid from Suakin to Tembuk is being prepared at Woolwich.

THE *Times'* correspondent at Pretoria says that Mr. Chamberlain's despatch to President Kruger is friendly but firm, and insists on the redress of the Uitlanders' grievances, at the same time affirming Great Britain's right to interfere, and requesting a reply to his invitation to President Kruger to come to England.

ADVICES from Achin state that the situation there is serious owing to the defection of the important chief Djohan, who is besieging several outlying Dutch forts, and notably the one at Olehle. The Dutch Government have decided to take energetic measures against the insurgents.

COMMERCIAL and consular treaties between Germany and Japan have been signed at Berlin. It is understood that extra territoriality is not wholly abolished, and that German imports will obtain numerous tariff reductions.

A BAND of farmers are taking refuge in Mafeking, as a general native rising is feared in the district owing to the slaughter of cattle to check widespread rinderpest in Rhodesia and Bechuanaland. The inhabitants of Mafeking have appealed to the Governor for troops.

THE American House of Representatives by a large majority has approved the report of the mixed Committee in favour of the Senate's resolution urging the recognition as belligerents of the Cuban insurgents. It is not expected that President Cleveland will act on the Senate's resolution which has revived the resentment of Spain.

THE Pope has approved of the decree of the Sacred Propaganda creating a separate Hierarchy for the Syrian Catholics of Malabar.

THE *Times'* correspondent at Singapore states that Li-Hung-Chang, who had arrived there, says that he is going to London after his visit to Moscow for the coronation.

THE weather throughout India, both in the hills and the plains, is reported to be abnormally hot, the greatest sufferers being the Punjab and Bengal. In the former province the day temperature is given at 8 degrees and in the latter 5 over normal. The maxima reported are 109 and 108 degrees. On the 8th, at 78 out of 130 meteorological stations in the plains, the thermometer rose to 100 degrees or over. Last week, except in Assam, there was no rain to speak of. At Cherapunji, with the highest rainfall in the world, 495 inches, only 30 inches fell between the 29th of March and the 4th of April.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

THE mortuary returns of the capital are alarming. The total number of deaths registered during the week ending 4th April was 584, against 480 and 425 in the two preceding weeks, and higher than the corresponding week of last year by 20. The mortality from small-pox last year was not therefore so great as from cholera this year. Last week there were 235 deaths from cholera, against 179 and 114 of the previous two weeks. The number is again higher than the average of the past five years by 180. There was only one death from small-pox during the past, against 4 of the previous week. The general death-rate of the week was 59.7 per mille per annum, against 35.3, the mean of the last five years.

SO there is panic in the town. The Lieutenant-Governor, although he is advised to fly the place, is not unmindful of those he leaves behind. Mr. H. H. Risley, Secretary to the Government of Bengal in the Municipal Department, has addressed the following letter dated Calcutta, the 10th April 1896, to the Chairman of the Corporation of Calcutta:—

"I am directed to request you to report, for the information of His Honour the Lieutenant-Governor, what steps are being taken by the Municipal Commissioners of Calcutta to prevent or check the spread of cholera in the city, and to provide medical aid for persons attacked by the disease. It is presumed that cholera pills or similar medicines are made available at all police-stations and post-offices, and at the registration stations of the Health Department, and that people are encouraged to make use of these remedies. Sir A. Mackenzie has himself found much advantage in dealing with an epidemic of cholera from the issue of a notice warning the villagers of the tract affected that they should apply to the chukidar for pills whenever the first symptoms of diarrhoea showed themselves. This saved many lives and served to allay the tendency to panic, which increases the liability to the disease. A similar notice would probably prove useful in Calcutta, the more so as the Lieutenant-Governor has been told by medical men that they are generally not called in until collapse has taken place."

AFTER the Legislative Council, the Lieutenant-Governor leaves for Dujeeing this afternoon. The departure from Calcutta and arrival at Dujeeing will be private.

MR. J. M. Rutherford, general traffic manager and acting agent, East Indian Railway, while travelling from Nawadi to Calcutta, was attacked with cholera and died in the train.

HOW to account for the unusually saltish water of the Hooghly at Calcutta? It has not been so brackish during the last 40 years.

THE Viceroy arrived at Simla in the afternoon of Thursday, the 9th of April. Lord and Lady Elgin are in good health.

AT Simla, on the 8th of April, in the forenoon, Mr. Mackenzie Dalzell Chambers, Barrister-at-law, the new Law Member, took upon himself the execution of his office under the usual salute.

THE old literary institutions and societies of Calcutta are dying out, if not dead. The Bethune Society exists in name. There was a talk of reviving the Bengal Social Science Association. The Dalhousie Institute, unable to pay the municipal rates, has been turned into a trade concern. The Metcalfe Hall languishes for want of support and threatens to tumble down. Instead, we have the Society for the Higher Training of Young Men, and the Chaitanya and Cottage Libraries which the great ones of the city love to patronize. Who is responsible for the hybernation of the Bethune Society in particular?

ON the 30th of March, the Chaitanya Library and Club presented their patron, Sir Alexander Miller, the late Law Member, with a farewell address. We reproduce the reply which is valuable in more ways than one. It gives a glimpse of the working of the Viceroy's Council, and is, besides, a record of the opinion of a high functionary of State regarding the natives of this country. A jolly old soul, Sir Alexander made his career in India a pleasant one, and we are grateful to him that he left the country with pleasant reminiscences.

"Sir Alexander Miller, in the course of a lengthy speech, in suitable terms thanked them for the address with which they had been kind enough to present him, for the uniform kindness they had showed him during the five years he had been in the country, and for the opportunity the Club had given him of taking an interest in the educational work here. He was quite certain that the one great danger which this country had to meet in the future was the risk that the governing and governed classes would drift away from each other. He was told on all sides that they were now further

apart than they were thirty years ago, and it was quite certain that unless something was done to draw them together again, nothing but misfortune could be looked for in this country. It was impossible for him to look round on such a large assemblage of educated young men and see that he and others had opportunities afforded them of meeting in social converse such bodies of young men, without feeling that it must be their own fault if the two races did not agree and understand one another better. (Cheers.) Of one thing he was perfectly assured—all the friction that occurred (and he was sorry to say that there was a good deal of friction)—arose from mutual misunderstandings. (Cheers.) There was, however, nothing of which he was more satisfied than that, with all their faults, the object of Englishmen in India was to do right and justice. (Cheers.) He was also satisfied that with all his suspicion—and the Indian was very suspicious—if one could only persuade the Indian that he was desirous of doing justice, there was no man who would appreciate it more. He had had many opportunities of meeting the members of the Club in friendly converse, and he had been privileged at various times to address them, and irrespective of the high and unexpected honour they had done him, he should take leave of the Club with feelings of deep regret. They had heard from Sir Henry Brackenbury something about the peculiar difficulties, if he might say so, of the Legal Member, but Sir Henry had omitted to mention, possibly because he was not aware of it, one disability which for the last five years had pressed most strongly on the speaker's mind. He took the first opportunity of his position of freedom from responsibility of unburdening himself. The Legal Member was the only member of the Legislative Council in India who was unable to introduce a single reform, no matter how desirous he might be to do so, or how keenly he might feel that the law required alteration in one particular or another. He was not only unable to introduce it himself, but he was precluded from getting it introduced by another. Soon after he landed, his attention was called to the difficulty and enormous amount of expense which was incurred in futile attempts at partition where there was an immense number of co-sharers in a small estate, and in the exuberance of his heart he proposed to amend the Partition Law but found that he could not. After a great deal of difficulty he ultimately persuaded Dr. Rash Behary Ghose, who laboured under no such disability as himself, to introduce the Bill, which was carried through with great success. The same thing had occurred with regard to various other matters with regard to which he did not think it necessary to trouble those present.

After referring in appropriate terms to the invariable courtesy and kindness which he had experienced from his colleagues, he went on to say that he had often felt that entirely outside the sphere of one's official duty there was a great deal which a man in a high position in India could do, and ought to do. He was the more impressed with that duty because he happened to live during a great deal of his earlier life among Englishmen returned from India whose tone and temper with regard to the people of this country Sir Alexander keenly resented, and who spoke of their stay in this country as a penal servitude. He came out with a strong feeling that this must be wrong, and he was very pleased to find from the very first opportunity that he had of mixing with Indian gentlemen that those people were necessarily and utterly wrong. (Cheers.) He then gave his personal reminiscences of the occasion when he first came into contact with Indian gentlemen at the meeting of the Sylhet Union, where he first made the acquaintance of Mr. Justice Gurudas Banerji. He was going away most reluctantly, with the earnest desire that the fates would give him an opportunity of coming back to this country again, though he feared that it would not be so. (Applause.)—*The Englishman*, Mar. 31.

Sir Alexander Miller passes over the first part of the attempt made to amend the law about partition of estates. Before he came out to this country, Dr. Rash Behary Ghose had moved in the matter; opinions were collected, but the Home Member, Sir P. P. Hutchins, was opposed to any change; and the then Law Member, Sir Andrew Scoble, allowed the matter to drop. It is to Sir Alexander Miller's credit, that he was agreeable to the introduction of a measure which has given appreciable relief.

THE National Magazine for December 1895 offers a varied dish, consisting of I. The Begums of Oude, by G. L. De, B.A.; II. Deva Mumledar, by Denonath Gunguli; III. The Marriage question among the Mahants, by Umapada Bose, M.A., B.L.; IV. History of Native Journalism in Bengal, by an old Journalist; V. Thy Child's Clear Eyes, by O. C. Dutt; and VI. Spring, by Thompson's Seasons. The last is a queer *nom-de-plume* for poet or poetaster. The paper on the Begums of Oude is a well-written one and will repay perusal. Bala Denonath Gunguli has given many short lives of saints belonging to Southern India. The title of "Deva Mumledar" was won by Eshwamt Rio. As a member of the Subordinate Executive Service of the Government of Bombay, Eshwamt Rio was honoured alike by superiors and subordinates. To the people in general his behaviour was like that of another Howard the philanthropist. Ruling chiefs delighted to honour him, but the simplicity of his disposition never abandoned him even when he was the recipient of high honours. Bibu Umapada Bose brings to notice the case of some Mahants who are not bound to celibacy. The concluding remarks of the writer deserve to be pondered over by those amongst our countrymen who are loud in their denunciations against Mahants in general for the

vicious lives supposed to be led by many of them. "Celebacy is against the law of Nature. The clergy, whenever ordained to lead celebrate lives, have in all countries been more or less sinful. The reform that Luther introduced and practically enforced in his life, was a very wholesome one. He married a nun. When religion is opposed to nature, it has every chance of becoming hypocrisy." The paper, entitled "History of Native Journalism in Bengal," is not ill-written. The account given of the *Hindoo Patriot* is tolerably correct. No attempt has been made to suppress the name of Dr. Sambhu C. Mookerjee as the successor of Hurrish Chandra Mookerjee and predecessor of Kristodas Pal. Unlike others that come forward to enlighten their countrymen regarding the history of the *Hindoo Patriot* without knowing anything of the subject, the writer freely refers to the assistance which Kristodas used to receive very systematically in the conduct of the paper. "Amongst those," he observes, "who assisted Kristodas in the literary management of the *Patriot*, mention should be made of Bibu Juggat Chandra Bannerjee, then of the Financial Department of the Government of India, now Private Secretary to Maharani Surnomoye. Sambhu Chandra also used to contribute actively from almost the beginning of Kristodas's connection till the establishment of *Mookerjee's Magazine*, new series, the department of review having been especially his." The poetry of O. C. Dutt is always welcome. "Thy Child's Clear Eyes," from the German is a delightful little piece.

THE Hindoo Patriot's leader of Monday is devoted to Mr. James Kimber, the retiring Engineer to the Calcutta Corporation. It is all admiration for him. We are told "It redounds much to his (Mr. Kimber's) credit that during the last 20 years, he has had no friction with the Commissioners with whom he has been daily brought into contact." Yet they would not grant him a retiring bonus which the Chairman wanted to propose. There is not another officer of the Corporation with whom the Commissioners were more displeased than Mr. Kimber. They once wanted to get rid of him but he stuck to his post or its rupees, and for the attention shewn him, he landed his masters in difficulty.

ON the first of the present month, at the distribution of prizes to the pupils of the famous Cotton Institution of Calcutta, Mr. H. J. S. Cotton, who occupied the chair, brought that interesting ceremony to a close with, among others, the following observations:—

"He was glad to find that the Institution was prospering. He was glad also to express the great debt of gratitude which the Institution owed to the Maharaja of Rungpore for the extremely munificent manner in which he had endowed the Institution."

So, we have it, on the authority of the Chief Secretary of the Bengal Government, that Govindalal Roy is not only a Maharaja but the Maharaja of Rungpore. Maharaja Sir Luchmeswar Sing Bahadur is still Maharaja Sir Luchmeswar Sing Bahadur of Durbhanga. The very representatives of the house of Burdwan, to speak with reference to living memory, have only been Maharaja Mahtab Chand Bahadur, and Maharaja Aftab Chand Bahadur, of Burdwan. None of them, in official correspondence, was ever referred to as the Maharaja of Burdwan. The lucky Govindalal, however, is a very much greater personage. He is not Maharaja Govindalal Lal Roy of Tajhat in Rungpore, but the Maharaja of Rungpore. Rungpore is a large district. The head-quarters also go by the same name. Whether it is the district or the head-quarters that the name may imply, the fortunate Zemindar of Tajhat must, therefore, be held, on semi-official authority, to be a territorial Chief or Maharaja like the Maharaja, for example, of Gwalior or Indore, Biroda or Travancore, or, for that matter, of Cashmere or Mysore. As such, "His Highness the Maharaja of Rungpore" should be his designation. It is impossible to suppose that the Chief Secretary to the Government of Bengal, in the Political, Judicial and Appointment Departments, does not know the distinction between "Maharaja so and so of Rungpore" and "the Maharaja of Rungpore." The expression, therefore, was evidently complimentary, intended to express the deep gratefulness of the speaker for the benefaction of Rs. 18,000 or so towards housing the Institution that goes by his name. The gift, instead of being an absolute one, has been guarded by conditions, for the house is to return to the giver in case the Institution ceases to exist. It is for a dish of porridge, therefore, that the Chief Secretary blows the pæan of praise for one whose munificence is remarkable, if not for degree or measure, at least for judiciousness of direction. The

friends, however, of the Hon'ble Mr. Cotton allege that the date of the utterance should be remembered for its justification.

THE rage for biography, in Bengal, is alarming. Within a month after Pundit Iswar Chandra Vidyasagar had breathed his last, a good, readable biography of his was given to his countrymen by his third brother, Pundit Shambhu Chandra Vidyaratna. The style is delightful in its simplicity. Every important fact connected with Vidyasagar is recorded there. No signs are visible in it of what is called the *furor biographicus*. What Macaulay said of Boswell applies with peculiar force to Vidyaratna's life of his brother, *viz.*, that his book resembles nothing so much as the conversation of the inmates of the Palace of Truth. The slightest attempt has not been made to conceal anything. The harrowing poverty of the father, the joy he felt at obtaining an appointment on a pay of Rs. 2 a month, the many acts of naughtiness which Vidyasagar committed in his childhood, have all been described with a simplicity that is remarkable, considering that the narrator is an intimate blood relation of his subject and, therefore, equally exposed with him to the derision the narrative is sure to inspire in the generality of his readers. Poor Vidyasagar died leaving a will by which he had disinherited his only son. The latter, it is said, could not bear to see his sire done by his uncle. Accordingly, a Brahmo gentleman, of the name of Chandi Charan Binerjee, was selected to do another life of Vidyasagar, the materials being for the most part supplied by the son. When this pretentious book came out, it was found to be mainly based on Vidyaratna's work, though some discursive chapters were inserted upon a few subsidiary matters. Many material errors were also committed. Vidyaratna issued a supplementary volume pointing out and correcting these. Not content with the two big volumes of Vidyaratna and Chandi Charan, another gentleman, Babu Behary Lal Sircar, has come forward with a third biography. Babu Sircar has told nothing that had not been said and said well by his two predecessors. It is true Sircar presents full 28 heads of *additional* information, but then it is easy to issue a fourth volume with four times as many heads of new topics connected more or less directly with Vidyasagar's life and character. We are surprised at the audacity of those who proceeded, after Vidyasagar's death, to demolish his Bengali reader called *Bodhodaya* or the rudiments of knowledge. The intrigue which has led to the supplanting of this little book is despicable for the reasons publicly assigned. A few expressions were called from this primer with great diligence and placed before the public with a view to attract the attention of the Central Text Book Committee. These, it was argued, were difficult and incapable of being thoroughly understood by those for whom the book was intended. Then, again, the material objects that surround us have been classed by Vidyasagar under three heads, *viz.*, animate, inanimate, and vegetables. For all practical purposes such a classification can scarcely be objected to. It is very true that vegetables have animation or life. Comparative anatomy and physiology have shown that they have organs for taking sustenance and digesting it, and even of generation. But all this may surely be left to be learnt at a more advanced stage of the Bengali boy's progress. The use of the word *padartha* for material objects, and of *jantu* for animated creatures, has also been objected to. But this is hypercriticism which deserved to be treated with contempt by those who have it in charge to select our text books. Another heavy accusation against poor Vidyasagar's book is that it makes mention of the Supreme Being as "bodiless spirit." This, it is said, no boy can understand. Granting that it is so, does the occurrence of this single expression make the book valueless? The Denty is incapable of being referred to without the ascription of attributes belonging to visible existences. Vidyasagar's *Bodhodaya* had kept its ground for years together. Tens of thousands of Bengali children learnt something of their mother tongue from it. The wise men of the Text Book Committee thought otherwise. Speculations on the Denty must always be unintelligible to young minds. The fiat has gone forth that children's books should contain no reference to Him or His nature. Instead, we must have plain, scientific truths, such as would not tax the child's imagination or reason in the least. Gradgrindism is the order of the day. If a list were drawn up of the Bengali books in use in our schools, setting forth their authors, the printing establishments in which they are printed, the relations between the authors on the one side and School Inspectors and gentlemen of the Text Book Committee on the other, and finally,

the appointments the authors hold in the Education Department, it would be a very telling commentary on the educational system pursued in Bengal. From its very nature the question is such that Sir Alfred Croft, with all his shrewdness, and desire for reform, can do nothing to remedy the abuse of patronage.

Erratum.—In our leader on Cholera, in the last issue, p. 161, line 37, for Russia read Prussia (.)

CHITRAL:

OR

SEARCH AFTER A FRONTIER.

IN one of his finest orations, Burke said that "in large bodies, the circulation of power must be less vigorous at the extremities. Nature has said it. The Turk cannot govern Egypt and Arabia, and Kurdistan, as he governs France; nor has he the same dominion in Crimea and Algiers, which he has at Brusa and Smyrna." Whatever the truth, in the past, of this law of dominion with either the despotisms of the East or the milder and constitutional Governments of the West, the latest inventions of science, it is believed, by annihilating both distance and time, have falsified it. An order of the British Cabinet, notwithstanding the extent of territory over which it watches, is as well obeyed in London as on the banks of the Indus or the Irrawady. One of the swiftest forces of Nature has been enlisted for bearing messages from one extremity of the world to another. Less than forty minutes would suffice to put a girdle round about the earth. The art of offensive and defensive war has been so far improved that the barriers put up by Nature, in the form of mountains and broad, unfordable pieces of water, are no longer looked upon as the best of obstacles against outside aggression. The disciples of Vauban, with the aid of only human hands, can create barriers more insurmountable than those which earthquakes and other convulsions of Nature have thrown up. The earth-hunger of powerful nations, therefore, has become practically unappeasable. History says that on the death of the emperor Augustus, when his testament came to be publicly read in the Senate, it was found that he bequeathed, as a valuable legacy to his successors, the sound advice of confining the Roman empire within those limits which Nature seemed to have placed as its permanent bulwarks and boundaries, *viz.*, on the west by the Atlantic Ocean; the Rhine and the Danube on the north; the Euphrates on the east; and towards the south the sandy deserts of Arabia and Africa. The exigencies of frontier policy and the inability of barbarian neighbours to appreciate the power of Rome, did, indeed, sometimes compel the Imperial lieutenants to undertake punitive expeditions and in isolated cases to even subjugate and annex new territories, but Hadrian deliberately abandoned many of those acquisitions for re-establishing those boundaries upon which Augustus had insisted. The successors of Hadrian, *viz.*, the two Antonines, respected the same policy. The historian of the Roman Empire gives us a graphic picture of these times, which deserves to be transcribed for the lessons it teaches. "They presisted in the design of maintaining the dignity of the empire, without attempting to enlarge its limits. By every honourable expedient they invited the friendship of the barbarians, and endeavoured to convince mankind, that the

Roman power, raised above the temptation of conquest, was actuated only by the love of order and justice. During a long period of forty-three years their virtuous labours were crowned with success; and if we except a few hostilities that served to exercise the legions on the frontier, the reigns of Hadrian and Antoninus Pius offer the fair prospect of universal peace. The Roman name was revered among the most remote nations of the earth. The fiercest barbarians frequently submitted their differences to the arbitration of the Emperor; and we are informed by a contemporary historian, that he had seen ambassadors who were refused the honour which they came to solicit, of being admitted into the rank of subjects."

What a commentary does the above passage afford on the policy of the British Government of India! A company of merchants, coming to trade to the East, stumbled upon empire, favoured by a strange combination of circumstances, chief amongst which, of course, was the degeneracy which time had brought upon the Pathan, the Mogul and the Mahratta who had been feebly contending with one another for dominion over this vast southern peninsula of Asia. Inspired by their instincts as traders, they took great care to impress upon their servants in India the desirability of not extending the boundaries of their conquests and protectorates. Events, however, proved more powerful than their well-reasoned despatches. Accordingly, under successive Governors-General, the limits of British dominion increased. Those amongst them that were most disposed to peace and that paid some attention to the orders of their masters, terminated their reigns by at least increasing the sphere of British influence, which, in time, led to new complications ending in accessions of territory. Province after province came to be marked with red on the map of India; chief after chief submitted to the military power of the prince merchants of Leadenhall street, aided by a diplomacy noted for its tortuousness and for the little regard it shewed for some of the commandments of the decalogue. The British empire of India at last got for its boundaries those grand barriers which Nature has thrown up for marking the country off from the rest of Asia. On the north the Himalayas constituted an impregnable wall; on the east the hills and forests that divided it from Burmese territory; on the west by the mountain ranges that cut it off from Afghanistan and Beluchistan; for the rest, the wide ocean girts it all round. Within these magnificent barriers is an empire that might have gratified the greed for dominion of even the most ambitious of ministers and proconsuls, especially as barbarous tribes, congregated beyond particular points of the frontier line, give abundant opportunities to the British power for keeping its regiments well employed. The territories beyond the Indus and within the mountain ranges of the borders of Cabool and Beluchistan in particular, have always been a fruitful source of trouble. As successors of the power which the Lion of the Panjab had erected, the British statesmen of the forties could not make up their minds to accept the Indus as the western limit of British India. Ranjit's trans-Indus conquests followed the fate of the Panjab proper by submitting to the civil administration of the British collector and the protection of the British red-coats. If the cost be estimated, in both blood and money, that has been incurred for upholding British prestige within this strip of land, it would come up to an appalling figure.

The advance of Russia on the east and the gradual consolidation of her Asiatic empire have powerfully influenced the frontier policy of the British Indian Government. The suspicion has never been abandoned that the occupation of India is the ultimate goal of Russian ambition. How best to check her further expansion and meet her in her war trail, has for more than half a century been the problem with which British statesmanship is occupied. Refusing to make anything of the boundaries which Nature has set up, a scientific line of defence has been the object of search. The beauty of this line is that it exists only in the imagination of statesmen fired with ambition or blanched by fear. No wonder, therefore, that this line should advance or recede as circumstances may favour or restrain the assertion of power. The policy of masterly inactivity beyond our own definite frontier and of subsidizing neighbouring chiefs for making their dominions a buffer, as understood sometime ago, has been materially modified if not practically abandoned. British diplomacy is trying its best to create a new Rubicon for the Indian empire which Russia will not be able to cross without being taken for a belligerent. To-day it is the western and the north-western boundary of the Amir's dominions that is to furnish us with such a Rubicon. Tomorrow, it is the southern and south-eastern limits of the Pamirs, or, if possible, some line traversing through them, that is to achieve the great desideratum. Enormous sums of money have been spent on this search after a boundary. And yet British statesmen are as far off from it now as when they first set about the business.

The game of finding a permanent border line of the British Empire in the east is not likely to end without serious troubles. The two banes of earth-hunger, *viz.*, expenditure of men and money, will reach proportions yet more alarming. Impelled as the search is by earth-hunger, by the desire, that is, of territorial aggrandisement, and not by the honest wish to defend or maintain acquisitions already made, the consequence we point out is inevitable. Judged by this, the retention of Chitral, instead of being the end, is only the beginning of the end. The history of this new acquisition far beyond what had only a decade before been regarded as the extreme line of British influence, is by no means singular. The large tracts of unexplored land lying between the extremities of Russian and British spheres of influence, are dotted with little kingdoms or chieftanships. Hostilities between them are chronic. It is easy for ambitious politicians placed in situations of trust to take advantage of those feuds and enter into relationships that are certain to lead to the march of British troops for offensive or defensive warfare. Nothing is heard by the outside public of those relationships until they result in actual trouble calling for armed interference on a grand scale. As a consequence of this mischievous policy, a small British garrison under a gallant officer found itself besieged in the little fort of Chitral by a swarm of men following the lead of an injured chief. We had no business to convert these men into foes. When intelligence came of the danger to which British prestige was exposed in that remote region, the rescue of the gallant band at any cost was naturally regarded as the first business. Then was seen the superiority of civilisation over a state of nature. Science prevailed over ignorance. The discipline of British troops, black or white, aided by arms of precision and

the appliances of knowledge for overcoming all obstacles in the shape of pathless hills, steep peaks, snow-covered steppes, and swollen rivers, made light work of every opposition which mere courage, entirely reft of such helps, was able to offer. Neither the fanaticism of the tribes along the line of march, nor the despair of Umra Khan in Chitral territory, could resist the steady progress of our troops. Chitral was reached. The besieged were rescued. The British flag waved over Chitral, and scared every thought of opposition from the hearts of the children of the soil.

The relief of Chitral having been undertaken and accomplished by one Cabinet, the question of abandoning or retaining the place came to be solved by another whose political views are diametrically opposed to those of their predecessors. Before yielding up the reins of power, the Liberals had come to the conclusion of abandoning this easy acquisition. The Conservatives felt bound in honour to oppose it. Accordingly, when the actual settlement came to depend on their will, the retention of Chitral was resolved upon as a master stroke of policy. The strategic importance of the place, it was urged, should of itself justify the retention. The increase of civil and military expenditure is not a point of much consequence to a Conservative cabinet. When to this is added the ingenious forecast of Lord George Hamilton about the country overrun being able to yield a revenue both direct and indirect, the case for the retention becomes as strong as that for the retention of the Punjab itself. Chitral with the whole tract of land intervening between it and the line that had so long formed the Indian frontier, is as fertile as any portion of India. There are roads and even irrigation canals extending on all sides, representing the civilisation of some people whose history is lost. The inhabitants are not the rude barbarians that many people thought them at first. There is a fine field for the consumption of Manchester cottons and Sheffield cutlery. An extension of the excise alone may bring an abundant income to the Indian treasury, for the Chitralis and their neighbours must be credited with the possession of intelligence sufficient to discriminate between the obnoxious liquor on which they now make themselves merry and the superior products of British Indian distilleries. The school-master and the school-mistress, and the druggist and the physician will soon be among them. A very short time will be needed to give them a taste for the benefits of civilisation. They have beaux and belles among them who will require to be only told of western essences and perfumery in order to popularise those articles in their country. Protected by the British rifle and bayonet from external aggression, and by the batons of Panjabi or Pooroobia policemen from internal enmities of every kind, their swords and spears will very soon be converted into ploughshares, and they will be as regular in the payment of their taxes and other dues as the inhabitants of the most peaceful portions of Hindustan itself. Some of the tribes along the way to Chitral have already been so favourably impressed with the consequences, immediate and remote, of loss of national freedom, that they sent delegates to Simla for soliciting the Viceroy to take early steps for the despatch of the British tax-gatherer among them. It is the Secretary of State himself that said so from his place in Parliament, and he must be a bold man who would curl his lip in doubt or disdain. Lord

George Hamilton is a man of parts and great cleverness of reasoning. In defending the retention of Chitral, on the last occasion in the House of Commons, he made as excellent a speech as anybody could be expected to make in such a cause. There can be little doubt, however, that he overshot his mark. If his reasoning be correct, every fresh accession of territory in Central Asia is capable of being justified. The swallowing up of Siam and Cochin-China may, on the same grounds, be upheld as a master-stroke of policy. Why stick to the Himalayas as the northern boundary of the empire? Pretexts for quarrel are not difficult to find. Why not overrun Thibet and Chinese Tartary till the southern slopes are reached of the great Altai range?

MARK TWAIN IN MADRAS.

AN INTERVIEW IN THE HARBOUR—HIS OPINION ON MR. SKRINE'S BOOK "AN INDIAN JOURNALIST."

The British India Company's S. S. *Wardha*, which arrived off Madras about eight o'clock on Monday night and was piloted into the harbour at day-light yesterday, carries the immortal Mark Twain and Mrs. and Miss Clemens away from India to Cape Town via Colombo and Port Louis. A Calcutta daily giving him the tip as to the celebrated humourist's departure from the City of Palaces on Thursday night last, a representative of the *Madras Standard* proceeded on board yesterday afternoon to interview him. Our Reporter confesses to a sense of disappointment as he first set eyes upon the distinguished globe-trotter because of his advanced years and a drawn paleness of countenance that suggested anything but the aspect of an active tourist anxious to take graphic notes of all he saw and heard. So far from impressing him with the vigour of middle manhood at least, and an active desire to know all about everything around him, Mr. Clemens appears to have given his interviewer the idea that he meant to take the rest of life as easily as surrounding circumstances would permit. The veteran author, then, was on the saloon-deck buried behind the pages of a Madras paper, reclining in an attitude of repose well into a deep cane-bottomed chair. It seemed almost a cruelty to disturb this *dol e far niente*, but pabulum the pressman must have when he has set his mind upon it! And this is how the ice was broken:—

"Mr. Clemens, I presume," said our representative laying his card upon a handy tea-stand within focus of Mark's glasses.

"The same, sir; glad to meet you, I am sure; sit down."

"Not wearied yet with interviewing, I hope."

"Well, no, I have had the last three or four days myself

OCCUPIED NURSING A COLD,

and I don't mind meeting press people anywhere. We are brought up to regard interviewing across the water as part of our lives, you know. Yes, thank you, my daughter has much improved, but I cannot make out why I am so troubled with this cold. It has stuck to me in spite of everything, even two weeks spent in bed, but I must say that, notwithstanding this inconvenience,

I HAVE ENJOYED MY TOUR.

When this boat leaves Madras to-day, I suppose I will be leaving India quite behind me. Let me see, I landed at Bombay in the middle of January and here is the 31st of March. It seems such a short time and India is such a large place to study. You are right, we call at Colombo and Port Louis and then push on to Cape Town. All going well, I hope to reach America again next September. Ah! about the price I have been offered for my book. It is not true that I have been offered £10,000 for it, because no publisher, at least I have never heard of one, offers what he considers an author's possible share in a lump sum, but the statement may have grown out of the fact that a publisher offers you in advance one-fourth of what he considers will be your ultimate profit on the book. I said in Calcutta that I was offered that quarter, but I have not and shan't make any contract. I don't usually make a contract as regards a book yet to be written. That £10,000 you speak of would not be good business—it wouldn't be wise of the publisher to offer it, but to offer you one-fourth would be rational, and it would be also rational to the author to have it—rational because it protects his book from being neglected.

A PUBLISHER IS ONLY A HUMAN BEING.

He might get a book worth pushing more than yours and the chances are that he will neglect your book if no money has been paid, and so silence his conscience; he won't attempt to do that if he pays you down something.

Did I find India precisely the place it was represented to be? Well, hardly. You seem to know of course that this is my first

visit to India. I came here like many others with only a very vague idea of the country, and I am bound to confess that I did not find it the immensely wealthy place it has been described as. But I am not surprised at that at all, because it is the showy side of the globe that reaches the remotest region, whether that showy side exists or not. In California, for instance, people have an idea that the gold dust is merely to be scooped up. Go there and you realize the nakedness of things. A feature that has struck me very forcibly in India is

THE POVERTY OF THE COUNTRY.

'This was something I knew of only vaguely before. It is poverty compared with the poverty I have been acquainted with, and it is also a poverty based upon a certain value which does not exist in the country I come from. Somebody on this very ship told me that it doesn't make any difference how low wages in India are, the working-man will save something out of it. He said don't deceive yourself when people talk to you

ABOUT LOW WAGES.

Take the case of a man who earns Rs. 7 a month—he pointed out one to me—and lower than that sometimes, I should think it would cost that man all that to live and yet leave him something to lay by. Wherever that is the case, then I would not say it was abject poverty, but then this is looking at it all through a false medium—the values are not the same here as they are in other countries. We think the Italians are very poor until we have lived in Italy; then we readily find that there are really no poor Italians. When you come to examine their circumstances they have enough in life to live upon and to save. It is not possible for a stranger to tell what wide-spread poverty is. I know though from reading Buckle on India that it is

THE VERY HOME OF POVERTY

and he's an authority, I suppose, we should respect. All the aspects of the country are poverty; a stranger could never mistake it for anything but poverty. It is the Anglo-Indian who calls your attention to the fact that the wages do not prove poverty. It would be the same in Europe or America as here if the conditions were the same. You can't create a famine in Europe or America, but you can here, and the people die off from actual want of food, a thing which can't happen in Europe or the United States—only in Ireland! You want to know how

FAMINES CAN BE CREATED?

I mean that in those countries there is no failure which is universal—no failure of foods which keep people alive. Here the failure of the crops is universal at times and when a district can't be approached in time by railway, famine prevails and the mighty masses die of sheer starvation. Here is Madras with a population of 35 millions, I think,—that means half the population of the United States, and I consider the area they occupy would represent about half the territory of the United States; now fancy that great mass to have to supply food to! I took particular interest in the appearance of the land between Bombay and Calcutta and I do not think that much of it is allowed to go waste. Wherever water is accessible

THE SOIL SEEMS TO HAVE BEEN DILIGENTLY TILLED,

and as regards General Booth's scheme, I have read something of it, but I do not think he can hope to succeed if he means to sandwich the religion of the Salvation Army with his peasant-settlement scheme. It may amuse you to know that I first believed General Booth's scheme was intended to import paupers and the milder sort of criminals from among the surplus population of England. I do not think any country would like that unless the settlement was removed some considerable distance from decent habitations.

(A slight fit of coughing here interrupted the interview, then Mr. Clemens proceeded:—) I am killed with this cold since morning. We went ashore and breakfasted at the hotel near Spencer's shop intending to drive around Madras afterwards, but I found I could not manage it. I wasn't equal to the heat with this cold, so I left my family to do that. By the way, who is the Roman General on horseback on one of your broad roads? Sir Thomas Munro, did you say? Ah, that takes one way back in your history to Clive. Yes, I recollect now, he was one of your early Governors. And that just reminds me

LORD WENLOCK WAS YOUR LAST GOVERNOR.

I remember reading of him in the *Pioneer* and one or two other papers. The *Pioneer* made him out a failure. I think it a mistake myself to send out your landed noblemen to administer this vast country. They are not cut out for administrative work and are better left on their wealthy estates. You want men who are born to govern and who have made statesmanship a life-long study. Your new Governor comes up to that mark, I am told. And what is that very telling structure there by that lighthouse? The High Court of Madras? Ah! it is so pleasant to see that. It has a proper look, as if it belonged to the country. This distinctly European architecture over here (the G. P. O.) is a false note, too European altogether. I like Oriental architecture in its place. You ask me a very large question when you say 'have I made the acquaintance of

THE NATIONAL CONGRESS

as an Indian institution?' Well, I have read of it, here a little and there a little, and all I can understand is that the men composing it, want a little more independence than they now have. I know little of their aims, but with

THE SCHOLARLY QUALIFICATIONS OF THE HINDUS

who sit in this Congress, I have been very much struck. I have recently read a book by Mr. Skrine, who has just been promoted to a Commissionership in Burma (Chittagong), dealing with the merits of a Hindu friend of the higher caste. Mr. Skrine makes certain quotations from letters written by his friend and that Hindu was so much a master of our language—he went into such excellent niceties—which you couldn't expect except in a man born English and bred to his own mother tongue. Now this Hindu was a born native of this country, and educated in this country; he was very learned in Western educational sciences and his English was flowing, easy and ever so idiomatic. This great aptitude on the part of the native of this country to excel in the English language is what one is confronted with all the time. There is, however, one good quality they lack as a nation—I believe they like to be called a 'nation'—and that is,

INVENTIVE GENIUS IN THE VARIOUS PRACTICAL ARTS.

England, as you know, has attained greatness chiefly on account of the inventive genius of her sons. There are many who suppose that America is the home of inventions. This is a mistake. We rank, but falsely, as the inventors of the world, but we do what is worth a great deal more; we take up an invention and work at it till it results in something perfect.

'PROMOTERS OF INVENTIONS'

would be the proper way of describing us Americans, and there is a reason for it. England invented Colt's revolvers three or four centuries ago; she invented the application of steam power to machinery way back in Charles the Second's time; England invented the telegraph 60 years ago, but she has

THROWN AWAY HER GREAT INVENTIONS

for the reason that she has had no patent law to protect them. England had Wheatstone's system of telegraph, but because she did not stick to it, Morse in America worked at it, and a hard time of it he had too, till he developed the present electric telegraph, but then he had the patent law to protect him. It was only during the past 15 or 20 years that England has had a patent law worth anything. It is true that

MEN IN AMERICA WASTE FORTUNES ON PATENTS

that turn out failures, but it is also true that they make larger fortunes on patents that turn out successful.

Yes, I have been interested in the recent

'SITUATION' BETWEEN ENGLAND AND AMERICA,

but I never doubted for a moment that the warlike talk was based upon nothing. The latest news is, I see, that they are getting into a rational and satisfactory state. Arbitration is to be resorted to after all. I knew that

COMMON-SENSE WOULD GET THE ADVANTAGE

of all concerned presently. It was absolutely silly to think that America and England would ever fire a shot at each other.

I hope to reach Colombo on Friday. I am engaged for two 'At homes' there I believe—not three. Thence I go on to Mauritius and South Africa. This boat I am in, just suits my mood at present. I am

IN NO HURRY TO GET ALONG.

The more salt air I breathe the better I feel. We had a fine passage down from Calcutta except for a current that took about 30 miles off the rate of our travel each day. The *Wardha* is not one of those boats that cover 500 miles a day, but without running away from herself she keeps in the neighbourhood of 200.

Thank you very much for your kind wishes. I have had nothing else all over India, and will carry the best recollections of this country home with me.

Concluding the interview thus, Mr. Clemens strolled to the other end of the deck to watch Harmston's menagerie being hauled inboard.

The *Wardha* left on her voyage in the course of the afternoon. —The *Madras Standard*, April 1.

THE OTHER SIDE OF THE TURKISH QUESTION.

(Dedicated to the *Travancore Times*.)

"I've just returned from Constantinople," said Mr. F. Hopkinson Smith, the author and artist, to a *Boston Herald* representative in New York, two or three days ago. "While there I had an opportunity, through talks with Minister Terrell and two of the Sultan's aides, to learn all the inside facts about the Armenian atrocities. The whole matter has been grossly misunderstood. The root of all the trouble lies in the missionaries sent out to Armenia from England and America. Instead of trying to help the people they teach them that they are ill-treated, and sow the seeds of discontent and rebellion. They have started all the difficulty, and, when the blame is properly placed, it will rest upon their heads.

"We hear a great deal in this country about 'the barbarous

Turk.' Now, I have travelled and painted all over the globe, and know pretty well the inhabitants of all countries; and let me tell you that I never met a more civilised, humane, intelligent, cleanly, pious, and chaste man than the typical Turk. He is quiet and respectable; he is pre-eminently kind and good to his family.

"See how humane the Turks are to animals. I don't know how many hundred thousand dogs there are in Constantinople, but probably there are fifty to each block. Every few minutes, if you are watching what goes on round you, you will see a Turk go over to a baker shop, buy a bit of bread or something else that the dogs will eat, and feed them. Nobody owns these creatures. They have been common property for a thousand years, I suppose; yet, ugly and mangy as they are, they never go hungry. Nor do they ever suffer violence. Striking a dog in the streets of Constantinople means imprisonment for a year. Why, I've seen a team come along one of these narrow streets when a dog was lying in the way, and the driver would stop his donkeys and lift the dog out of the way, rather than run the risk of hurting him. I never saw anyone beat or kick a donkey in Turkey. The people recognise that these creatures are their faithful servants, and treat them kindly. The love existing between the Turk or the Arabian and his horse is proverbial.

"What have we in the way of religion to teach these people? Nothing. It's pure bumpiousness for us to try to 'convert' them. They neither want nor need our religion. They've got a better one of their own.

"Another point. What order of men are they whom the English and the American religious bodies send out as missionaries? If you have ever noted closely the students in our training schools for the ministry, you must have discovered that, as a class, they are far from representing the best, or even a very good, type of American manhood. Many of them are young men from country towns and villages who would not make a decent living in any other calling. They hear a sermon by some returned missionary who wishes to arouse interest in the country in which he has lived, and straightway they are called to labour in the same field. Such sermons are apt to take hold of the less intelligent and more impressionable men; and it is often the men who are not fitted to take high rank among the ministry in their own country who feel themselves drawn to work in a foreign land. The result is that we send out the most incapable specimens of our rural population—men of uncouth manners, who have learned a little Latin and Hebrew, the representatives of half-a-dozen religious sects, which are at constant war with each other about their creeds—to convert a cultured, courteous, pious, humane, temperate race, whose unified religion enters as much into the life of its members as does their business.

"Now and then we hear of some girl in a country town who thinks that she has a mission to do good to the heathen. She had far better go down to the factory in her village and minister there; but no, there is no glamour about that. Imagining that she is a new Joan of Arc, our hysterical friend tells some missionary body all about it, and they send her over to Turkey. You can picture to yourself the amazement and the disgust with which the Turks regard such missionaries. Superb specimens of physique they look upon these little wizened, dried-up, spectacled women with infinite contempt; just as they scoff at the idea of adopting a religion about which the various schools cannot agree.

"Well, colonies of such bores and cranks go over to Armenia and found schools. The children come to be taught, and eventually they join some one or another Christian church. They are pariahs as long as they live—marked boys and girls, branded men and women, who have lost caste among their fellows. What have they gained? 'Christianity,' you say. Very true. But if they would lead pure and noble lives under the religion of Muhammed, how are they better off? We surely cannot believe that heathens who lead good lives according to their lights do not go to heaven.

"Pretty soon someone comes along and hits an Armenian over the head. The missionaries keep telling their converts and the poor people that the Turk did it. They tell them that they are abused, and stir them up to rebellion. The result is bloodshed, as you have seen. So far as can be learned not one American missionary has been injured.

"But our missionaries and those sent out by the English can, if they will, do immense good. They can teach the races, among which they make their homes, to plough, to harrow, to make and to use tools, and innumerable other things, in which they are far behind us. There is very little use to carry our knowledge of medicine to the Turks, because the latter are never sick. They are temperate in all things; they drink no wine (their religion forbids it) and they eat very little meat. Above all, they are the cleanest people on the globe. Your orthodox Turk bathes three times a day. When you enter a restaurant in Constantinople the first thing they bring you is a bowl of hot water and some fresh towel to wipe your hands on. Then they bring you cold water and a fresh towel. Now, disease is bred by dirt and intemperance, and in the absence of these there is health.

"But although Turkey is not one of the countries to which we can with advantage send missionaries with a knowledge of medicine, we can really benefit the Turks and the Armenians by teaching them the mechanical arts and agriculture. And in that direction lie our rightful activities in their behalf, not in the way of religion. For a people whom you can hardly induce to go to church once a week, save to hear a sensational sermon, to teach religion to a race who go gladly and enthusiastically to worship the Jehovah whom they believe to be behind the blank wall on the Meccaward end of their mosques, is the most arrogant bumpiousness."

HOW DID THE THIEF GET IN?

YOU wake up some morning and miss your watch, your purse, your best clothes and other valuables. Yet neither you nor any member of your family heard a sound during the night. Neither is there a sign of how the thief got into the house nor by what road he decamped. You rush round and tell the police, and also decide to keep a dog and a shot gun. You will let thieves know they mustn't come fooling around your premises after this. A sensible procedure. Meanwhile your watch, your money, &c., are gone. Quite so.

Now suppose I should tell you that the thief who stole your property never entered your house at all; that he was born in it; had lived twenty years in it; never had been out of it till he went off with your things, albeit not a soul of you had ever seen or heard of him. What would you say to me? You would call me an idiot and threaten to have me sent back to the asylum. But don't be too sure.

"Later on," says Mr. Heakin, "rheumatism struck into my system and I had pains all over me. I was confined to my bed for three months with it and could not dress myself. In this general condition I continued for five years. One after another I was treated by *fourteen* doctors in that time, but their medicines did me little or no good. At one time I went to the Infirmary at Shrewsbury, where they treated me for heart disease; but I got worse and feeling anxious, returned home."

How he was finally cured we will mention in a minute. First, however, about his rheumatism. Every intelligent person knows that rheumatism and gout (its twin brother) is virtually a universal ailment. It does its cruel and body-racking work in every country and climate. No other malady causes so vast an aggregate of suffering and disability. Whatever will cure it is worth more money in England than a gold mine in every country.

But does rheumatism "strike into" the system as a bullet or a knife might strike into it? No Rheumatism is a thief who steals away our comfort and strength; but it a thief, as I said, who *is born in the premises*. In other words, it is one—and only one—of the direct consequences of indigestion and dyspepsia. And this is the why and wherefore: Indigestion creates a poison called uric acid; this acid combines with the chloride of sodium to form a salt; this salt is urate of sodium, which is deposited in the form of *sharp crystals* in the muscles and joints. Then comes inflammation and agony, otherwise rheumatism. Thus you perceive that it doesn't come from the outside but from the inside—from the stomach. Our friend's cold, caught in the mine, didn't produce his rheumatism, it clogged his skin and so kept all the poison in his body instead of letting part of it out.

Here is our very good friend Mr. Richard Heakin, of Penrith, Salop, who expresses an opinion in this line. Let us have his exact words. He says: "*Rheumatism struck into my system*." Of course we understand that he speaks after the manner of men. You know we talk of being "attacked" by this, and the other complaint, as though diseases were like soldiers or wild beasts. "Doesn't make any odds," do you say? Big pardon, but it does—*heavy odds*. *For it teaches us to look in the wrong direction for danger*. Do you see now?

Thirteen years ago, in the spring of 1880, whilst working in the Roman Gravel Lead Mines, Mr. Heakin took a bad cold. He got over the cold, but not over what followed it. He was feeble, without appetite, and had a deal of pain in the chest and sides. His eyes and skin were tinted yellow, and his hands and feet were cold and clammy. Frequently he would break out into a cold perspiration, as a man does on receiving a nervous shock caused by something fearful or horrible. He was also troubled with pain at the heart and had spells of difficult breathing—what medical men call *asthma*.

Mr. Heakin adds: "I was cured at last by Mother Seigel's Curative Syrup, and without it I believed I should have been dead long ago."

Very likely, very likely; for this thief, although he may wait long for his opportunity, isn't always satisfied to run away with our comfort and our money: he often takes life too.

INDIA GENERAL STEAM NAVIGATION Co., Ltd. IMPORTANT NOTICE.

The undersigned beg to give notice that they are prepared to insure at very favourable rates, upon F. P. A. terms only, all and any goods (with the exception of Tea) shipped by steamer and flats to or from any station on their Inland Services.

For further particulars apply to—
KILBURN & Co.,
Managing Agents.

CALCUTTA:
4, FAIRLIE PLACE,
The 12th March 1896.

A Wonderful Medicine.

BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are in valuable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical; it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Utkor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Barington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babu, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the pen in apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

Far much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—The *Pioneer*, (Allahabad) Oct. 5, 1895.
The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—The *Muhammadan*, (Madras) Oct. 5, 1895

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—The *Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—The *Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." x Dr. H. Moore of Royal Artillery from Poonamallee says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumtun says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Sub Inspector from Suikuttia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kanotees says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Foudzari
Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases. Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent, on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.
Scientific American.

CALCUTTA, SATURDAY, APRIL 18, 1896.

WHOLE NO. 721.

CONTEMPORARY POETRY.

THE PHANTOM SHIP.

The breeze had sunk to rest,
The noonday sun was high,
And ocean's breast lay motionless
Beneath a cloudless sky.
There was silence in the air,
There was silence in the deep ;
And it seemed as though that burning calm
Were nature's final sleep.

A noble ship there lay
Upon the quiet sea,
Her keel had ploughed for many a day
The paths of ocean free ;
She had braved the storm and battle,
She had faced the booming gun,
And 'midst a thousand foemen,
Had struck her flag to none.

And many a noble heart
That gallant vessel bore,
And many a sigh and many a prayer
Had wafted her from shore ;
But now that breathless calm
Was round her like a chain,
And helplessly for many a day
Beneath it she had lain.

Her canvass all was spread,
To catch the lightest gale ;
But spread in vain, for no breeze was there,
To ruffle the loftiest sail ;
The shadow of her masts
Chequered the deep below ;
You might trace the line of her slenderest spar
On that azure mirror's glow.

The mid-day watch was set
Beneath that blaze of light,
When there came a cry from the tall masthead,
A sail ! a sail ! in sight ;
And o'er the far horizon
A snowy speck appeared,
And every eye was strained to watch
The vessel as she neared.

There was no breath of air,
Yet she bounded on her way,
And the dancing waves around her prow
Were flashing into spray.
She answered not their hail,
Alongside as she passed ;
There were none who trod her spacious deck,
Not a seaman on the mast :

No hand to guide her helm ;
Yet on she held her course ;
She swept along that waveless sea,
As with a tempest's force ;
A silence, as of death,
Was o'er that vessel spread ;
She seemed a thing of another world,
The world where dwell the dead.

She passed away from sight,
The deadly calm was o'er,
And the spell-bound ship pursued her course
Before the breeze once more ;
And clouds across the sky
Obscured the noonday sun,
And the winds arose at the tempest's call,
Before the day was done.

Midnight, and still the storm
Raged wrathfully and loud,
And deep in the trough of the heaving sea
Laboured that vessel proud ;
There was darkness all around,
Save where lightning flashes keen
Played on the crests of the broken waves,
And lit the depths between.

Around her and below,
The waste of waters roared,
And answered the crash of the falling masts,
As they cast them overboard.
At every billow's shock
Her quivering timbers strain ;
And as she rose on a crested wave
That strange ship passed again.

And o'er that stormy sea
She flew before the gale,
Yet she had not struck her lightest spar,
Nor furled her loftiest sail.
Another blinding flash,
And nearer yet she seemed,
And a pale blue light along her sails
And o'er her rigging gleamed.

DEAFNESS COMPLETELY CURED ! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S.W.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

But it showed no seaman's form,
No hand her course to guide :
And to their signals of distress
The winds alone replied.

The Phantom Ship passed on,
Driven o'er her pathless way,
But helplessly the sinking wreck
Amid the breakers lay.

The angry tempest ceased,
The winds were hushed to sleep,
And calm and bright the sun again
Shone out upon the deep.
But that gallant ship no more
Shall roam the ocean free ;
She has reached her final haven,
Beneath the dark blue sea.

And many a hardy seaman,
Who fears nor storm nor fight,
Yet trembles when the Phantom Ship
Drives past his watch at night ,
For it augurs death and danger ;
It bodes a watery grave,
With sea-weeds for his pillow ;
For his shroud, the wandering wave.

—*Sharpe's Magazine.*

WEEKLYANA.

We read in the *Weekly Dispatch*, printed and published at Tudor House, Tudor Street, London, that "No fewer than 1,000,000 of men, women, and children die yearly in India from starvation." It is a heavy indictment against the Government of India which have perfected their famine code.

A HIGH official, referring to our article on cholera in our issue of the 4th of April, says :—

"As to cholera, you are wrong in recommending camphor which, in Asiatic cholera is useless. Let those who want to be proof against cholera take 15 drops of sulphuric acid in a little water daily after a meal. This is a great discovery. I should like to see water carts full of dilute sulphuric acid sent through the streets for all who wish to take a couple of ounces or so to help themselves. If cholera takes hold of you, take a table spoonful of castor oil beaten up with milk and flavoured with nutmeg. This is an infallible remedy. When nature gives a poison, she gives an antidote. The castor oil plant is death to the cholera microbe, and it grows as a weed in the cradle of cholera."

Sulphuric acid has been tried in cholera and found—wanting. Our readers will know more of this from the leader on the subject this week.

THE Bengal Government have issued two more circular letters to Commissioners of Divisions on the present scarcity of water and the prevalence of cholera due to such want. We reproduce them below. Regarding the scarcity of drinking-water, Mr. Risley, Secretary in the Municipal Department, says :—

"Circular No. 23 L.S.-G., dated Cal. the 11th April 1896.—In continuation of my Circular No. 22 L.S.-G., dated the 2nd April 1896, on the subject of the present scarcity of drinking-water in many districts of Bengal, I am directed to request that you and all District and Sub-divisional Officers will endeavour by all means in your power to bring home to the landed classes and to the people generally the fact that the utmost the District Boards can do to augment the available supply of drinking-water can only produce a very trifling effect in comparison with the requirements of the rural population. Scarcity of drinking-water is a calamity which affects more or less all classes of the community, and every one should therefore do something according to his means to supply this want. Land-owners and other wealthy persons can fulfil what has always been regarded in India as a religious obligation by digging new tanks or wells, deepening and cleansing old ones, and, above all, by surrendering their private rights in respect of water-supply in favour of the District Boards, and thus rendering it possible for these bodies to exercise the powers conferred on them by sections 88 and 90 of the Bengal Local Self-Government Act of 1885, of repairing and maintaining wells and tanks, and reserving them for the supply of water for drinking. On the other hand, cultivators and labourers, who habitually work with their hands on their own or other people's land, may do useful work by repairing and excavating village tanks and wells, and while thus labouring for the good of the community, they

may fairly claim to be aided with supplies of food by members of the middle class, who should contribute according to their means. If means can be found of starting and organising voluntary action of this kind, more may be done in a year than the District Board even with the aid of Government could do in a generation.

2. The question of water-supply in municipalities is one of less difficulty than in rural areas, but in the smaller towns scarcity of water is complained of. Here again the owners of tanks and wells can do much to help the people by waiving their rights of private property in favour of the Commissioners and thus enabling them to set apart such sources for the supply of drinking water under section 199 of the Municipal Act. Action may also be taken by the Commissioners of their own motion to prohibit the use of bad water under section 199A, and to require the owners or occupiers of land to cleanse unwholesome wells, tanks or water-courses under section 200."

To a Hindu, it is a religious merit to supply free water to his thirsty neighbour. Dedication of tanks for drinking water and of trees for their shade are not uncommon charities among Hindus. The Government Circular does not require more.

With reference to the prevalence of cholera, Mr. Risley writes :—

"Circular No. 24 Medl. Cal. the 11th April 1896.—In connexion with the increasing prevalence of cholera in many districts of Bengal at the present time, I am directed to invite your attention to Government Circular No. 46, dated the 19th August 1879, laying down the procedure to be adopted in the event of an epidemic of disease occurring in any district, and to request that the orders conveyed in that circular may be carefully observed. A copy of the report on the outbreak should be sent to the Sanitary Commissioner, and telegraphic intimation of its occurrence should be given to Professor Haffkine in the manner laid down in my circular No. 12 Medl., dated the 7th March last.

2. With reference to clause 2 of paragraph 3 of the circular, I am further to say that whenever an epidemic occurs, cholera pills or similar medicines should be made available at all police-stations, post-offices, and cutcherries of wards and encumbered estates in the area affected, and that zamindars and other persons of influence should be induced to distribute these remedies. Sir Alexander Mackenzie has himself found much advantage in dealing with an epidemic of cholera from the issue of a notice warning the villagers that they should apply to the chaukidar for pills whenever the first symptoms of diarrhoea showed themselves. This saved many lives, and had much effect in allaying the tendency to panic which augments the liability to disease.

3. The Lieutenant-Governor desires you to see that in addition to the measures indicated above, all such other measures as local conditions may admit of are taken to meet outbreaks of cholera wherever they may occur. The Inspector-General of Civil Hospitals has been requested to arrange to depute Assistant Surgeons and Civil Hospital Assistants to do cholera duty in places where they are most needed. A copy of this circular is being sent direct to all Magistrates and Deputy Commissioners."

It would have been well if the Circular of 1879 were republished for general information. That would have been another step towards allaying public apprehensions.

THE Health Department of the Calcutta Corporation have suggested preventive measures against cholera before outbreak in these words :—

1. The use of the water of tanks and Circular Canal for any purpose whatever should be stopped, and that of the water of the Tolly's Nullah and of the River Hooghly should be stopped or avoided as much as possible, till the beginning of the rains. Their water is not in a safe condition. Filtered water should be used for drinking, cooking, bathing and washing utensils and clothes, and for all other purposes. If there be scarcity of filtered water in any locality, the Municipality should be immediately written to.

2. Water drawn from unknown sources (such as water supplied by bhistees, bhandis, etc.) should be avoided, or if used at all, should be boiled for half-an-hour, and placed in a clean covered vessel before use for drinking, cooking, washing utensils or clothes or bathing. The water used for drinking and cooking may be treated with alum and camphor after boiling.

3. All unwholesome or indigestible food (such as raw fruits, preserved fish or meat, native confections from *haloowies*, or decomposed articles,) milk or products of milk or articles of drink or food from hawking vendors or unknown sources should be carefully avoided, and extreme and continuous fatigue in the hot parts of the day should be as far as possible avoided.

4. Milk and all articles of drink should be thoroughly boiled before use.

5. Fasting or overloading of the stomach should be avoided.

6. The house and premises should be kept scrupulously clean; latrines and drains should be daily thoroughly cleansed, and, if possible, washed and disinfected daily with phenyle, crude carbolic acid (in large quantities), chloride of lime or quick lime.

7. As prophylactic quinine with or without nitro-muriatic acid in water may be taken twice or thrice a day, or anti-choleraic inoculation on Haffkine's system may be resorted to.

8. Any looseness of the bowels, or other bowel-complaints should be at once attended to, and medical advice taken."

Diarrhoea has been described as inchoate cholera—cholera in its curable stage, and should, therefore, be guarded against and never neglected.

Mr. R. Sen, L.F.P.S., L.S.A., the Officiating Health Officer, further prescribes the following precautions during outbreak of cholera :—

"1. On the occurrence of cholera in a house, the patient should be strictly isolated from the rest of the inmates except those who attend on him : medical advice should be immediately sought for and intimation given to the Health Officer. If the patient or his friends be too poor to pay for medical advice, the patient should be either sent to hospital, or application for medicines should be made at one of the offices mentioned below :—

No. 1, Hogulcooria Gully, Dr. I. K. Chatterjee.

No. 195, Cornwallis Street, Dr. S. Das.

No. 23-1, College Street, Dr. B. Basu.

No. 44, Wellington Street, Dr. Sirkar.

If the patient has no proper accommodation and no friends to attend on him, he should be immediately sent to hospital.

2. All discharges of the patient should be immediately disinfected with carbolic acid (solution 5 per cent.) in large quantity, chloride of lime, or quick-lime, and after being mixed with saw-dust, ashes or house-sweepings completely burnt.

3. All linen and bedding soiled with the discharges should be burnt, or taken apart and disinfected by boiling in water for half-an-hour and then washing over a drain or by sending it to the Municipal Disinfecting Station at the Entally Incinerator.

4. No article of food or drink used by the patient should be partaken of by any other person. No utensil or furniture used by the patient should be used or handled by any one else until it has been thoroughly disinfected by boiling in water or potassium permanganate solution for half-an-hour.

5. None but persons required to nurse the patient should enter or go near the patient's room. Persons in attendance on a patient should wash their hands with phenyle, carbolic lotion 5 p.c. or corrosive sublimate lotion (1 in 1,000) every time they handle the patient and every such person before entering any room or part of the house beyond the patient's room, should wash his hands with the same disinfectants, and, if possible, change his clothes.

6. Any article of clothing on the person of any of the patient's attendants that may have been soiled with the discharges should be dealt with in the same way as the patient's clothes.

7. Sulphur should be burnt at different points in the open parts of the house, but particularly opposite the windward side of the patient's room.

8. On the death or recovery of the patient, all his clothes, bedding, etc., should be burnt, articles of value being disinfected by boiling in water for half-an-hour or sending to the Municipal Disinfecting Station; all furniture as well as the room used by the patient and his attendants should be disinfected according to the following rules :

Rules for Disinfection.

1. All infected clothes should be boiled with water for at least half-an-hour. This is the safest and most easy method which should always be adopted.

2. All furniture and other articles which have been infected should be thoroughly washed with hydrag. perchloride lotion (str. 1 in 1,000) viz., 1 drm. hydrag. perchloride (*Rasacarpur*) 6½ pints water.

3. All infected beddings should be burnt.

4. All other articles of value which have been infected should be sent to the Disinfecting Station at Nimtola, where they will be disinfected free of cost, and will then be returned to the owner.

5. All the infected rooms should be fumigated with sulphurous gas and the walls and ceiling should be scraped and thoroughly lime-washed. (2½ lbs. of sulphur should be burnt in a saucer, placed in the centre of the room with the doors and windows closed for at least three hours.)

6. The floor in the case of a hut should be leaped with mud mixed with perchloride of mercury (*Rasacarpur*) or carbolic acid lotion. In the case of a house the floor should be thoroughly washed with 5 per cent. carbolic, or 1 in 500 perchloride lotion. *i. e.*,

4 drms. Carbolic Acid; ½ pint water.

1 drm. of hydrag. perchloride; 3 pints water."

CLEANLINESS is next to godliness. If the Hindus truly followed instead of making a mockery of the injunctions laid down for daily life, they need not be afraid of the present visitation. In 1850, when cholera was raging in London, it was remarked that the Jews, although inhabiting for the most part the foulest and most unhealthy portion of the metropolis, were almost exempt from the disease. In a population of over 20,000 of the chosen people, besides 2,000 Portuguese, there were only 13 cases of cholera. The same immunity was also observable during the epidemic of 1832. The causes were simple enough as explained by the Board of Health. The lower classes of Jews, however poor they may be, never crowd more than one family into the same room ; whereas, among the lower orders of other communities—especially the Irish—several families "pig together" in one apartment. Another reason is that the Jews, as a class, are not given to intoxicating liquors. One of the commissioners of enquiry said—"I have had, during the last twenty years, much intercourse with the Jews, and I cannot recall to mind a single instance of drunkenness in any family I have visited. In virtue of their religion, they are particular in their food. All shell fish is avoided, and the meat exposed for sale is inspected by an officer appointed for the purpose ; and if any disease is found, it is condemned. Sabbath rest is, for the most part, strictly observed.

The Jews are unable, from religious motives, to enter the workhouse, and the poor, being comparatively few in number, are relieved by the more wealthy of their own persuasion. Relieving officers enquire into distress, which being relieved, extreme destitution is avoided. The passover enjoins every Jew to have his house thoroughly cleansed annually, and the rooms of the lower classes are annually 'lime-washed'."

••

We read :—

"At a recent meeting of the American Psychological Association, as reported in *The American Naturalist*, February, Prof. W. R. Newbold narrated informally three cases vaguely described as 'Dream Reasoning,' which had occurred in the experience of two of his colleagues. Dr. W. A. Lamberton, Professor of Greek in the University of Pennsylvania, when a young man after giving up as insoluble a problem in descriptive geometry upon which he had been working for weeks by the analytical method, awoke one morning several days later to find an hallucinatory figure projected upon a black-board in his room with all the lines necessary to a geometrical solution of the problem clearly drawn. He has never had any other visual hallucination. Dr. H. V. Hilprecht, Professor of Assyriology in the University of Pennsylvania, some years ago dreamed an interpretation of the name Nebuchadnezzar which has since been universally adopted. At a later period he dreamed that an Assyrian priest gave him information about some inscribed fragments that had puzzled him which was afterwards confirmed in all points now capable of confirmation. Dr. Newbold offered a psychological explanation of these curious cases."

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

MR. Chamberlain, replying to Mr. Bhaunagri, in the House of Commons, promised careful attention to the petition of the Indians of Natal regarding the deprivation of their right to purchase land. Mr. Hanbury replying to Mr. Allen and other members, who complained that the Peninsular and Oriental Company employed lascars to the exclusion of British sailors, said that no coolies were employed ; that it would be unjust to exclude lascars who were our fellow-subjects, and that, moreover, India paid a large portion of the subsidy.

THE situation in Matabeleland continues serious. The whole nation has risen against the Government. Fifteen hundred men at least are required to quell the disturbance. The *Times* states that Sir Hercules Robinson is assuming a grave responsibility in refusing reinforcements. In the House of Commons, on April 13, Mr. Chamberlain stated that Sir Hercules Robinson, after consulting the commander of the troops in Cape Colony, and hearing from Earl Grey and Messrs. Rhodes and Duncan, had offered to send to Matabeleland from Natal 300 cavalry and 200 mounted infantry, besides volunteers. A police force for the disturbed districts had already been arranged. It was also the intention of the High Commissioner to raise a force of 250 Basutos for service in Matabeleland. Mr. Chamberlain further said that he was conferring with the War Office as to what steps were necessary to replace the troops ordered from Natal to the Interior. The Chartered Company will have to pay for all these operations. The offer of troops made by Sir H. Robinson has since been accepted by the authorities concerned. Two hundred men belonging to the Leicestershire Regiment leave Aldershot for the Cape at the end of May. Captain Lumsden, of Gifford's party, who was wounded in one of the late engagements with the Matabele, has died of the injuries. A large body of Matabele, armed with Martini Henry Rifles, furiously attacked and surrounded a force of 130 men under the command of Captain Brand some thirty miles from Bulawayo. The British, after having exhausted their ammunition, successfully cut their way through the enemy, and then emerging met a relief column. The British loss was five killed and sixteen wounded, while the Matabele lost 150 killed and 400 wounded. Advances from Bulawayo continue to disclose a serious state of things. Mr. Nicholson, the local administrator there, telegraphs that about 250 men are available to co-operate with Colonel Plumer's force, but it is impossible to estimate the numbers of the Matabele. The garrison are amply victualled.

THE Natives in the Northern parts of the Transvaal are getting restless, and a rising is apprehended. The *Times* urges the necessity of increasing the British garrisons in South Africa in order to keep peace within the borders and thereby to render foreign aggression hopeless.

THE ravages caused by rinderpest in Bechuanaland are increasing, and the transport service to Bulawayo has collapsed. Confirmation has been received that two hundred Soudanese are with Mr. Rhodes, who is still at Fort Salisbury. He has recovered from his late illness, and proposes to start with his column to relieve Bulawayo.

MAJOR Stevani's column has been ordered to temporarily remain at Kassala. A group of Egyptian capitalists holding Egyptian bonds for about a million is legally opposing the action of the French bondholders, and affirming that the grant of funds by Caisse de la Dette was justified by the necessity which existed for undertaking the Nile expedition. The hearing of the case brought by the French bondholders against the Caisse commenced before the Cairo Court of the first instance, and was adjourned for a fortnight. In the House of Commons, on April 14, Mr. Curzon, replying to a question by Mr. Labouchere, said that if it were necessary to employ British troops beyond Wady Halfa the cost of doing so would be a matter for discussion between England and Egypt. The Secretary of State for India, replying to a question whether it was the intention of Her Majesty's Government to employ troops belonging to India in the Soudan, said that the Government had no reason to suppose that the Egyptian army was inadequate to the undertaking. The *Daily News* as well as the *Daily Telegraph* announce that ten thousand British troops will be despatched in the autumn for the purpose of reconquering the Soudan. The *Times* publishes a telegram from its correspondent at Rome stating that evidence is accumulating which points to the fact that Russia and France are succeeding in combining the Shoans and the Dervishes against the Italians and the English. Intelligence has been received that a Russian expedition, ostensibly under the Red Cross to succour the Shoans wounded in battle with the Italians, composed of eighty persons, including several officers, has sailed for Abyssinia. It is reported from Cairo that two sharp encounters have taken place between the Dervishes and the Egyptians in the neighbourhood of Tokar, the Dervishes losing heavily. Eighteen Egyptians have been killed.

THE death is announced of M. Tricoupis, the Greek statesman.

THE meeting at Venice of King Humbert and the Emperor William was of a most cordial character. The Emperor William had also a cordial meeting at Vienna, on April 14, with the Emperor Francis Joseph. The German Emperor, had, moreover, a conference with Count Goluchowski.

AT the Colonial Institute, on April 14, Lord Loch presiding, Mr. Justice Clarence read a paper reviewing the history of Ceylon and the splendid results obtained by the British rule over the Island. He pointed out the great development of trade and plantation enterprise of the British in the Colony, and said that the principal shortcoming to be found in the domain is law and justice.

COUNT Yamagata has arrived at New York from Japan on his way to Moscow to be present at the Tzar's coronation, and met with an enthusiastic reception.

IN reply to a question in the House of Commons, Mr. Chamberlain said that the Indian Government increased its contribution to the Imperial Institute to £750, and that a committee having Indian experience will be appointed to co-operate with the staff of the Institute to secure the proper application of the Indian grant.

THE treaty which has been concluded between Germany and Japan completely abolishes extra-territoriality in Japan, but the German Consuls retain legal functions in respect of certain matters, particularly the question relating to succession and guardianship. A

convention between Germany and Japan dealing with the patents and trade-marks is projected in the treaty, meanwhile the Germans have been placed on an equal footing with the Natives. Japan concedes to the reduction of tariff, while Germany merely grants the favoured nation treatment to Japan.

THE Sultan has created Prince Ferdinand of Bulgaria a Field-Marshal in the Turkish Army.

IN the House of Commons, on April 16, the Chancellor of the Exchequer, in opening his Budget for 1896-97, announced that, notwithstanding the largest expenditure known since the last great war, the Budget showed a surplus, of which four millions had already been devoted to the navy. The estimated increase in the expenditure was four millions which will chiefly be incurred in respect of the navy; notwithstanding which there will be a surplus of two millions, where-with the Government will be able to reduce the land tax, and the agricultural rate, and transfer the remaining balance for the purpose of education. Tea is expelling coffee from the market. Indian and Ceylon kinds are rapidly replacing those grown in China. The national debt has been reduced by eight millions. Every item of revenue has increased. The Chancellor, in conclusion, declared the credit of England to be so good that it is possible in an emergency to raise 200 millions without any increase of taxation.

THE preliminary announcement of the ensuing International Homœopathic Congress has been made. The Congress will be held at Queen's Hall, Langham Place, London, for one week, from Monday the 3rd of August to Saturday the 8th. It is open to all qualified to practise medicine in their own country. The general Secretary is Dr. Richard Hughes, 36 Sillwood Road, Brighton, to whom all communications relating to the work of the Congress should be addressed. The following programme has been decided upon. On Monday evening the President will hold a reception of the members and the ladies of their families. The following day will be occupied with the address of the President and the presentation of reports from the different countries on the history of homœopathy during the last five years. Then there will be a discussion on the condition and prospects of homœopathy at the present time, and the best means of furthering its cause. Wednesday is reserved for institutes of homœopathy and materia medica. Thursday will be devoted to practical medicine and diseases of eye, ear, and throat. For Friday the topics are surgical and gynæcological therapeutics.

THERE is a split in the camp of the Salvationists. General Booth and his son Ballington Booth have separated. The son and his wife have organized a new army.

RÖNTGEN'S X rays have been recognized in Court. In a suit for damages by an actress against the Nottingham Theatre Company, for injuries sustained by her slipping on a defective stone staircase in the theatre, Professor Ramsay exhibited photographs of the bones of both her feet in one of which the cuboid bone was displaced. There was a decree for £76-10s.

SURGEON-CAPTAIN George Hilliard, of the Army Medical Department, for his attendance on Prince Henry of Battenburg during his last illness, has been gazetted a Companion of the Order of St. Michael and St. George. Sir Morell Mackenzie got his knighthood for treating the late Emperor Frederick when he was suffering from cancer of the larynx of which he died.

AT Lambeth, Charles Gordon, 37, was charged, before Mr. Denman, with pretending and professing to tell fortunes. The prisoner's defence was that the information he gave was from well-known works on astrology. Mr. Denman had no doubt that prisoner had been pretending to tell fortunes. Looking through one letter addressed to the prisoner, the magistrate remarked that there was not a single piece of information given in reply which the fair writer—a girl—had not herself communicated. There was a very old saying and a true one, that the world consisted of a great number of people, mostly fools, and upon that fact the prisoner had been trading. He ordered a fine of £8, and £2 costs or prison for 1 month.

Is fortune-telling an offence in India?

THE Hon'ble Prince Sir Jehan Kadr Mirza Mahomed Wahid Ali Bahadur, K.C.I.E., died suddenly at his residence, in Garden Reach, on Thursday, April 16, at 5-40 P. M. Though not in the best of health for some months past, there was no visible indication of the approaching end. Those, however, who watched him closely, found a change in the man that was foreign to his nature, and they apprehended evil. At 5 P. M., the same day, he wrote his last letter. It was intended for Khan Bahadur Abdul Jubbar, but not despatched. In it, the Prince says that "it is with great difficulty that I have written you these few lines. I have been in indifferent health of late, and now I feel a pain in my chest and I am also suffering from shortness of breath." Immediately after the letter was closed, the pain grew severer and he made a rush to the W. C. From there he ran to the veranda and descended a few steps. The servants, apprehending danger, brought him back to the central drawing room. He shrieked three times, said he had heart disease, and sank into bed. In 5 minutes more, the Prince had breathed his last. The family members and friends who had gathered round the bed, were not aware of the end. They believed that he had swooned of the pain, and that he would revive. In this state of suspense they waited for more than an hour, nursing the dead. Dr. Panioty, the family physician, who was sent for, arrived at 7 P. M., to confirm the suspicions of death and to pronounce that death was due to apoplexy. The prince was buried the next day at about 2 P. M., at the Septanabad Inambara by the side of the late King of Oudh. A large number of Mahomedans were present. We are sure that if the Hindus could know it, many of them would have been present to pay their last tribute of respect. The Calcutta Madressa was closed yesterday in memory of the deceased.

With Prince Jehan Kadr passes away the remaining glimpse of royalty at Garden Reach. There are a host of Oudh pensioners, but they are pensioners only. A prince by blood and in appearance, the late Prince maintained his status as far as the slender means placed at his disposal would allow and realized the responsibility of his position. At the distribution of the Oudh pension on the death of the ex-king Wajid Ali Shah, Mirza Jehan Kadr was not given the first rank as he preeminently deserved. But later on Government consoled him with a knighthood and membership of the Governor-General's Legislative Council. Although a Shia by persuasion, he was equally respected by the Sunnis of his community as well as the Hindus of the metropolis. Of sweet temper, agreeable manners, taking interest in all public affairs, the death of Prince Mirza Jehan Kadr is a loss to Calcutta society. The death will be equally mourned elsewhere, wherever he was known—it Oudh, at Moorshedabad, and all Mahomedan Durbars, by both Mahomedans and Hindus.

As soon as the mournful intelligence was brought to Calcutta, friends hastened to Garden Reach. The Hon'ble Nawab Ameer Hossain, a man of the world, reserved his visit till the next morning. It must not be supposed that he was unmindful of the dead. On receipt of the news, he drove at once to the telegraph office and sent messages to absent governors and distant friends. That was as much a duty to the dead as to arrange for and attend his funeral. Telegrams of condolence have been received from both the Viceroy and the Lieutenant-Governor. The Prince leaves no son, but only two married daughters. His wife, the daughter of the ex-king, had predeceased him as also his eldest daughter.

For many years, Prince Jehan Kadr was President of the Mahomedan Literary Society. It was as such, as for his own qualities, that he was so widely known and honoured by Government. We believe it is now the turn of Khan Bahadur Abdul Jubbar, who was held in great regard by the deceased, to succeed the Prince as President of that Society.

Mr. D. R. Lyall having, with his retirement from the British service, resigned his seat on the Bengal Legislative Council, Mr. William Henry Grimley, his successor in the Board of Revenue, has been appointed a member of the Bengal Council. Mr. Lyall did not go out without a sigh or a regret. The Civil Service gave him a farewell dinner at which the Lieutenant-Governor was present. The Bengal Government have again Gzatted the following notification:

"The Lieutenant-Governor announces with regret the retirement of Mr. David Robert Lyall, C. S. I., member of the Board of Revenue, after a service of nearly thirty-five years. Mr. Lyall has always been regarded as one of the most efficient and reliable officers under the Government of Bengal, and has done good work as a Magistrate

and Collector, as Inspector-General of Police, as Commissioner of Division, and finally as a member of the Board. His retirement is a loss to the administration."

Let us hope, his accession will be a gain to the Cooch Behar State. There is undoubtedly an advancement in that principality. A retired Commissioner of a Division in British India had been its Superintendent. "This time a retired member of the Board of Revenue has been offered and accepted the post. The next advance will be to appoint a retired Lieutenant-Governor. Mr. Lyall draws an advance of Rs. 500 on Mr. Lowie's pay. Of a sporting disposition, Mr. Lyall will have an ample field for exercise in that kingdom in the budget whereof the shooting camp has a prominent place.

HERBERT ALLEN, baron, was tried at the Birmingham Assizes, and found guilty of the murder of Henry James Skinner, manager of the Bodega Stores. Having been dismissed from service, he shot his master. The defence was directed in proving that there was insanity in the prisoner's family. His father had attempted suicide; a brother had actually killed himself; another brother also shot himself, though not fatally; while he the prisoner had suffered severely from the effects of a fall from a tree. The medical evidence shewed that the prisoner was suffering from brain disease but he was conscious of his act and knew that it was wrong. The jury found a verdict of guilty, with a strong recommendation to mercy. Before the Judge passed sentence, the prisoner, in a firm and loud voice, read the following from a paper in his hands:—

"My lord and gentlemen of the jury, I beg leave to address a few remarks to you concerning myself. I have always been, as far as I can remember, a misanthropical character, and always wherever misfortune befel me my thoughts instantly turned to suicide. I have made several attempts on my life which have been unsuccessful, and I don't place much value on the possession of it. It is with the greatest anguish that I know I have taken the life of a fellow-creature, but from the first my only intention was self-murder, and it was only by a strange combination of circumstances that I was led to commit the crime for which I am about to suffer. And it has been the hope and certainty that you would condemn me that has alone been the means of restraining me from committing suicide whilst in prison, so that it does not come to me with such a shock that it would do any one else. First I bought a revolver and cartridges even at the age of 12 to shoot myself, but my father took them from me, and I have besides tried other ways to get rid of myself. But that does not matter now, as you are going to do it for me, and I am very pleased that I shall not commit suicide after all. I sincerely thank every one for their kind sympathy, and trust they will not petition the Government for a reprieve for me, as I should only strangle myself at the first opportunity if you obtained one."

The Judge was not so sentimental. Addressing the prisoner, he said:

"I have no wish to add to the misery of your present position. The act of yours that has deprived Henry Skinner of his life was cruel and deliberate. And I won't refer to the observations that you have just made. I advise you not to rely on the recommendation to mercy, and not to build hopes upon it that may be disappointed. I hope the interval of life that may be left to you will be employed as it should be, and with a due sense of your responsibilities hereafter. At any rate I trust that you will show a better spirit and a true sorrow and contrition for the wrong upon a fellow-man, and one who for many years was a kind friend of yours."

The sentence of death in the usual form was then passed.

REIS & RAYYET.

Saturday, April 18, 1896.

CHOLERA: ITS TREATMENT.

THE treatment of cholera is always a vexed question, especially in India where four different systems are in vogue. The old school may be said to consist of the Kaviraji, the Yunani and the so-called allopathic methods; and the new, the homœopathic. Without expressing any opinion on the two Indian systems, we will confine ourselves to the two European, the old and the new. The old school practitioners do not follow any defined rule but, as empirics, catch hold of the prevailing fashion which they call rationalism. In their earlier practice they would administer astringents, to put a stop to the evacuations, and prescribe large doses of calomel. Along with these spirit ether nitric was given to help the emission of urine, and stimulants to keep up the heart's action. A favourite medicine with the late Dr. S. G. Chuckerbutty, adopted from the new school, was tincture cantharides for retention or suppression of urine. The late Dr. Smith as first

physician of the Medical College used to follow Dr. George Johnson, in his recommendation of castor oil as eliminative of the cholera poison. This treatment, owing to many failures, was at last abandoned. Opium and stimulants, though found successful in Europe, gave no satisfactory results in India. There are, however, a few in this country who yet stick to them. Then came the days of the bacilli discovered by Pasteur. Koch followed him with his tubercular germ and cholera organism. On these discoveries, attempts were made to kill the bacilli which caused the disease, and not to check the symptoms produced. The next step was to find the germicides. This led to the adoption of sulphuric and other acids, quinine, corrosive sublimate, arsenic and others supposed to possess a destroying property. They had their little triumphs, acid sulphuric dilute with tannic acid being favoured till the last. Calomel with soda bicarb would be administered in the collapse state of a patient, though in diminished doses. Some of the practitioners having found the success of arsenic of the new school, resorted to their pharmacopœial preparation of the liquor arsenicales. It has now a prominent place in the old school practice which still cannot do without calomel. Chlorodyne, as when it was put in the market, still maintains its hold, notwithstanding the warnings against patent medicines given by the *British Medical Journal* and other authorities.

There are other quack nostrums in which each of the practitioners is an authority by himself, appealing to his age and experience. Age he may have, but experience very little. If there had been any accumulated experience worthy of the name, the treatment of the disease would not have changed like a weather-cock. Experience or observation means the differentiation in the physiological action of medicines. Accepting the cholera bacilli to be the true parasites producing the disease, how is it that all cases of cholera are not alike? It has not been ascertained why there are so many different symptoms. One patient has cramps for the leading symptom, another the failure of the heart's action from the very beginning. Probably the diversities are due to the different kinds of toxins eliminated by the same bacilli; but that discovery has yet to be made. In our present state of pathological knowledge the safest course seems to be to treat the symptoms. To do this it would be necessary to understand the physiological action of medicines by provings on human bodies and not on animals. For they differ so much in essential varieties in the development and the distribution of nerves derived from the brain and the spinal cord.

The method of treatment depending on the destruction of microbes is yet far from the region of certainty. Celebrated bacteriologists of Europe and of India do not accept the comma bacilli discovered by Koch as *causa causans* of cholera. Klein, Guber, Hueppe, Pettenkoffer, and many others including our Cunningham are not reconciled to that theory. Further, it has been seen that ptomaines, comma and other bacilli can produce symptoms of cholera under certain circumstances. The patient must have a predisposition to catch the disease. This state of health has been explained by the researches of Metchnikoff and Buchner who demonstrated that the white blood cells and the serum have the power to destroy any foreign organism that may come in contact with them. When the blood

loses this power to destroy the microbes, the predisposition arises. As for the germicidal action of medicines, sulphuric acid pure possesses this power, but sulphuric acid dilute we use for our medicine has it not. It has never been shown by experiment that sulphuric acid dilute when taken internally can destroy the comma bacilli or any other poisonous aninfatcles or even the ptomaines in our intestinal canal. Corrosive sublimate even in minute doses has a powerful action. Then why not substitute this for the other? Can any rational explanation be given based on the germicidal property? Dr. Lauder Brunton, one of the greatest of medical authorities in England, recommends muscarin in cholera, basing his opinion on symptoms of the disease and the indications of the medicine and not on the germicidal action of the drug.

The choleraic symptoms produced by ptomaines are sometimes made little of as ptomain-poisoning and not cholera. This system of classification cannot be correct. A disease is usually described by groups of symptoms and not by the bacilli which may produce it. The researches of Dr. Lawrie of Hyderabad in connection with Laveran's plasmodiums of malarious fever go against the assumption of these germs as the cause of disease. There are microscopists in Europe and America who find these bacilli as altered fibrin or blood cells and not as parasites in our blood. Perhaps the day is not distant when these physiologists will view with triumph the adoption of their theory. The antiseptic treatment of surgical wounds is losing favour with its supporters.

Leaving aside the questionable theory of cholera being produced by comma bacilli, let us examine the action of the so-called microbe-killing drugs on the tubercle bacilli which have been accepted by most of the bacteriologists as the cause of consumption. Dr. Koch himself could not discover any poison which destroyed them. His tuberculine, containing the virus of the disease with gold and other medicines supposed to have the power to destroy the bacilli, proved abortive. To take an analogy from the drugs which destroy the serpent poison. Permanganate of potash, ammonia and such others can destroy this poison chemically when observed under a microscope. But they are powerless against it when introduced into a breathing body. It may raise expectations to see the germ destroyed in a microscopic field, but it is quite uncertain that the so-called remedies can counteract the poison growing into the human body deriving sufficient nutrition. The vital action of the blood and the nerves offer a resistance to their so-called chemical properties when pathologically applied. All microbes again are not equally tenacious of life and anthrax bacilli are difficult to destroy. On the other hand, there are many diseases whose germs have not yet been discovered. The celebrated Pasteur could not find any in hydrophobia.

The old school practice has come to such a deplorable plight that Sir Alexander Mackenzie is free to recommend cholera pills. Do the medical department of the Government of Bengal know their compounds? When attempts are being made in England to prosecute the vendors of secret medicines, containing poison as they generally do, here in Bengal the authorities order their general use. In Germany and other countries of Europe the law is very strong. A patent medicine is not permitted until it is found by analysis to contain no poison. If

it contain any, the owner is prosecuted. How different in Bengal! His Honour the Lieutenant-Governor recommends a drug without knowing its composition. He has experience of the pills and that is his justification for the order. A few words about the prophylactic treatment of cholera by Dr. Haffkine will not be out of place. It cannot be denied that he is a specialist in his branch of study, but his conclusions from his own work are not always sober. It ought to be mentioned that he derives his virus from comma bacilli which have not yet been accepted as the cause of cholera by most of the leading scientific men. His method of work is not according to Pasteur's whom he professes to follow. Pasteur never took a group of bacilli nor cultivated them in the way Dr. Haffkine does. In his hydrophobic inoculation Pasteur used the whole spinal cord of the diseased rabbit for the solution, and after a certain process a portion of it was injected. Even in his chicken cholera inoculation, a different method from Haffkine's was followed. The value of a prophylactic treatment is according to the length of the period of immunity from the disease. The time given by Dr. Haffkine is not more than six months. In a country like India where so many dangerous diseases shew themselves at the same time, as cholera, small-pox, dysentery, typhoid fever, &c., would it be any particular advantage to keep off cholera while others stare at your gate? If a prophylactic treatment has any virtue, you must subject yourself to all the treatments of the different diseases at the same time. Then one virus may act against another so as to destroy the action of both and all. Or it may be that the strongest poison will save itself and secure an immunity from one danger for a time.

Aerobic and anaerobic germs are yet the subjects of discussion by reputed bacteriologists. The aerobes thrive in oxygen and are destroyed by nitrogen, while anaerobes multiply in nitrogen and die in oxygen. Cholera bacilli are supposed to be aerobes and there is evidence that in the human body they work like anaerobes. Thus they have two behaviours—when they produce a disease in the body and when out of it. All bacilli can thrive in oxygen as well as in nitrogen. The anaerobes are poisonous in their nature, and after secreting their toxin they cease to exist. When before the period of secretion they come in contact with oxygen they change their behaviour and become innocuous. It is not said that there is difference in the shape of the same bacillus when it is aerobe and when anaerobe. But it is possible there is a change of shape which has not yet been detected. For these reasons, it seems that it is not desirable to cultivate the aerobes for anaerobic purposes. At the same time to cultivate the anaerobes as they act in the body, is impossible. As soon as they come in contact with a good quantity of air they become changed.

The statistics, supplied by Dr. Simpson, of cases inoculated in Calcutta and its suburbs, is more hopeful than Dr. Haffkine himself had expected. Dr. Simpson boldly puts up figures to console his chief for his discomfiture at Lucknow and Cawnpur. Among the soldiers inoculated there, the protected suffered more than the un-protected. The value of such treatment can best be ascertained in the army where there are all sorts of possible restrictions. Within a few months of the inoculation, cholera made its dreadful appearance. The Calcutta operations give no better result. Dr. Haffkine limits

the immunity to six months. Before that period expires, it is profitless to speculate as to the success of his inoculation. The cholera epidemic of this year is great and general in its nature. Reliable figures can be prepared only after the disappearance of the scourge. But as far as we are informed, the results of the inoculation in the regiments at Cawnpur and Lucknow have disturbed the faith of many in Haffkinism. There are so many odds and ends that it is not easy to find fruitful results from this mode of application of the isopathic law.

The new school has no different modes of treatment. There is only one system and the line of practice is fixed. The practitioners are guided by provings or symptoms produced by drugs on healthy human body as well as by subsequent clinical observations. They compare the drug symptoms and the symptoms produced by the disease and administer the medicine having the closest affinity. There may be difference in the selection for not observing the disease properly, but the mistake can soon be rectified. That selection follows the one established law "like cures like." The allopaths have no law to go upon. That on which they pretend to act is "contrary cures contrary." This method can only be tried when the causation of the disease is known, which is not easy. Many circumstances combine to create a disease and for this reason to understand it in its legitimate sphere is an impossible task. It is all very well to say apply cold when heat is the cause, but how to know whether it is heat or cold that is the cause? When you treat the symptoms, you need not know how they have been produced. A mechanical injury is easily traced to its cause and there are special homœopathic remedies for it. Nor when you know the cause, can you successfully meet the disease. Tonsillitis arising from cold, cannot be cured by the application of heat only. Other remedies must be resorted to and for the selection of the remedy we have only the symptoms to guide us.

Isopathy or "same cures same" is a definite law. The treatment of Pasteur is based on this principle; so also vaccination for small-pox introduced by Jenner. Differences of opinion may exist as to the basis of the Jennerian practice, but there are reasonable grounds to side with Dr. Crookshank. The prophylactic value of this system of treatment is rather wide off the mark. So it is with Haffkinism. The administration of anthracine, of tuberculine, of varioline, of vaccinia in the diseases from which they have been derived is according to the isopathic principle. But their application according to provings to other diseases would be homœopathic. A false notion is prevalent with regard to homœopathy that it imposes the use of dilutions. The application of the law and not the dilutions of medicines ought to be the main consideration.

The homœopathic treatment of cholera should begin with tincture camphor both from the commencement of the disease and when the old school had had its work. Even in the collapse stage it is prescribable when there has been over-medication. The next choice of medicines would be according to the state of the patient. When the pulse is present, even of moderate intensity, and other disturbing elements are absent, the following medicines are recommended: veratrum, podophyllum, colchicum, colocynthis, jatrophia, and ricinus. Veratrum or podophyllum

can be given when there are painful or painless stools, with or without vomiting. But the latter should be preferred when there is passage of flatus with the stool. Ricinus is a remedy for the painless variety, colchicum and colocynth for the painful one, but the colic of colocynth is more persistent and painful. There is also a difference in their character. The colocynth pains are increased by drinking water. Jatropha is for omission of loud flatulence with the stools; arg. nit. has often failed to serve the same purpose. When there is pulselessness or very feeble pulse, arsenic or carb. v. ought to be of help. These failing, aconite should be tried. Where cramps are the prominent symptoms cuprum, cuprum arsenicosum, and secale ought to be remembered. In collapse when cuprum does not act, cuprum ars. should have a chance. Cuprum is prescribed for the cramps of the flexor muscles and secale for the extensors. For muscular spasms of the chest try cicuta, and arg. nit. The last is also a remedy for spasms of the diaphragm. In impending failure of respiration the chief restorers are acid hydrocyanic, colra and lachesis. They are analogous to each other. When after cessation of the stools, the pulse remains tolerably well but there is no urine, give cantharis. Terebinth can also be recommended. In uræmic coma, bell., hyoscyamus, and stramonium should be thought of. For nausea and vomiting ipecac is a well-tried remedy.

A HOMCEOPATH.

PARTITION OF ESTATES IN BENGAL.

THE BENGAL LEGISLATIVE COUNCIL. AP. II.

The Hon. Mr. Finucane introduced the Bill to amend the law relating to the partition of estates, and to move that it be read in Council.

In doing so he said :—I move that a Bill to amend the law relating to the partition of estates should be read in Council. I may say at once that the objects of this Bill are (1) to simplify, shorten, and cheapen the procedure for effecting partition of estates and (2) to impose some limit, below which partition of estates will not be carried out by the Collector.

I do not propose on the present occasion to trespass on the time of the Council by entering on an elaborate disquisition on the history of this important subject. For the purpose of explaining the principles of this Bill, I need refer but very briefly to the historical aspect of the subject.

As Hon'ble Members are aware, when the right of property in the soil was explicitly declared, by the Regulations of the Permanent Settlement, to be vested in the zamindars of Bengal, it was also declared that they might dispose of the whole or any portion of their properties in any way they thought fit. But as every acre of the land was hypothecated to Government for revenue, it necessarily followed that the right of transferring by sale and gift, dividing, or otherwise disposing of their properties, then declared to be vested in the zamindars, was not absolute and unconditional, but subject to the paramount consideration of the security of the Government revenue.

Hence we find that on the very day on which the Permanent Settlement Regulation I of 1793 was passed, Regulations were also enacted for the purpose of enabling proprietors to apply to the Collector for partition of their estates, and rules were prescribed for carrying out such partitions.

These rules were contained in Regulations VIII and XXV of 1793.

The Permanent Settlement was in many cases concluded for large estates or tracts of land. Sometimes whole parganas consisting of several mahals were included under one engagement for the payment of a certain amount of revenue, and all the lands so included were held jointly liable for the payment of that revenue.

With such large estates it was deemed desirable to give every facility for subdivision of them and for enabling the co-proprietors to separate their interests and their liability for the State revenue.

It was soon found, however, that the unrestricted subdivision of estates and separation of financial responsibility was being carried on to an extent that was thought to be dangerous to the security of the revenue, and a Regulation was therefore passed in

1807 on the unanimous suggestion of the Board of Revenue (Regulation VI of that year) enacting that no partition should be allowed which would have the effect of creating a new estate with a sardar jama of less than Rs. 500. The preamble to this Regulation to which I would invite the attention of the Council runs thus :—

"Whereas under the provisions contained in Regulations I and XXV of 1793 persons holding shares of estates paying revenue to Government are entitled to a separation of such shares; and on the completion of the batwara by the officers of Government, and on the confirmation of it by the Governor-General in Council to hold the same as distinct mahals subject to the just proportion of the public assessment; and whereas considerable loss and inconvenience have been experienced in the collection of the public revenue from the too minute subdivision of landed property."

Then followed the enactment that estates might be divided down to a jama of five hundred rupees.

The restriction imposed by the Regulation of 1807 did not remain in force long. Regulation V of 1810 removed it and allowed partitions to be made of estates, however small. The Regulation of 1810 was passed in accordance with the views of one new Member of the Board of Revenue of the time, but the opposition to the views of the other two Senior Members, who strongly protested against the removal of the restrictions of 1807, and expressed their apprehension of the occurrence of the evils likely to result from such removal, which have in fact since occurred. The reasons for removing the restriction imposed by Regulation VI of 1807 were stated in the preamble to Regulation V of 1810 thus :—

"Experience having shown that the existing rules for the division of landed property paying revenue to Government are in many respects defective, inasmuch as they do not sufficiently provide against the artificial delays and impediments which are frequently thrown in the way of the process of the division by some one or more of the parties concerned, who may be interested in so doing or (as often happens) by the officer employed in conducting the details of that process; nor effectually secure Government from the loss resulting from fraudulent and collusive allotments of the public revenue on the shares of estate when divided; and, there being moreover reason to believe that the restriction which has been laid on the partition of small estates by Regulation VI of 1807 has been, and is, the cause of considerable injury to numbers of individual sharers in such estates, thereby inducing a sacrifice of private rights, which the degree of public inconvenience arising from the minute division of landed property does not appear to be of sufficient magnitude to justify or require: with a view therefore to remedy these defects, to expedite the division of landed property paying revenue to Government, when duly authorized by the provisions of Regulations I and XXV of 1793, and their corresponding Regulations for Benares, and for the ceded and conquered provinces; with due regard to the permanent security of the public revenue, whatever be the amount thereof; and to obviate the injury to which individual sharers are liable in the case of a joint estate being brought to a sale for balances which may have arisen from the default of their coparceners during the interval while the process of division is pending, the following rules have been enacted."

I need not weary the Council with a detailed narrative of the history of the Law on Partitions from 1810 down to the present time. The different Rules and Regulations on the subject were consolidated in the Regulation XIX of 1814, which, with slight modifications, continued, in force till the present Bengal Council Act VIII of 1876 was passed. But I have to notice that in 1875 the Hon. Mr. Dampier, then Senior Member of the Board of Revenue, introduced a Bill in this Council for the amendment of the Partition Law.

In the course of the discussions that took place in the Council in connection with that Bill, the inconvenience to the Administration and the injury to private interests that have arisen from the unrestricted partition of estates were pointed out and admitted. It was provided in Mr. Dampier's Bill, as it came from the Select Committee, that no partition should be made which would result in the formation of a separate estate, liable for a revenue of less than Rs. 20, unless the proprietor agreed to redeem the revenue. This provision was unanimously accepted by the Council of that time, containing as it did among its members such authorities as the Hon. the Advocate-General Sir Charles Paul and the Hon. Kristodas Pal and Maharaja Durga Charn Law. The Bill of 1875 was passed unanimously by the Bengal Council on the 8th April 1876, but it was vetoed by the Government of India on the ground that the proposal to redeem the Government revenue in the case of estates having a revenue of less than Rs. 20 was opposed to the financial interests of the country, for it was thought that if

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address, THOMAS KEMPE, VICTORIA CHAMBERS, 9, SOUTHAMPTON BUILDING, HOLBORN, LONDON.

such redemption were allowed a time might conceivably come when all Bengal would become revenue free.

Mr. Dampier's Bill having been vetoed by the Government of India, another Bill was introduced in August of 1876, which imposed no restriction on partitions except this, that when a new estate was created with a *sadar jama* of not more than one rupee, the proprietor was bound to redeem the revenue by paying its capitalised value in a lump sum. This Bill was passed, and became the present Act VIII (B. C.) of 1876.

The point to which I would invite the attention of the Council and the inference which I think may be fairly drawn from the foregoing sketch of the history of the law on this subject, is, that the right of Government to impose restriction on what are elsewhere called perfect partitions, or in other words on the divisibility of responsibility of estates to Government for land revenue, was never questioned down to 1876, and was expressly asserted by the unanimous vote of this Council agreeing to Mr. Dampier's Bill of 1875. The object of the Act of 1876 was to shorten, simplify and cheapen the procedure for effecting partitions. The Hon. Member (Mr. Reynolds) in charge of the Bill of 1876 said in the course of the debates on it that there might be inconveniences connected with the multiplication of petty estates, but it had always been conceded that landed proprietors had a right to have their estates divided, if they chose to demand partition, and the Government did not consider that the right should be abrogated or denied to them. It may be remarked, however, that Mr. Reynolds afterwards withdrew his opinion on these points.

The question of the amendment of the law came before this Council again in 1884, when it was proposed to impose a limit of Rs. 10, below which partitions were not to be allowed to proceed. A question was then raised, for the first time, by the Hon. Mr. Hurbans Sahai, of the right of Government, under the terms of the Permanent Settlement, to impose any such limit. The Bill was withdrawn partly, because it aroused a strong feeling of opposition, and partly because it was thought that the relief sought to be given by it would, to some extent, be afforded by the provisions of the Tenancy Bill, which would, it was supposed, simplify the carrying out of partition.

I now come to the present Bill. It cannot be denied that the Act of 1876 has to some degree succeeded in attaining the objects which it was designed to effect, but experience has shown it to be defective in many respects; while new light has, since the passing of the Tenancy Act, been thrown on the evils attendant on partition proceedings which were before unknown. The object of the present Bill is to apply a remedy to these defects and guard against the continuance or recurrence of the evils referred to. The Board of Revenue after consulting local officers drew the attention of Government in 1890 to the inconvenience and expense to which proprietors were subjected by partition proceedings under the present law, and reported that though they had by executive orders and various expedients endeavoured to check delays and reduce expenditure, no substantial improvement could be expected without a change in the law. The Bill is the outcome of discussions that have since taken place. One of the principal changes proposed with a view to shorten proceedings and reduce expenses is to do away with what is called the "general arrangement" as a distinct stage. The retention of the general arrangement has only the effect of multiplying objections and appeals, thus delaying the proceedings.

Another defect in the present law is that it allows objections and appeals at all stages which not only cause much delay, but swell the costs enormously. It is proposed to remedy this defect by concentrating at one stage objections and appeals which can be taken up at that stage without detriment to the parties while the costs will thereby be much reduced. Another defect in the present law is that it provides no adequate procedure for carrying out measurements and ascertaining the amount of the existing rents or assets on which the partitions are to be based. The result is that animus dawdle over these measurements for years, fomenting disputes in the villages, thus increasing the expenses.

It is proposed to apply a remedy to this defect by providing that if a previous survey has been made, or the parties themselves file measurement papers, admitted to be correct, the Deputy Collector may, after testing their correctness, accept them as the basis of partition without a fresh survey, and that where a survey is necessary, it shall be made and a record of existing rents and rights prepared, under proper supervision and control at a moderate expense and with sufficient legal sanction. It is not proposed to empower the Deputy Collector to alter existing rents. The main object of the Bill is then to afford relief to the proprietors in these ways, but the opportunity has been taken to effect improvements in the law in other respects which will, it is hoped, be beneficial to their tenants also and to the general tax-payer.

I cannot explain its objects and reasons without trespassing to an intolerable length on the time of the Council better than by reading, with the permission of His Honour the President extracts from the Statement of Objects and Reasons. They run thus:—

"The primary and chief object of this Bill is to simplify, cheapen and shorten the procedure for effecting partitions of estates in Bengal. The present law for the partition of estates, which is contained in the Partition Act, VIII (B. C.) of 1876, has been found by experience to be defective, in that it allows excessive and unnecessary opportunities for making objections and delays at almost every stage of the proceedings. Parties who wish to obstruct the partition take advantage of these opportunities to such an extent that partition proceedings are protracted to an intolerable length, and are excessively expensive and harassing to the proprietor applicants, who, when entitled to partitions, should have the means of getting them effected within a reasonable limit of time and at a moderate expenditure.

The protraction of partition proceedings is also a source of irritation, harassment, and injury to the tenants of estates under partition; for, though under the present law the tenants are not bound by anything entered in the partition papers, it has been found, as a fact, that partition proceedings have been abused for the purpose of effecting illegal and inequitable enhancements of rent. The Bill aims at applying a remedy to these evils:—(1) by defining and limiting the stages of the proceedings at which objections and appeals may be made, without, at the same time, taking away or curtailing the right itself to make objections or urge appeals at the proper time; (2) by providing for the making of a survey and the preparation of a record of rights and existing rents unless a previous measurement has been made, or the proprietors themselves file measurement papers admitted to be correct, so that there may be an authoritative finding on the assets on which the partition is to be based and that all parties concerned, including the tenants, may have an opportunity of knowing what is being recorded relating to them and of urging objections if they have any.

The delay, expense, and harassment caused by partition proceedings under the present law, and consequent necessity for amending the law, are illustrated by the following facts:—The average duration of these proceedings at present is not less than 3½ years, and there are some cases which were instituted more than 20 years ago (*i.e.*, before the present Act was passed), but up to date are not completed. The average cost of partition proceedings under the present law is about 8 annas an acre, and in some districts the expenditure has amounted to from Re 1 to Re. 1-7 per acre.

The injury that is done to tenants under the present law is illustrated by the facts that some estates in Bihar in which a survey was made, a record of rights prepared, and authoritative rentals recorded under Chapter X of the Tenancy Act in 1886, came under partition a few years later; that rents were recorded by the Partition Deputy Collector in the partition proceedings according to the statements of the proprietors, behind the backs of the tenants, and that the rents so recorded were two to three times the true rents entered in the settlement record of 1886. What occurred in the estates referred to, where the facts were susceptible of ascertainment, is what is believed to occur also in other estates under partition where there are no means of knowing what the real rental is. It is true that rents recorded in the partition proceedings did not in law bind the tenants, but it is known as a fact that the entry of exaggerated and fictitious rentals, in this way, in partition proceedings, behind the tenants, has in some cases been accepted by the tenants themselves out of court, as imposing on them liability to pay such fictitious rents, and in others, that the separate proprietors immediately after partition proceeded to enhance rents illegally. The result is that there is no more fertile source of arbitrary and illegal enhancements of rent in Bihar than petty partitions as now conducted. The Bill seeks to remedy this evil by providing for an authoritative record of existing rents and rights, save when the landlords file measurement papers admitted to be correct, and also by providing them that the rents as stated by them in such measurement papers shall be explained to, and their correctness attested in presence of, the tenants.

A secondary, but still very important, object of this Bill is to impose some limit on the endless divisibility of responsibility for land revenue to the State allowed under the present law.

Under the law as it stands, the only restriction on the creation of petty estates is that contained in section 11 of Act VIII (B. C.) of 1876, which directs that no partition shall be carried out if the separate estate of any of the proprietors would be liable for an annual revenue of not more than one rupee until the proprietor of that separate estate agrees to redeem the revenue assessed upon it. The result is that the multiplication of petty estates entered in the Collector's registers has in some districts gone on to such an extent that it is believed to be likely to become dangerous to the security of public revenue. In the Muzaffarpur and Darbhanga districts the number of separate estates borne on the Collector's revenue-roll increased from 5,186 in 1850-51 to 13,432 in 1871-72, and in 1892-93 was no less than 30,477, the increase thus being six-fold in 40 years, and this though these districts contain large zemindari of great pro-

priators which are not subjected to partition. In these districts, too, arbitrary and illegal enhancements of rents have, by means of partitions, been effected to an excessive degree.

This divisibility and great multiplication of estates is believed to be bad for the proprietors and bad for their tenants, besides being dangerous to the public revenue, and imposing an unnecessary amount of labour and expense on the administration, without any proportionate benefit to anybody.

It is bad for the proprietors, because it tends to foster the creation and growth of an infinite number of petty pauper landlords, who not being themselves able to cultivate the lands of their microscopically small states (since there are tenants already on the lands whom they cannot legally eject) are driven to screw up rents, and quarrel with their tenants and landlord neighbours, and thus bring discredit on their class. It moreover, involves waste of time and labour from the proprietor's point of view, as the separate management of several petty estates, must necessarily cause more trouble and expense than the joint management of the parent estate.

The unrestricted multiplication of petty estates is obviously bad for the tenants; for, apart from the inevitable tendency of the peasant landlord to be a bad landlord who from necessity must endeavour to illegally rack-rent or eject the tenants in occupation, it is also to be remembered that a tenant who according to the terms of his original tenancy had only to deal with one landlord or one representative of all the co-sharers, and to pay his rent at one place, keeping one set of accounts, may and does become, without his consent, bound, after a partition is made, to pay rent in several different places, to keep several different sets of accounts and to deal with several different landlords, each and every one of whom may sue him separately for rent, or distrain his crops, or sue him for ejectment, or do separately any act adverse to the tenant's interests authorised by law, which before partition the proprietors must have all agreed upon (under section 188 of the Tenancy Act) before any action could be taken.

It is clear for these reasons that the infinite partibility and multiplication of estates is injurious to the interests of the tenants.

Lastly, these petty partitions impose on the administration an amount of labour in effecting them and subsequent expense altogether incommensurate with any advantage accruing from them. Multiplication of estates means multiplication of boundary disputes, of disputes between landlord and tenant, more riots, more criminal cases, more civil suits, great multiplication of accounts and processes for collection of the land revenue, and greater multiplication of accounts and processes for collection of road cess and other public demands and consequently multiplication of establishments which will for all time have to be paid by the general tax-payer, and not alone by applicant proprietors.

For these reasons it is thought desirable in the interests of the proprietors, their tenants and the general public, that some restriction should be put on the partibility of estates to be borne as separate units in the Collector's revenue-rolls. The restriction proposed in section 10 of the Bill is, that partition shall be refused if the separate estate of any of the proprietors would be liable for an annual amount of land revenue not exceeding Rs. 100. The particular limit of Rs. 100 is put forward tentatively, and may be too high. Some of the facts above stated suggest the desirability of imposing an absolute prohibition on the subdivision of estates below a certain limit. But it is not thought necessary to go so far. The limit proposed only affects the separation of responsibility for payment of Government revenue, and does not affect the right of proprietors to dispose of the whole or any portion of their estates as they think fit or their right to obtain separate possession of any portion thereof. It is expressly provided that any Civil Court which has made a decree for partition or for the separate possession of a share of an undivided estate, paying revenue to Government may execute such decree, in the same manner and subject to the same conditions as in the case of a revenue-free estate, but the joint and several liability of the entire estate is not thereby to be affected, unless such partition is made or separate possession given by the Collector under this Bill.

An objection that may, with some apparent show of reason, be urged against the proposals of section 10 is that, if the power of partition is withdrawn from petty proprietors, they will be placed at the mercy of their more wealthy co-sharers and neighbours, but the force of it is nullified by the facts that small co-sharers are protected by the proviso to the same section, and that they can protect themselves otherwise by opening separate accounts or by applying for the appointment of a common manager under section 93 of the Tenancy Act. Whatever risk of hardship to petty co-sharers there may be under the Bill, if there be any, it is as nothing compared to the injury to proprietors and rayyets and to the general tax-payer that is being now, and in a greater degree in the future, is likely to be, caused by the microscopic sub-division of estates.

The Bill is in the hands of Hon. Members, and statistics and papers will be circulated with it which, it is believed, will satisfy

them of the correctness of the assertions of fact made in the extracts which have been read.

Assuming the fact to be as stated, it will, I hope, be agreed that enough has been said to warrant me in asking for permission to have the Bill read in Council.

As regards the Bill itself, I may explain that the question of amending the Partition law has been under discussion for the past five years, and the Bill is the outcome of these discussions.

It was submitted by Sir Charles Elliott substantially in its present shape to the Government of India, and was approved by that Government. It may be, and no doubt is, susceptible of improvement. There is no desire to rush this Bill.

On the contrary, the object of Government in now having it introduced in Council is to permit of its being circulated, and of inviting during the next four months the criticisms and opinions of public Associations, private individuals, and Government officers.

Such criticisms will be welcomed and carefully considered, and it is hoped, when the Bill finally comes before Council after such modifications by Select Committee as opinions and criticisms may suggest, that it will be accepted by the Council as being beneficial to the proprietors themselves, their tenants and the general taxpayer.

A CASE OF NERVOUS PROSTRATION RESULTING FROM INDIGESTION.

THEY say that misery loves company, and they have had it so often it has passed into a proverb. Yet it isn't an all-round truth. Some kinds of misery detest company. They want to be left alone. They hate to be elbowed and questioned and talked to. A wounded dog will always crawl into some retired place by itself. The instinct of badly injured men, after a battle, is the same. Aliments that are mostly fancy, tend to set tongues wagging. But real, genuine and dangerous diseases don't incite to speech. Crises which are big with fate usually come and go in quiet.

That is why Mrs. Scuffham had no desire for the society of even her best friends at a certain time she is going to tell us about.

"Up to April, 1881," she writes, "I never knew what it was to be ill. At that time I began to feel that something was amiss with me. I had no relish for my meals, and after eating my chest felt heavy and painful, and my heart would beat and thump as though it meant to leap out of its place. Presently I became so swollen round the waist that I was obliged to unloose my clothing, as I could not bear anything to touch that part of my body."

"Even the lightest food gave me pain; a little fish setting my heart to beating at a great rate. My feet were cold, and cold, clammy sweats would break out all over me, leaving me exhausted and worn out. At night I got no sleep to speak of, and in the morning I felt worse tired than when I went to bed. I also suffered a great deal from my feet being puffed up and sore. I could scarcely get about the house. When I went shopping I had to ride to the town and back as I could only walk a few yards."

"As time went on I lost my flesh and strength more, and gave up hope of ever recovering the precious health I had so sadly lost. I took medicines, and consulted a clever doctor at Derby who examined me and said my heart was weak. He also gave me medicines, but I got only temporary ease from them, and in a short time was as bad as before. All this time I was so nervous and depressed that I had no desire for company. On the contrary, I seemed to want to be alone with my misery. Even a knock at the door frightened me, as though I expected bad news, yet I did not really. My nerves and fancies ran away with my knowledge and judgment. Thousands of women who have suffered in this way will understand what I mean."

"Year after year I remained in this condition, and what I went through I cannot put in words, nor do I wish to try. It will answer the purpose to say that I existed thus for eleven and a half years, as much dead as alive. I spent pounds on pounds in physic, but was not a whit the better for any of it."

"In October, 1892, a book was left at our house, and I read in it of cases like mine being cured by Mother Seigel's Syrup. I got a bottle from Mr. Bardel, the chemist, in Normanton Street, Derby, and when I had taken this medicine for a few days, my appetite was better and I had less pain. I kept on taking it; and soon my food agreed with me and I gained strength."

"After this I never looked behind me, but steadily got stronger and stronger. When I had taken three bottles I was quite like a new woman. All the nervousness had left me, and my heart was sound as a bell. Since then I have enjoyed good health, and all who know me say my recovery is remarkable. I am confident that Mother Seigel's Syrup was the means, in the hands of Providence of saving my life; and out of gratitude, and in hope of doing good, I freely consent to the publication of this statement. (Signed) (Mrs.) Ann Scuffham, Cooper's Lane, Laceby, Grimsby, May 1st, 1895."

This letter is endorsed by Mr. William J. Tollerton, of the same town, who vouches for the truth of what Mrs. Scuffham has said, as he personally knew of the circumstances of her illness at the time they occurred. No comment can add a jot to the force of this open, candid, and sincere communication. Whoever reads it must needs be moved and convinced by it. The disease which filled this woman's life with pain and misery for nearly twelve years was indigestion or dyspepsia, an ailment sly and cunning as a snake in the grass—and as dangerous. Send for the book of which Mrs. Scuffham speaks, and read the symptoms in order that you may know what it is, and how to deal with it. The book costs you nothing, yet it would be worth buying as if every leaf were hammered gold.

CAUTION!

It having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (*viz.* 4 annas, 8 annas or 9½d, 12 annas or 1s. 1½d. and Rs. 2 or 2s 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes the prices have been obliterated and the boxes represented to be of higher value than they really are.

AN INDIAN JOURNALIST:

Life, Letters and Correspondence

OF

Dr. SAMBHU C. MOOKERJEE,

late Editor of "*Reis and Rayyet*."

BY

F. H. SKRINE, I.C.S.,

(Collector of Customs, Calcutta.)

The Volume, uniform with Mookerjee's
Travels and Voyages in Bengal, consists of
more than 500 pages and contains
PORTRAIT OF THE DOCTOR.

DEDICATION (To Sir W. W. Hunter.)

HIS LIFE STORY.

CORRESPONDENCE OF DR. S. C. MOOKERJEE.

LETTERS

POSTSCRIPT.

After paying the expenses of the publication the surplus will be placed wholly at the disposal of the family of the deceased man or letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corfit, K.C.I.E., Director of Public Instruction, Bengal 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kistodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—The *Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—The *Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kistodas Pal himself.—The *Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1857. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

Dr. Mookerjee's monograph is a valuable contribution to the literature of the subject. It is a book which every one who is interested in the progress of the Indian press should read. It is a book which every one who is interested in the progress of the Indian press should read. It is a book which every one who is interested in the progress of the Indian press should read.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1857. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNIED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." x Dr. H. Moore of Royal Artillery from Pondicherry says:—"I sold it for Rs. 16 x Pte. W. Hopkins of Sussex Regt. from Dumfries says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Simkuta, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Puraudhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kumtee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless real solid gold watch Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Foudzari
Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HURRON DIXON, 43 & 45 East Bloor St TORONTO, Canada. *Scientific American*.

CONTEMPORARY POETRY.

MOOLTAN.

A company of Moolraj's Muzubees, or outcastes turned Sikhs, led on the mob. It was an appalling sight; and Sirdar Khan Sing begged of Mr. Agnew to be allowed to wave a sheet and sue for mercy. Weak in body from loss of blood, Agnew's heart failed him not. He replied, "The time for mercy is gone; let none be asked for. They can kill us two if they like, but we are not the last of the English; *thousands of Englishmen will come down here when we are gone, and annihilate Moolraj, and his soldiers, and his fort!*" The crowd now rushed in with horrible shouts; made Khan Sing prisoner, and pushing aside the servants with the butts of their muskets, surrounded the two wounded officers. Lieutenant Anderson, from the first, had been too much wounded even to move; and now Mr. Agnew was sitting by his beside, holding his hand, and talking in English. Doubtless, they were bidding each other farewell for time. * * * Anderson was hacked to death with swords, and afterwards the two bodies were dragged outside, and slashed and insulted by the crowd, then left all night under the sky.—Major Edwardes' *Year on the Panjab Frontier*, vol. ii., p. 58.

The besieging army did not march away to other fields without performing its melancholy duty to the memory of Agnew and Anderson. The bodies of those officers were carefully—I may say affectionately—removed from the careless grave where they lay side by side; and wrapped in Cashmere shawls, (with a vain but natural desire to obliterate all traces of neglect,) were borne by the soldiers of the first Bombay Fusiliers (Anderson's own regiment) to an honoured resting-place on the summit of Moolraj's citadel. By what way borne? Through the gate where they had been first assaulted? Oh, no! through the broad and sloping breach, which had been made by the British guns in the walls of the rebellious fortress of Mooltan.—*The same*, p. 588.

Bear them gently, bear them duly up the broad and sloping breach
Of this torn and shattered city, till their resting place they reach.

In the costly cashmeres folded, on the stronghold's topmost crown,
In the place of foremost honour, lay these noble relics down.

Here repose, for this is meekest, ye who here breathed out your life,
Ah! in no triumphant battle, but beneath the assassin's knife.

Hither bearing England's message, bringing England's just command,
Under England's ægis, came ye to the chieftain of the land:

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

In these streets beset and wounded, hardly borne with life away,
Faint, and bleeding, and forsaken, in your helplessness ye lay.

But the wolves that once have tasted blood, will ravin still for more;
From the infuriate city rises high the wild and savage roar.

Near and nearer grows the tumult of the gathering murderous crew;
Tremble round those helpless couches an unarmed but faithful few:

"Profitless is all resistance; let us then this white flag wave,
Ere it be too late, disdain not mercy at their hands to crave."

But to no unworthy pleading would descend that noble twain:
"Nay, for mercy sue not; ask not what to ask from these were vain."

"We are two, betrayed and lonely; human help or hope is none;
Yet, oh friends, be sure that England owns besides us many a son."

"They may slay us; in our places multitudes will here be found,
Who will hurl this guilty city with its murderers to the ground."

"Yea, who stone by stone would tear it from its deep foundations strong
Rather than to leave unpunished them that wrought this bloody wrong."

Other words they changed between them, which none else could
understand,
Accents of our native English, brothers grasping hand in hand.

So they died, the gallant-hearted, so from earth their spirits past;
Uttering words of lofty comfort each to each unto the last;

And we heed, but little heeded their true spirits far away,
All of wrong and coward outrage, heaped on the unfeeling clay.

—Lo! a few short moons have vanished, and the promised ones appear,
England's pledged and promised thousands, England's multitudes
are here.

Flame around the blood-stained ramparts the swift messengers of
death.

Girdling with a fiery girdle, blasting with a fiery breath;

Ceasing not, till choked with corpses low is laid the murderers' hold,
And in his last lair the tiger toils of righteous wrath enfold,

Well, oh well—ye have not failed them who on England's truth relied,
Who on England's name and honour did in that dread hour confide:

Now one last dear duty render to the faithful and the brave,
What they left of earth behind them rescuing for a worthier grave.

Oh then bear them, hosts of England, up the broad and sloping breach
Of this torn and shattered city, till their resting place they reach.

In the costly cashmeres folded, on the ramparts' topmost crown,
In the place of foremost honour, lay these noble relics down.

—*Fraser's Magazine*.

WEEKLYANA.

"THE Imperial and Asiatic Quarterly Review and Oriental and Colonial Record" of the current month has the following notice of the late Dr. Rost:—

"Dr. Reinhold Rost, C.I.E., who died at Canterbury on Friday, the 7th of February, was a distinguished member of the noble little band of German Oriental scholars who have made England their home. His life's history is briefly as follows. Born in 1822 at Eisenberg in Saxe-Altenburg, he was educated at the Grammar School of Altenburg and the University of Jena, where he graduated in 1847. In the same year he came to England to continue his Oriental Studies. In 1851 he was appointed Oriental Lecturer at St. Augustine's Missionary College, Canterbury. The duties of this appointment he continued to discharge, literally until the day of his death, which took place in that institution, whither he had gone for his usual weekly lecturing visit. In 1863 he was appointed Secretary to the Royal Asiatic Society, and in 1869 he succeeded Dr. Fitzedward Hall as Librarian of the India Office, whence he retired on pension in 1893.

Before his appointment as Oriental Lecturer at St. Augustine's College, Dr. Rost had published an essay on the Indian sources of the Eeomese laws. In 1862 he published the first two volumes of his edition of Professor Horace Hayman Wilson's Selected Works, namely, Essays on the Religion of the Hindus. The three volumes of Essays on Sanskrit Literature, also edited by Dr. Rost, appeared in 1865. Dr. Rost's notes in this edition are enclosed in square brackets. They show the editor's wide acquaintance with Indian literature, and even with the subject of Folk-lore, which lies outside the path of the professional Sanskritist. In 1880 he edited two volumes of the selected papers of his friend, Mr. Brian Houghton Hodgson, entitled *Essays on Indian Subjects*. In 1886 appeared, in *Trubner's Oriental Series*, two volumes of Miscellaneous papers relating to Indo-China, reprinted for the Straits' Branch of the Royal Asiatic Society. These papers were 'carefully edited' by Dr. Rost, who, to borrow the words of the Honorary Secretary of the Society 'added some useful references to modern literature giving fresh value to papers, some of which would otherwise have little beyond antiquarian interest.' Many of Dr. Rost's illustrations are borrowed from Dutch writers. The second series of these papers appeared in 1867, also in two volumes. For work of this kind Dr. Rost was specially qualified by the wide range of his linguistic knowledge. Besides being a sound Sanskrit scholar, he had made a careful study of the Pali language, as is shown by his admirable essay on the Pali Language and Literature in the XVIIth Volume of the *Encyclopædia Britannica*. He had a useful knowledge of Tamil and Telugu, and was by no means out of his depth in Burmese. As he added to his knowledge of the Hindu and Buddhist languages of India, a considerable acquaintance with the Musulman languages, he easily mastered the Malay language and literature. His essay on this subject will be found in the XVth volume of the *Encyclopædia Britannica*. It was reprinted in the *Journal* of the Straits' Branch of the Royal Asiatic Society. From the study of the Malay language, he was naturally led on to the study of Malagasy; and it is well known that Dr. Rost took special interest in some of the languages of Africa. Besides acquiring the Swahili language, he invaded the domain of the Bantu dialects.

Dr. Rost's knowledge of alphabets, both printed and written, was extraordinary. He rendered aid in preparing the first specimens of Sanskrit manuscripts published by the Paleographical Society. This series was, if we remember aright, discontinued in 1883, for lack of support. He contributed many articles on Oriental philology to the *Athenæum*, edited *Trubner's Oriental Record*, and his series of *Simplified Grammars*, and wrote notices of books for *Luzac's Oriental List*. Nor was he a mere linguist. He was accustomed to look at the East from a wider point of view than the merely philological, as is shown by his brief account of the Thugs in the *Encyclopædia Britannica*.

It is, of course, to be regretted that so little of his vast learning is preserved in a conveniently accessible form for future generations. But his knowledge was at the disposal of every one that consulted him, and many a specialist is indebted to him for aid ungrudgingly rendered. In this respect he may be compared with the late Mr. Henry Bradshaw, Librarian of the University of Cambridge, of whose vast paleographical and literary knowledge no memorial remains, as far as we know. Scholars of the Rost and Bradshaw type are eminently altruistic: other men enter into their labours.

Of the discerning sympathy of Dr. Rost many Orientalists have recorded their testimony. We select by way of example the eloquent tribute paid to him by the late Mr. R. C. Childers in the commencement of his Pali Dictionary: 'These pages I dedicate to my friend Reinhold Rost, who first induced me to commence the serious study of the Pali language, and to whose encouragement and help it is due that I persevered in it under many difficulties.' These words represent in a concise form the service which Dr. Rost rendered to Oriental studies,—a service none the less valuable because wholly unobtrusive."

THE Queen's Birthday will be celebrated on Wednesday, May 20. The early date has probably been fixed in view of the grand coronation at Moscow which commences on May 22.

A COMBINED expedition from Germany and Austria will start for the South Pole. Dr. Julius Von Payer, the explorer of Franz Josef Land, has been invited to the command.

In the number of botanic gardens Germany takes the lead with 35. Next come France and Italy with 22 each, while Russia has 14, Great Britain and Ireland 11, the Indian empire 9, the United States 5 and New Zealand 3.

THE oldest member of the House of Lords is the Earl of Mansfield, who completed his ninetieth year in February last. He was one of Mr. Gladstone's fellow lords of the Treasury in 1834-5 and succeeded to the peerage in 1840 and was made a Knight of the Thistle three years later.

THE churchmen of England, at a meeting held on the 10th of March, at Exeterhall, Lord Halifax presiding, voted against the use of the Church and Church service for marriages of divorced persons. This is an indirect way of discouraging what is considered an evil. Why not meet it in the face?

At the Westminster Police Court, Henry Feltham, who dubbed himself champion boxer of the Navy and instructor to the Duke of York, was, for disorderly conduct and assault on the police, sentenced, by M. Sheril, to three months' hard labour. When the order was made, the prisoner excitedly said, "Look here, Sir, this is not justice. There is none to be found in England, and if I hang or die for this, revenge will be sweet."

THE same court committed for trial Harriet Wightman, 21 years of age, on a charge of murdering her newly-born male illegitimate child. She occupied a bed room at the top of the house of her father, a retired saddler. It was charged against her that she concealed the fact that she was enceinte, and that after giving birth to a child, she threw the infant out of the window on to a stone-paved yard.

EVEN Shanghai has beaten hollow the metropolis of the British Indian Empire in the matter of electric lights. The "China Gazette" says:—

"A couple of years ago there were only about seven miles of streets lighted by electricity for which 60 arc lamps were quite sufficient, and there was not a single incandescent lamp in or around Shanghai. Now the electrical department of the Municipal Council runs 140 arc lamps, lighting some fifteen miles of streets and there are about 43 miles of line wire laid, in addition to 6,100 incandescent lamps of 8 candle power each, for domestic purposes. The customers for incandescent lighting have increased from 2 to 55 in number since the Council took charge of the department."

THE Olympian Games were to have been revived at Athens early this month, according to a declaration made two years ago in the Paris Athletic Congress. The games were instituted in the year 776 B.C., in honour of Zeus, in the plain of Olympia, a valley in Elis, Peloponnesus, Greece, and abolished by Theodosius in 394 A.D. The contests were all held in the stadium, which was so constructed that fifty thousand spectators could find a place around the arena. It was 656ft. long, 100ft. wide and there were twenty five ranges of seats. The seats, steps and all were built of stone from the Piræus and of Pentalic marble. The repairs have been finished through the munificence of a Grecian gentleman. In the revival, women will be allowed to compete according to the old Grecian custom. The games were to have begun on April 6, the day of the seventy-fifth anniversary of the proclamation of Greek Independence, continuing for five days, under the presidency of the Crown Prince of Greece, the programme comprising of 1. Running contests including jumps, wrestling, &c. 2. Shooting. 3. Nautical sports. 4. Cycling. 5. Lawn Tennis. The next contest will be in Paris in 1900.

THE discovery of the higher refracting power of the oil of cassia than that of cedar is a distinct gain to the microscopist. Dr. H. G. Piffard, of New York, recently read a paper before the New York Academy of Medicine, describing the oil in question as possessing a refractive index of 1.593. The new oil possesses a capacity of shewing to greater advantage the brilliance and sharpness of contour of the bacilli. Spores, flagellæ and other minute details are also seen with a distinctness impossible with the cedar oil. But it has its disadvantage. It, like the oil of cloves and unlike the cedar oil, tends to abstract the colour from bacilli stained with some of the aniline dyes. The absorption, however, of the colour is not so rapid as to materially interfere with the examination.

TWO-THIRDS of the letters which pass through the post offices of the world are addressed in English.

THE self-ignition of cotton waste has been made the subject of careful experiment. A quantity of the waste saturated with linseed oil and wrung out, was inclosed in a wooden-box with a thermometer. Immediately the thermometer rose from 70 degrees Centigrade to 173 degrees and the contents burst into flame.

DR. ERNICO MORSSELLI has gathered statistics connecting suicide with lunacy and divorce. Out of every million people in Germany, 61 married women, 87 young girls, 124 widows, and 348 divorcees or wives separated from their husbands commit suicide. Among men the numbers are 286 married, 298 unmarried, 984 widowers and 2,834 separated from their wives. Among a million, again, the lunatics are 143 married women, 224 girls, 338 widows, 1,540 divorcees, 140 husbands, 236 bachelors, 338 widowers, and 1,484 men living apart from their wives. These statistics may hold good for the rest of Europe but not for India, where divorces have little play. In Bengal there is, however, danger of suicide from oversensitiveness of boys and girls.

MR. KRISHNA GOVINDA GUPTA, Commissioner of Excise, Bengal, and Officiating Junior Secretary, Board of Revenue, has been allowed special leave for six months from May 2. Mr. E. H. C. Walsh, on leave, will officiate for Mr. Gupta during the period.

WATER tanks imported for a Railway Company have been exempted from the import duty.

NOTES & LEADERETTES, OUR OWN NEWS & THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Hon. Maurice Gifford has been rewarded for his wounds received during the fighting in Matabeleland, and raised to the Companionship of St. Michael and St. George.

In the House of Commons Mr. Chamberlain said that one battalion and a body of mounted infantry would be despatched to South Africa at the earliest possible date in order to replace the troops sent to Matabeleland. This is in accordance with the decision of the Government to make permanent increase in the garrison of Cape Colony. The military authorities, Mr. Chamberlain continued, are of opinion that the present garrison of the Cape is inadequate for the purpose of defending its dockyards and coaling stations from the enemy's attack. Mr. Chamberlain declared that Her Majesty's Government was of opinion that, except on occasions of the greatest emergency, the employment of Imperial troops for suppressing a Native rising was not suitable. The supply of men and arms for South Africa was, he said, ample, but their transport was the only difficulty the authorities had to contend with at the present moment.

The reinforcements consist of the first battalion Middlesex Regiment for the Cape, and 400 mounted infantry for Natal.

Mr. Chamberlain, in a speech made at the Constitutional Club, where he was banqueted, said that Great Britain must be paramount in South Africa, and will resist at all risks and costs any foreign interference there. It was not intended, he said, unless unexpected emergency arose, to send a large British force to South Africa as the colonists would resent the imputation that they were unable to take care of themselves in the presence of a native rising.

12,000 Matabeles, divided into five impi, now threaten Buluwayo, the garrison whereof consists of about 600 men. The total number of the defenders of Buluwayo and its neighbourhood amounts to sixteen hundred. The main body of the Matabeles is seeking to cut off communication between Buluwayo and the South and to effect a junction with the Matabeles in the Matoppo hills. Fourteen thousand Matabeles are said to be within three miles of the town. Eleven hundred friendlies have come in to assist the garrison. Dynamite mines have been laid by the garrison in the streets on the outskirts of the town, and those in command feel confident that the position can be held.

A party of scouts had two skirmishes with the Matabele in the neighbourhood of Buluwayo on the 18th, and inflicted a loss on them of fifty killed. Several sharp skirmishes close to Buluwayo took place on the 19th, in which the Matabeles lost heavily. A column of three hundred on Wednesday attacked the Matabele, four miles to the northward on the Unguza river, when most severe fighting took place, and the British were hard pressed, but finally were repulsing the Matabele when they were ordered to return to Buluwayo.

Telegraphic communication with Buluwayo is interrupted.

It is rumoured in Cairo that the French Syndicate withdraws the action against the Caisse de La Dette and its objection to the application of the Egyptian Reserve Fund for the Dongola expedition.

It is also reported from Cairo that Omdurman is in a disturbed state owing to a quarrel among the Khalifa's bodyguard in which fifty men were killed. Osman Digna has been reinforced. It is also stated that his forces are demoralised by the losses they suffered in the recent fighting and by the want of food.

The Russian Red Cross detachment for Abyssinia proceeds via the French Colony at Djibuti on the Gulf of Tadjurah. The Massowah section returns to Russia. The Red Cross detachment has obtained the permission of the French Government to pass through Obok.

IN the Committee of Ways and Means Sir Michael Hicks-Beach said that the Government had provided for no great expenditure on military operations, and that the Chartered Company would pay for the Matabele campaign, whilst the Nile expedition was purely Egyptian, although it was possible that Great Britain would have to incur a small charge in connection therewith. The Government, he said, were determined not to repeat the folly of 1884.

THE Executive Council at Pretoria have replied to Mr. Chamberlain's despatch in a friendly tone, but it says that President Kruger cannot ask the Volksraad's permission to go to England until the basis of discussion is settled.

THE peace negotiations between King Menelik and General Baldissera are broken off.

ADVICERS from the East Coast of Africa state that the Chief M'Baruk Aziz with his followers has surrendered to Major Wissmann in the German territory.

PRINCE Ferdinand of Bulgaria who arrived at St. Petersburg on the 18th was received with much ceremony. He afterwards proceeded to the Royal Palace, where the Czar welcomed him. In Turkey, the Prince was received not like another foreign Prince, but as a *prince de ma maison*.

THE Times, in a telegram from Washington, states that the Venezuelan question remains at a dangerous stage, and that the effect of the British Bluebook is far less favourable than was expected; furthermore that the negotiations between Great Britain and America are at a standstill.

DEATHS are announced of M. Leon Say and Baron Hirsch.

REUTER'S Yokohama correspondent states that the Korean Envoy to Russia, besides raising a loan, is empowered to apply for troops to guard the palace and for advisers for Government and military instructors. Nine Russian war-ships are at Nagasaki and six others are awaited.

LI-HUNG-CHANG has arrived at Port Said, whence he proceeds direct to Odessa.

THE India Office has invited tenders up to the 28th instant for a loan of £2,400,000 at two and a half per cent. interest. The rate of issue will be 99, and the loan will be redeemable in thirty years. The loan was anticipated in the Budget statement in India in these words:

"The Secretary of State had no transactions in 1895-96, except the renewal of the £2,000,000 temporary loan as entered in his original budget estimates in 1896-97. He proposes again to renew or replace this loan when it falls due on the 11th May, 1896. His proposals also include the issue of £2,400,000 of India Stock, in order to discharge £2,000,000 of India debentures falling due in August, and £313,700 South India Railway debentures falling due in July."

A TELEGRAM to a contemporary from Simla says that all fighting with the Kafirstan tribes has ceased. The Amir is treating those who have submitted most leniently, and given the Afghan officials strict orders not to bully or try to convert the Kafirs against their will. The Amir is now enjoying better health than for some years past. He has recently accompanied his sons on a shooting party, travelling most of the way in a sedan chair. More recently he has also been for some miles inspecting a new road on Tangi Gauri d'elie.

THE loyal Sawbwa of Kengtung is dead.

A STUDENT of 18 in one of the Calcutta Colleges studying for the First Arts has obtained, from a trans-Atlantic University, for his "Oriental researches," an honorary degree of Master of Arts.

AT Bhowmuggur, a fire originating in a timber *latti* near the railway station, and burning for six hours, destroyed all the timber in the *latti* and about 40 neighbouring houses. The loss is estimated at about 5 lacs.

ON April 17, a storm, with heavy hail, swept over Silchar. Thatched houses were blown down and unroofed in all directions. The regimental lines suffered severely. Several corrugated iron sheds outside the lines were unroofed, and iron sheets carried over 500 yards. No deaths are reported.

HEAVY floods have damaged the bridge over the Panjkora River at Chutiatan, Chitral, and swept away all bridges above Dir. The road has also been rendered impassable in some places.

WE have neither storms nor rains, but fires are plentiful in Calcutta. Since the destruction and purification caused by the conflagration at Kidderpore, fires, great and small, have kept the Fire Brigade constantly engaged. There is hardly a night in which the water works engine house opposite these premises has no night work. The panic is so great, that on one occasion the Fire Brigade rushed through the streets and the engine house worked at night, when there was no fire to extinguish. Yet cholera rages. Fires have not killed it. We want rains. How to bring them down? The *Indian Mirror* has solved the problem. It attributes the drought and cholera in Bengal to the visitation of the gods on the sinful inhabitants who have neglected the power possessed by their ancestors of bringing down rain whenever wanted. It reads "fearful signs and portents on the earth and on the sky" of worse disasters not only for Bengal but for the world generally and for India in particular. True to its present religious instinct, it has come upon a remedy—an infallible cure for droughts, cholera and what not. Perform the sacrificial *homa* is the advice of our contemporary. "This is just the time when a grand *Yajna*, according to Vedic rites should be performed in Bengal to produce heavy showers for the thirsty, and to purify us as a people." It is probably meant that the offerings ascending the sky in curls of smoke would form themselves into clouds and descend on the parched earth in showers of rain. An enterprising member of the British Indian Association had once offered Rs. 500 to bring down rain by cannonading. That surely was a more expeditious remedy if more costly. The ancient principle of Tippera has a way more appreciable to the vulgar. When rains are long withheld, the Maharaja is appealed to by both Hindus and Mussulmans to worship the god of rain. Priests go down the river and remain in water up to their necks, invoking the god, the whole day, day after day, till the god relents and sends down rain.

The loud reports of the *Mirror* cannot go for nought. They are sure to attract attention, and raise a dust which going up and forming a cloud may come back again in drops of water. Already, we see clouds are gathering.

It is a pity that the Calcutta Corporation passed on Thursday a motion for extraordinary powers without first trying the Mirorial sure and swift recipe for rain.

Mr. H. C. Williams, the new Chairman of the Calcutta Corporation, for the first time met the Commissioners in meeting on Thursday. He thanked them for having approved his nomination by the Lieutenant-Governor; felt very much the honour they had done him and hoped

to prove himself worthy of it. Speaking of the many projects before them, he mentioned the drainage scheme, the better supply of filtered water, the further extension of the unfiltered water-supply, the building of a proper Municipal office, the repairs of the present and the erection of the new Town Hall, the improvement of Bentinck-street, the opening of the lungs of the northern part of the city, the question of incinerators for the disposal of road sweepings, the question of altering the Circular-road railway, the lighting of Harrison-road, and various other matters. While recognizing the gravity of the task, he felt sure of the support of the Commissioners in carrying out the improvements so as to make Calcutta what it should be, namely, the best city in the Empire of India. This is a highly satisfactory programme and we hope Mr. Williams will be enabled to achieve success. Of the 40 Commissioners present, we do not read that any of them responded to his call, except Mr. Apcar, who, we find, simply "welcomed the new Chairman."

On account of the death of Prince Jehan Kadr, the business of the meeting was not gone through. At the instance of the Chairman the Commissioners recorded a resolution expressing regret at that death, as that of one of their important colleagues, thus:—

"That the Commissioners have received with deep regret the sad intelligence of the death of the Hon'ble Prince Sir Jehan Kadr Meerza Mohamed Wahed Ali, Khan Bahadur, K.C.I.E., and they desire to place on record their high appreciation of his services as a Municipal Commissioner and their sorrow at his loss. His genial disposition, suavity of manners, and the keen interest he took in municipal matters earned the esteem of his colleagues, who believe it will be difficult to replace the loss sustained by them."

Several of the Commissioners, representing all sections of the community, spoke on the resolution, testifying to the gentle manners of the Prince. The Chairman also moved that a copy of the resolution be sent to the Prince's bereaved family and asked the Commissioners to adjourn the meeting, after disposing of one very urgent matter, as a mark of respect to the memory of the deceased Prince, which was done.

The urgent matter was disposed of by the following resolution:—

"Resolved that the local Government be asked to empower the Health Officer under section 334 of Act II (B.C.) of 1888 to completely de-water, after service of notice for twenty-four hours, every tank, public or private, the water of which is used by the residents of any locality and which he has reason to think has been contaminated by infected articles of cholera patients; the power to be exercised by the Health Officer only with the sanction of the Chairman on reasons stated by him in meeting and that the local Government be asked to grant such power for two months only."

The section of the Municipal Act runs in these words:—

"In the event of Calcutta being at any time visited or threatened with an outbreak of any dangerous, epidemic or epizootic disease, the Commissioners in meeting, if they think that the ordinary precautions are insufficient to check the spread of such disease, may, with the sanction of the Local Government, take such special measures as they shall think necessary to prevent, check, or mitigate any such outbreak, and the expenses of any such measures shall be paid out of the General Fund. Such measures and any regulations passed to give effect thereto shall be published in the *Calcutta Gazette*, and any person wilfully neglecting or refusing to carry out, or obstructing the execution of any regulation made under this section, shall be liable to a fine not exceeding Rs. 100."

The mortality from cholera as stated at the meeting is 40 a day. The Commissioners do not, therefore, hesitate to take a drastic measure and do not grudge to bear the expense ordinarily imposed on owners of tanks to keep them pure.

THE *Times of India* writes:—

"The s.s. Bullmouth, the first of a fleet of tank steamers to arrive in Bombay harbour with a full cargo of kerosine oil in bulk, consigned to the Bulk Oil Installation Company at Mody Bunder, reached this port on Monday and is now anchored in the harbour. The vessel which has on board nearly 1,200,000 gallons of Russian oil shipped at Batoum was brought alongside the newly constructed timber pier on Wednesday morning, and during the day work was started of pumping her liquid cargo from the ship's hold into the four capacious reservoirs erected on the bunder, the total capacity of which are but little short of 2,800,000 gallons. Since our last description of the works the latter have now practically been completed, the tanks having been painted white outside and protected each with a lightning conductor. The powerful pumping machinery has been placed in position and connected with the pier head, while in addition the branch railway line from the Oil Company's compound to the Dock sidings near Carnac Bridge has been nearly completed, so that within a very few days the oil should be ready for distribution among local and up-country purchasers. The arrangements for making the oil cans and filling them on the works are also complete and are up to the latest designs."

The business of kerosine oil in bulk in India is the enterprise of a Syndicate in London, Messrs. M. Samuel & Co., being the manag-

ing agents in London and Messrs. Grahams & Co., of the same city, sole agents for India. Started by their corresponding firm in Calcutta, Messrs. Graham & Co. of this city, the trade is being extended rapidly throughout the Indian continent and the neighbouring island. The first storage installations were made at Budge Budge, where there are five reservoirs, one with a capacity of 2,500 tons and four each of 1,500 tons, or a total of 28,34,750 gallons; next in Madras, then in Ceylon. Bombay comes fourth, to be followed by Karachi. In Bengal, we have storage tanks at Nircaidanga (Calcutta), Patna, Rungghat, Burdwan, Rungganj, and Assensol. Tanks are under construction at Khulna and Bhagalpur. Orders have been made for Kushtea, Mignanat, and Sahebganj. Outside Bengal, tanks are being put up at Benares, Cawnpur, Agra, Allahabad, and Delhi. The first steamer *Harrow* from London with Russian oil, not in bulk but in drums, measuring 1,32,927 gallons was landed at Budge Budge on the 14th of December, 1892. The last to arrive this week is S.S. *Volute* with 17,37,972 gallons. On the 17th of February, 1893, the first oil in bulk was brought by S.S. *Turbo* from Batoum, the quantity being 16,42,902 gallons. In that year Messrs. Graham and Co. had 6 tank waggons of 10 tons each of their own to carry the oil over the railways. Spurred by the activity of Messrs. Graham, who have made a remarkable development of the trade in so short a time, the E. I. Railway are now making waggons of 14 to 15 tons. Six are working and 12 being built. The E. B. S. Railway have ordered 8, two of them are complete and are at present used in carrying drinking water on the line for their staff and employees.

Dr. Kitasato of Japan is reported to have discovered a remedy for leprosy by inoculation. He was a colleague of Dr. Haffkine in the Pasteur Institute of Paris.

WALDEMAR MORDECAI WOLFF HAFKINE was born in 1863, in a Jewish family in South Russia. After studying in the gymnasium of Berdiansk and the University of Odessa, he got his degree of the doctor of Science at the age of 23. He then worked at the laboratory of the Natural Society of Odessa for five years. In 1888, he was assistant professor of physiology in the Geneva University and in the next year assistant to the celebrated Pasteur. It is Mr. Ernest Hart, the editor of the "British Medical Journal," who heralded him into India where he has an obliging friend in Mr. Hankin. Dr. Simpson also took him by the hand and at the municipal laboratory he commenced his operations for Calcutta. Wherever he has been, he has been a favourite, for he has an introduction from the India office.

Shortly before the appointment of Dr. Simpson as Health Officer of Calcutta, a most promising man of science and of versatile talents was a candidate for the place in the person of Dr. Von der Horcke, who had come out with letters from Dr. Koch, who himself, a year after, came out as the head of the German Cholera Commission. Some of the Commissioners, led by the late Kristodas Pal, cried down Dr. Horcke as a German spy. If that spirit still ruled in the Municipality it might be said of Dr. Simpson that he had associated himself with a Russian spy.

THE question of the separation of the judicial from the executive service, if not the judicial from the executive function in India, is as old as 1868, if not older still. At any rate, early in that year the Secretary of State for India recognized the necessity of the distinction and was anxious to make two branches of the Civil Service. He wrote:

"It is the opinion of some that the present civil administration of India is defective in this respect; that no sufficient distinction is maintained between the classes of officers called on to fulfil functions so widely different as those of the ordinary administrative branches, and of the judicial. It has been suggested that such an alteration might be made in the system of promotion, which now obtains among Civilian, as would obviate the common occurrence of a transfer to the judicial bench of men who have had no special preparation for the performance of its duties, and are too old to commence the necessary training.

I shall be glad to have your opinion on this subject: and any proposals which you may make to obviate evils, which I find to be the subject of general complaint, will meet with my ready concurrence."

The questions formulated on the occasion were:

Whether it is expedient that a distinct judicial branch of the Civil Service should be formed, the members of which should be trained specially for the duties of the Bench, and should not look for advancement beyond the sphere of those duties?

Whether there are any difficulties in accepting the principle of such a change absolutely with regard to the Indian Civil Service?

The select officers in Bengal consulted were:—

A. Money, Esq., Officiating Member, Board of Revenue.

R. B. Chapin, Esq., Offg. Commissioner, Presidency Division.

A. R. Thomson, Esq., Offg. Superintendent and Remembrancer of Legal Affairs.

Lord H. U. Browne, Offg. Commissioner, Chittagong.

W. J. Herschel, Esq., Offg. Commissioner, Burdwan.

J. Monro, Esq., Offg. Magistrate, Jessore.

H. Bell, Esq., Judge, Small Cause Court, Muotiharee.

J. P. Grant, Esq., Magistrate, Banconra.

J. Westland, Esq., Offg. Magistrate, Nadia.

REIS & RAYYET.

Saturday, April 25, 1896.

HOW THE POLICE CAN MOLEST AND NOT BE MOLESTED.

CONVENIENTLY situated, Dacca is the chief city of East Bengal. It still enjoys the reputation of having been for many years the capital of this province. Long before it became the seat of Mussalman Government, the fame of Dacca had spread far and near for the produce of its looms. Dacca muslins found their way to the marts of the Levant and thence to imperial Rome. Though shorn of political glory, for this old town, no longer the residence of viceroys of Pathan and Mogal, is now the head-quarters of only a Divisional Commissioner under British rule, and though its commercial importance also has considerably abated, for it is no longer the emporium that it was of the entire trade of East Bengal, and its weaving industry in particular has, from want of encouragement, greatly decreased, Dacca is still the second town in Bengal for wealth and influence. It is the home of many bankers and merchants, some of whom are distinguished for liberality. One such Mussalman house of the day as that of Khaja Abdul Gani, whose benefactions are unrestrained by considerations of creed and colour, can create the reputation of a town. The Shahas or Roys of Hatkhola, in Calcutta, whose annual dealings in jute and rice would come up to several lakhs of rupees, and some of whom carry on extensive transactions in loans to Zamindars and Patnidars on mortgage of land, are all connected, more or less intimately, with Dacca. The commercial greatness of Calcutta, therefore, may be said to depend to a degree upon the prosperity of Dacca.

From ancient times, Dacca has been the city of shows. Costly and splendid processions are organised by the Dacca millionaires on occasions of marriages in their families and of certain national festivals. Elephants adorned with jewelled housings, and steeds richly caparisoned, are led out in numbers. Diverse ingenious constructions are made with wicker-work and coloured paper or cloth. Those processions that are paraded through the streets at night are characterised by a blaze of light. About a fortnight before the dates, thousands of sight-seers are attracted to the city from all parts of the district. Large, however, though the crowds be, their behaviour is generally peaceful. A dozen or so of constables deputed by the District Superintendent of Police, is quite capable of maintaining order. Though the population consists of both Mussalmans and Hindus, the former outnumbering the latter, and though the processions are generally issued by Hindus,

DEAFNESS. A treatise describing a really genuine Cure for Deafness, Singing in Ear, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-trunks and similar appliances carefully supervised. Address: THOMAS KEMP, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

yet the oldest inhabitant of Dacca cannot remember any *fracas* between Hindus and Mussalmans on such occasions. They have a local word for these processions, *viz.*, *Micchil*, evidently of Urdu origin. Mussalman Zamindars freely lend their elephants and steeds to the Hindus, and *vice versa*. The adoption of the Urdu word by the Hindus points to the fact of there being a perfectly good understanding between the two communities.

Our object in describing these details is to draw public attention to the untoward results of a *Micchil* that took place in March last. With as few comments as possible of our own, we shall try to give a simple narrative of what happened. Among the old families of Dacca may be numbered that of the Bysakhs of Lalchand Mokin's Street which branches off from the broad Nawabpore Road. The present heads of the family are Babus Priya Nath Bysakh and Dharani Nath Bysakh. The month of March corresponds with Phalguna of the Hindu calendar. As a rule, in consequence of the auspiciousness of Phalguna, more marriages take place in that month than at any other time. The cousins Priya Nath and Dharani Nath had each a son to marry. The 7th of March was fixed as the day for celebrating the nuptials of both the youths. The brides were girls belonging to two respectable families of Dacca. A grand procession issued from the residential house of the Bysakhs and accompanied the two bridegrooms who took the same way and reached the houses of the brides one after another.

The *Micchil* proved a success. The usual license had been applied for and granted. The discharging of fire-works along the way having been forbidden, the Bysakhs took care that nothing of the kind might happen. The crowd that had collected to witness the show was very great but everything went off as peacefully as possible. The weddings were over. The brides were brought to the house of the Bysakhs. The 11th of March was fixed for the second procession, *viz.*, that which is generally got up for escorting both bridegroom and bride from the latter's to the former's house. As, however, the brides had already been brought to the house of their husbands, the second procession was more a matter of form than otherwise. It started from the house of the Bysakhs, and having made a tour of some of well known streets of the town returned to the same point. It was a mile long, and consisted of carriages, steeds, dozens of silver and gilt chairs and *chowkis*, flags and banners, incense, music, &c. The cost of the articles exhibited would come up to more than a lakh of rupees. The bridegrooms and the brides were borne on costly silver chairs, accompanied by their relatives and a large number of invited gentlemen. The number of men who walked in the procession, together with the sight-seers, came up, at a rough calculation, to about twenty thousand. The usual license had been taken out. In it were laid down the names of the streets through which the procession was to pass. The time fixed was from 2 P.M. to 4 P.M. There was nothing in the license to show that it was the intention of the Police to forbid the playing of music at any point along the route. Ten constables, with one Head constable, were told off for preserving order.

The procession started at the hour fixed. The Cutchery buildings on the Nawabpore Sadler Road were reached in about fifteen minutes. The van and centre of the procession, with music playing, passed off unmolested. The work of the Courts was sus-

pending. Suitors and Vakils and Muktears, and ministerial officers, and all the judicial and executive officers, including the District Judge, came out to witness the sight. There were abundant evidence that no one was annoyed or felt any wish to stop the music. A very small part of the long line had to still pass the Cutchery buildings. It was absolutely the rearmost section of the procession. The two bridegrooms, on the same costly silver *chowki* adorned with many precious things, were there. Babu Priya Nath Bysakh, with his relatives and a select party of gentlemen, walked by the side of this *chowki*. A small band of musicians played here. As this portion of the long train came up in front of the premises in which the Magistrate held his court, a number of Police men came up to Babu Priya Nath and said that the music should be stopped. He replied that he had permission for the music, and that his license contained no interdiction. The Police rejoined, that the music must be stopped, for they would, on no condition, permit it there. They then enquired under whose orders was the music being played. When informed by the Babu that the order had been given by the Magistrate himself and the District Superintendent of Police, the men were heard to say that they would not recognise the order. Most inconsistently, however, with their profession, they asked for the production of the license. Babu Priya Nath failed to produce it, as it had been made over to the constables who had gone ahead. Then the Inspector ordered the men to arrest Babu Priya Nath. What followed had better be described in the Babu's own words. "Directly the order was given, the Head-constable, Harendra, caught me by the neck and Sub-Inspector Sarat Babu caught my left hand and said—'I arrest you'—and began to drag me. Then all the Policemen pushed me along to the northern steps of the Fouzdari Cutchery. At the time they abused me and beat me. Here my younger brother, Pramatha Nath Bysakh, came up and begged the Inspector to let me off and told him that I was his elder brother. Thereupon I was let off. My coat was torn in the course of these proceedings. I produce the coat. I felt pain in consequence of the beating. I have suffered much mental pain and also suffered in the estimation of society. I am a Mahajan and Zamindar."

Smarting under the wounds inflicted on both his body and mind, Babu Priya Nath filed the next day, *viz.*, the 12th of March, a complaint against the Police in the court of the District Magistrate. The deposition was recorded on the 13th by the Deputy Magistrate in charge, who promised to pass orders the next day. Before, however, recording the deposition, the Deputy Magistrate had sent for the Police register for satisfying himself as to whether there was any interdiction of music. The procedure with regard to licenses at Dacca is rather curious. The District Superintendent makes the order, fixing the hours and routes and laying down such conditions as seem meet to him. A copy of this order is then made over to a Head-constable who, with a number of constables, is told off to see that the order with respect to time and routes and other conditions is duly carried out. The parties, therefore, are obliged to call for a production of either this copy or the original register for showing what the precise orders are. In the present case, the original register showed that there was no inter-

diction about music on any part of the route the procession was to take.

As soon as the deposition was recorded, the District Superintendent of Police roused himself. He addressed a letter to the District Magistrate under date the 13th of March. It is a curious farrago of statements of fact and argument. India is, probably, the only country where such an effusion can be quietly received by a judicial officer, in course of a judicial proceeding, from an official representing one of the parties in a criminal cause. The letter stated that in arresting Babu Priya Nath and seeking to drag him by force for producing him before the District Superintendent, the Police were acting within their rights in controlling and regulating the conduct of the procession in the streets, that Babu Priya Nath having refused to obey the behest about the stopping of music, the Police were obliged to arrest him under the orders given them by the District Superintendent himself. The letter concludes with a characteristic statement: "I do not consider that the attempt to produce the man before me in order that I might find out why he would not carry out the orders was illegal." So, it was only to find out why a man disobeys an order, verbally communicated to him in supersession of a previous order given to him or his men, it is necessary, in the judgment of this sapient Superintendent of Police, to apprehend him and drag him forcibly from the place where he is apprehended to the presence of the Superintendent. Clever as this defence is of the arrest of a wealthy citizen enjoying the esteem of the whole district for the position he occupies in society, it is rather inconsistent with another statement made in the same letter by the august Police official. It runs to this effect: "The Inspector told me that as they refused to obey the order, he was bringing Priya Nath Bysakh to me when his brother Pramatha Nath Bysakh came up and said they would stop the music; so he was allowed to go." Look at the nice way in which the head of the Dacca Police takes such things. If anybody was responsible for the conduct of the procession, it was the person who had applied for the Police license and the constables who carried it for seeing it obeyed in every particular. Babu Priya Nath was not the applicant. The District Superintendent, annoyed at something that he had not forbidden while permitting the procession, asks his myrmidons to apprehend Babu Priya Nath, not for bringing about a stoppage of the music, for we have his own words before us, but only for production of the man before him with a view to ascertain why he was disobeying orders. This *why* Babu Priya Nath had repeatedly informed the Police of. That would not do. They had orders to seize and drag him to the Superintendent so that he might repeat it once more in the awe-inspiring presence. While being dragged, another man comes up and says that the music would not go on. Forthwith the arrested individual is set free. The necessity of ascertaining the why of his disobedience ceases as soon as another man appears on the scene and says that he, at any rate, would not disobey orders! The District Superintendent's letter concluded with a request for the transfer of the case from the Deputy Magistrate's file to that of the District Magistrate himself, or to that of a European officer. The ground urged was that an important principle was involved as to the powers of the Police in controlling and regulating processions in the city.

The Magistrate was too good to refuse such a simple request. Bracton and Lyttleton and Coke, if not Grotius and Puffendorf and Vattel, would be cited by both sides in course of the arguments. He asked the complainant's pleaders as to whether they had any objection to the transfer of the case. It was a delicate question, if not to ask, at least to answer. They returned the only answer which, as men of experience, they possibly could. They had no objection to the Magistrate trying the case.

About 9 witnesses were examined. Of these, 8 were Government servants, such as mohurrirs and clerks. One of them was the Assistant-Magistrate, and one a Deputy Magistrate. The fact of arrest was deposed to by all. Some spoke of the violence done to the complainant. The one fact which the Magistrate succeeded in eliciting from some of the witnesses was that it is not customary for processions to pass the Cutchery buildings with music playing. This was enough. The complainant's pleaders desired to call other witnesses, that is, gentlemen unconnected with the Government, and prayed for time. The Magistrate did not allow this. The pleaders for the complainant were not even allowed to address the Court. The Magistrate once went to his private chamber. What passed there is not known. He came out and at once gave judgment, dismissing the case. The judgment is a strange document. It should be produced *in extenso*. It offers the best evidence regarding the judicial abilities of Mr. L. P. Shirres, for that is the name of the Dacca Daniel.

"I have examined the witnesses summoned on behalf of the prosecution whom the complainant's pleaders wished to examine. They have to-day applied to send for more witnesses, but I see no reason to grant that petition.

It is proved that music is never allowed to be played by the processions when passing the Cutcheries; and the necessity of this rule will be obvious when it is considered that there were about 150 processions on the day in question. The order passed by the District Superintendent on the petition did not especially prohibit the playing of music there, but the directions to the Police were not to allow music in the forbidden places. The complainant's procession, however, continued to play music passing the cutcheries, but the Police ordered it to stop. Some one in the procession ordered the music to continue (it is said this order was given by complainant but there is no proof of that in the record). Thereupon the Police arrested the complainant. Complainant would not submit, and force had to be used. It is not proved, however, and does not appear to have been the case, that any unnecessary force was used. Only one witness of the prosecution deposes to the Police having beaten the complainant, and the other witness, who must have seen it if it had taken place, makes no mention of it. It is possible that if complainant were sent up as an accused under the Police Act he might get off on the plea that the playing of music at the place in question was not specifically prohibited in the order on his petition; but he certainly has no ground for bringing a complaint, the Police men only doing their duty, and the complaint against them appears to be frivolous because based on no substantial ground whatsoever, and vexatious because it has been brought with no hope of obtaining a conviction but merely in order to harass the Police.

As, however, the accused have not been sent for,

I cannot award compensation. The complaint is dismissed under Section 203, C. C. P."

We reserve comments on this miserable document which Mr. Shirres hoped would do duty for the judgment of a court of justice on the complaint of a substantial subject of Her Majesty for restraint of personal liberty, assault, and loss of honour. Could such a judgment be possible if judicial and executive functions had been separate in India?

Letter to the Editor.

RAGHUNATH SIROMANI.

SIR,—Your article (*R & R*, Mar. 28) on Raghunath Siromani has been read by me with delight and interest. A few more particulars regarding Vasudeva Sārvabhauma would have been welcome. Permit me to point out a little inaccuracy. After Raghunath's return to Nadia, old Vasudeva retired, not to Benares but to Pooree or Purushatam. It was there that Vasudeva met Chaitanya and his followers. Chaitanya had at one time been a pupil of Vasudeva. At Pooree a religious discussion took place between Vasudeva and his quondam pupil. Chaitanya succeeded in convincing his former preceptor of the truth of the religion of Bhakti or Devotion he preached. It is said that Chaitanya put forth two additional arms and became actually *Chaturbhuja* or four-armed (Vishnu) for showing his particular good will to Vasudeva. The latter wrote several works on the Vaishnava religion. After his death these were despatched from Pooree on a cart bound for Navadwip. The roads were then infested by robbers. It was at Vishnupore that the contents of the cart were robbed in the belief that they were valuable. The robbers, to their great disappointment, found that instead of gold and silver there were only manuscripts on palm leaves. These afterwards found their way to the family of a Vishnupore magnate. Some of the disciples of Vasudeva, upon hearing of this, proceeded from Nadia to Vishnupore for recovering their master's latest writings. It is said that success did not attend their efforts.

The books that Vasudeva reproduced from memory were the *Karika* or aphorisms of the *Kusumanjali*, and the four volumes of Gangeshopadhaya, known as the *Chintamani*. It is questionable whether before Vasudeva set himself up as a teacher of Naya in Nadia, there had been any preceptor to teach that branch of Sanskrit philosophy in Nadia. It is probable that the *Gautama Sūtras* were known and taught in that place. The treatises, however, that were composed by Udayanacharya, by Gangeshopadhaya, and by Bardhamanopadhya, could not be available to the Nadia professors. The preceptors of Naya in Mithila guarded these works with jealous care. These great logicians had developed the system of Gautama along new lines.

The real name of Pakshadhara Misra was Jayadeva Misra. There are two explanations given for the change of name. One is that Jayadeva had become a master of Naya while yet in his teens. One day while teaching his pupils, a bird dropped from a tree. The learned Jayadeva ran, from childish habit, to catch the bird. He came, from this incident, to be called by the name of Pakshadhara or bird-catcher. The other is that Jayadeva became so skilful a dialectical reasoner that no one could argue with him. If he adopted a *paksha* or side (proposition), there was no one to dislodge him from it. Both the etymologies seem to be fanciful. They rest on no better evidence than tradition.

BHARGAVA.

Calcutta,
March 30, 1896.

DR. SAMBHU C. MOOKERJEE.

An Indian Journalist: Being the Life, Letters, and Correspondence of Dr. Sambhu C. Mookerjee. By F. H. Skrine, I.C.S. Calcutta: Thacker, Spink & Co. 1895.

Travels and Voyages between Calcutta and Independent Tipperah. By Sambhu C. Mookerjee. Calcutta: *Reis & Rayyet* Office. 1887.

Down to comparatively a short time ago, a work like 'An Indian Journalist' would have been markedly exceptional. A noteworthy proof is afforded, by it, of the change which, within the last two generations, English education has effected in India, and more especially in Bengal. By acquiring a knowledge of the English language and literature, the native has, in many cases, become capacitated to understand the rule under which he lives, and the motives and policy of the far-off kingdom which ultimately determines and shapes that rule. By means of that acquisition he has also qualified himself, not infrequently, for intelligent personal intercourse with those to whom his interests are immediately intrusted; an advantage, equally to himself and to them, of

incalculable value. Enabled, consequently, much as if he were an Englishman, to discuss the measures of the Indian Government, and wisely left free to do so, and also to arraign them within legitimate limits, he has now come to figure as a political critic and counsellor, and one with whose deliverances his alien legislators do well to reckon.

As a representative of his fellow-countrymen, rarely has any one hitherto appeared for whom can be claimed a rivalry with the esteem which was the due of the late Dr. Mookerjee, and which was explicitly accorded to his manifold merits. Highly appreciated as he was by those for whose behoof he spent himself in labouring, it was his condign good fortune to win the regard of the leading British authorities in India, and no less that of the numerous persons of distinction, outside his fatherland, to whom, as a letter-writer, he addressed himself. Nor, towards gaining this regard, was he ever known to hate a jot of the sturdiest independence. Yet, at the same time that he thus respected himself, a sense of justice invariably prompted him to treat with befitting respect the opinions of others, even if they were his most virulent antagonists. A spirit of reasoned and reasonable conciliatoriness, while he could not but perceive that, as a patriot, it was the dictate of expedience, seems to have been, with him, a second nature.

After considerable practice as a miscellaneous essayist, Dr. Mookerjee, in 1882, founded, at Calcutta, a weekly newspaper, in English throughout, though bearing the Arabico-Persian or Hindustani title of *Reis & Rayyet*, which may be rendered, not inadequately, "Sovereign and Subjects" or "Prince and People." Chiefly by this, and by his correspondence, he has, without question, merited lasting and honourable remembrance. In Bengal this is assured to him; and his broad-minded and discerning biographer was certainly justified in his forecast, that, on the presentation of facts, it would be widely shared by those to whom his character and literary achievements had previously been unknown. As depicted, after long acquaintance, by Mr. Skrine, he was a man to challenge all but unqualified admiration, as for his sterling integrity, disinterestedness, and genial disposition, so for his ability and untiring energy. Many of these traits are abundantly evidenced, or else suggested, by the letters which are appended to the interesting memoir of his career, unfortunately a somewhat brief one, which terminated, in his fifty-fifth year, in February, 1894. This influential journal which he established, it is gratifying to be able to say, has been conducted, since his lamented death, in a manner redounding conspicuously to the credit of his successors.

The volume of travels named in our heading could have emanated from none but an acute and well-informed observer. The region of Bengal with which it has to do is one regarding which, in the main, hardly anything but dry statistics and the like has heretofore been accessible. Little appears to have escaped the notice of the author, in the course of his peregrinations, with respect to either the peculiarities of the people with whom he came into contact, or the geographical features, natural productions, and antiquities of the territories which he visited. He has, indeed, set in his pages an example which other Hindus would do wisely to copy. That he occasionally had experience of gratuitous discourtesy was only to be expected at the hands of such as those who debased themselves by it. To quote the words of Colebrooke, the illustrious Orientalist: "It is not to be dissembled, that the European, that the descendant of the Gothic race, that the white man, and, above all, the Englishman, is full of prejudices, and governed, in his intercourse with men of other nations and other complexions, by a repulsive dislike of strangers, an unjust contempt and deep aversion, amounting, in an illiberal mind, to a contemptuous hatred of men of dark hue. The conduct of the lower British, in their dealings with men of colour, in either of the Indies, is but too often influenced by such feelings." To a deplorable degree, however, till very recently, not merely the lower British has Colebrooke's censure been applicable. That the indications are now steadily becoming more and more numerous and obvious of a much kindlier attitude than of old to the people of India, on the part of the English functionaries dwelling among them, is a circumstance of auspicious omen to both parties indifferently.—*The Nation* (New York), Mar. 12, 1896.

DIFFICULTIES OF DISTRICT OFFICERS IN INDIA.

BY COL. H. C. E. WARD, C.I.E.

Mr. Seton Karr's article in the *National Review* for October 1895, opens up a field for discussion that will, I have no doubt, be taken up with vigour by many of those young Indians, who are deeply impressed with a sense of their own capabilities and of their power to hold with success every appointment in India.

I think, however, that most men who have had any large experience of administration in the East will agree with Mr. Seton Karr in his view that it is absolutely necessary for the safety of English Rule in India, that for many years to come we

should not put into the hands of any class of our Indian subjects, the entire administrative charge of any important district. For the convenience of the English reader it may be well to explain that our administrative system in India is based on a division of the country into areas, varying both in mileage and population, called districts. Each of these districts is in charge of an English Officer who is variously called Magistrate and Collector in the North-Western Provinces, Bengal Madras, and Bombay, and Deputy Commissioner in the Punjab, Central Provinces, Oudh, and elsewhere. This Officer combines in himself the whole of the judicial and executive administration of the district in his charge: he is in fact the responsible unit to whom the Government looks both for the well-being and the proper management of the populations within his territorial limits. To assist him in this work, he is given a staff of Assistants varying in number according to the size and importance of the district, and a District Superintendent of Police. Four or five of these districts make up a Division, the officer in charge of which is subordinate to the Governor, Lieutenant-Governor or Chief Commissioner of the Province.

Obviously it is of the greatest importance that the officers in charge of these district-units should be men both of administrative ability and of strength of character, for on them practically depend the welfare of the population and the peace of the country. This is seen the more clearly when we look at the constituent parts of which this population is composed: there is no large town where one does not find both Hindus and Mussalmans, the former subdivided into a large variety of castes, each with interests of its own, and conflicting with those of their neighbours. The advance of education has, if anything, increased the antagonism between classes; for the inferior castes will no longer allow themselves to be ridden over rough-shod, but are imbibing larger ideas of equality than they were ever allowed under any regime other than the English. To hold the scales of justice perfectly evenly between all these conflicting elements requires an absolute freedom from all bias, a thorough knowledge of the manners and customs of the different people concerned and a scrupulous adherence to justice on the part of responsible officer:—and where will one find those qualities among natives of India? Admit that there is no lack of distinguished ability and integrity among our native subordinates, they themselves will be the first to confess that it is almost impossible for them to be entirely disinterested. The pressure put on them by their many relatives and dependents can hardly fail to influence their choice in the selection of men for appointments, whereas the Englishman's choice is, as a rule, in favour of the man most likely to do best in the post. I do not for a moment say that favouritism does not exist, but only that the Englishman's main object is to have the work well done, that with this view he selects the man he thinks likely to do best, and that he is not troubled with the importunities of poor relatives and friends which weigh very heavily on the Indian. A Mussalman friend of mine, who had risen high in the service and was deservedly distinguished both for intelligence and integrity, told me once that the greatest difficulties of his position had come from the impossible demands of his own relations.

Where a Mussalman officer is in charge of a Hindu district, however just his selection of men may be, he will never be credited with disinterestedness; and the same thing applies to the reverse of the picture,—the Hindu in charge of a Mahomedan district. Mr. R. Kipling's skit on the Bengali Deputy Commissioner of a frontier district, though highly coloured, is exceedingly true, and I doubt whether this phase of administration is yet within the range of practical policies. In all my experience I have never come across the Hindu capable of managing successfully a Mussalman district, though the converse does not necessarily follow.

Agreeing as I do with Mr. Seton Karr, I would gladly see the Government of India do more to strengthen the hands of their Deputy Commissioners.* These are the men on whom the brunt of all administrative or executive difficulties falls; and to them we look to see that the peace of the district is not broken. There may be the bitterest strife in secret between the Hindus and Mussulmans: the Deputy Commissioner is responsible that this bitterness should not come to a head or culminate in a riot, say, at any of the numerous festivals of either side. Famine is imminent; the Deputy Commissioner is responsible that such arrangements for the supply of food to the starving are made as will ensure no loss of life. Crops fail; but the Land Revenue demand of the Government has to be got in, whether or no:—and all these bricks have to be made often without straw or with only half the quantity required.

Perhaps the D.C.'s greatest difficulty is that of keeping the peace

in these days of religious antagonism between Hindu and Mussalman. Why this feeling of antagonism should have become so accentuated of late years is not easy to explain. We have to go back a long way—to the time, in fact, when the Mahomedan was the practical ruler over the greater part of India, and the Hindus were altogether under subjection; and were kept in that subjection by a high hand, and no Hindu ever dreamed of doing aught that could in any way be construed into an insult, either to the Mahomedan religion or to the personnel of the ruling race. The Hindu passed a Mussalman Mosque in silence and never used musical instruments within a certain distance on either side of the Mahomedan place of worship. We need not go far for an example: one can see the same practice even now in the streets of Bhopal or Haiderabad in the Deccan, where there have been none of these outbursts of fanaticism which have unfortunately become too common in recent years in British India. Jealousy between the two creeds has much to answer for: the Mussalman has been left far behind in the educational race by the Hindu, as, for years, he was too conservative to give up his own system of teaching, although he saw the young Hindu ever outstripping the young Mahomedan in all examinations and gradually ousting him from Government employment. Ever since the blessing (?) of competitive examinations was introduced into India, the former dominant race has been losing its position, until now in many Government offices it is a rarity to find a Mahomedan employe. It has been a part of our system to treat all our Indian subjects with perfect equality,—to allow to all the same religious freedom,—and to permit no interference with the religious observances of either side. Very naturally the race that has been so many years in subordination,—seeing itself now ousting its old masters from positions in our Courts that used to be theirs almost by prescriptive right, taking up the work of pleaders and advocates that formerly to a Hindu was not within the “scope of practical politics,” aspiring to the highest judicial appointments in the land and holding them, too, with credit,—has come to the conclusion that the time has arrived to give up all semblance of subservience as well as those old-world customs which may seem to show that the Hindu is, in any way, the inferior of his former ruler, the Mussalman.

A racial change of this description can hardly be effected without great disturbance, and this disturbance has been increased by the not unnatural arrogance and pride of place of the Hindu on finding himself practically obtaining a monopoly of the power which was formerly the birthright of the Mahomedan. Various other circumstances have increased the feeling; that curious assembly of Bengali pleaders and other Hindus, which calls itself by the magniloquent name of the “Indian National Congress,”—but which has no more right to be termed “National” than the assembly of Irish Carpet-baggers who have also adopted the term—added considerably to the bad feeling; for no Mahomedan of any standing or position, would have a word to say to this “National Congress,” in spite of the support some of its members received from one of India's Vicereroys.

The Home Rule institutions introduced by Lord Ripon have not improved the position in those places where the Hindus are numerically stronger than the Mussalmans; for the latter have few representatives on the District and Town Councils, and those few are out-voted on every important occasion.

All these matters have to be taken into consideration when speaking of the present bitterness of feeling between Hindus and Mussulmans; and to enable District Officers to cope satisfactorily with emergencies which are constantly arising out of this feeling, they require to have their hands strengthened by legislation. It may be urged that under the existing laws—the Penal Code and Criminal Procedure Code—large discretionary powers have already been conferred on District Officers; but these are hedged about with so many precautions and every order is open to so many appeals, that it sometimes happens that the best intentions of the officer on the spot are frustrated by the equally good intentions of an Appellate Court at a distance. As an illustration of my meaning I will give a case in point.

In 1889, '90 and '91, I was Commissioner of the Nerbada Division,—one of the five districts composing that division being Nimar in which is the large town of Burhanpur with a population of some 3,000, one-third Mussulmans, two-thirds Hindus. It happened that in two of the three years, the Hindu festival of the Dusshra coincided with the Mahomedan Moharram. The sentiments naturally aroused during the celebration of these special feasts are very apt to excite men's minds and make them more inclined to bigotry than usual. Rumour was rife that disturbances were certain to occur when the processions of the two religious parties met in the streets on the final day of the feast. The Deputy Commissioner consulted the head-men of both factions and arranged with them that selected streets should be set aside for each party; and the first year, with a certain amount of good feeling on both sides, the day passed peaceably without anything more serious than a few faction-fights between the worst-behaved followers of both sides.

* The designation of “Deputy Commissioner” is used preferentially as the remarks specially apply to Non-Regulation Provinces, but they are applicable to Executive District Officers throughout India generally.

The next year things looked more serious. The headmen could not agree as to the routes their processions should take,--each side claimed the right to go where they would,--the Hindus, who up to this had paid the Mahomedans the compliment of keeping silence when passing their Mosques, now urged that this was an infringement of the liberty of the subject,--they would carry their noisy music where they wished, regardless of whether they disturbed the Mussalman worshipper at his devotions or not. The Mahomedans met this threat with another, and said that as the Hindus would not have certain streets specially set apart for their processions, they, too, would carry their Tazias (representations of the tombs of Hasan and Husain) where they pleased, whether the Hindus liked it or not. The Deputy Commissioner tried argument in vain; he increased the Police force in the town but he knew that he could not lean on this broken reed, as the men felt strongly themselves; finally, seeing that a breach of the peace was imminent, he called up the head-men of both parties, and bound them over in very heavy recognizances to keep the peace for a month,--that is until the Moharram and Dusshra festivals were well over. Now this action of the Deputy Commissioner is strictly within his right, if it can be proved that a breach of the peace is imminent. This technical point is, often, one that is incapable of proof by ordinary evidence and, as a rule, has to be left to the discretion of the officer entrusted with the maintenance of order--provided always that he is fit to be trusted with such power: if he is not, the Administration ought never to have made him a Deputy Commissioner.

Petitions poured in to me, and telegrams were sent flying all over India, to the Chief Commissioner, to the Judicial Commissioner, and even to the Viceroy, by the legal representatives of the headmen who had been called on to find security. Execrations were heaped on the head of the Deputy Commissioner whose high-handedness was made the theme of many a virulent essay. The very violence of the opposition to the order was, in fact, its best justification, but this, perhaps, is not easy for an Appellate Court, sitting some hundred miles away, "to realize."

As it happened, I was a long distance off and could not reach Burhanpur for three days, during which time all the telegrams that had been scattered broadcast over India had filtered back to me "for report." Once on the spot it was soon made abundantly clear to me that the emergency was no ordinary one, and that special precautions were absolutely necessary to avoid a serious riot. I heard the legal representatives of the parties, who urged that there was no reason whatever to anticipate a riot, that the Magistrate was quite unnecessarily alarmed and that consequently his orders were altogether *ultra vires*. Finally, I admitted the appeal and fixed the date of hearing for the evening of the day after the festival, at the town of Burhanpur. Strong objection was taken to this order. I was urged to fix another date or some other place; and on my refusal, every one of the legal luminaries found it impossible to be present: other engagements would compel their absence;--they would meet me at the Railway Station three miles from the city, but not there;--would I not hear the appeal then and there? I might have done this easily and then confirmed the order appealed against; but I intentionally refused to take this course, for any such decision was open to appeal to the Judicial Commissioner, who has to be guided by a meagre written record, and has not before him the unwritten facts and the feeling of the people which guide the responsible officers on the spot. He, sitting in his easy chair at Nagpur where everything around him is peaceful, might easily take the view that the local officers were biased as they had to maintain order, were too much impressed with the heated atmosphere of the place, and had allowed their fears to interfere with their discretion; that there was no tangible evidence on the record of any likelihood of a breach of the peace; that there had been none the year before at Burhanpur and there was no reason why there should be this year;--so he would cancel the obnoxious order. To avoid a result that would have been equivalent to inviting a riot, I determined that all the chief leaders of both sects should continue to feel that a breach of the peace by any of their followers meant a heavy pecuniary loss to themselves: the consequence was that though the relations between Hindus and Mussalmans were strained almost to breaking point, they did not actually break.

Now here I think, the Government of India might improve the position of affairs, so far as not to leave the question of peace or riot to hinge on the idiosyncrasy of the officer in charge of either the division or district. Some officers have an exaggerated idea of the importance of a Judicial Commissioner's censure, and do not like laying themselves open to it: others may not care to take upon themselves the responsibility of even appearing to be in antagonism to the higher judicial authorities, however great the emergency might be. It will be urged that it is very improbable that an officer in the position of a Judicial Commissioner of a large province, would intervene in an emergency of this description, but experience has shown that this argument is not sound: cases have occurred where Civil officers have worked up to the position of Judicial Commissioner through the Secretariat or some other

side-line, without having one day's experience of the administration of a district; and it is impossible for men of this class to put themselves in the position of the District Officer, on whom practically the responsibility for the safety of the country devolves.

That this should be possible is perhaps a blot on our administration; but I can answer from my own experience that it has occurred, and it may occur again, so that, in order to be safe, I would recommend the Government to strengthen the hands of the men to whom they must look for the well-being of the population.

A very little in the way of legislation is required. Rules and very distinct ones must be made for the conduct of public religious processions, and even a small infringement of these rules should be visited with punishment. This would surely be better than a repetition of the riots in Bombay and elsewhere, where the military had to be called out and peace was only restored after considerable loss of life.

These rules should, however, not be based on any narrow view of the difficulty. The position of the two conflicting parties should be carefully considered, both as it now is, and as it used to be, before we introduced the "liberty of the subject"; and neither side should be allowed to use that liberty as a weapon to irritate the other.---*The Imperial and Asiatic Quarterly Review*.

A CASE OF NERVOUS PROSTRATION RESULTING FROM INDIGESTION.

THEY say that misery loves company, and they have had it so often it has passed into a proverb. Yet it isn't an all-round truth. Some kinds of misery detest company. They want to be left alone. They hate to be elbowed and questioned and talked to. A wounded dog will always crawl into some retired place by itself. The instinct of badly injured men, after a battle, is the same. Ailments that are mostly fancy, tend to set tongues wagging. But real, genuine and dangerous diseases don't incite to speech. Crises which are big with fate usually come and go in quiet.

That is why Mrs. Scuffham had no desire for the society of even her best friends at a certain time she is going to tell us about.

"Up to April, 1891," she writes, "I never knew what it was to be ill. At that time I began to feel that something was amiss with me. I had no relish for my meals, and after eating my chest felt heavy and painful, and my heart would beat and thump as though it meant to leap out of its place. Presently I became so swollen round the waist that I was obliged to unloose my clothing, as I could not bear anything to touch that part of my body.

"Even the slightest food gave me pain; a little fish setting my heart to beating at a great rate. My feet were cold, and cold, clammy sweats would break out all over me, leaving me exhausted and worn out. At night I got no sleep to speak of, and in the morning I felt worse tired than when I went to bed. I also suffered a great deal from my feet being puffed up and sore. I could scarcely get about the house. When I went shopping I had to ride to the town and back as I could only walk a few yards.

"As time went on I lost my flesh and strength more, and gave up hope of ever recovering the precious health I had so sadly lost. I took medicines, and consulted a clever doctor at Derby who examined me and said my heart was weak. He also gave me medicines, but I got only temporary ease from them, and in a short time was as bad as before. All this time I was so nervous and depressed that I had no desire for company. On the contrary, I seemed to want to be alone with my misery. Even a knock at the door frightened me, as though I expected bad news, yet I did not really. My nerves and fancies ran away with my knowledge and judgment. Thousands of women who have suffered in this way will understand what I mean.

"Year after year I remained in this condition, and what I went through I cannot put in words, nor do I wish to try. It will answer the purpose to say that I existed thus for eleven and a half years, as much dead as alive. I spent pounds on pounds in physic, but was not a whit the better for any of it.

"In October, 1892, a book was left at our house, and I read in it of cases like mine being cured by Mother Seigel's Syrup. I got a bottle from Mr. Bardel, the chemist, in Normanton Street, Derby, and when I had taken this medicine for a few days, my appetite was better and I had less pain. I kept on taking it, and soon my food agreed with me and I gained strength.

"After this I never looked behind me, but steadily got stronger and stronger. When I had taken three bottles I was quite like a new woman. All the nervousness had left me, and my heart was sound as a bell. Since then I have enjoyed good health, and all who know me say my recovery is remarkable. I am confident that Mother Seigel's Syrup was the means, in the hands of Providence of saving my life; and out of gratitude, and in hope of doing good, I freely consent to the publication of this statement. (Signed) (Mrs.) Ann Scuffham, Cooper's Lane, Laceby, Grimsby, May 1st, 1895."

This letter is endorsed by Mr. William J. Tollerton, of the same town, who vouches for the truth of what Mrs. Scuffham has said, as he personally knew of the circumstances of her illness at the time they occurred. No comment can add a jot to the force of this open, candid, and sincere communication. Whoever reads it must needs be moved and convinced by it. The disease which filled this woman's life with pain and misery for nearly twelve years was indigestion or dyspepsia, an ailment sly and cunning as a snake in the grass--and as dangerous. Send for the book of which Mrs. Scuffham speaks, and read the symptoms in order that you may know what it is, and how to deal with it. The book costs you nothing, yet it would be worth buying as if every leaf were hammered gold.

ALLAN'S ANTI-FAT

PURELY VEGETABLE. Perfectly Harmless. Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into Fat. Sold by Chemists. Send stamp for pamphlet.

Botanic Medicine Co.,
3, New Oxford-street,
London, W.C.

BEFORE  **AFTER** 

A Wonderful Medicine.
BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness,

Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are in valuable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, **BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.**

Beecham's Magio Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical: it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1¼d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corfit, K.C.I.E., Director of Public Instruction, Bengal 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal Journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Indian Patriot*, in its pulmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babas, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengal journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1857. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." x Dr. H. Moore of Royal Artillery from Pondicherry says:—"I sold it for Rs. 16 x Pte. W. Hopkins of Sussex Regt. from Dindigul says:—"I have sold it for Rs. 20 x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

KAVIRAJ NAGENDRA NATH SEN, Physician,
Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds, Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, MAY 2, 1896

WHOLE NO. 723.

AN OLD BALLAD OF 1566.

Give place, you ladies all,
unto my mistresse faire,
For none of you, or great or small,
can with my love compare.

If you would knowe her well,
you shall her nowe beholde,
If any tonge at all may tell
ner beautie[s] manyfolde.

She is not high ne lowe,
but just the perfect height,
Below my head, above my hart,
and then a wand more straight.

She is not full ne spare,
but just as she sholde bee,
An armfull for a god, I sweare ;
and more—she loveth mee.

Her shape hath noe defect,
or none that I can finde,
Such as indeede you might expect
from so well formide a minde.

Her skin not blacke, ne white,
but of a lovehe hew,
As if created for delight ;
yet she is mortall too.

Her haire is not to [o] darke,
no, nor I weene to [o] light ;
It is what it sholde be ; and marke—
it pleaseh me outright.

Her eies nor greene, nor gray,
nor like the heavens above,
And more of them what needes I say,
but they looke and love ?

Her foote not short ne long,
and what may more surprise,
Though some, perchance, may thinke me wrong,
't is just the fitting size.

Her hande, yea, then, her hande,
with fingers large or fine,
It is enough, yon understand,
I like it—and 'tis mine.

In brieft, I am content
to take her as she is,
And holde that she by heaven was sent
to make compleate my blisse.

Then ladies, all give place
unto my mistress faire,
For now you knowe so well her grace,
you needes must all dispaire.

WEEKLYANA.

WITHIN a quarter of an hour on Tuesday, March 3, Londoners experienced, says a London journal, a thunderstorm, a gale, snow, .. hail, rain, and sunshine.

NEARLY the whole of the City of Vernon, Texas, has been buried by sand-storms, the sand being swept in from the desert and literally covering up the prosperous city.

THE State of Michigan owns a place called Fish City which disappears in summer and rises up in winter. It is, again, founded on no land, nor is it built on boats. It is a city on ice. The ice of Saginaw Bay furnishes the foundation and the town is occupied by men with their families, who catch, clean and pack white-fish and lake trout for the market. It is raised in the same cove every year, the houses being constructed of rough pine boards. In 1893-94, the population numbered 3,000. Next winter, the number nearly doubled.

IN Scotland Yard Röntgen's X rays are being utilized for examination of suspected parcels, bombs, and explosives. They disclose distinctly nails, screws, cartridges and even grains of powder inclosed in cases. Picric acid and black powder are pervious to the rays, while sulphur, chlorate of potash, and fulminate are impervious. Here is an opportunity for Custom Houses to afford much relief to importers. It is said that Edison, after testing 1,800 different substances, has come upon a potential one for the X rays, believed to be tungstate of calcium in crystalline form, by which you are enabled to see with the naked eye the bones of arm and hand, and look through eight inches of solid wood.

Tit-Bits, a penny weekly, (No. 754 vol. XXIX, March 28, 1896) in answer to one of its correspondents, says :—

"Years ago, when the circulation of this paper, although very great, was much smaller than it is now, we offered to give the sum of £10,000, cash down, to be divided among the hospitals and charitable institutions of this country, if the circulation of *Tit-Bits* averaged for the following year half a million weekly. The circulation did not, in the time named, come up to the terms of the challenge, but we paid in proportion to the increase."

We read of many devices to push the circulation of a journal in the Indian empire, but have not yet come upon any such charity, not to say colossal.

THE same paper writes :—

"Writer's cramp seems to be most prevalent. We have received more letters from all parts of the country from sufferers from this annoying infliction, and most of them agree that the pen-holders generally used are too thin. H. K. sends particulars of a method, which

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

is very simple and is claimed to be effective. Prepare a round ball of cork with a hole in the centre, through which to put the pen-holder half-way. With this arrangement the whole hand closes round it and gets a support, whereas, with common pen-holders, the finger-ends tightly grip the pen and the fingers are held in a bent position, which, in time, gives the cramp. Bamboo or cork holders, about one inch thick, are sometimes used."

We are afraid the cork ball holder will be an impediment to quick writing. The practical effect suggested is the economy of the movement of the fingers, or as much rest as may be devised.

**

THE romantic Lady Burton has not survived her romantic husband six years. We take from an English journal the following account :

" Lady Isabel Burton, widow of the late Sir Richard Burton, died at her house in Biker Street, London, on Sunday afternoon, March 22. Lady Burton was a daughter of Mr. Henry Raymond Arundell (one of the Warden Arundells), and niece on her mother's side of the first Baron Gerard. She was but a school girl when she first met her future husband, then Captain Burton, on the ramparts at Boulogne; but from this time down to her death her whole life and thoughts were bound up with the fortunes of Sir Richard Burton. Four years later, in 1856, on his return from Mecca and Somaliland, Sir Richard proposed to her, but the marriage did not take place until 1861, owing to the opposition of her mother on religious grounds. In the meanwhile Burton had become famous by his discovery of Lake Tanganyika. Lady Burton has narrated the history of her romantic attachment in her *Life of her husband*. After her marriage, Lady Burton and her husband spent some time at Tryston, the seat of Lord Houghton; and here she met the Duc d'Anmale, Louis Blanc, and the youthful Swinburne, to whom 'Richard' used to recite 'Omar Khayyam.' Lady Burton did not accompany her husband in his Consulate on the West Coast of Africa (the occasion of his celebrated visit to Dahomey), but was with him in December 1863 at Teneriffe. Here she wrote a book on *Madera and Teneriffe*, which, however, her husband advised her not to publish. In 1865, largely owing to an appeal by Lady Burton to Lord Russell, Sir Richard received his second Consulate at Santos, and was accompanied thither by his wife. From this time Lady Burton was a constant companion of her husband in his travels. In 1870 she went with him to Damascus, where he held the post of British Consul for several years. These were the most eventful years of an eventful life. Disguised as a boy, she accompanied her husband in his perilous ride over the desert of Palmyra, and behaved with great coolness during the anti-Christian riots at Damascus. Later, we find her with her husband at Trieste. From this place she went to India (travelling part of the way in a Jeddah pilgrim ship); visited Bombay, the Deccan, and Goa, returning by way of Egypt. Occasionally she came to England (in 1878 and 1885), but she was never long away from her husband. When he died at Trieste, where he was Consul, in 1890, she felt that her life was practically over. She came to England, and received a pension from the Crown of 150*l.* a year. In July 1891, she entered a convent at Chelmsford, Essex, but finding life unendurable far away from Mortlake, where her husband was buried, she came to London in November of the same year. She never recovered from the blow of her husband's death, and the remaining years of her life were merely years of painful waiting relieved by the task of editing her husband's works and writing his life. In 1875 Lady Burton published '*The Inner Life of Syria*'; in 1879 '*Arabia, Egypt, and India*'; and, lastly, in 1893, a very fascinating '*Life of Sir Richard Burton*' in two volumes. She incurred a considerable amount of notoriety in connection with the burning of several of her husband's MSS. after his death—notably a translation of the '*Scented Garden*,' an exotic work by an Arabian sheikh."

**

THE election expenses of Mr. John Morley, who appeared for the Montrose District of Burghs, were :—

Returning officer's charges...	...	£	S.	D.	118	18	5
Personal expenses of candidate	23	10	0
Election agent and clerks	214	4	0

Postages, telegrams and carriages	36	14	2
Miscellaneous	93	2	0
Total	650	14	0

This sum does not include any law charges or the charges of a contested election.

**

A PARISIAN *chroniqueur* discusses "How women walk" and of course gives the palm to his own countrywomen. According to him an English lady doesn't walk; she travels. You might almost say that her limbs were moved by the engine of a steamer, and her feet have the motion—and the proportions—of an Atlantic liner. The German is heavy, and one feels the earth tremble beneath her tread. The Spanish donna prances. *La belle Américaine* resembles the pendulum of a clock, the Italian skips, the Russian skates along, the Dutch woman rolls, and the Belgian tramps about.

THERE are many foreign students in Paris, the law placing no obstacle to their acquisition of knowledge. In India, especially in Bengal, we are taking the wrong direction. In Calcutta, the Medical College, the only institution of its kind for Bengal and the N.-W. P., is no longer to be free to all comers. Even the children of the soil must not look to it for medical instruction.

**

IN Paris, out of 4,158 law students 230 are foreigners, and out of 5,445 medical students no fewer than 879 are foreigners, Russians, Roumanians, and Turks being the most numerous. There are also 71 foreign students—10 of them women—in the faculty of science, and 160 in the faculty of letters, 61 of them being women.

**

A *Gazette of India* extraordinary dated Simla, Monday, April 27, announces that

"A vacancy having occurred in the office of an Ordinary Member of the Council of the Governor General of India, owing to the vacation of office by Lieutenant-General Sir Henry Brackenbury, K.C.B., K.C.S.I., R.A., Her Majesty the Queen, Empress of India, has been graciously pleased to appoint Major-General Sir Edwin Henry Hayter Colten, K.C.I.E., of the Indian Staff Corps, to be an Ordinary Member of the Council of the Governor General of India.

Major-General Sir Edwin Colten has, on the afternoon of this day, taken upon himself the execution of his office under the usual salute."

**

**

THE choice of the non-official members of the Bombay Legislative Council has fallen on Mr. Rahimulla Muhammad Sayani, M.A., LL.B., as their nominee for the Supreme Legislative Council, and he has been accepted by the Governor-General.

**

ORIGINALLY written in Urdu, Mr. Hankin's pamphlet on the prevention of cholera has reached its fourth edition. He introduces the cholera microbe in these words :—

"If the body of a man dead of cholera is examined and if a small drop of the contents of the intestines is examined with the microscope, it is seen to contain many thousands of a minute living creature, peculiar in its form and properties, and which is only to be found in connection with cholera. It is now known that this minute living being is the cause of cholera. It is called the 'cholera microbe.' Although much is now known as to how it lives and grows, it is difficult to say whether it is an animal or a plant. It can move with great rapidity through the water and therefore is like a fish. But it is different from a fish, or from any animal, in that it has no mouth. That is to say it cannot eat solid matter. Its food is first dissolved and then absorbed. It is sometimes found in well water. Then it often happens that persons using this well will get cholera. It is well known that the symptoms of cholera are like those produced by eating arsenic, so much is this the case that it has been supposed that cholera is caused by eating a poison, but the distinction between cholera and arsenic poisoning can be easily made by a doctor. It has been found that just as a snake secretes snake poison, so do the cholera microbes when in the body secrete a poison, and to this poison the symptoms of the disease are due. It is not always that the cholera microbe makes the disease; just as a cow only under certain conditions secretes milk, so only under some unknown conditions the microbes of cholera have the power of secreting their poison and of producing the disease.

The symptoms of the disease do not appear immediately after swallowing the cholera microbe. It needs some time in which to make its poison and to grow and reproduce. Then only does the

harvest of symptoms appear, in the same way as the crops do not appear till some time after the seeds have been sown. It is probable that as a rule cholera appears two or three days after the water that causes it has been swallowed."

How do the cholera microbes live and multiply?

"Their food is dirt. If they are in water in which is much dirt the cholera microbes can quickly grow and reproduce. If at this time, such water is examined under the microscope, the cholera microbes may be seen in the form of small curved rods. They are so small that if 60 of them are placed in a row end to end they make a line whose length is equal to the thickness of a hair. If one of these cholera microbes is notified carefully, it will be seen to grow longer and at length to break into two equal pieces. Each of the minute curved rods thus formed is a cholera microbe. Each again grows longer and in about half an hour will, in turn, break in two and again two daughter microbes will be produced from each individual. Thus it may be understood how these minute creatures, though they have no sexes, neither do they lay eggs, are able to reproduce with great rapidity. If a trace of the cholera microbe is put into suitable water, that is to say water containing dirt, the microbe may reproduce with such fertility that on the following morning the liquid is turbid because in every drop are many lakhs of these creatures."

Therefore keep clear of dirt consisting of particles of animal origin on which the microbes live and multiply. They cannot live without food and die for want of it. When, again, you remove the dirt, you remove the cause of the disease produced by the microbes. The running stream of the Ganges usually need not be feared. For its mud is made up exclusively of small fragments of stones and sand and no particles of animal origin. Sun and air to which the stream is exposed are great purifying agents which kill many kinds of dirt. But when much pollution gets into it, it is capable of producing cholera. Therefore avoid ghats where many people bathe, ordinarily or on great religious occasions. During the rains, the river is polluted with many kinds of dirt, and it is, therefore, not safe then to use its water. Cholera microbes or comma bacilli have been found in the unfiltered water supply of the town and in many of the bathing ghats.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Queen has instituted a new order of Knighthood, to be called the Royal Victorian Order.

THE Shabzada Habibulla Khan and Nasrulla Khan have been appointed Knights Grand Cross of Saint Michael and Saint George.

PRINCE Ferdinand of Bulgaria has arrived at Paris and had the Grand Cordon of the Legion of Honour bestowed upon him by the President.

THE Czarevitch has become suddenly worse, and his condition is causing anxiety.

THE Marquis Yamagata has arrived at Havre, where he met with a cordial reception. Li-Hung-Chang landed at Odessa on April 27, and arrived at St. Petersburg on May 1, receiving a most imposing and a splendid reception at both places.

AN edict has been issued in Peking authorising the construction of a railway from Peking to Hankow.

TENDERS for the new India $2\frac{1}{2}$ per cent. Loan of £2,400,000 amount to £6,180,000. The tenderers at £102-16 receive 23 per cent. of the above in full.

THE *Times*' St. Peter-burg correspondent says that Russia has decided to build a broad gauge railway immediately from Merve to Kushk, and to prepare all necessary material at Kushna for rapidly laying a Decanville line to Herat, the object being to enable Russia to beat Great Britain in the race to Herat.

THERE is no further news from Kassala. The Shoaos are closely investing Adigrat.

PRESIDENT Kruger has replied to Mr. Chamberlain, saying that he is unable to visit England at present, as the Volksraad requires his presence in the trial of the Reform leaders at Pretoria. The *Times*' Pretoria correspondent states that President Kruger, in his reply objects to discuss reforms, as Great Britain cannot interfere in the internal administration of the Transvaal, but he adds that private suggestions would always receive consideration. President Kruger then says that if the revision of the Convention of 1884 and its supersession by a treaty of amity and commerce cannot be discussed unless the alleged grievances of the Uitlanders are also discussed, the Government of the Transvaal would prefer to leave things as they are, and limit its demands to an indemnity for Dr. Jameson's raid. The President mentions the necessity of his presence at the meeting of the Volksraad, and suggests that the question of his visit to England should not be pressed just now, but says that Great Britain can facilitate his going by accepting the basis of discussion which he has proposed. In the House of Commons Mr. Chamberlain read an extract from President Kruger's reply, which was courteous in tone, and he was, therefore, hopeful, he said, of a peaceful solution of the difficulties between the two Governments. He added that he had reluctantly withdrawn his invitation to the President to come to England. Meanwhile he had telegraphed to Sir Hercules Robinson to come to England when Sir Graham Bower returns to the Cape if the situation in Rhodesia permits of his doing so, to receive directions for further negotiations.

The Reform leaders, Colonel Frank Rhodes, Mr. Lionel Phillips, Mr. J. H. Hammond, and Mr. Farrar, pleaded guilty to high treason, and the other prisoners to *lese majesté* but without hostile intent towards the Republic. The first four were sentenced to death.

Mr. Chamberlain telegraphed to President Kruger, through Sir H. Robinson, that the British Government felt confident that the President would commute the sentences, and that he (Mr. Chamberlain) had assured Parliament to that effect. President Kruger has commuted the death sentences.

Fifty-nine of the remaining reformers have been sentenced by the High Court of Pretoria to two years' imprisonment and a fine of two thousand pounds, besides three years' banishment.

The severity of the sentences has startled London, and the whole press agrees that they are excessive, and relies on the clemency of President Kruger. There is general relief and content at the commutation of the death sentences.

Lord Salisbury, speaking at a meeting of the Primrose League defended the Dongola expedition which, he said, was necessary to restore the Egyptian frontiers: otherwise the British would be unable to deliver up Egypt as they received it. Referring to the sentences passed on the Johannesburg reformers he said he felt confident that President Kruger would make no unworthy use of the circumstances which had placed his political opponents in his hands.

LORD Selborne, speaking at the Colonial Institute, said that if more men were required in Rhodesia they would be sent, and that when sufficient forces were on the spot General Carrington would once for all crush the Matabele revolt.

ONE hundred Whites and two hundred Natives made a sortie from Bulawayo on Saturday, and were attacked by three thousand Matabele who attempted to surround them. With the Maxim guns, however, they played havoc with the enemy, who were driven into Ungwaga River, the waters of which were crimsoned with their blood. Two Whites were killed, and seven wounded. News from Bulawayo of April 28, state that three Matabele impis have been defeated with great loss.

MR. Curzon, in reply to a question in the House of Commons, said that the Russian Ambassador in London absolutely denies the existence of a secret treaty whereby a large Chinese territory has been ceded to Russia.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

THE Russian Government is about to send an expedition to the Amour to observe the eclipse of the sun on August 9. It will be under the charge of three astronomers from the Pulkowa observatory. An American expedition also goes to Japan for the same purpose. Who will observe the phenomenon in India? In Calcutta, there is no Government observatory. Bombay boasts of one. In Vizagapatam, in the Madras Presidency, the observatory originally owned by the local enlightened Raja, has been placed under Government superintendence.

The Imperial and Asiatic Quarterly Review is truly imperial. It has a Summary of Events in all parts of the world. In the last or April number it has a notice of the Indian National Congress. Thus: "The 'National Congress' held its annual December sitting at Poonah under the Presidentship of Sourindro M. H. Banerji, with about 1,600 delegates and 4,000 visitors; the usual resolutions were passed, the dissensions between Reformers and orthodox Hindus being laid aside for political unity." While so much honour was done to the last President in India, in England, among Orientalists his name is a jumble of sounds only, meaning anything and anybody, and nothing in particular. What do M. H. mean? Do they stand for Mahomed Hujeebhoy to represent two different types of the various nationalities composing the Congress?

WE read in *Answers* of March 28:—

"The following actually occurred in London some years ago. A gentleman had occasion to go into a shop one day to purchase an umbrella, and, as he told the shopman, was prepared to pay a good price for a genuine article.

A sale was speedily effected, and the gentleman returned home, with the reflection that he had now, at least, an article that would stand many a day's rain.

It was about a fortnight later that the umbrella was first called into actual use, and at the end of the day in question it presented such an appearance that the gentleman hastened to its original owner, demanding a new umbrella or his money back.

He got no recompense, however; and the following day a bogie man might have been seen parading X—Street, where the umbrella shop was situated, carrying the inevitable umbrella, which bore these words: 'Bought at R—'s, X—Street, a fortnight ago; cost 12s. 6d., and was out in yesterday's rain for the first time, with this result.'

Needless to say, the shopkeeper was much annoyed, but, so far, held his peace. But when the following morning the bogie man made his reappearance, the shopkeeper could stand it no longer, and sent the owner of the offending umbrella a new one."

It is many years, in our own city, during the Pujas, a Brahman who could with difficulty earn a few rupees went to Burrabazar for buying clothes for his children at home in the country. Before he could make any purchase, he was relieved of his little all by pick-pockets who abound in such places. Unable to procure the Puja presents, and having no other money, he gave up the idea of going home. His next thought was how to punish the thieves or to recover the money? The Police having been applied to proved of no use. He then devised a plan of his own and set to work it out, which ultimately proved very successful. It not only brought him back the money he had lost but also more. Every morning he would be at Burrabazar and cry through the lanes and streets—"Beware of pick-pockets," "Take care of your pockets". He repeated the warning all the hours till the shops closed for the day. At the end of a week when he was beginning to despair, a man called him aside, paid him a purse and begged him to go his way and leave the presenter of the purse and his associates to their own trade. Will the plan of the gentleman in London be permitted now? Or, will not the law, at the instance of the shopkeeper, punish him for such publication of libel?

AT the Thames Police Court, Mary Schroder, charged with drunkenness and disorderly conduct, defended herself by saying that the woman with whom she was fighting had called her a name she would not like to mention in Court. She then added that it commenced with a "c."

Magistrate: Do you mean "cow"?

Defendant: Yes, that's it. Isn't it a dreadful word?

Magistrate: I don't think so, and do not see why you should be afraid of mentioning it. It's not a bad word.

Defendant: Yes, it is.

Magistrate: Very well if you say it is.

He then sentenced her to one day's imprisonment.

If the Magistrate were a Bengali and the word were uttered in Bengali, the defendant would probably have made out a case for her. Thus, the word is not so innocent as it looks in English. The Bengali, like all Hindus, reverences the cow, but to him she is also symbolical of an undignified intellectual state. When an Englishman says a goose, the Bengali uses the word commencing in "c" to express the same feeling of disgust.

Supposing the defendant had been called a parallelogram? Would the magistrate have been justified in rejecting the defence? It is not the word but the manner in which it is used and the occasion on which it is uttered that make it offensive or not. A good word may cause dissension, while an ugly phrase meant for no abuse may be passed over.

THE steps taken and reported to the Local Government by the Municipal Commissioners of Calcutta to prevent or check the spread of cholera in the city and to provide medical aid for persons attacked by the disease are:—

1. Every case that is reported or otherwise comes to knowledge is enquired into by one of the Medical Inspectors of the Health Department, and remedial measures are promptly taken. For the early detection of cases the Medical Inspectors carry on house-to-house inspection and enquiry. For this purpose six temporary Inspectors have been added to the permanent staff of seven Medical Inspectors.

2. Persons affected with cholera, who are found to be without proper accommodation or without friends to attend to them, are removed to hospital.

3. Every house affected is thoroughly cleansed and disinfected with such disinfectants as Jey's Purifier, Pinophenol, sulphurous acid gas (sulphur fumes), corrosive sublimate solution, and carbolic powder; and such disinfection includes that of latrines, urinals, and drains as well as of the premises generally.

4. All infected articles are usually destroyed by fire. Occasionally when articles are of value, or when their owners are too poor to be able to afford losing them, they are disinfected by superheated steam under pressure in the Steam Disinfector (Lyon's patent) of the Corporation stationed at Entally.

5. Shops for the sale of articles of food and drink (such as grocer's shop, confectioner's shops, etc.), in which cholera has taken place, are closed for a certain number of days, after all infected articles likely to communicate the disease have been destroyed or disinfected.

6. All the sewers of affected localities in the town proper are flushed and disinfected as early as possible, and all kutcha or pucca open drains in such localities in the unsewered areas and in bustis are also promptly cleansed and disinfected.

7. The use of every tank which has become contaminated or is suspected to have become contaminated with the discharges or infected articles of cholera patients is prohibited, and guards are placed over it to prevent people from using its water until the outbreak in the neighbourhood is at an end and bacteriological examination of its water shows its freedom from comma bacilli.

8. Every endeavour is made to actively carry on anticholeraic inoculation on Haffkin's system in affected localities as well as in unaffected places on persons who can be persuaded to submit to the operation.

9. Instructions for the prevention of cholera and directions for the prevention of its spread when it has taken place in a house have been distributed to the residents in the form of handbills, and copies of them have been posted at prominent places in different parts of the town; and they have also been published in some of the local newspapers. The use of filtered water for all domestic purposes has been specially enjoined.

10. In consequence of systematic bacteriological examination showing the presence of comma bacilli in the unfiltered water supplied to the town, as well as in the river-water at many of the bathing ghats, notices have been posted near the public bathing platforms and at other conspicuous places, prohibiting the use of the river-water and the unfiltered water-supply for any purpose except bathing.

11. The Medical Inspectors of the Corporation attend and treat patients who require their assistance and who cannot pay for doctor's attendance.

12. Simple medicines have been supplied to the police thanas, post-offices, and birth and death registration offices for distribution to persons requiring or applying for them; and the Police Commissioner and the Postmaster-General, Calcutta, have been requested to give instructions to their subordinates to give as early as possible intimation of every cholera case they may come to hear of to the Municipal Medical Inspector or at the nearest birth and death registration office.

13. It has been notified by beat of drum throughout Calcutta that persons affected with cholera or diarrhoea may obtain medicine on application to constables or at the police thanas, post-offices, or birth and death registration offices, as well as on application to the Medical Inspectors of the Health Department.

The report is dated the 20th of April and signed by Mr. R. Sen, Offg. Health Officer. Since that report the Commissioners have passed the resolution asking the Local Government to empower them to dewater all infected tanks, public or private. Was it not necessary to take the power alluded to in paragraph 5 of the report? Is it, again, enough, to temporarily close a shop where cholera has appeared and not prevent ordinary vendors from selling articles of food

that may bring on cholera? The instructions may be all right as far as they go. It would have been more to the purpose if it were stated how they are being carried out. We are afraid, even among the knowing of our people, the instructions count for nothing. They are as regardless in a season of sickness as in ordinary times. They run their even course unmoved by present surroundings and drag others with them to the neglect.

IN company of the Commissioner of Police and led by him, the new Chairman of the Calcutta Corporation had been visiting the cow-sheds. As a result of the inspection, the Chairman ordered the transfer of the prosecution of the milkmen under the Municipal Act from the Municipality to the Police. The Municipal Pleader at the Police Court has pointed out to the Chairman that the delegation of power to Police officers is inconsistent with the Municipal Act.

SIR John Lambert has also taken up the question of the tramways or rather the condition of the horses and the lines. Egged on by his repeated complaints, at the last municipal meeting, several of the Commissioners descanted on the miserable condition of both. The Chairman promised to communicate with the Company and see what could be done.

ON Wednesday, Mr. Cotton left Calcutta for home. He took leave of the Secretariat at Calcutta and raised his hat to all the assistants he met in the office. At the Howrah railway station, several persons, in service and not in it, were present to see him off. It is reported that an old Mussulman, bent with age, who had been Mr. Cotton's Nizir at Chaudang, came down to bid his old master farewell. But the man who owes his distinguished elevation to the late Chief Secretary was nowhere. Maharaja Govindlal has a code of etiquette of his own.

ON the invitation of Moulvi A. F. M. Abdul Hafeez, the President, an extraordinary meeting of the Muslim Literary Academy was held at the Calcutta Mederssa on Thursday, to express regret at the death of the Hon'ble Prince Sir Jahan Kadir Bahadur. The meeting was open to outsiders. Prince Mahomed Bikhayr Shah (of the Mysore family) was in the chair. In opening the proceedings, the President read letters from Dr. A. F. Rudolf Herno, Mr. R. D. Mehta and Mr. H. M. Rastomjee and others sympathising with the object of the meeting. The following resolution was passed unanimously:—Proposed by Moulvi A. F. M. Abdul Hafeez and seconded by Moulvi Abdul Kadir Khan Bahadur, Deputy Magistrate, —(1) That the meeting places on record its heartfelt sorrow for the loss sustained by the Mahomedan community in consequence of the death of the Hon'ble Prince Sir Jahan Kadir Mirza Mahomed Wahid Ali Bahdur, K.C.I.E. It was also decided to send a letter of condolence to Prince Mirza Mahomed Makeem Bahadur, son-in-law of the deceased. Another resolution empowered the Muslim Literary Academy to consider what steps should be taken to do honour to the memory of the deceased who took a deep interest in the welfare of the Mahomedan community.

Dr. Panigty proposed a vote of thanks to the chair, which was seconded by Haji Hassan Ismail Sahib.

COUNT MATTEI is dead. He

"died at his residence, near Bologna, at the age of eighty-six. Cæsar Mattei was a native of Bologna, and was born in 1810. He was made a count by Pope Pius IX. in 1847, in recognition of the loyalty and generosity displayed in his gift to the Pontiff of an estate on the Austrian borders at a time when there had been a serious breach between Austria and the Vatican. The next month he was appointed lieutenant-colonel of the Civic Guard. In May 1848 he was elected Deputy of the Electoral Chamber in Rome. After a brief political career, the Count retired into private life, and devoted himself chiefly to the study of medicine, and presently announced that he had discovered a means of preparing herbal remedies which imparted to them a peculiar efficacy. Lady Paget, the wife of the British Ambassador in Rome at the time, called the attention of English readers to these remedies by several interesting articles in the reviews, in which she described her visits to the Count in his mountain home. In 1866 Professor Pascucci, who held the chair of medicine at the University of Bologna, tested these remedies at the Military Hospital of San Theresa at Rome. His report, afterwards published, declared that many marvellous cures had been effected, and that Mattei's febrifuge was better than quinine as a remedy for fever. The remedies discovered by the Count have been named electro-homoeopathic, though the terms employed by the Count in Italy were anti-cancerous, anti-scrofulous, anti-febriose, and the like. The Rev. S. J. Whitnee, F.R.S., of the London Missionary Society, in 1894, reported a number of cures of elephantiasis among the natives of

Samoa through using Count Mattei's remedies. The formula for making the remedies was not made known by the Count, and he has left the secret to his adopted son, Count Mario Venturoli Mattei."

There are other medicine vendors of his stamp in the market, though they came after him. The Count's medicines are all secret preparations and bear sensational names, but there is neither one thing nor the other which they claim to be. There is neither homoeopathy nor electricity. The medicines are mixtures or decoctions of many plants combined together. A few years ago the trial of anti-cancerous proved a failure in London, in clinical experiment, under the guidance of some of the reputed Surgeons.

THE Trades Association have elected Mr. H. T. Ottewill, of Messrs. Thacker, Spink & Co., and Mr. Everard Cotes, editor of the *Indian Daily News*, to represent them on the Port Commission and in the Calcutta Corporation respectively. Mr. James Wilson, editor and proprietor of the *I. D. News* was long a valued member of the Municipality on the opposition side and fought many hard battles in and out of the corporation and in the High Court. The present editor has shown a disposition to fight and to cleanse the Augean stable. Mr. Wilson wrote a pamphlet on Local Self-Government and always advocated the elective principle for the Municipality. He was kept out when the first election under the present law was held. Mr. Cotes comes in through the Trades Association. He has written many articles against the Municipality. He has found the constitution defective. As a member, if he is not enabled to set it right, let us hope he will prove a Hercules, and put down all abuses.

THIS week we had a dust storm, a shower and high wind. The temperature is not oppressive but the mortality from cholera continues high. Last week there were 188 deaths, the same as in the week before.

THE *Calcutta Gazette* of 29th April publishes reports from various district magistrates on the present scarcity of water. In Burdwan, we are told, owing to the scanty rainfall of 1895 and the absence of storms during the last two months, the water in most of the tanks is lower than in ordinary years and some tanks have dried up altogether. The only tracts which have a full supply of good water are those situate along the banks of the river and along the edge of the Eten Canal. In certain villages water has to be fetched from a distance of half a mile and more. It is the women who do this work and they prefer the nearest tank to more distant better water. There may be an excuse for weak women. But the men are equally lazy and prefer to die rather than move an inch to save themselves. For them ordinary measures taken by Government are simply wasted. For such to draw water from wells is out of the question. In Calcutta the convenience of filtered supply at every house is so much abused that there is not only a culpable waste, but you will not everywhere find a sufficient storage of water when the supply through the pipe is stopped.

In Birbhum, there are three sources of water supply, namely, rivers, tanks and wells. The rivers and khals, usually dry at this time of year, are exceptionally so this year. Water, however, is still to be obtained in some, and in others by digging a few feet in the sandy beds. There are very few wells and these mainly belong to the District Board or the San Municipality. The main source is tanks which are numerous but dry and empty. There is a disinclination in owners to make over to the District Board, under section 90 of the Local Self-Government Act, the tanks. The magistrate, Mr. Drake-Brockman, is at sea to account for it. "It may be due," he says, "to many circumstances, a fear lest the propriety of the tank will be lost, or mere selfishness, as in some cases the owners themselves will not be benefited, or from disputes as to the ownership." Later on, he remarks: "As regards relieving the present distress, I have ordered here and there wells to be dug where it has been considered necessary and not likely to be found hereafter useless by reason of the proximity of tanks, the water of which is generally preferred. In some cases I have asked if the villagers are willing to come forward with help. In one village I noticed the necessity for a well for both men as well as for the cattle which were brought in large numbers weekly to be sold. I applied to the Zaminder for subscriptions, and beyond getting the reply that the people were too busily engaged with some puja ceremony to hold a meeting, I have heard nothing since." Again, "My experience is that self-help and public spirit are almost unknown qualities here. There is also a want of co-operation among villagers. In one village where I was asked if Government would erect a small dam a few feet

long and 2 or 3 feet high in order to prevent the water of a tank being spoiled by the drainage from the surrounding fields. The village itself was quite well-to-do, but it never seemed to strike the inhabitants that a little exertion on their own part would be necessary." Mr. Drake-Brockman thinks it would be a waste of money to dig tanks as they are to be found everywhere, and the measure would bring no relief when the want of water is due to the absence of rain. He is not for tanks but for wells which he has ordered in urgent cases in anticipation of sanction.

The opinion of Mr. J. Lang, the Magistrate of Hooghly, is more pronounced. "It is felt that drinking water is a necessary of life, and that it is of easy access to every villager, if only the residents will lay themselves out to obtain it. The present is a time when the people of this district at first were prepared to sit idle in their villages until the Suku came forward and paid them to look for water to save themselves. But I have taken every opportunity to point out to the people of the upper classes, and through the chankidars on parade to the people of the lower classes, that they ought to trust to themselves in the present emergency and not look to the Suku, who however anxious to assist all can only help a few."

Mr. J. H. Lea, the Officiating Magistrate of Pubna's opinion is to the same purport. He says: "From personal inspection I find that water is always available at river level, and if the villagers would only club together and sink ring-wells or even large holes they would have no difficulty in getting a supply of water. I find, however, that they are too apathetic to do anything of this kind, and they are not helped in any way by their zamindars."

Mr. Lang's experience of Norton's tube-wells is wholly unsatisfactory:

"It will be noticed that Norton's tube-wells are not being purchased for this district. Even if worked successfully, they are not popular; and, if I may quote my own experience, it is that of 20 sunk in different districts in alleged suitable soils, only one was in working order at the end of a year, and *that one* occupied three men using all their energies 15 minutes to squeeze out one pail of water! Given an experienced mechanic ready at hand, the experiment will often succeed but let him go away, and failure will follow. The Municipality of Hooghly tried these tube-wells lately, but the experiment proved a failure, owing probably in this particular instance to the unsuitable character of the soil."

The report is better from the 24-Perganas. Mr. E. W. Collin writes:

"Three Norton tube-wells have been sunk. Of the latter, one was driven 42 feet, and good a supply of water is obtained. The other two tube-wells have been driven 37 feet, but water has not yet been reached. Of the nine wells in the Sadar subdivision, seven are successful and in two of them the water is unfit for use. Of the ten wells in the Baraset subdivision (which have been dug to depths of 25 to 30 feet), all but one are successful. The Basirhat well is not successful. The progress in well digging has been delayed by the difficulty of getting men trained to the work, and by the necessity of procuring earthen rings from Calcutta. I have also been waiting to see whether the wells are successful. I have inspected two wells south of Anpore. I found that the supply of water was good, but that people preferred to walk half a mile to a tank. The custom here is for the women to get the water for the family, and they are averse to draw it from wells. It is less likely that they will be able to manage pumps. On the other hand, I am informed that since my visit to the wells south of Alipore, the scarcity of water has increased, and the people are glad to use the wells."

Like Birbhum, Bankura abounds in tanks. Wells there, owing to their water being less palatable than that of tanks and rivers, are at a discount. A well, again, that is not at least 40 feet deep cannot yield a permanent supply. Mr. N. Bonham-Carters, the Magistrate, thinks that, as the water from tanks is muddy and polluted and will become more so during the course of the next two months, the digging of wells is in every way desirable. So provision has been made in the year's District Board budget for 20 wells with masonry rings, at a cost of Rs. 2,000. Another Rs. 2,000 has been resolved upon, partly for permanent wells and partly for temporary measures of relief.

One hundred rupees for a well is not an enough sum and the villagers will not have it. Such is our report from the three districts of Burdwan, Birbhum, and Bankura. The collectors have offered the sum, but the people will not take it, for a single well will cost at least three times the amount. Instead of sinking wells in these districts, a better plan would be to re-excavate the tanks, and this is the season for such renovation. Five hundred rupees so expended on one tank will confer a benefit to an area of a square mile. Wells in the N.-W. P. have been condemned by Mr. Hankin. In Bengal they are sooner polluted by percolation. By being exposed to the heat and light of the sun a tank is better and, for its larger area longer, fitter than a well to supply pure water.

The water-supply of the Rungpur district is derived chiefly from the flowing rivers—the Teesta, Ghagat and Brahmaputra, and wells, tanks being very little used.

Mr. J. H. Beinaid, the Collector of Purnea, fears flood rather than drought. "Water is particularly easily obtainable in this district. In Purnea a small ring well can be made for Rs. 5, and in the *mufassil* for a smaller sum. The water is near the surface. There are many rivers, lagoons, and water-courses. The river Kosi, which feeds most of them, is rapidly rising, and we fear flood rather than drought, as every village has several small wells."

The Mozaffarpur report is not of the ordinary run. Mr. F. R. Roe, the Offg. Magistrate, is mindful of the purity of water. He writes:

"There has, however, been in many places a deficiency of rainfall, and there is a sufficient scarcity of water to make cholera a very dangerous enemy, and the measures I have taken have been directed chiefly to purifying as far as possible the water-supply available. To this end all the wells in the municipalities of Mozaffarpur, Laigunge, Hajipur, and Sitamarhi have been cleaned out and purified with lime or permanganate of potash. The District Board have allotted Rs. 320 for the cleaning of the wells on their list, and this work is being carried out. In addition to this, I have issued a notice under section 144, C.P.C., to the effect that, whereas immediate action is necessary for the prevention of cholera, zamindars, panchayets, and headmen will immediately purify their wells by dewatering them, cleaning the wells and when the well has filled by adding fresh lime to the water."

Whatever the applicability of the section, it is something that the Magistrate is alive to the next danger.

None of the Magistrates recommends cartage of water. It does not seem that, generally speaking, the scarcity is unusually great this year. The last published report is from Mr. R. Caustairs, the Deputy Commissioner, Sonthal Parganas. It concludes thus:—

"As regards giving grants-in-aid to local people for digging wells, or making or repairing reservoirs, this must be done either by way of loan or by way of gift. Loans we find people very slow to take on the conditions the Government find it necessary to lay down. I do not myself see that the conditions can be much relaxed if we are to ensure the money being used for the purpose for which it is lent and punctually repaid."

As regards gifts, I think they are sure to do more harm than good. They discourage private enterprise, and the chances are that the money is wasted, and the work on which it is spent not maintained. I think where it is possible to dig a well with labour which would cost a few rupees only, that will be done by the villagers for their own sake without waiting for help from Government. In Dumka itself, where the zamindar, Mr. Grant, offered to pay half the cost of digging wells if the bazar people would pay the other half (the estimated cost was about Rs. 1,000), his offer was not accepted, chiefly I believe because of caste difficulties. My own idea is that wells of this trifling description paid for by Government would not be as successful in providing water as wells dug by the villagers, though they would probably cost more.

Irrigation reservoirs on a small scale spring up on all sides, and seem to be especially provoked by such a dry season as that we have been passing through. We could not pay for the construction or repairs, or even for a small part of these in more than a limited number of cases; but the effect of our doing so at all would probably be to check the work now going on and reduce it by a great deal more than the limited encouragement given by us would increase it.

It is to be remembered that this district has not been demoralized as I see a public speaker says most of Bengal has been, by the imposition of the road-cess. My memory of the road-cess payer is that he has a most extravagant idea of the amount he pays and a microscopic one of the amount received for it, and, consequently, having in his mind a standing grievance against Government, frequently cuts off his nose to spite his face. In this district, whether from that or from other reasons, there is a much stronger spirit of self help and compacity to balance payment and benefit received, and I do not wish to pauperise the people by teaching them to look for doles from Government."

REIS & RAYYET.

Saturday, May 2, 1896.

WATER: BOILED AND UNBOILED.

THE question of boiled or unboiled water has been brought into prominence by the investigation into the recent enteric fever at the Allahabad cantonments. Mr. Hankin, the Indian imperial bacteriologist, has found that boiled water kept in *surahis* produced the typhoid bacilli as unboiled water under the same conditions. This discovery does not run counter to known opinions. A distinction must always be made between a chemical analysis of water and a microscopical examination. It is an established truth that chemically pure water may be microscopically

a bad specimen. In making a chemical analysis of water we confine ourselves to the impurities, which are productive of evil on our health. It is more the quantity than the quality of the putrified organic matter which is the cause of mischief.

On the other hand, distilled water, though divested of all impurities, chemical or microscopical, is not a better food than the ordinary potable water. The reason is patent. Distilled water is wanting in salts that good drinking water contains which are necessary constituents of our blood. Being deprived of salts, distilled water is not only tasteless but fails also to supply one of the principal ingredients of our blood. For this want we have to resort to other means.

Besides the chemical and microscopical tests, there is another and a finer one, namely physiological adaptability. There are infinitesimal matters which are beyond the reach and scope of our present rough scientific research. But natural living objects have an instinct to discover their presence. One-twentieth of a grain of arsenic or bichloride of mercury will produce visible symptoms, while a chemical analysis of the evacuation or the contents of the stomach will not disclose the cause. Nor will microscopy be of any use. Some vegetable organisms are so much susceptible to *rasakarpur* or bichloride of mercury, that even one in thousand parts of pure water will destroy them. A minute particle of musk that scents a large volume of air can be detected by our olfactory nerves but never by any kind of analysis. Patients susceptible to the smell of a cat, will get asthma at the presence of the animal though unnoticed by him.

Almost all drinking water contains either dissolved or suspended matter. The latter can be entirely separated by filtration, whereas the former is not so removable. Dissolved matter is again divided into inorganic and organic. The first is generally the salts and the second is due to decomposition of vegetable and animal substances.

It should be mentioned that after filtration if the water be boiled, the application of heat makes the salts and the organic matters to change their constitution, and they are partly driven off with the steam and some are thrown to the bottom of the vessel during the cooling process. Refiltration is necessary to make the water suitable for drinking.

During the recent outbreak of enteric fever at Allahabad among the Norfolk regiment, Mr. Hankin found that boiled water cultivated typhoid bacilli in *surahis*, as profusely as unboiled water. No medical man with ordinary knowledge would have expected a contrary result. The *surahis* were at fault and not the water. Even distilled water in that circumstance would have behaved in the same way. The difference between the *surahis* and other ordinary earthen water jars is the difference between narrow and wide mouthed vessels. While the former with their contracted base, broad hold and narrow mouth can not be easily or are not ordinarily cleaned, the latter are capable of more effectual washing.

We are not aware of the nature of Mr. Hankin's investigation nor the conclusions arrived at by him. But we may safely presume that all the *surahis* in the bazaar were not infected. Those in the service of the regiment and examined were probably spoiled by contact with typhoid evacuations or by being washed with some dirty water. If care is not

taken to put boiled water in earthen vessels heated in the sun for three or four days, it makes little difference whether the water is boiled or not. With ordinary precautions, there is little chance of boiled water being contaminated.

Within the last few years bacteriology has made such an advance that we can never be too careful of our water. It is the quality and not the quantity of bacteria that determines its potability. The word bacteria primarily means minute rods but now it is used to indicate all micro-organisms. These may assume different forms, such as micrococci or globular (spherical) bacteria, bacilli or rod-shaped, spirilli or spiral-formed (twisted). They may again be divided into innocuous and injurious, according to their harmless or harmful action on the human system. The latter are said to be pathogenic. They act in two different ways to produce mischief. They are dangerous, living or dead. A species of them in death exude a toxic principle or ptomaine, which, though infinitesimal in quantity, accumulating, proves fatal to human life. Bacteria are generally very rapid breeders, and the various varieties have different terms of existence.

The presence of the pathogenic bacteria in water is positively harmful. One typhoid bacillus in a gallon of water is more dangerous than a million of ordinary bacteria. But the harmless germs are indicative of the source of contamination. For instance, the ordinary bacteria of human feces in water prove sewage contamination.

It is said that the detection of typhoid bacilli is not always possible if the examination is made too late, for their period of vitality is short. With their death they leave the toxin to poison the supply of water. For the cholera spirillum also the same theory has been made to hold good. But the opinions of the majority of the authorities are against it. Klein, the medical officer of the Government Board, London, does not admit that spirillum is the true cause of cholera. A blind faith in this theory produced a terrible mischief before the last epidemic of Hamburg in Germany could be identified as cholera. For the medical men were unable to detect the bacilli in the early stage of the epidemic. We have yet to know more of these insidious destroyers of human life: their vitality with or without oxygen, their luminiferous condition, their period of existence, the one or the several kinds of toxins generated at their death, their self-destroying properties or their mode of deadly warfare among themselves. Heat is, however, the best disinfectant and kills the microbes.

Water being boiled, is denuded of its bacilli, not its oxygen, as some may suppose. Oxygen cannot exist in a nascent state, without being mixed with either hydrogen, nitrogen, or any other gaseous substance. It is a known fact proved by analysis as well as synthesis, that water consists of two molecules of hydrogen and one molecule of oxygen. Boiling takes away the combined gas in the form of steam, and not one only of its constituent parts—oxygen. So the chemical proportion remains in tact after boiling. Boiling has another advantage, it changes the constitution of the soluble matters. In the course of convection or ebullition the organic matters are oxidised and turned into insoluble compounds to settle at the bottom of the vessel during the cooling process. It has its disadvantage also. The soluble salts are driven out or precipitated, and the water is made comparatively tasteless. In places where

good drinking water is not available, it would be well to boil water before use, for it is better to suffer from the loss of salt than to take in obnoxious organic matter.

Boiled water when poured into a *surahi* or other vessel and again when taken in the glass comes in contact with enough air to draw any quantity of oxygen. In the glass, it further combines with that element in the air, if at all there is a possibility of doing so. The air globules containing oxygen adhere to the sides of the glass, still they do not mix with the water. It is an antiquated notion that boiling deprives water of its oxygen.

It may not be out of place here to speak a few words about well-water. The idea of its salubrity in most cases is erroneous. Well water comes through natural filtration of sand, earth or other organic and inorganic materials lying deep in the soil. May not the water bring with it bacteria or other impurities imprisoned in the lower strata of the earth? It is not impossible that slow decomposition of organic and inorganic matter is being favoured by the high heat of the deep soil. There are instances of workers of deep excavations being attacked with cholera. The appearance was probably the re-appearance of the disease in the same locality contaminated with the earlier outbreak. An instance of the kind occurred in the Madras Presidency. Apart from the contamination of well-water from its source, percolation is no other serious danger. Chemically examined, well-water is found to contain more sulphates than tank water, but the hydrant water is generally devoid of them. Covered wells, though preserved from dust, may be mischievous from being deprived of heat and light, which are the best purifiers.

DR. SAMBHU C. MOOKERJEE.

THE place of honour in *Revue Critique* of Paris of the 23rd March is given to a notice by M. Barth of *An Indian Journalist*. The reviewer shows some acquaintance with the conditions prevailing in Indian Society and certain phases of Mookerjee's complex personality. M. Barth's criticism of Mr. Skrine's style may strike some as a little too bold. Style is a subtle thing and foreigners are rarely qualified to judge an English author in that direction. The reviewer's misuse of the phrase "matter of fact" lends support to this view. We subjoin a literal translation :

"He was a curious specimen of the contemporary Indian,-- was the late Dr. Sambhu Chunder Mookerjee an exception in many respects, but at bottom an epitome of his times and people--of that Bengali race of which so much good and so much more evil has been said and written. He had the true Bengali industry, suppleness, tact, tenacity, versatility, its subtle intelligence, its susceptibility, and, above all, its marvellous aptitude for assimilating foreign ideas rapidly, and, so to speak, by simple contact with them. Externally, and I use the word in its widest sense, he was a very refined English gentleman. Internally, he remained a Hindu, and after a life of struggle and expedients he died at fifty-five with an unstained reputation. His career was apparently full of movement and incident; but in reality was very consistent. Born in 1839 of Brahmin parents who were shop-keepers but of high caste and descended from Sirharsha, the author of the *Nairbadhya*; educated, against his father's wishes and by fits and starts, at the Metropolitan College, Calcutta, a father at nineteen, we find him by turns the minister of divers Rajas, mixed up in the affairs of the Oudh Taluqdars' Association as its Secretary, beginning to study law and medicine, an honorary doctor of homœopathy of Philadelphia. But, in spite of all this zig-zagging, he was through-

out his life a journalist, first on the *Hindoo Patriot*, while still a mere boy, later, the editor of *Reis and Rayyet* which he founded in 1882 and conducted till his death on the 7th of February 1894.

Mookerjee, like his Bombay rival Malabari, was self-educated, from assiduous contact with men and affairs and also with books. For he was a voracious reader: and it is certainly a fact worthy of note that the most brilliant pens in the service of Hindu journalism owe nothing or almost nothing to the training provided in the local universities. Furthermore, his powers developed with great rapidity: for at the very outset of his journalistic career his articles bore the stamp of maturity and experience and were composed with that perfect mastery of the English language which was the distinctive mark of his talent. As editor of *Reis and Rayyet* he exercised for many years a great influence over public opinion, not only in Bengal and India, but in England and even on the Continent. Government found that in him they had a force to be reckoned with: for they knew that, if he generally liked to take the safe side, he was also attached to his liberty of speech. His character was as lofty as his abilities. He neither sold nor prostituted the power which he owed to his pen. Whilst he was perfectly "loyal," as our neighbours say, and opposed on principle to noisy Utopias, he sympathized with the healthy aspirations of his race; and every liberal measure put forward by Government found in him a sturdy champion. But he was none-the-less faithful to the custom of his race, a "Hindu of Hindus," as he loved to style himself, and without submitting to all the rules of rigorous orthodoxy, he wandered from it as little as possible. He occasionally consented to take his seat at the table of a *mleccha*, and he even advised a young fellow-countryman to make a trip to Europe; but he would not have received him as a visitor on his return without proceeding afterwards to purify his reception room. The thousand and one essentials of usage and tradition which this great ally of England and English ideas knew how to insist upon in his own case and to respect in others, are, in fact, the barrier behind which the Hindu national spirit shelters itself,--a barrier stronger than the aspirations of politicians, and which will be long in disappearing, for it rests on the innermost self of the Hindu. I will give a single instance of this feeling. But for a cursory remark of his biographer we should never have known that a man who discourses so copiously on so many subjects was married, twice, indeed, if I am not mistaken, and had children. In his letters, and there are many confidential ones, he says not a word of his family. The reader may see Mookerjee in his editorial sanctum: but his *home* remains hermetically sealed and those whom it shelters do not exist, as far as we are concerned.

Mr. Skrine more than once expresses regret that Mookerjee did not focus his powers on a given branch of human research; for he thinks that, had his subject done so, he must infallibly have had a brilliant scientific career. This is not precisely the direction in which the aspirations and talents of "Young Bengal" seem to tend: and I fancy that Mookerjee knew his own better than his biographer. Amongst his letters is one to Rajendralala Mitra, who had asked him for some general information about human sacrifices. It is only an improvised summary: but it tells us much of Mookerjee's want of the critical faculty and the fashion in which a man of vast reading indulged of bringing it to bear on a given point. He had in him, doubtless, the stuff to furnish out several artists; but nothing of the man of science or the man of action.

The biography would have gained had it been longer and, above all, had it been written in a directer and more simple style. Amongst the letters there are many curious ones and many which are charming. But there, too, one would have liked a little more of precision and "matter of fact" (*sic*) in the notes. The latter are hardly copious enough for the Calcutta public and are inadequate in the eyes of a European reader.

A. BARTHA.

THE SOURCES OF WATER SUPPLY; AND THE ALARMING INCREASE OF SCARCITY OF WATER IN BENGAL.

(From *The Calcutta Journal of Medicine*, March, 1896).

In the present distressed condition of Bengal on account of the scarcity of drinking water, the very useful paper on "Water and Health" of Dr. Charles Platt, Professor of Chemistry in the Philadelphia Hahnemann Medical College, published in the *Hahnemannian Monthly* of January last, deserves an attentive perusal. Its chief recommendation lies in the fact, that it does not treat of ambitious and expensive schemes of public water supply but of simple means of procuring pure water in villages and small towns, where poverty prevents the outlay of large sums of money for the purpose.

Chemically, Water, has a definite composition, and therefore pure water can only mean a compound of Hydrogen and Oxygen in the proportion of 2 parts of the former to 15.96 of the latter by weight, or very nearly of 2 volumes of the former to 1 volume of the latter. But from its remarkable and important property of being almost a universal solvent, capable of dissolving a very large number of substances, solid, liquid and gaseous, it is seldom if ever found in a state of purity in nature. The fact of its being an essential constituent of all living beings, vegetable and animal, has invested it with peculiar interest. And accordingly in all ages and in all countries it has been looked upon as a sacred thing. In our own country it is looked upon as a form of Vishnu himself, the preserver of the universe. Hence, especially by the Hindus, the pollution of sources of water is considered as a great sin.

When it is remembered that water forms more than half the weight of the human body (nearly 60 per cent.), that the remaining 40 per cent. constituting the solids can be introduced into the body only in a state of solution in water, that all the tissues even the hardest must have water as an essential constituent,—the enamel of the teeth having 2 per 1000, fat 209, the liver 693, the spinal cord 697, the skin 720, the brain 750, the muscles 757, the spleen 758, the thymus 770, the nerves 780, the heart 792, the kidneys 827,—it will be seen how the instinct of our race has guided it in its early days in forming a true estimate of the importance of this universal agent.

The fact, that the maintenance of the purity of water is enjoined as a religious duty among all nations, shows both the strength and the unerring character of that instinct. But in the absence of intelligible reasons which could only be assigned by knowledge, the injunction could not be carried out in the fullest measure by the ignorant majority. And even in the present day when science has made plain how water is easily liable to pollution, and how this pollution is the fertile source of disease, the sanitarian has to encounter opposition from ignorance of the most lamentable description. Dr. Platt states but a fact when he says: "It would be difficult to cite an instance when the struggle against an unpleasant truth is more determined. People will use poisoned or dangerous supplies in face of the most earnest advice to the contrary and in face even of family deaths. We are told that 'our family have used that well from time immemorial, what was good enough for my grand father is quite good enough for me,' or, 'the water is sparkling and clear, and cannot possibly be contaminated,' or, 'that well has given good water so many years that I guess it will continue to do so awhile longer,' and so on. The water is supposed to remain the same whatever the change in conditions, and the only criterions of purity are the color and the taste, neither of value."

If such is the case in the enlightened countries of Europe and America, it is useless to fret at similar ignorance in this country. As sanitarians it should be our duty to enlighten the masses, and do our best to maintain as much as we can the purity of all the available sources of our water supplies. These, it is easy to see, and as Dr. Platt has pointed out, are reducible to four classes;—1. rain water; 2. surface waters; 3. sub-soil or ground water; and 4. deep seated or phreatic waters—the first being the ultimate source of the three others. On each of these Dr. Platt has made valuable remarks which we present in a condensed form in the following paragraphs:

The rain as it falls from the clouds dissolves certain gases existing in the atmosphere, and also removes from it certain floating solid bodies. The condition in which it reaches the surface of the earth is dependent upon the condition of the air through which it has passed; in rural districts it is comparatively pure, while in the cities and manufacturing districts the reverse is the case. After reaching the ground it may pass directly into lakes, rivers, &c., forming surface water, or it may sink into the earth, and be held by the upper strata of soil, forming subsoil water, or it may percolate deeply, be collected in natural reservoirs far beneath the surface and form deep-seated water. Rain water may be preserved by collections from roofs, storage in cisterns, &c. At this stage, pollution may take place by the accumulations of organic matter from caves-troughs and water pipes being washed into the storage vessels, and the putrefaction of the organic matter renders water

most unwholesome. "The cistern itself may be open to pollution either from its imperfect construction whereby subsoil water enters through the sides or bottom, or by direct contamination from exposed tops." Precautions may be easily taken against all these three factors. The pipes are best made of terracotta, and the next best are the metal pipes; but wooden pipes are objectionable. The water courses should be kept clean or when not exposed, provision should be made for the diversion of the water that first passes through. "The water, before entering the cistern, should pass through a filter box containing alternate layers of gravel, sand and charcoal, whereby organic matter is removed, and, finally, the cistern is to be built with sides and bottom both sealed and with a close-fitting protected top." Attention to these simple points will insure a supply, however small, of pure, wholesome drinking water.

In deciding upon the condition of surface water, which is regarded with suspicion by people of all countries, it may be considered "whether the stream is storm-fed, spring fed or of composite nature; the character of the soil over which it has passed, the nature of the watershed whether populated, wooded or tilled; and of course the opportunities, direct or indirect, of pollution from sewage or manufacturer's waste."

The danger of pollution from manufacturer's waste is threatening to be very great in this country, and the river Hughly seems to be in particular danger, as will be evident from a characteristic instance mentioned in the Administration report of Bengal for 1894-95. It is stated in that report that "the question of the alleged pollution of the river Hughly by the discharge of noxious matter from certain mills situated in the neighbourhood of the intake for the Calcutta water supply at Phalta came specially under the consideration of Government. Enquiry was made as to the desirability of special legislation with the object of putting an end to a practice alleged to be injurious to the public."

But what was done in the matter? Was the Sanitary Commissioner, or any Medical Board, Sanitary Engineer, or Health officer consulted? No. "The Chamber of Commerce and the Special Inspector of Factories were consulted, and both were averse to any such special legislation on the ground that the risk to public health, if it existed at all, could only be very small. In deference to these opinions the Lieutenant-Governor decided to abandon the proposal to undertake legislation in the matter." It is impossible to imagine a more evident shirking of duty on the part of a responsible ruler than the light-hearted manner in which a most serious matter, involving the health of the metropolis of India, was thus disposed of. Happily for Bengal we now live under a better regime. We trust this question will be soon taken up by Sir Alexander Mackenzie, and a proper decision arrived at, which may not run counter to the advanced views of Sanitary Science. More than a crore of Rupees has been spent in improving the water-supply of Calcutta, and as its contamination may affect the health of a large community we hope the question will be thoroughly sifted, and suitable measures taken after due deliberation to prevent the pollution of the river Hughly.

The zone of subsoil water is not of uniform depth at all places, and though generally, does not always, conform to the surface contour. The quality of the water depends upon the nature of the soil and upon the local conditions, being of a high degree of purity, when these factors are kept free from pollution, and organic matter is removed by filtration and aeration. The gases dissolved by the rain in falling are replaced by the mineral matter of the soil. This is generally the case with wells in new and thinly-populated districts. From barnyards, outhouses, kitchens, distilleries, fields spread with fertilizers, and other similar sources, the upper stratum of soil becomes surcharged with impurities, which are carried into the subsoil water by the rains. In the downward percolation through a soil exposed to the action of pure air, the organic matter is removed and destroyed, and so the water entering at the bottom of a deep well will remain pure in spite of defilement at the surface, provided a constant source of pollution extending downwards, a cesspool for instance, does not exist in the immediate neighbourhood. The insalubrity of city wells is chiefly owing to the fact that the soil of cities is not much exposed to the free action of the air. If then the soil be in proper physical condition and the well were dug to a sufficient depth, and if the water was derived entirely from the base, there would be little reason to doubt its purity. But the mischief is that water passes into the bottom of the well through the sides and from the top without being subject to the wholesome processes of filtration and percolation, and even in closed wells the surface washings are conducted along the cuttings rather than through the soil itself. Geologically the well should be above all source of pollution, its position being such that the flow will be away from and not towards, the reservoir,—a condition to be satisfied by a determination of the dip of the underlying strata rather than by the surface contour."

"The open well with wooden buckets represents the most dangerous use of subsoil water, the closed well with iron pumps the most

satisfactory ; but in either case, due attention must be paid to the location and cleanliness." We do not quite agree with Dr. Platt when he says that the mere presence of organic matter, even in the form of animal excreta, is not so much an impurity as a proof that the well is open to pollution and may at any time develop poisonous qualities, and that the mere presence of a minute quantity of sewage is not so much in itself injurious as evidence that if at any time disease germs should pass into sewage they would in turn enter the drinking water and render it poisonous. We are of opinion that the minutest quantity of animal and human excreta may be impurity enough to seriously affect susceptible constitutions, and therefore all possibility of contamination with them should be avoided.

The fourth class of potable water is what has been called the phreatic or deep-seated water, about which the following remarks are important :—"Should the subsoil water find its way through the strata near the surface, it may percolate downward for a considerable distance before it again reaches a stratum sufficiently impervious to sustain it. Should this lower stratum be basin-shaped, the water will accumulate until by its own pressure, it is brought to the surface through artificial boring--artesian well--or it may accumulate in the reservoir until it tops it, overflows, and finds an outlet in some ravine or upon some mountain side. In this passage downward the water undergoes many important changes ; organic matter is reduced, and destroyed, while mineral matters, and, under pressure, certain gases, are dissolved. The character and temperature of the resulting water will thus depend upon the character of the soil and the depth to which it has penetrated. In soils rich in soluble mineral salts, mineral waters will result, or when the soluble salts are absent, we will obtain an ordinary artesian or spring water, varying in temperature but generally pure, at least free from contamination by specific germs. The location of the artesian well is, however, of considerable importance, and before driving such a well the advice of one versed in the geology of the district should be asked. The source of the water-supply is dependent upon the geological structure of the district, and is rarely, if ever, coincident with the location of the well-head." In this country, it must be remembered, geological experts are rare, and in their absence all that we can do is to depend upon chance borings.

It will thus be seen that rain water properly collected, filtered and stored, is one source of obtaining pure water ; a closed well properly located and attended to is another ; while the artesian well is perhaps the best of all ; and that the location of the well should be decided upon with due regard to the geological as well as the surface conditions.

The above remarks on the sources of pure drinking water, and the cheapest and easiest ways of procuring it, are of special value to our country at the present moment when accounts of the distress from want of good, wholesome water for drinking and culinary purposes, and of the diseases which spring from insufficient water supply, are coming from all sides. In former days prior to the introduction of the British rule, wells and tanks without number used to be constructed and kept in repairs by private individuals from pious and benevolent motives. But from causes which need not be recounted here, there has been a decay of this religious sentiment, and charity has, to a large extent, been diverted to other channels. Magistrates, Commissioners, and Governors, of Provinces appear to have been hitherto busy with elaborate schemes of hospitals for females, and of irrigation, drainage, and other sanitary works, but whenever the question of the improvement of water supply in villages and small towns was presented before them, they generally turned a deaf ear to such representations, and left the people under distress to their own resources, or, if they paid any attention to rural water supply it was on a scale far out of proportion to its importance.

For some years past the Government has very properly taken upon itself the responsibility of preventing death from famine. Now famine being ordinarily understood to mean starvation from scarcity or want of food, and water not being ordinarily looked upon as food, nobody seems to have thought of the necessity of providing against a possibility of famine from scarcity or want of water. But if whatever supplies the essential constituents of the body be food, water must be considered to be the most important of all our foods. The originators of the Famine Fund should have kept this in view and not left it out of account altogether, for then

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

there would have been no want of funds to meet the present distress from the water-famine that has overtaken Bengal. And we are bound to add that if the Road cess had been devoted strictly to the purposes for which it was originally intended and to which the Government was pledged, the present crisis could have been averted.

The present water famine has not come upon us as a surprise. We were receiving warnings regarding it for sometime past when the rainfall was becoming less and less from year to year, and our tanks and other reservoirs of water were, in consequence, drying up and threatened with complete exhaustion. We heeded not these warnings. We have not excavated new tanks, we have not even deepened by re-excavation old ones, for the storage of whatever rainwater we were having. The threatened exhaustion of the chief sources of the water-supply of the villages and most of the towns of Bengal, as an inevitable result, has come ; and unless prompt measures are taken, it will be impossible to avert the consequences of a water-famine which are far speedier and far more frightful than those of food-famine. Already cholera, the offspring of dirty and polluted drinking water, is raging with epidemic virulence, and if the present state of things is allowed to continue, the mortality from this disease alone will be something which it is appalling to contemplate.

A CASE OF NERVOUS PROSTRATION RESULTING FROM INDIGESTION.

THEY say that misery loves company, and they have had it so often it has passed into a proverb. Yet it isn't an all-round truth. Some kinds of misery detest company. They want to be left alone. They hate to be elbowed and questioned and talked to. A wounded dog will always crawl into some retired place by itself. The instinct of badly injured men, after a battle, is the same. Aliments that are *mostly fancy*, tend to set tongues wagging. But real, genuine and dangerous diseases don't invite to speech. Crises which are big with fate usually come and go in quiet.

That is why Mrs. Scuffham had no desire for the society of even her best friends at a certain time she is going to tell us about.

"Up to April, 1881," she writes, "I never knew what it was to be ill. At that time I began to feel that something was amiss with me. I had no relish for my meals, and after eating my chest felt heavy and painful, and my heart would beat and thump as though it meant to leap out of its place. Presently I became so swollen round the waist that I was obliged to unloose my clothing, as I could not bear anything to touch that part of my body.

"Even the lightest foot gave me pain ; a little fish setting my heat to beating at a great rate. My feet were cold, and cold, clammy sweats would break out all over me, leaving me exhausted and worn out. At night I got no sleep to speak of, and in the morning I felt worse tired than when I went to bed. I also suffered a great deal from my feet being puffed up and sore. I could scarcely get about the house. When I went shopping I had to ride to the town and back as I could only walk a few yards.

"As time went on I lost my flesh and strength more, and gave up hope of ever recovering the precious health I had so sadly lost. I took medicines, and consulted a clever doctor at Derby who examined me and said my heart was weak. He also gave me medicines, but I got only temporary ease from them, and in a short time was as bad as before. All this time I was so nervous and depressed that I had no desire for company. On the contrary, I seemed to want to be alone with my misery. Even a knock at the door frightened me, as though I expected bad news, yet I did not really. My nerves and faculties ran away with my knowledge and judgment. Thousands of women who have suffered in this way will understand what I mean.

"Year after year I remained in this condition, and what I went through I cannot put in words, nor do I wish to try. It will answer the purpose to say that I existed thus for eleven and a half years, as much dead as alive. I spent pounds on pounds in physic, but was not a whit the better for any of it.

"In October, 1892, a book was left at our house, and I read in it of cases like mine being cured by Mother Seigel's Syrup. I got a bottle from Mr. Budel, the chemist, in Normanton Street, Derby, and when I had taken this medicine for a few days, my appetite was better and I had less pain. I kept on taking it, and soon my food agreed with me and I gained strength.

"After this I never looked behind me, but steadily got stronger and stronger. When I had taken three bottles I was quite like a new woman. All the nervousness had left me, and my heart was sound as a bell. Since then I have enjoyed good health, and all who know me say my recovery is remarkable. I am confident that Mother Seigel's Syrup was the means, in the hands of Providence, of saving my life ; and out of gratitude, and in hope of doing good, I freely consent to the publication of this statement. (Signed) (Mrs.) Ann Scuffham, Cooper's Lane, Lacey, Gainsby, May 1st, 1895."

This letter is endorsed by Mr. William J. Tollerton, of the same town, who vouches for the truth of what Mrs. Scuffham has said, as he personally knew of the circumstances of her illness at the time they occurred. No comment can add a jot to the force of this open, candid, and sincere communication. Whoever reads it must needs be moved and convinced by it. The disease which filled this woman's life with pain and misery for nearly twelve years was indigestion or dyspepsia, an ailment sly and cunning as a snake in the grass—and as dangerous. Send for the book of which Mrs. Scuffham speaks, and read the symptoms in order that you may know what it is, and how to deal with it. The book costs you nothing, yet it would be worth *buying* as if every leaf were numbered gold.

CAUTION!

It having been notified to the Proprietor of Beecham's Pills that certain unscrupulous dealers have recently been perpetrating a fraud in connection with the 4 anna box lately introduced, the public are requested to see that the retail prices, (*viz.*, 4 annas, 8 annas or 9½d, 12 annas or 1s 1½d. and Rs. 2 or 2s. 9d.) are clearly printed on the lid of each box. The fraud to which attention is drawn is that in the case of the two smaller sizes the prices have been obliterated and the boxes represented to be of higher value than they really are.

POSTSCRIPT

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "*An Indian Journalist*," at the Bee Press, 1, Utkoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Binghamton Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta : Thacker, Spink and Co.) ; nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication ; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahmin of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspiced by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or life-like portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man. Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India is neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Munny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." x Dr. H. Moore of Royal Artillery from Pondicherry says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dindigul says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Simkutta, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Puraudhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kanpotee says:—"A Corporal offered Rs. 30 for the very same watch, Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

WHOLE NO. 224.

CONTEMPORARY POETRY.

VERSICLES

(For fathers and mothers only) on an infant daughter's first walking.

BY JAMES GREGOR GRANT.

HA! ambitious little elf!
Off by thy adventurous self?
Fairly off? O fair betide thee!
With no living thing beside thee;
Not a leading string to guide thee;
Not a chair to creep or crawl by;
Not a cushioned stool to fall by;
Not a finger tip to catch at;
Not a sleeve or skirt to snatch at;
Fairly off at length to sea,
Full twelve inches (can it be
Really, truly?) from the lee
Of mamma's protecting knee!

Fair and softly—soft and fairly—
Little bark, thou sail'st it rarely,
In thy new-born power and pride,
O'er the carpet's level tide,
Lurching, though, from side to side,
Ever and anon, and heeling
Like a tipsy cherub reeling,
(If e'en cherubs, saucy gypsy!
Smile like thee, or e'er get tipsy!)
Even as though yon dancing mote
In the sunny air afloat,
Or the merest breath that met thee,
Might suffice to overset thee!

Helin a-weather! steady, steady!
Nay, the danger's past already;
Thou, with gentle course, untroubled,
Table-Cape full well hast doubled,
Sofa-Point has shot a-head,
Sifted Footstool Island sped,
And art steering well and truly
On for Closet-Harbour duly!

Anchor now, or turn in time,
Ere within the torrid clime
Which the tropic fender bounds
And with brazen zone surrounds;
Turn thee, weary little vessel,
Nor with further perils wrestle;

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

Turn thee to rest awhile
In the sweetly sheltering smile
Of thine own Maternal Isle—
In the haven of dear rest
Proffered by the doating breast
And the ever ready knee
Of a mother true to thee
As the best of mother be!

Nay! adventurous little ship!
If thine anchor's still a-trip,
And, instead of port, you choose
Such another toilsome cruise,
Whereso'er the whim may lead thee,
On! my treasure! and God speed thee!
Hackneyed as, perchance, they be,
Solemn words are these to me,
Nor from an irreverent lip
Heedlessly or lightly slip:
Even He whose name I take
Thus, my dear one, for thy sake,
In this seeming idle strain,
Knows I take it not "in vain,"
But as in a parent's prayer
Unto Him, to bless and spare!

WEEKLYANA.

GENERAL JAMES T. WALKER, R.E., C.B., F.R.S., LL.D., the late Surveyor General of India and Superintendent of the Great Trigonometrical Survey, is dead. The Journal of the Royal Geographical Society writes of him thus:

"There are few men who have during a service of upwards of fifty years worked with such zeal and industry, and with such signal ability for the public interests and for the good of his country. Born in 1826, James Walker was the son of Mr. John Walker, of the Madras Civil Service. Passing at Addiscombe in December 1844, he was appointed to the Bombay Engineers, and arrived in India on May 10th, 1846. His active service commenced with the second Punjab campaign. He was field engineer at the second siege of Multan. When the town was stormed, he was in charge of a party of fifty sappers and miners. While charging the Mohon Gate a powder magazine exploded, killing eleven and wounding thirty-three of his party. Dashing through the blazing wood work and falling walls, Lieutenant Walker, at great personal risk, succeeded in extracting three of the party from the debris. He also served at the battle of Gujrat, and in the subsequent pursuit. From 1847 to 1853 he was engaged on the military reconnaissance of the Trans-Indus region from Peshawar to Dera Ismail Khan, arduous work well performed, and all the more meritorious because it was executed single handed, in a very disturbed region. During this period he served with distinction in many of the encounters with hill tribes on the frontier; and he completed a Military survey over 8,761 square miles.

On December 1st, 1853, Lieutenant Walker became an assistant in the Great Trigonometrical Survey of India under Sir Andrew Waugh, his first employment being the measurement of the Chach base near Attock. The Indus series connected the Chach and Karachi bases, and Walker had charge of the Northern Section. He was occupied with this work when the mutinies broke out in 1857. Walker was then attached to Sir Neville Chamberlain's moveable column. At the siege of Delhi he had been told off to blow up the Kashmir gate, but

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

he was severely wounded, and afterwards was attacked by cholera. He was promoted to the rank of Captain in December 1857, and of Major in 1858.

Returning to his surveying duties at the close of the war, he resumed work on the Indus series, which was completed in 1860, and he was afterwards employed on the Jogi Tila meridional series. On the completion of this work the Surveyor General wrote to him in the following terms: 'The brilliant success which invariably attends your undertakings is a proof of the high professional qualifications, the foresight and judgment which you bring to bear on the important geodetical work on which you are engaged.' During 1860 he served in the Mahsud Waziri Expedition.

On March 12th, 1861, Major Walker succeeded Sir Andrew Waugh as Superintendent of the Great Trigonometrical Survey of India, and in the next two years the three last meridional series in the north of India were completed. Walker's first independent work was the measurement of the Vizagapatam base line which was completed in 1862. To show the accuracy of the calculations, it may be mentioned that the difference between the measured length of the base line and the length as computed from triangles, commencing 480 miles away at the Calcutta base line, and passing through dense jungle, was half an inch. A revision was then undertaken of the triangulation of Laubton in the south of India, work executed during the early part of the century, with re-measurements of the base lines. In February 1864, Walker attained the rank of Lieutenant-Colonel.

On his way home on leave in 1864, Colonel Walker visited Russia and established very friendly relations with the geodesists of the Russian survey. Through this wise step he was well supplied with geographical information from Petersburg, and there was a cordial feeling of co-operation between the officers of the two services. For instance, when Colonel Walker undertook a series of pendulum observations, the convertible pendulums were lent him by the Imperial Academy of Sciences at Petersburg. Colonel Walker was again on leave in 1871-72, when he, in conjunction with Sir Oliver St. John, fixed the difference of longitude between Teheran and London. He also made a thorough investigation of the condition of the plates of the Indian Atlas remaining in England, and wrote an important memorandum on the projection and scale of the Atlas. On his return he gave much attention to the question of the dispersion of unavoidable minute errors in observations for latitudes, longitudes, and azimuths, to obtain the closest approach to accuracy. At about the same time a gigantic work was undertaken, the 'Account of the operations of the Great Trigonometrical Survey of India,' to consist of 20 volumes. The first nine were published by General Walker, and the first appeared in 1871. It contains his introductory history of the early operations of the survey and his account of the standards of measure and base lines. The second volume, also mainly by Colonel Walker, consists of an historical account of the triangulation, with descriptions of the method of procedure and of the instruments employed. The fifth volume is an account of the pendulum observations by Colonel Walker. The Superintendent's work as a geographer was only second in importance to his geodetic labours. His office at Dehra Dun was a hive of ceaseless and intelligent industry. Explorers were trained, Survey parties were organized for every military expedition, native surveyors were despatched to make discoveries, and their work was reduced and utilized. Numerous valuable maps were published and Walker's map of Turkistan went through many editions, and was the leading authority for upwards of twenty years. On January 1st, 1878, Walker, who had become a full Colonel in 1869, undertook the exceedingly laborious post of Surveyor General of India, in addition to the work of Superintendent of the Great Trigonometrical Survey; and he continued to transact the whole business of the combined surveys until he retired.

After a most arduous service of twenty-two years as Superintendent, Walker retired, having become a Major-General in December 1878, and a Lieutenant-General in 1881. The date of his retirement was February 12th, 1883, and in January 1884, he was promoted to the rank of General. He was F. R. S. and LL.D., of Cambridge. *

General Walker saw the principal triangulation of British India completed during his incumbency, including ten base lines and 3,668 stations, those on the plains being towers 30 to 40 feet high. As the Duke of Argyll well observed in his despatch of 1871, this great survey, as a record of accurate geodetical measurement and of arduous services well performed, will yield to none that has hitherto been published by any European nation either in interest or in scientific importance, while the final harmonizing of results necessitated the most elaborate calculations that have ever been undertaken for the reduction of triangulation. It was no small honour to have been the leader, during nearly a quarter of a century of that devoted band of able public servants which composed the staff of the survey—*primus inter pares*. These men combine the knowledge and habits of thought of a Cambridge wrangler with the energy, resource, and presence of mind of an explorer or a backwoodsman; adding also all the gallantry and devotion which inspire the leader of a forlorn hope. The danger of service in the jungles and swamps of India with attendant anxiety and incessant work is greater than that encountered on a battle field; the percentage of deaths is larger, while the sort of courage that is needed is of a higher order, yet the well-earned rewards are withheld. When General Walker retired, his great services received no recognition whatever. Nevertheless the story of the Great Survey forms one of the proudest pages in the history of English domination in the East.

After his retirement, General Walker gave himself little rest. In 1885 he became a member of our Council, and for ten years he has been one of its most active and most valued labourers in the field of geography. In the same year he was President of the Geographical Section of the British Association at Aberdeen. He kept up a large correspondence with geodesists throughout the world, always ready to give advice and to supply information. *

General Walker was married in India on April 27th, 1854, to Alicia,

daughter of General Sir John Scott, K.C.B., by Alicia, grand-daughter of Dr. W. Markham, Archbishop of York. His widow survives him, and he leaves one son, Herbert, a promising young officer in the Royal Engineers, and three daughters to mourn his loss."

THE Government of India moves with an electric speed. The *Gazette of India* of May 2 republishes, for general information, from the second Supplement to the *London Gazette* of 16th February 1896, the Queen's Letter to Her Secretary for the Home Department on the death of Princess Beatrice, Princess Henry of Battenberg. It has already appeared in all the Indian newspapers. It is a touching letter and would not have lost its mournful interest if it were republished in the Indian Official Gazette another four months hence.

AT Simla, on the afternoon of Saturday, the 2nd of May, Mr. Arthur Charles Trevor, C.S.I., I.C.S., took upon himself the execution of his new office as Public Works Minister under the usual salute.

31,769 persons visited the Indian Museum during the month of April, that is, 440 male and 136 female Europeans, and 24,742 male and 6,451 female natives, the daily average during the 21 open days being 1,512.

NASHIPUR has been the scene of gay festivities. A telegram of the 6th instant reports:

"The marriage of the daughter of Raja Rannjit Sinha Bahadur of Nashipore with the eldest son of Babu Isri Persad of Ula, Monghyr, came off with much eclat on Sunday last. Nashipore has worn quite a gay appearance and there is general rejoicing all round. The bridegroom's party consisting of more than five hundred men about one hundred and fifty of whom are relations of the bridegroom, representing the communities of Gya, Begonserai, Daraly, Mozafferpoore, Ula, Gazipore, Telhara, Bahadurgunj, Mowkupa, Gorukhpore, Mobarakhpoore, Durbhanga, Bhagalpoore, Ekangar and other centres on the side of the bridegroom, and Patna, Calcutta, Benares, Cawnpore, Lucknow and other centres on the side of the bride's father arrived at Azimgunj by special and ordinary trains and went in procession to the Katgola gardens where arrangements on an extensive scale were made by the Raja Bahadur for their accommodation. The next evening the nikasi consisting of complements of procession, the largest seen for years, sent by His Highness the Nawab Bahadur of Moorshedabad and Maharani Surnomoyi of Cossimbazar, went round the town arriving at the Rajbari at 10 P.M. and returning to Katgola where music and dancing were in full play. The next evening the bridegroom in procession came to the Rajbari and the wedding ceremony was performed in the presence of the members of the beradari and several local leading gentlemen. Both Katgola and Nashipore are *en fete* and the happy festivities will go on till Thursday next when the bridal party will leave for Ula. The native community of Nashipore, Moorshedabad, Berhampore and other places and the Jains of Baloochar and Azimganj were entertained on Saturday, the members of the beradari being daily entertained to sumptuous feasts at the Rajbari. The whole bridal party are guests of the Raja Bahadur. The happy pair take with them beside universal blessings most valuable presents from the Raja Bahadur of Nashipore."

We publish the telegram as we find it. We will be glad to know more of "the *nikashi* consisting of &c."

READ this and learn:

"Dr. Linsley, of the Connecticut State Board of Health, in his last report earnestly urges the people to vigilance in the use of ice; there is no doubt that much ice is gathered from ponds and rivers that would receive unqualified condemnation as drinking water, and repeated analyses have shown that the impurities do not 'freeze out' as many imagine, but are entangled in the ice, ready to be just as bad as ever when thawed out, and many kinds of bacilli survive freezing for many days, especially the typhoid. It seems like sheer folly to pay millions of dollars to procure pure water, and then to deliberately poison it with polluted ice. People can live without ice."

Artificial ice is worse, not only for the bacilli it may contain but also for its ingredients.

THE L. M. S. Examinations which were conducted this year much quicker than usual, give the following results:

Preliminary Scientific L. M. S. ...	102
First L. M. S. ...	63
Second L. M. S. ...	14

AT the Muktearship Examination held in February last, 265 candidates have passed.

ON account of the sudden death of the Rani of Koti, wife of the giver of the fete, the Sipi fair, which was to have been held on the 12th and 13th instant, will not take place this year.

THE *Englishman* says :

"There are very few vacancies in the Orders of the Star of India and Companionship of the Indian Empire, and it is believed that the forthcoming Birthday Honors List will be but small. There are two vacancies in the K.C.S.I., and no C.S.I. or K.C.I.E., to spare. The number of C.I.E.'s is of course unlimited."

Our contemporary is very liberal with C.I.E.'s, but has no C.S.I. or K.C.I.E. to offer. It evidently takes no note of the death of the Hon'ble Prince Jehan Kadr, which has caused a vacancy in the knighthood of the Indian Empire.

THE "Scientific American" of March 28, 1896, has the following :—

"London oculists are up in arms against the very serious danger to the community caused by the electric light. Several eminent eye doctors are agreed on the point that unless a stop is put to the exposure of uncovered electric lights in the streets and in shops and offices nearly all the population will become blind. Experts are so greatly exercised in the matter that they even suggest that Parliament should take it up, and prohibit the use of plain glass globes for electric lights unless they are properly shaded."

Commenting on this, a London electrical journal says :

"It is not customary to look at the Sun, and not even the most enthusiastic electrician would suggest that naked arcs and incandescent filaments were objects to be gazed at without limit. But naked arc lights are not usually placed so as to come within the line of sight, and when they do so accidentally, whatever may result, the injury to the eye is quite perceptible. The filament of a glow lamp, on the other hand, is most likely to meet the eye, but a frosted bulb is an extremely simple and common way of entirely getting over that difficulty. The whole trouble can be easily remedied by the use of properly frosted or closed glass globes. In any case, however, the actual permanent injury to the eye by the glowing filament is no greater than that due to an ordinary gas flame."

You can avoid looking at the Sun but your eye cannot escape a long line of electric lamps.

Mr. Harry de Windt is a great traveller. He had been to Siberia three times, in 1887, in 1890 and in 1894. He has besides travelled from Pekin to Calais by land. Recently he started on a tour from New York to London by Alaska, the Bering Strait and Siberia. He will be out eight months, half of the time being spent in the sunless polar regions. Born of English father and French mother, in 1856, near Paris, he has the hardihood and eccentricity of both the nations.

THE Michigan Supreme Court of the United States, America, has decided that a critic, however hostile, is not amenable to a suit for libel and damages. But for wilful misstatement of any material fact contained in the book and attack on the private character of the author, he may be held to account. The rapid development of the judge-made law of libel in India requires a check.

PANCHANANDA has his compeer in Europe in angel Gabriel. He has the power of possessing young women and more—of giving the past, the present and the future of a human life. Such is the announcement from Paris, the spokesman or rather woman being Mlle. Cuélon, a young lady of twenty three and personal attractions. She has maddened all Paris. Her house in Rue de Paradis is always crowded. All the principal newspapers publish reports about her. M. Zola who went to her discovered nothing surprising. But the representative of the *Figaro* was struck and charmed. He was informed of many things connected with his private life and journalistic career which were only known to himself. She has predicted the advent of a hero in Paris, who will deliver France from radicalism and socialism. She sees a near European war, in which France will suffer mutilation. There will be a Commune worse than that of 1871.

A hero may come or not, but she is now the heroine of France.

THE French Academy of Medicine have decided to divide the Saint Paul prize of £10,000 for a remedy for diphtheria between M. Moux of the Pasteur Laboratory and M. Behring of Berlin. Shall we take it then that a remedy has been found for the disease?

The Government of India prize of a lakh of rupees for cure of snake bite remains unrewarded, although we are reminded by Dewan Bahadur Mombhai Jisbhai that ancient India possessed the art. The Dewan Bahadur in opening the New Arya Medical School at Anund Rushi's Wadi quoted Surgeon-General M. C. Foruelli, who, in his address at the Convocation of the Madras University in 1878, thus referred to the excellence of the Indian system of medicine :

"When the Greeks came to India with Alexander, they found, among the traces of civilization which raised their astonishment and admiration, the practice of medicine far advanced. Thus Arian informs us : 'The Grecian physician found no remedy against the bites of snakes, but the Indians cured those who happened to fall under that misfortune.' And, again, Nearchus informs us : 'Alexander having all the most skilful Indian physicians about his person, caused a proclamation to be made throughout the camp, that whoever might be bitten by one of these snakes should forthwith repair to the Royal Pavilion to be cured.' This was 300 years before Christ, and now in 1878, more than 2,000 years after, we have the Government of India and Dr. Smith vainly offering a reward for the precious but lost knowledge. These physicians are also said to have made other cures."

* Not only did the Greeks derive much information direct, during Alexander's and his successor's invasion of India, but from the Egyptians subsequently and they owed their knowledge to some mysterious nation of the East India, no doubt. But our indebtedness to India can be more directly traced somewhat later. When Bagdad, under the Caliphs after the destruction of Alexandria, became the great seat of learning, medicine was cultivated with much diligence and success. Hindu physicians were invited to settle in Arabia, and the works of Charak, Susruta, and the Treatise, called Nidan, were translated and studied by the Arabians in the days of Harun and Mansur, A. D. 773. With the great wave of Mussulman conquest which spread along the shores of the Mediterranean, medicine and mathematics were brought by the Arabians to Spain, and found a congenial home in the Saracenic Colleges of the Iberian Peninsula. The Arabians were not only great physicians, but famous alchemists, and to their teachings we owe the foundation of those sciences which have now grown to the fair dimensions of modern medicine and chemistry.

"The science of medicine has to do with everything that concerns man's material comfort and safety, not only to cure, but to prevent disease, and thus the very elements from subjects of its investigation. Your ancestors here again seem to me to have forestalled modern civilization. Pure water enough and ample enough for all wants, is the great cry now of our large cities in Europe, thanks to the teachings of modern hygiene. If I am not mistaken, your ancestors, especially the Brahmins, had grasped this fact ages ago."

I have said enough, I think, to convince you that medicine is not a science which the people of India of all people, and especially the Brahmins, should despise or neglect. It originated with you, and the prejudices which now debar you from its study, had no existence in your olden age."

THE trial of Mrs. Emily Ghose, a daughter of the late Koylas Chunder Bose, charged with poisoning by arsenic her husband, the Rev. Baroda Churn Ghose, a Native Christian clergyman of the Church of England in charge of St. Saviour's Church, commenced on Tuesday at the Criminal Sessions, before Mr. Justice Trevelyan and a special jury. The Coroner's jury had found nothing against her, but the Chief Magistrate, under legal advice, sent her up. Mr. Dunne, the officiating Standing Counsel, prosecutes, while Messrs. Allen and W. H. Knight defend the prisoner. In an unusually long statement, Mr. Dunne opened the case, giving a synopsis, with occasional comments of his own, of the evidence recorded at the magisterial enquiry.

Indian Magistrates have grown wise. They no longer order the presence of the *chundimandip* to depose to an occurrence in its front, but require a plan of the place where a crime is said to have been committed. The first person examined by Mr. Dunne was a draughtsman who proved the plan of the house. The next witness was a student of 15, a Native Christian, who deposed to accompanying the prisoner to one Solomon (charged in the magistrate's court with abetment of murder, and set free by him) then to a dispensary and to her administering four times a white powder smelling camphor to her husband who vomited and purged after each dose. He also spoke to Mrs. Ghose throwing the evacuations into a drain downstairs. Another boy, much younger, said that he had seen the prisoner administer something to the deceased after which he vomited. Alfred Downes, an agent and broker, who had lived with the Ghoses for five days before Mr. Ghose died, had found him all right the morning of the day of his death. He deposed :

"I went upstairs about a quarter past seven to ask Mr. Ghose if he was going to service that morning. I called out to Mr. Ghose, and receiving no reply, I went upstairs. I then found Mr. Ghose on his stomach with his hands stretched. Mrs. Ghose was in the room upstairs. I first called out to Mr. Ghose, and receiving no reply, I put my hand on him, and found he was cold. I then put my hand on his wrist, and found he had no

pulse. I said, 'Mrs. Ghose, what is this?' She said, 'cholera, cholera,' and put her handkerchief to her eyes. She asked me to turn the body. I told her that she might have come to me in the morning. I would have got her the best doctor available. She said, 'What is the use of talk as he is dead now.' No further conversation took place. I saw some vomit in a basin. There was a very bad smell in the room. I noticed that she was not weeping. I know a man named Solomon. I saw him at the house at about eight o'clock. At eight o'clock Mrs. Ghose asked me to go to the thanna and fetch a constable. She said that the Mohamedans were very troublesome, and unless a constable was there to keep order, they would rush upstairs to see Mr. Ghose. I saw several Mohamedans outside. I went to the Collinga Thanna between 8 and 9 o'clock, and gave information of Mr. Ghose's death, which I said was due to cholera. I returned with a constable, whom I placed at the gate. I was present when Mr. Dowling, the undertaker, came to the house at eleven o'clock. I don't remember prisoner saying anything to Dowling. After that I saw prisoner and Solomon outside. Mrs. Ghose told me that they were going to Dowling's to arrange about the funeral, and to get a death certificate. I said I would try and get a death certificate, as it was a case of cholera. I went with Solomon and Mrs. Ghose to Messrs. Smith and Stanstreet in Durruntollah, Messrs. Scott, Thomson & Co., in Esplanade, and Messrs. Bathgate & Co. I then went to Dr. Wallace and to a Native doctor in Jam Bazar. Solomon and Mrs. Ghose suggested going to the Native doctor. I don't remember the Native doctor's name, but I can recognise him. I did not get a death certificate from anybody, and I returned to the house. There is a dispensary about 400 yards away from the deceased's house."

Other persons have been examined to prove, if not the actual administration by the wife of arsenic of which the husband died, but of her behaviour after death, to shew that she knew the cause and had helped it, was anxious to suppress all enquiry after death, and had gone the length of offering bribes to the police. The trial has not yet ended.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE divinity that doth hedge a king is no guarantee against vaillanism. Western Republican States equally with Monarchical Empires are a prey to it. That crime is a growth of modern civilization and has not yet travelled to the East. Here the assassination of kings, though not unknown, is due to other causes than socialism. Wading through blood to a throne is an Eastern potentate's privilege. But he has been always safe from his subjects. Religious fanaticism is, however, rivalling socialism. We have had a taste of it in British India. Now comes the intelligence of such a diabolical murder from the Oriental Kingdom of Persia. The King of Kings, the Shah Nasiruddin of Persia was shot by a fanatic while entering a shrine near Teheran on Friday, May 1. His Majesty was at once conveyed to his Palace, and died at four in the afternoon. A telegram received by the Persian Consul-General at Bombay from Teheran, stated that the Shah was assassinated by a Babee. His Majesty had gone to the celebrated mosque of Shahzada Abdul Azim which is situated five miles from the Persian capital, for the purpose of worshipping. As he was entering the compound of the mosque the fanatic shot him dead with a revolver, the bullet entering the Shah's neck. The murderer was immediately arrested. It seems that the Babees belong to a new religion established about sixty years ago in Persia by Mozu Ali Mahomed, who was shot by order of the Shah Nasiruddin, and whose followers have now taken this revenge. The name of the assassin is Mirza Mahomed Reza. He is a follower of Djemaleddin. He has confessed his crime and named eight accomplices. The eldest son of the Shah, Governor of Ispahan, his mother not being of royal blood, has been excluded from succession. Mozuferuddin, the second son, was proclaimed the next Shah and summoned to Teheran from Azerbaijan. He was enthroned at Tabreez on May 3. Great Britain, Russia and Turkey have recognized Mozufer as the Shah of Persia. The Consul-General at Bombay had issued invitations for an evening party, in connection with the Shah's Jubilee, which was of course abandoned. Immediately the news of the assassination was made known, the Imperial Standard was hoisted half-mast at all public buildings and also on the ships in harbour. The Consul-General telegraphed the sad news to the Viceroy and Lord Sandhurst, and in the course of the day received sympathetic messages in reply.

THE May Day celebration passed off in Europe generally in a quiet manner. Only in Vienna, serious rioting took place. The police and military were summoned. Numbers of rioters were injured, and many arrests made.

THE whole Italian force advancing in three columns has relieved the Adigrat garrison.

EARL Grey has arrived at Bulawayo, and telegraphs that he considers the back of the Matabele revolt is broken, and that Bulawayo is now as safe as London. The column from Salisbury, with which Mr. Cecil Rhodes is, has defeated the Matabele near Gwelo, killing thirty of them.

THREE hundred and Mounted Infantry and 150 men of the Middlesex Regiment sailed for the Cape on Saturday. Mr. Merriman, member of the Cape Council, brought forward a motion in the House of Assembly that an address be sent to the Queen to consider the revocation or alteration of the Chartered Company's charter.

AT the opening of the Volksraad, President Kruger made a speech, in which he said that he hoped for the assistance of the assembly in developing the prosperity of the Transvaal which had been interrupted by Jameson's raid. The foreign relations of the Republic, he said, were friendly, and the Transvaal and the Orange Free State were discussing the question of a closer union. No mention was made of the Unlanders' grievances in the speech.

MR. Chamberlain read in the House of Commons a telegram from Sir Hercules Robinson, stating that he had not the slightest hint of Dr. Jameson's raid which came upon him as a bolt from the blue. Mr. Chamberlain said he placed implicit confidence in Sir H. Robinson's statement.

MR. Cecil Rhodes has tendered his resignation to the Chartered Company, and the Board of Directors are now considering the same. He has also tendered his resignation as member of the Privy Council to Mr. Chamberlain, and offered to return to England immediately. The majority of English papers urge generous treatment of Mr. Rhodes for the sake of the great work he has done in South Africa which may be lost without him. Mr. Hawksley, Solicitor to the Chartered Company, cabled to Mr. Cecil Rhodes at Gwelo on the 4th that, owing to the altered situation in Rhodesia, the Board hesitate to accept his resignation, and they ask what Mr. Rhodes's view is. Mr. Rhodes cabled on the 6th to let his resignation wait, "as we fight the Matabele again to-morrow." The Board next day resolved to defer the acceptance of Messrs. Rhodes and Beit's resignations, but this was only temporarily approved by certain Directors, who consider the resignation of Mr. Rhodes and Beit to be inevitable, otherwise they will resign themselves.

A SHARP skirmish has taken place near Akasheh between three squadrons of Cavalry and 300 Dervish Camelmen, in which the latter were repulsed with heavy loss. The Egyptian loss was trivial. Captain Fattan was slightly wounded.

A COMMERCIAL treaty between Japan and Sweden has been signed at Stockholm.

OWING to the famine in Tonquin, the French Government has abolished the duty on rice from Hongkong until June.

LI-HUNG-CHANG has been sumptuously received by the Czar and Czarina at Larskoe Selo, their summer residence. The Chinese ambassador, after attending the Czar's coronation, will visit the courts of the Treaty Powers partly with a view to obtaining an increase of five to eight per cent. in ad valorem import duties at the treaty ports in China.

NOTWITHSTANDING semi-official denial regarding the railway line to Herat, the *Soviet* confirms the statement that it is to be laid from Merve to Kushk with a northern terminus ninety-four miles from Herat.

SEVENTEEN cases and eleven deaths from cholera took place at Alexandria on May 5.

LORD Wenlock has been presented with the freedom of the city of York. In a speech made on the occasion he dwelt upon the importance of railway extension in India, and praised the excellent work done in the Madras Presidency in this direction.

THE Indian Parliamentary Committee wrote to Lord George Hamilton, urging him to exempt from all duty all cloths made in India or imported, which contain no yarn higher than twentys. Lord George has replied reciting at some length his reasons for declining to disturb the recent equitable arrangement.

THE *Advocate* of Lucknow reports that

"The Collector of Shahjahanpur's Orderly has been sentenced to two months' imprisonment for using service stamps."

An orderly of an official is entitled to many extra emoluments. Is he not competent, like his master, to send his private letters under official frank?

AGAIN :—

"A sweeper of Bijanour who allowed his five years old girl to play on the public road and to be run over by a carriage has been sentenced to five months' imprisonment."

Who is the owner of the carriage? Has the driver been prosecuted for negligence, or is the father alone made responsible for the death of the child? The magistrate was evidently anxious more for the safety of the carriage than of the girl crushed under its wheels. A jocose friend of ours once warned a man talking by the side of a carriage to move away lest he might injure the wheels by their going over his feet. The Indian Penal Code prescribes penalties for not taking order with one's property and animals. Under which law was the sweeper punished for letting loose his child not to kill but to be killed? We smell a rat. We hope our contemporary will publish the full facts and the judgment of the magistrate.

We quote the same paper again :

"The friends of female education will be glad to learn that in a marriage at Meerut the services of the Paudits were not required to conduct the marriage. The bride, daughter of Lala Ram Chandra, cloth merchant, was sufficiently well versed in Sanskrit so was the bride-groom a graduate, to conduct their portion of the work."

Was the priest entirely discarded? There are various kinds of marriage. To what class does the present belong? It could not be a valid marriage as is now ordinarily understood. The priest is indispensable. He is as much needed for the learned as for the ignorant. He is the chief witness to the matrimonial tie.

THE Simla or rather the Hyderabad bribery case has entered a new phase. Mr. Monomohun Ghose has been retained for the defence.

WE read in the *Madura Mail* :

"The month of February, 1896, was in one respect the most remarkable in the world's history. It had no full moon. January had two full moons, and so had March, but February had none. Do you realise what a rare thing in nature that was? It had not occurred since the creation of the world. And it will not occur again, according to the computation of astronomers, for how long do you think? Two million, five hundred thousand (2,500,000) years! Was not that a truly wonderful month?"

This appears in the column of News and Notes. There is nothing to shew that it is original news and no reproduction from any other journal. Original or not, it is wonderful to be sure, and the originator has succeeded in his object. The news has appeared in *Madura*, if not anywhere else, and now sees the light in *Calcutta*. Our contemporary publishes the strange non-occurrence without any comment or note. We cannot silently pass it on to our readers. It is all bosh of course. It could not have been seriously meant. Yet there are people who will be set athinking by the strange news. To save them any trouble we will point out that the first day of February began on the second day after a full moon. The 13th was thus the day for a new and the 28th for a full moon. The 28th of February was remarkable for two natural phenomena—the full moon and a lunar eclipse. That was also the day for the celebration of the *Aoli*, not with red powder but flowers. It was pre-eminently a full moon night.

AT the election of the General or the ruling Committee of the Calcutta

Corporation, the amalgamated area gained two seats. So there are now 3 suburban Commissioners in that Committee instead of one. Almost all the old members among the elected Commissioners have been re-elected. Only four have gone out.

THE *Madras Standard* of May 2 writes :—

"We are desirous to draw attention to the fact that on Wednesday and Thursday nights at the Victoria Public Hall, during the performances given by the Saunders-Gould Combination, absolutely no Police assistance was provided for the regulation of vehicular traffic. We can quite understand the stupid system obtaining by which the performing company, professional or amateur, is expected to pay for Police attendance. The question therefore arises whether this anomalous practice should not be abolished, if only on the principle that wherever two or three are gathered together in lawful or unlawful assembly there the Policeman should be present to guard against accidents and offences. To expect that he should be remunerated by a company which is more or less indifferent as to how its audience comes to or goes from its show, for this service, is plainly a matter of unwarranted exaction, and we are glad to notice that the Saunders-Gould Company, on principle, did not apply for the services of the Police, notwithstanding that on the first night there were two accidents of a more or less serious nature at the gates of the hall. To our mind a Circus Company may be reasonably charged for Police services seeing that order must be preserved among eager, excited mobs, but as regards the regulation of vehicular traffic at any other form of public function, the services of the protectors of public safety should be freely given.

The question raised by our southern contemporary is not to be lightly answered. Yet it is a matter which requires solution. It is not easy to make a distinction between occasions when the Police should be supplied free or on payment. The rule ought to be that except on special occasions and for special purposes to be named, the Police must not expect payment but do the ordinary work as a public duty. The Police are same in *Madras* as in *Calcutta*. You are expected to pay for every service done, and when you pay or are made to pay you are supplied with more men than you require. The *Calcutta* Police have thus opened a source of income which is not unacceptable to Government. A vicious system has grown up to ask for payment on the slightest pretext. That cannot be tolerated.

THE Police are identified with oppression. Not only the honour of individuals is safe but the Police Commissioner has extended his hands to men's pockets. He has imposed a tax unsanctioned by law or regulations. More of it in our next.

THE week has been full of marriages. The expiring month of Baisakh is auspicious for happy unions and has been too much utilized because the following months happen to be inauspicious.

RAINS are reported from several districts of Bengal. We had two good showers at *Calcutta* this week. But the mortality from cholera maintains its high figure.

THE following telegram dated Peshawar, May 3, appears in the *Englishman* of May 4 :

"Lieutenant Stevens, of the 20th Punjab Infantry, whilst placing his ponies into a horse box at the Peshawar Cantonment station on Friday, the 1st May, was stabbed from behind. The assassin tried to escape, but was captured. Time about 9-30 A.M. The man is supposed to be Sudan Kuan, a Shinwari from the country west of Bajawar and a follower of the Hadia Mulla. He was tried on Saturday and executed at about 1 P.M. Lieutenant-Stevens is doing well, and hopes are entertained that he may get over this terrible calamity."

This is swift (or shall we say? wild) justice. No. It is frontier justice, the justice of the Frontier Crimes Act. The Puthan was arrested, tried, sentenced and executed within 15½ hours of the crime. Yet not so long a time! Another telegram dated May 6 says :

"The fate of the murderer did not take long to decide. Making the attack at half-past nine he was tried at half-past eleven, and by half-past one the capital sentence had been completed. In such cases of unprovoked murder short shiving has the best moral effect, and Peshawar is to be congratulated on having a Deputy Commissioner strong enough to take prompt action and thereby discourage future crimes of the sort. The lesson has been needed long and will not be lost."

"The would-be murderer was captured by a porter named Devi Dial, who happened to be in the vicinity, and at once admitted having come in from the frontier with the deliberate intention of killing a European." Sudan Kuan, it is also reported, was 25 years of age, was a Shinwari of the Batmar district, and attempted the life of the Lieutenant with an Afghan knife. The execution was of course

public and was attended by a large body of troops of the garrison. Whatever its effect on those who attended, the prisoner was sorry that it was not more public. "The prisoner, who was a miserable, undeveloped stupling, not only acknowledged his guilt, but bragged of it, and went cheerfully to his doom, disappointed only that the police had refused to first take him round the city and exhibit him to the people."

There will be a disappointment, indeed, if Mr. Maude does not figure in the Birthday Gazette.

The quick despatch of fanatics may satisfy British revenge, but it is hardly a deterrent to mutiny to faith who hope to attain Heaven through British blood.

Lieutenant Stevens, has not, as was fondly hoped, survived his wound. He died on Thursday last.

EVERY one taking an interest in India ought to know something of the character of the country, its inhabitants, its resources and its commercial financial and educational condition. The development of the country to the requirements of modern civilization demands a knowledge of these subjects much more than of anything else. But the subjects are so vast and varied that it is not possible for everybody to study each in detail, though it is desirable to have a general idea of the main features of all. It is for the latter purpose that the "Statistical Atlas of India" was first prepared by the Government of India in 1886. "Since then another census of India has been taken and the Atlas has now (in the 2nd edition) been revised and brought up to date." It consists of thirty five maps and diagrams illustrating India's Physical Configuration, Geology, Rainfall, Irrigation, Famine, Crops, Forest conservation, Horses and Live-stock, Economic Minerals, Railway, Prices, Foreign Trade, Finance and Taxation, Revenue and Rent systems, the People, Languages and Religions, Education, Emigration and Feudatory States. The value of the maps and diagrams has been considerably enhanced by explanatory chapters, which have been written by Sir E. C. Buck, Dr. W. King, Mr. John Elliot, Mr. George Watt, Mr. B. Ribbentrop, Mr. J. E. O'Connor, and Veterinary-Lieutenant H. F. Pease, possessing special knowledge of the subjects. In the maps, clearness has been secured by the omission of all unimportant details. The object has been not to give mere *compendia* of technical information, but to sum up, as shortly and clearly as possible, the leading points. It is true that some of the subjects are still wrapped up in obscurity, but the maps give all up to date information. They as well as the diagrams are singularly neat and the explanatory chapters sufficiently lucid. In every way the publication is an agreeable addition to a library.

WE will glean from the Atlas a few facts regarding the water supply of India, both natural and artificial. The subject engages a deal of public attention, mainly as regards drinking water.

LOOKING at a map of India one cannot but be struck with the vastness of the country. The physical features are again so well-regulated that it may without hesitation be said to be one of nature's favourites. There are countries whose immensity does not compare unfavourably with that of India, but there the mark of special favour is generally wanting. Egypt, for instance, which is one of the most fertile lands in the world, has an area more than a third of that of India. Comparing the inhabited and cultivated areas of the two countries, the British provinces in India exclusive of the Native States are, however, equal to about forty-two Egypt's. This pre-eminence is due to the physical configuration of India. The Himalayan range in the north standing "like a high wall bounding and protecting a rich garden," and regulating its singularly unique drainage system, contributes vastly to the wealth and fertility of the country. "The Himalayan range stops and holds the vapour blown in from the sea and gives it back to India in rains and fertilizing streams. Beyond lie the steppes of Asia, dry or arid and unprofitable." "Even the drainage that flows down the north side of the great mountain wall is carried half to the east and half to the west in the two mighty rivers which become the Indus and the Brahmaputra respectively, hugging the very foot of the wall, until they are able to find openings through which they burst their way southward into the Indian continent. Thus the northern drainage to which geographically the trans-Himalayan region would seem to have a prescriptive right is almost unfairly captured

by India, and by its fertilizing service frees its master from all fear of rivalry from the lands beyond the mountain zone." Another remarkable feature is the mountain wall on the west coast—the Sahyadri range which arrests the vapour-bringing winds of the South West monsoon and deprives the country lying to the lee side of a sufficient rainfall. Nearly the whole of the drainage flows towards the east. And the alluvial detritus borne by the streams contributes to the formation of a rich soil of considerable agricultural value. Thus the peculiarly favourable physical configuration of India is a key to the distribution of the rainfall, climate and agricultural wealth, as of the vast and varied population.

India is essentially an agricultural country and agriculture depends on moisture. Moisture is available in the forms of rain and atmospheric vapour, river-floods and inundations, shallow tanks and ponds, retention of moisture in soil, rivers fed by snow and mountain springs, underground reservoir and deep lakes or surface reservoirs. The distribution of these over India is very unequal. Some provinces are plentifully supplied, while in others artificial means are resorted to. Various methods are applied for a more or less uniform supply all over the country, with some of which, as for instance canals, Indians were familiar before the occupation of the country by the British. These methods are of course varied according to the requirements of the different provinces. The Indo-Gangetic alluvium from Peshawar to Calcutta is a level tract, slightly raised above the sea level. Under this tract stretches a steady zone, soaked with fresh water forming a vast underground reservoir. This reservoir is utilized for water supply by sucking wells. "It is more largely used in the central section (of the alluvium) than at either extremity, because towards the Western or Punjab end, the water lies at too great a distance for the surface of the soil to admit of its being lifted without great labour and expense, while towards the eastern or Bengal end, rain and moisture are so plentiful as to make irrigation unnecessary." Hence the N.-W. P. is "well" watered far in excess of any other province. In the Punjab system of irrigation "whole rivers of great size are lifted bodily into canals constructed just above the foot of the Himalayas and are spread over the plains in a network of distributing channels. A very large portion of Western and Central India is a large plateau of basaltic rocks, consisting of successive sheets of igneous outflow known as the Deccan Traps. It is like a huge sponge and contains "so large a proportion of rich, black, water holding soil that it seeks for no other form of water supply." The formations of Peninsular India are Archæan consisting of hard crystalline rocks—gneisses, schists and granites. They are extremely old, in fact, the oldest to be found on the face of the earth. They have been subjected to a high degree of metamorphism and are consequently "covered with fissures, corrugations, and hollows, in which surface water can be collected with or without the aid of artificial means."

The natural supply of water is thus very considerable in India, and the existing and possible functions of artificial irrigation show that it can be extended to a very small proportion of the total area. There are 33 millions of uncultivated acres which can be made culturable, and 43 millions of cultivated acres whose produce can be largely increased by irrigation. And the Government recognizes a "great duty before it in aiding the cultivating population—either by loans of money or by engineering assistance—to make extended use of various forms of water and moisture available to them."

REIS & RAYYET.

Saturday, May 9, 1896.

HOW A MAGISTRATE ERRS TO PRE-SERVE PRESTIGE.

WE have already published (*R. & R.* of 25th March) the judgment of Mr. L. P. Shirres, the District Magistrate of Dacca, in the complaint of a wealthy citizen against the police for wrongful restraint and assault accompanied with violence. That judgment, as we said, is possible only in a country like India where judicial and executive functions are combined in the same official. The complainant had cited

many witnesses. Processes had been taken out. A few among them were examined. All of them happened to be public servants whose prospects of pay and promotion, or at least of peace, depend upon the good will of Mr. Shirres. Every one of them deposed to the arrest and the dragging. The dragging could not be a gentle operation. The complainant's vakils desired to prove the violent character of the assault. They applied for time to produce other witnesses—men unconnected with either the police or the Magistracy and, therefore, better able to depose to the facts. No Magistrate that was not prejudiced on behalf of the accused could refuse such an application. Mr. Shirres, however, in the exercise of that discretion which is vested in the trying Magistrate, refused the prayer. With him judicial discretion, instead of being a science, probably means unfettered license. "I see no reason to grant the petition" is his curt reply. That short sentence embodies his reason for the refusal. The accused had not been called. They had not examined any witnesses. Upon the evidence, however, such as it was, tendered by the prosecution, Mr. Shirres held it was proved that music is never allowed near the Cutcheries. As a matter of fact, it was only one or two witnesses, inferior clerks of the Magistracy, that had said so. Our information is that it is only in ordinary processions that music is so prohibited. The unpublished rule does not apply to processions which are costly and whose magnificence is greater than usual. The reason is obvious. Such processions are rare in even that city of shows. The procession of the Bysakhs, it was known from the beginning, would be a grand affair. Hence, the usual interdiction of music did not apply to them and it was not mentioned in the license. Mr. Shirres, however, having come to the conclusion that music is never allowed in the vicinity of the Cutcheries, indulges in a clap-trap for blinding the superior Courts and the public. He says that "the necessity of the rule (interdiction of music) is obvious when it is considered that there were 150 processions on the day in question." From what source did he derive this information? As a matter of fact, no witness had stated so. Is this a fact of which Mr. Shirres could take judicial cognisance? Obviously enough, he must have been told so by the police and we will do him the justice to suppose that he believed what he had heard. A cursory enquiry, however, if he had been free to make it, would have established the fact that so far from 150, not one procession, excepting that of the Bysakhs, passed by the Cutcheries that day. The statement, therefore, about 150 processions is an inaccuracy not of the ordinary but of official magnitude. But even this is nothing compared to the reasoning of the next few lines. Briefly stated, it is this: the license granted by the District Superintendent of Police did not especially interdict music. Directions, however, unknown to the licensee, had been given to the police not to allow it. The procession continued to

play music notwithstanding the prohibition by the police. It is not known whether the complainant himself ordered the music after the police had forbidden it. But the music not having been stopped, the police arrested the complainant, and as he would not submit, force had to be used. In the first place, is there a tittle of evidence on the record to show that the District Superintendent had given orders to the police to stop the music, after having apparently allowed it in the license, or, at least, after his omission to interdict in the only regular way? Was this also a fact of which Mr. Shirres was competent to take judicial notice? Verily, it was his mentor that had said so and he could not possibly distrust him. To what a depth would British prestige sink if a Magistrate, sitting as a Judge, were to regulate every part of his proceedings according to, not the technicalities of Westminster Hall, but the law of evidence and procedure as laid down by the Indian legislature itself? Mr. Shirres could not be a party to such a sacrifice of prestige at the bid of an oleaginous native. Supposing, for argument's sake, that the District Superintendent of Police really chose to act with the wisdom Mr. Shirres had the goodness to impute to him, *viz.*, verbally ordering the police, behind the back of the licensee to stop, at a particular point, the music after having granted an unlimited license, were there not other questions to dispose of before dismissing the case? The complainant was not the man who had applied for the license. Nor was it issued to him. Some one else had obtained it. Who, under the law, could possibly be responsible for any breach of the license? It is true that the complainant is the father of one of the bridegrooms. Is that fact sufficient to make him responsible in the eye of the law? Then, again, the license had been entrusted to a Head-constable, who, with ten constables, had been told off to see that everything went off as it should. What becomes of the allegation about the District Superintendent's verbal orders to the police to stop the music when the Head-constable and the constables in especial charge had done nothing to carry them out? That man and his assistants, finding no interdiction in the license, had walked with the procession without having once called upon the musicians to stop playing. It is no special pleading in which we are indulging. Criminal responsibility, such as would justify the forcible seizure of a man and dragging him away with violence, is a grave thing. It is not even proved that when the police gave the order for stopping the music, the complainant, in a spirit of contumacy, set that order at defiance, telling his men to go on. Why arrest him? why not arrest the musicians if they disobeyed the order? why not punish the Head-constable and the ten constables who had the license in their keep and who had done nothing to prevent the music? Is it possible to suppose that the musicians would have gone on playing if the police had prohibited them? The fact is, the arrest of the complainant was utterly indefensible. This could easily have been shown to the satisfaction of Mr. Shirres if he had only allowed the complainant's vakils to address him after the examination of the witnesses.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

The concluding portion of the judgment, where the Magistrate gives his reasons for holding the complaint frivolous and vexatious, is ridiculous. That a gentleman of the boasted Civil Service of India

could descend into such bathos, would be almost incredible but for the actual fact. "The complaint appears to be frivolous because based on no substantial ground whatsoever, and vexatious because it has been brought with no hope of obtaining a conviction but merely in order to harass the police." Not only was there no ground, but no ground whatsoever, for the complaint, for the forcible seizure of a man and dragging him violently away, when the seizure and the dragging are acts of the police, are very ordinary things, to which, besides, every subject of the crown in India should submit. The statement that there could be no hope of obtaining a conviction, may, after all, be correct. Mr. Shirres has probably succeeded in inspiring the people of Dacca with the conviction that he is not the Magistrate to punish the police. The complainant, therefore, must be held to have acted thoughtlessly in not taking note of this. He must suffer for his rashness in rushing into court.

Such then is the extraordinary judgment which Mr. Magistrate Shirres delivered in the complaint of a citizen for wrongful arrest and violence done to his person by men who are supposed to be guardians of the peace for the badges they wear and the pay they draw from the public funds. This, however, is not all. The finale is still behind. Not satisfied with their victory, the police wanted a triumph. Their dearest wish was accomplished. They brought two complaints against the brothers Priya Nath and Dharani Nath. On the day of marriage, *viz.*, the 7th of March, the Bysakhs were alleged to have allowed certain fire-works to be discharged. These consisted not of bombs or rockets or anything of the kind, but *tubris*, or as they call them at Dacca, *Turnis*. By what accident phosphoric torches also have come to be classed under fire-works at Dacca is not known to us, but somehow people using such torches for light are regarded as letting off fire-works. The police called three witnesses from their own force. The defence alleged that fire-works had not been let off from any part of the public road, but that private land had been used for the purpose. The Magistrate disbelieved the defence. The evidence of the three policemen was enough. Both the brothers were convicted of offences under section 32 of Act V of 1861 and section 283 of the Indian Penal Code. The beauty of the conviction is that none of these sections applies. Section 32 of the Police Act refers to cases where there is opposition or disobedience of orders issued (1) with respect to the conduct of processions, the routes they are to take, the hours allowed, and the use of music, and (2) about the prevention of obstruction on thoroughfares. It also refers to the breaches of the conditions laid down in licenses. Supposing, that the section applies, at Dacca itself convictions have taken place for letting off fire works upon only a prosecution by the municipality. Then, again, one of the accused, *viz.*, Dharani Nath, could not be shown to have had any connection, however remote, with the particular procession in which it was alleged that fire-works had been let off.

The second case which the police brought against the two cousins was for violation of the condition laid down in the license about time. The contention of the police was that the procession did not break up till at least half an hour after the sanctioned time. Two witnesses were examined, connected with the force. One of the cousins was let off. The

other was convicted and fined Rs. 50. The judgment is a curious document. It is as follows:—"This would ordinarily be a petty case because if the procession was after time, the offence was not serious. Here it is quite clear from the evidence for the defence (see evidence of Radha Ballav Bysakh) that the procession was after hours, and it appears also that the accused wilfully set the law at defiance." The evidence of Radha Ballav, which is expressly referred to as proving the wilful character of the breach is to this effect: "I was with the procession. Dharani Babu was not with it. No one ordered the procession to stop when we are near the Kutwali. The police went with us—accompanied us to the end, and no one told us to stop." How far this evidence justifies the conclusion about wilful disobedience may be left to the reader to judge. Supposing that there was some delay in breaking up the procession, it should be remembered that Babu Priya Nath had been arrested and that it was the police which, by that arrest, had caused the delay. Then, again, the procession having started from the house of the Bysakhs was to return to that point. If it was late by half an hour, with whom would the responsibility lie? The men walking with particular things could not stand on the way or leave it altogether just as the clock struck the hour of 4 p.m. What were they to do for observing the law? Were they to come to a dead halt throwing down every thing on their persons, as soon it was time, or were they to reach the point from which they had started? Nobody had ordered them to stop. Why had a number of policemen been told off to regulate the procession? Was it not their duty to see that the prescribed time was not exceeded? In this case again, the question of criminal liability required to be fully discussed before the accused could be convicted. Who could be said to be guilty of a breach of the conditions of the license? The license had been granted to one man, while another was convicted for having disobeyed its conditions! This may be law with the District Magistrate of Dacca, but few men will accept it as such. How long will the country groan under this intolerable state of affairs? How long will the same person that practically prosecutes be allowed to sit as a judge in his own cause? Mr. Shirres of Dacca, we may be sure, is not actually so blundering a judge as not to know that many issues of law had to be decided before there could be a conviction in the two complaints by the police. That he gave his judgments without deciding them,—without, in fact, having allowed the vakils of the accused to argue the cases—is due only to the administrative blunder of combining judicial and executive functions in the same official. The plea of economy urged in its defence is no longer tenable. It has been shown that the desired reform may be effected without additional cost. The argument connected with this maintenance of official prestige is an insult to the intelligence of the people.

OUR LONDON LETTER.

April 17, 1896.

The principal events in the Imperial Parliament during the past week, have been the introduction of the Irish Land Bill on Monday, by Mr. Gerald Balfour (brother of Mr. Arthur), and of the Budget last night by the Chancellor of the Exchequer.

The former is a Bill so bristling with technicalities, the common saying is, only five members in the House are competent to deal with it, and of these five, two only are experts. The five are the Brothers Balfour, Mr. John Morley, Mr. T. W. Russell and

Mr. Tim Healy, the last two being the experts. Roughly speaking, the Bill is said to hold the *juste milieu* between the extreme landlord party on the one hand, and the extreme tenant right party on the other.

The passing of the Bill depends largely on the action of the Irish members, as the Education Bill has precedence, and will be fought in committee, by the Radicals, clause by clause, if not line by line. On this Bill, the Radical party is hopelessly demoralised.

It will lose the support in the Division Lobbies of the entire Irish party making a difference of 150 to 160, in favour of the Government, on each division. The reason of this is, the Bill favours the R. C. schools, and the Catholic Hierarchy has given it a general support, and has called upon all Catholics in the House of Commons to vote for it.

It is too soon yet to judge of the merits of the controversy, as between Sir John Gorst, representing the present Government, and Mr. Acland as the spokesman of the Radicals.

One thing only is clear. It will be a very bitter struggle. Party feeling will run high, and what Macaulay called the "braying of Exeter Hall" will make itself heard with blatant noise. Already the Gladstonian clergy who turn their pulpits into mere political vehicles, are screeching and braying, the Guinness Rogers, the Cliffords, the Hughs of London, are already in full chase, denouncing, perorating, and misrepresenting as only a Radical dissenting clergyman can. When the Education Bill has passed the Commons, the Irish Land Bill will have its turn.

It is to be hoped the Government will be firm over the former. With the aid of the Irish vote, it is reckoned the majority will run from 250 to 300 on each division and with such an enormous force at its command, it should be able to crush needless obstruction, after giving the fullest opportunity for debating *ad nauseam* the principle of the measure.

The Budget. I wonder how our foreign critics—French and German—who gloat over what they call Great Britain's "splendid isolation," feel this morning on reading the Chancellor of the Exchequer's speech, last night, in Committee of Ways and Means, when introducing his Budget. The simplest analysis I have seen of it, is this:

Estimated revenue for 1896-97	...£101,755,000
Estimated expenditure	..., 100,047,000

Surplus £ 1,708,000

I quote from the *Standard*:

"In the customs the increase arose from tobacco, tea, and wine, tea was driving coffee out of the market."

British and Irish spirits were driving foreign spirits from the market. No less than a million sterling a year was literally thrown into the gutter in the shape of cigarette and cigar ends.

Out of the number of new companies that were floated, an almost innumerable number were christened by the consumption of 1,200,000 extra bottles of champagne. The net receipts from beer were £10,719,000 and the net revenue from British spirits was £15,603,000.

Death duties yielded £11,600,000.

Stamps yielded £7,350,000.

Continental News. The visit of the Emperor William to the King of Italy at Venice, and to the Emperor of Austria at Vienna, is supposed to be of first class political importance, as cementing more strongly than ever, the *Triple Alliance*. That is the alliance of Austria, Germany and Italy, as against that of France and Russia.

But an event which in its far-reaching consequences, may vastly transcend the importance of the Triple Alliance, occurred at Berlin this day week. Herr von Schrader fought a duel with Herr von Kotze. The former was fatally wounded, and died on the 11th. The event has caused the most profound sensation in Germany, and in the result may shake the throne of the Hohenzollerns to its foundations. The quarrel arose out of that abominable Court scandal connected with anonymous letters bringing foul and loathsome charges against the Imperial entourage. Schrader accused Kotze of being the author. Instead of seeking redress—as in this country—by an action for libel, the code of honour in the German army insists upon a duel being fought. The Emperor could have forbidden it, but apparently the arrangements for the fatal encounter were made with his active connivance.

This is the serious part of the matter. The whole German Press, from the extreme conservative, to the wildest socialist, agrees in condemning him.

I enclose the letter of the *Times'* Berlin correspondent under date the 14th which will show you I have not exaggerated the incident. Perhaps you might find room for it in full.

In Paris, duelling is carried on more as a piece of tomfoolery, and therefore one is not surprised that in the duel between the Prince de Sagan and Mons. Abel Hermant, both left the field of honour (?) unscathed though 20 paces only separated them!

Africa. Our most serious trouble at the moment lies in Ma-

tabelle land and not in Egypt. Appearances are somewhat against Sir Hercules Robinson, the High Commissioner at the Cape. He seems to have underestimated the crisis.

But as Mr. Chamberlain said the other night in the House of Commons, this is not the moment for recriminations. The paramount duty is to restore order, and there is something startling in the suggestion of the "Daily News" that Dr. Jameson and his fellow prisoners should have lengthened leave of absence on bail, to return to Matabeleland and assist in suppressing the revolt.

The decisive movement in Egypt will not take place till the autumn, when, it is said, Great Britain will place 10,000 troops at Lord Cromer's disposal. The Venezuela question drags on wearily at Washington, but everything points to an amicable settlement. Chili and Argentina, it is said, have both agreed to submit the boundary dispute to the arbitration of Great Britain.

India. The Colonial Secretary is keeping his eye on those of your countrymen who have emigrated to the Transvaal, and you may be satisfied he will see justice done to them.

We hear little of the famine in the North-West which makes your friends on this side hope the Government are keeping it well in hand.

As a matter that may interest your readers I may mention the launch of a new steamer for the P. & O. Co. It is named most appropriately the "India." It is not only the largest of the fleet of the P. & O. Co., but it is the "largest steamer ever built on the lower reaches of the Clyde." It has a tonnage of 8,000 tons and will be supplied with engines of 11,000 horse power indicated. It will be placed on the admiralty list of armed cruisers. The P. & O. Director who was present at the launch declared Messrs. Caird & Co. and Greenock "had built fifty vessels for the P. & O. Co. which, if put in line end to end, would measure a length of between three and four miles!"

Books of the week. Since the monumental work of Mr. Lecky on Democracy, we have had no great outstanding publication. But the "Times" reviews with great favour the late R. L. Stevenson's "Records of a family of Engineers" being a biographical sketch of his ancestors.

Mr. E. F. Knight's "Madagascar in War Time" is described as a "readable as well as instructive work."

Baron Ferdinand Rothschild has written on "Personal Characteristics from French History," a book evidently well worth reading.

I commend to your friends most strongly "Matthew Arnold's Letters," and the "Far East" by Chisol. The latter gives in small compass a most graphic account of China and Japan, throwing light on the great problems now working themselves out between Great Britain, France and Russia in the "Far East."

I can recommend a remarkable story of English public school life, entitled "George Eversley's Friendship" by the eminent Headmaster of Harrow, the Rev. J. E. C. Weldon.

In a recent issue you referred to the late Sir W. Mackinnon's revocation of his bequests to the Free Church of Scotland. But you must remember, Sir William was consistent throughout. He never swerved from the Church as founded by the illustrious Chalmers, and defected in later years by such men as Prof. Thomas Smith (formerly of the F. C. Institution, Calcutta), the late Drs. Begg, Fraser, Kennedy and others. The Free Church of to-day as represented by Dr. Rainy, Marcus Dods, Lindsay, Bruce and others is not the Church as founded by Chalmers. And when some years ago the General Assembly passed what is termed the *Declaratory Act* Sir William felt released from all obligation to carry out his munificent bequest. The wonder rather is the Church disputed his right to do so. A still greater wonder is, that the Church having lost the suit should have been allowed its costs, by the Judge, out of the estate. If the Free Church lawyers can depend on their costs being paid throughout, you will see they will carry the case to the House of Lords. No one enjoys litigation so much as your Scotch dissenting cleric, especially if the costs do not come out of his own pocket!

You will see we are having more than one average of fearful crime. The natives of India may well point the finger of scorn at us. The Muswell Hill murder, the East End murder, and the atrocious infanticides at Reading form a terrible reckoning. And this after eighteen centuries since Christ Jesus appeared on earth. The true fact is, London is as bad morally as Paris, New York, or even Chicago pace Mr. Stead and General Booth. And yet we have fanatical hypocrites who desire to deprive poor India of her right to grow opium!

THE GERMAN COURT DUEL.

Berlin, April 14.

The profound sensation caused by the Kotze-Schrader duel shows no signs of abatement. The miserable stand out of which it arose, the long-drawn proceedings of the military courts of honour which rendered it inevitable after the Emperor's final intervention, the publicity given to the preparations made for it, the murderous intent with which it was deliberately fought, and its tragic outcome have combined to produce a far deeper impres-

sion than any other recent incident of the same character. Even in newspapers whose monarchical loyalty is above suspicion, the responsibility which attaches in this case to the *laissez faire* policy adopted in the highest quarters is openly recognized and deplored. The language of so responsible an organ as the *Cologne Gazette* is in this respect so significant that the leading article which it devotes to the subject deserves to be reproduced in full. It runs as follows :—

"With the death of Herr von Schrader the interminable Kotze case enters upon yet another phase. Whether it will be the last we do not know, for the Reischach-Kotze duel failed to close it, and there may still be persons living against whom Herr von Kotze has much the same grievances as against his last antagonist. Surely, however, far too much blood has already been shed, and it is high time to put an end to this scandal. We cannot, perhaps, go the same lengths as the *Reichsbote*, which compares it to the scandals of the *ancien regime* in France before the great Revolution. But we quite agree with it when it points out that the prestige of the Court has suffered severe injury, and that some strong hand should have intervened with inexorable rigour to arrest the growth of this wretched business. Instead of this, the duel was allowed to be, so to speak, advertised beforehand for weeks by sensational journals. Everything has taken place under the very eyes of the Court and of the authorities, and, apparently, with their connivance, and thus a scandal has been provoked of which the effects must not be underestimated.

"It is no exaggeration to say that in the widest circles the views which appear to be held in influential quarters with regard to the practice of duelling are causing grave misgivings. The way in which the proceedings against Herr von Kotze were first initiated was most unfortunate, and their subsequent course has been equally ill-starred. Courts of honour and court-martials have given conflicting decisions, duels have been fought, and yet to-day no one can say who the real offender is. No trustworthy accounts have been published, and as there has been plenty of misrepresentation and exaggeration only a few are in a position to distinguish truth from falsehood. Nor has Friday's duel thrown the smallest ray of light on the question at issue, or proved either Herr von Schrader's guilt or the innocence of Herr Kotze. Mischievous rumours are naturally more rife than ever. In the present state of the law public opinion is not entitled to demand any explanation, but in regretting that this should be so we are speaking much less in the interest of the public than in that of the parties concerned, among whom in a certain sense the Court itself must be reckoned. For in spite of the secrecy of all these proceedings the suspicion cannot be eradicated that they have either been parties to mean and discreditable actions, or that they have maliciously instigated an intrigue which it is impossible to condemn too severely. Seldom, in our opinion, has there been a more striking illustration of the drawbacks of secret legal proceedings. Had the matter been brought before a civil Court certain points could well have been withdrawn from publicity, but enough would still have been published to silence the evil rumours which are now current. When a bomb laden with poisonous gases explodes fresh air must be let in, lest the foul odour of the discharge contaminate the whole surroundings.

"We must not overlook the delight with which the Social Democrats have revelled in the Kotze scandal. The *Vorwärts*, using for its own purposes the clumsy quotation of a Court chaplain on a recent occasion, heads its leading article 'Ave Imperator! morituri te salutant.' We need hardly point out the application which the Socialist organ intends its readers to make of this quotation."—*The Times' Correspondent*.

THE SAGAN-HERMANT DUEL.

Paris, April 13.

I borrow from the *Temps* the story of the Sagan-Hermant duel. The narrative, which is extremely well done, runs as follows :—

"The proposal of a *jury d'honneur* having been rejected by the Prince de Sagan's seconds, a meeting was considered inevitable. It was decided that the parties should use pistols at 20 paces, firing twice at the word of command. This morning at 10-30 the two landaus containing the duellists, their seconds, and the doctors left the house of the Comte de Dion, where a final interview had taken place between the seconds. Instead of going to Auteuil, as had been reported in order to throw the curious off the scent, the carriages passed rapidly towards St. Ouen, and shortly before 11 o'clock entered the gate of the park which has already been the scene of so many celebrated duels.

"A few journalists succeeded, in spite of the countersign, in penetrating thither and concealed themselves discreetly behind the coppice bordering the lawn where the meeting was to take place, some 200 metres from the spot where, on a similar occasion, MM. Paul Deroulede and M. Clemenceau once stood facing each other.

"The Prince de Sagan was the first to alight from his carriage. He raised his hat as M. Abel Hermant and his seconds appeared. At the same time all hats were doffed in the group

of those present. The seconds measure out 20 paces and at each limit fix stakes, near which the combatants take their places. Both are in black from head to foot, wearing long overcoats buttoned up to the chin, with black scarves concealing the neck. The slight and thin silhouette of M. Hermant seems to offer a less easy target than the tall, broad-shouldered form of the Prince, whose white head, moreover, forms, so to speak, a good mark. In spite of the sun, which is shining brightly enough at this moment, the air is very fresh. A cold wind stirs the grass round the two men and moves the skirts of their overcoats. The preliminaries of the combat are very brief. The Comte de Dion takes from their box the pistols loaded by *employes* of Gastine Renette, and standing between the two combatants reminds them that they are to fire after the word of command 'Feu!' and that they may aim until he has counted aloud 'Un, Deux, Trois!' Then he hands them the weapons, returns to his post as *directeur de combat*, and in clear tones says, 'Gentlemen, kindly cock your pistols.' There is a click, and then, 'Gentlemen, are you ready? Fire! One, Two, Three!' M. Abel Hermant is the first to fire, almost immediately after the word 'Feu!' the Prince de Sagan between 'Deux' and 'Trois.' The two black silhouettes stand still in front of each other. M. de Dion takes from them their pistols, returns them loaded weapons, and the second exchange of shots ensues, preceded by the same word of command. This time the two opponents wait until the word 'Trois!' aiming carefully. Neither of them, however, is hit. All is over. Their friends press about them to shake hands. Only the seconds bow, and the two parties then quit the ground. —*Our Own Correspondent*.—(*The Times*.)

A CLEAN CUT INDIVIDUAL OPINION, BOLDLY EXPRESSED.

It is for this reason that an assertion like the following sticks up above the dead level of our stupid talk, and becomes noticeable ; "When I saw how pale I had grown I said to myself, it was because something had gone out of my blood."

There! That is a statement with the seeds of an idea in it. Suppose we follow it up by quoting the rest of the letter which contains it.

In December, 1890, says the writer, "I fell into a poor state of health. I was tired, languid, and weary without any apparent cause. My appetite left me, and all food, even the lightest and simplest kinds, caused me great pain in the chest and stomach. When I saw how pale I had grown I said to myself it was because something had gone out of my blood.

"Then my sleep was broken, and night after night I scarcely closed my eyes. It wasn't long before I became so weak and dejected that I took no interest in things around me. I was so nervous that common sounds annoyed and worried me; even the noises made by my own children in their talk and at their play.

"There was a disgusting taste in my mouth; it made me sick, and often gave me a shivering sensation all over. When I saw others eating and enjoying their meals I felt as though it were a strange thing; in a way I wondered how they could do it. For myself I could eat hardly anything. Food went against me, and I turned away from it, as one turns from smells or sights that are offensive. And yet I know, what everyone knows, that without sufficient food the body languishes and weakens. And such was the case with me as month after month went by.

"During all this time, so full of pain and discouragement, I was attended by a doctor who did what he could to relieve me, but without success. I do not say he did not understand my complaint; for may he not have understood it without having the means of curing it?"

The answer to the lady's question is: Yes, easily enough. All intelligent, studious doctors "understand" consumption, cholera, cancer, &c., without (is yet) having the means of curing them. There is usually a wide gap between the discovery of a want and the way to supply it.

"I will now," continues the letter, "tell you how I came to be cured. In April, 1891, I read in a small book or pamphlet about Mother Seigel's Syrup. The book said the Syrup was a certain remedy for all diseases of the stomach, indigestion in every form, and dyspepsia; and it also said that most of the complaints we suffer from are caused by that. On looking over the symptoms described in the book, and comparing them with my own, I saw plainly that my ailment was dyspepsia.

"We sent immediately for a bottle of this medicine, and after taking it a few days I began to feel better. In a very short time, by keeping on with the Syrup according to the directions, I could eat without pain or distress, and digest my food. I also slept soundly and naturally. Then my strength came back and with it the colour to my face. In short, after a few weeks' use of Mother Seigel's Syrup, I was hearty and strong as ever. And I should be indeed ungrateful if I were not willing that others should have the benefit of my experience. You are therefore free to print my letter if you think it will be useful. (Signed) (Mrs.) M. Truman, Milton, Lincoln, April 24, 1895."

I simply desire to say to Mrs. Truman that her idea about the blood is a perfectly correct one. All our food (the digestible part of it) is turned into blood, and in that shape it feeds the entire body. When the blood gets thin and poor (lacking in nourishment), we lose flesh and grow feeble and pale. And the cause of the blood getting thin and poor is indigestion, or dyspepsia. How easy this is to understand when once you get hold of the right end of it. Mother Seigel's Syrup has the peculiar power to correct what is wrong about the digestion, and thus enables the digestive machinery to make good rich blood, which is life and health and beauty.

A Wonderful Medicine.

BEECHAM'S PILLS

ARE universally admitted to be worth a Guinea a box, for Bilious and Nervous Disorders, such as wind and Pain in the Stomach, Sick, Headache, Giddiness, Fulness, Swelling after Meals, Dizziness and Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite Shortness of Breath, Costiveness,

Scurvy, and Blotches on the Skin, Disturbed Sleep, Frightful Dreams and all Nervous and Trembling Sensation, &c. The first dose will give relief in twenty minutes.

Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

WORTH A GUINEA A BOX.

For females of all ages these Pills are invaluable, as a few doses of them carry off all humours, and bring about all that is required. No female should be without them. There is no medicine to be found equal to Beecham's Pills for removing any obstruction or irregularity of the system. If taken according to the directions given with each box, they will soon restore females of all ages to sound and robust health. This has been proved by thousands who have tried them, and found the benefits which are ensured by their use.

For a Weak Stomach, Impaired Digestion, and all Disorders of the Liver, they act like magic, a few doses will be found to work wonders on the most important organs in the human machine.

The Natives of India will find Beecham's Pills the finest medicine ever introduced to their notice; the European residents also will find them of great value for cooling the blood. For throwing off fevers and preventing inflammations in hot climates, they stand without a rival.

These are Facts testified continually by members of all classes of society, and one of the best guarantees to the Nervous and Debilitated is, BEECHAM'S PILLS have the Largest Sale of any Patent Medicine in the world.

Beecham's Magic Cough Pills.

As a remedy for Coughs in general, Asthma, Bronchial Affections, Hoarseness, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. Let any person give Beecham's Cough Pills a trial, and the most violent Cough will in a short time be removed.

Beecham's Tooth Paste

Will recommend itself being efficacious and economical: it is packed in neat airtight collapsible Tubes.

NOTICE.—G. Atherton & Co. will forward on receipt of letter, samples at the following rates: size 9½d. at 8 annas per box; 1-1½d. size 12 annas per box, 2s. 9d. size 2 rupees per box; Tooth Paste 12 annas per Tube, these rates do not include the cost of postage which will be added to the amount.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, t. Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 3, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahmin of the Brahmins—a conservation of the best of his inheritance that was nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiosyncratic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unwarped by ostentation and earnestness unspiced by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man. Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

"The Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Munny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel-silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental hold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Panamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dindim says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sunkatia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kumbhee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

KAVIRAJ NAGENDRA NATH SEN, Physician,
Surgeon, Accouchment, practises the Ayurvedic
system of medicine, after having obtained a
diploma at the final examination of one of
the Government medical Institutions of the
country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phtisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases. Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

CONTEMPORARY POETRY.

PASSING UNDER THE ROD.

BY MRS. M. S. B. DANA.

"It was the custom of the Jews to select the tenth of their sheep after this manner. The lambs were separated from the dams, and enclosed in a sheep-cote, with only one narrow way out; the dams were at the entrance. On opening the gate, the lambs hastened to join the dams, and a man placed at the entrance, with a rod dipped in ochre, touched every tenth lamb, and so marked it with his rod, saying 'Let this be Holy.' Hence says God by his prophet, 'I will cause you to pass under the rod.'"

I saw the young bride in her beauty and pride
Bedecked in her snowy array,
And the bright flush of joy mantled high on her cheek,
And the future looked blooming and gay,
And with woman's devotion she laid her fond heart
At the shrine of idolatrous love,
And she anchored her hopes to this perishing earth,
By the chain which her tenderness wove.
But I saw when those heart-strings were bleeding and torn,
And the chain had been severed in two,
She had changed her white robes for the sables of grief,
And her bloom to the paleness of woe;
Yet the Healer was there, pouring balm on her heart,
And wiping the tears from her eyes,
And he strengthened the chain he had broken in twain,
And fastened it firm to the skies.
There had whispered a voice—'t was the voice of her God,
"I love thee, I love thee!—pass under the rod!"

I saw the young mother in tenderness bend
O'er the couch of her slumbering boy,
And she kissed the soft lips as he murmured her name,
While the dreamer lay smiling in joy.
Oh, sweet as the rose bud encircled with dew,
When its fragrance is flung on the air,
So fresh and so bright to the mother he seemed,
As he lay in his innocence there!
But I saw; when she gazed on the same lovely form,
Pale as marble, and silent, and cold,
But paler and colder her beautiful boy,
And the tale of her sorrow was told.
Yet the Healer was there, who had smitten her heart,
And taken her treasure away;
To allure her to heaven he has placed it on high,
And the mourner will sweetly obey!
There had whispered a voice—'t was the voice of her God,
"I love thee, I love thee! pass under the rod!"

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

I saw when a father and mother had leaned
On the arms of a dear cherished son,
And the star in the future grew bright in their gaze,
As they saw the proud place he had won:
And the fast coming evening of life promised fair,
And its pathway grew smoothed to their feet,
And the star-light of love glimmered bright at the end,
And the whispers of fancy were sweet;
But I saw when they stood bending low o'er the grave,
Where their hearts' dearest hope had been laid,
And the star had gone down in the darkness of night,
And joy from their bosoms had fled.
Yet the Healer was there, and his arms were around,
And he led them with tenderest care,
And he showed them a star in the bright upper world—
'T was *their* star shining brilliantly there!
They had each heard a voice—'t was the voice of their God,
"I love thee, I love thee!—pass under the rod!"

WEEKLYANA.

THE Empress' Birthday falling on Sunday after next, it will be observed next Wednesday, the 20th May. In Calcutta, there will be the usual parade on the Maidan. We do not hear of the Municipal Chairman's Garden Party in honour of the day. The season, however, is too hot for any entertainment. It is to be hoped the Birthday Gazette, whether short or long, will be published simultaneously at Simla, Calcutta, Madras and Bombay.

FROM next week, the mail will leave Calcutta on Tuesdays instead of Wednesdays.

THE Sipi Fair will, after all, be held, the dates fixed being the 22nd and 23rd May.

A NEW medal, to be designated "The India Medal, 1895" with a distinctive ribbon, has been approved of to commemorate military operations in, or on the frontier of, India. The medal with two clasps, inscribed, respectively, "Defence of Chitral, 1895," and "Relief of Chitral, 1895," will be granted to all the troops and followers who were employed in the late operations connected with the defence and relief of Chitral. As the founder of the medal, the Chitral war is to go down as one of the great wars of India. We must also be prepared for such wars and annexations from time to time if only to keep alive the glory of the medal.

THE *Glasgow Weekly Herald* of April 18 has the following:

"Cyclomania is epidemic. It has ravaged the streets of Paris. There were 30,000 cyclists in the Bois one Sunday recently, and carriage traffic had to be suspended. Aberdeen has a Ladies' Cycling Club, which holds a weekly 'At Home'—the last place one would look for a lady cyclist. The Ameer of Afghanistan has ordered bicycles for the ladies of his family. So Nasrullah did pick up something in this country after all. To come back to Glasgow, we understand that the maidens of Kelvinside go on their knees to the cycle agent, and with streaming eyes implore him to let them have the bicycles ordered a month ago at least in time for the Autumn Holiday. But the Sultan has the happiest notion of bicycling. He has introduced it into his harem for the punishment of refractory wives."

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

AFTER a trial of full one week, Mrs. Emily Ghose, charged with murder of her husband, was acquitted on Monday. The jury without retiring returned a unanimous verdict of not guilty. The released prisoner expressed gratefulness to her counsel by falling at his feet. The Judge's address to the jury has not been reported in full in any of the morning papers. The *Statesman's* report is as follows :—

"His lordship then summed up. He said that it was frequently impossible for the prosecution, in cases of this kind, to show an adequate motive for the crime, and the inability of the prosecution to do so in the cases had been remarked upon by counsel for the prisoner. The reason suggested by the prosecution was the intrigue with Solomon, and that such an intrigue existed there could be no reasonable doubt. Before he proceeded to deal with the evidence, his lordship said he wished to refer to the remarks relative to the intemperate habits of the deceased. The only actual evidence with regard to the drunkenness consisted in this : that Mr. Wheeler had seen deceased drunk some six years ago, and that some years ago the deceased was sent away to another district on account of drunkenness. As the jury were aware, the law did not allow an accused person to go into the witness-box. The law also did not treat the statements made by accused persons, through their counsel or at the time they were questioned, as actual evidence in their favour, but this might be allowed. If accused persons made a statement either to their counsel at the time of trial, or in the earlier part of the case either in defending themselves to the police, or, as in this case, in examination by police, and if that statement was consistent with all the facts which had been proved in the case, it was reasonable to consider that statement and see whether it should be acted upon. On the other hand, it may be consistent with the facts of the case that the deceased was in the habit of taking more than was good for him in the shape of liquor. His lordship went on to say that the prosecution had said they could not prove that the prisoner bought this poison, but that arsenic was easily procurable in every drug shop in this country. That, however, cut both ways, for it held good equally with the theory that Mr. Ghose might have bought the poison and committed suicide. Referring to the evidence of Soshi, his lordship said it would be extremely dangerous to come to a conclusion on any fact based on the recollection of one person, unless that person was a man of education whose recollection was likely to be correct. As regards the offering of bribes to the police to prevent detection, his lordship remarked that that was a circumstance which was certainly adverse to the prisoner. He would not, however, advise the jury to pay much attention to that circumstance. Persons often acted foolishly by offering bribes to the police to try and prevent detection. In cases in England the fact of such bribes having been offered to the police was held to be damning evidence against a prisoner ; but in this country it could not be taken to be so in every case. After reading portions of the evidence, and commenting on them, his lordship read the medical evidence, and said it was never safe to convict people in a case of this kind upon only expert evidence, unless that expert evidence was of a safe and sure kind. Instances had been referred to from standard medical works to show how widely different was the action of arsenic in different cases, and Dr. Gibbons had told them that arsenic was an erratic poison, and that its action varied according to the health and vitality of an individual. His lordship was of opinion that it would not be safe or right for the jury to convict the prisoner on the statements as to what took place on the night of the occurrence.—The *Statesman*, May 12.

The *Englishman's* account is more elaborate :—

His lordship in summing up to the Jury read from Baron Alderson, who had laid it down clearly that when a case was made up of circumstantial evidence the Jury must be satisfied that the facts were such as to be inconsistent with any other rational conclusion than that the prisoner was guilty. The only question in the case was, did she poison her husband with arsenic ? His lordship said that whatever was the conduct of the prisoner with regard to the medicine story, whether it was a case of poisoning or suicide, at any rate the part that she wanted to conceal was not the going for the medicine but the going to Solomon's house. There was nothing in her going to Solomon's house which was indicative of her guilt. At that time he did not suppose she and Solomon had thrown aside all shame and did not care if all the world knew of their intrigue. Coming to the occurrences after the return of Mrs. Ghose and Soshi to the house, his lordship said that it was scarcely possible to say with any certainty that she put any of that white powder Soshi had spoken of into the medicine. It was fair to observe that in what she was doing the prisoner made no attempt to conceal anything from Soshi. With regard to the suggestion that she got rid of the vomited matter to destroy traces of crime, it was also natural that she should do so to prevent the house from being unpleasant for her own sake and the children's sake. The deceased was heard to say that his headache was relieved. This was about 4.30 A.M., when it was pretty clear that he was not dead. There was nothing to show when he died. After dealing with the minor points, his lordship said that the real evidence against the accused were the statements made by her after her husband's death. What the effect of this evidence was it was for the Jury to determine. The comments made by counsel for the prisoner with regard to the boy George Ghose not being called to prove that his father had threatened to kill Solomon and the accused and then destroy himself, his lordship thought it was not necessary to call this witness.

Referring to Mr. Allen's remark about amateur detectives his lordship said that action such as that of these gentlemen who came to examine Mrs. Ghose was open to a great deal of observation. Mr. Allen had called them amateur detectives, and it was perfectly true that they so acted in this matter. It was not desirable that any one should take upon himself the duties of a police officer for the purpose of ascertaining that crime had been committed, especially in Calcutta, where

there was no lack of police officers. It might be that in the district, where there were not sufficient police officers, that respectable people might sometimes do work of that kind. But that did not take away from the Jury the necessity to try to ascertain what the evidence of these people was, whether they were actuated by right motives or not. The Jury were bound to consider whether they were persons likely to have twisted the truth for their own ends. If they thought that there was the least suspicion that the Rev. Mr. Mukerji, either for the motive suggested in cross-examination in regard to the promissory note or for any other purpose, had either wilfully or otherwise mis-stated the truth, they should not rely upon his evidence. It was a great thing to suppose that a man in his position, a clergyman of the Church of England, should for any such purpose give false evidence in a case of this kind.

Assuming that all these statements were truthful, that they were accurately recorded word for word, still the Jury would have to examine the facts and draw the absolute inference that each particular statement was meant to be made by her exactly as these witnesses said it was made. Here was a woman who, from any point of view, must have been in very great distress, a wife who had just lost her husband, or had just poisoned her husband, after witnessing all the agony her husband had gone through during the whole night, after all her terrible trouble, confronted by several men of intelligence and questioned by them. It was very likely she would be confused. The Jury would have to consider the several statements. The circumstance of offering a bribe was adverse to the prisoner, but the wretched woman in all that trouble might well have thought that, whether she was guilty or not, the body of her husband would be cut open and it would be a disgrace. His lordship did not invite the Jury to place very much weight upon this circumstance. It was for the Jury to see if her statement that he died of cholera was for the purpose of concealing her crime, or whether it was only for the purpose of concealing that he died of arsenical poisoning, and in doing that they would have to consider whether it was not her interest, if possible, to conceal her husband's suicide. It was obvious that if it was a case of suicide she must have known that it would have been a slur cast upon her and her family. If she was concealing something, it did not necessarily follow that she was concealing her own wrongful act. They would also have to consider whether the statement about the four pills lead necessarily and certainly to the conclusion that she was guilty. If it did not lead to that inference they must cast it aside. The action of arsenic was admittedly erratic.—The *Englishman*, May 12.

We wish the Judge's charge to the jury were more fully reported. We do not ordinarily hear such an address. We admire it not for its learning, not for the flow of sentences, but for its accurate knowledge of the country and for its strong sense of justice. No prisoner could wish for a better judge than Mr. Justice Trevelyan. We are sure if he, in his present mood, were President of the Commission that tried the Gaekwar Mulhar Rao of Baroda, that Prince would not have been declared guilty of attempting to poison the British Resident at his court with a dust that does not kill. To many Emily's faithlessness to her husband and offer of bribes to the Police would have been confirmation strong as proofs of holy writ. To an English Judge without true Indian experience, or a Native Judge without the boldness to acknowledge a native weakness and to rate the Police at their worth, the attempt to hush the enquiry by illegitimate means would not have been a trifle light as air. She may be condemned for not being faithful to her lord. She is not therefore to be punished for his death. Aware of the difficulties of a prosecution in a case of poisoning and knowing that the Coroner's Jury had found nothing against her, we were not doubtful of the result of the trial. If it has been a harassment to the prisoner and an exposure of herself, her husband and her love, it has clearly proved the high value of British justice as administered by the High Court.

To shew the uselessness of such a trial for a convict, and for a purpose which will appear later on, we quote the address of Mr. Justice Norris in the previous case, *Empress vs. Wagner*, another female Native Christian :

"Now what substantial case have you against the woman ? Stripped of all embellishment, the plain facts are these :—The man Wagner was taken ill on the 28th of January. He was at work on the 28th. He came back from work suffering from some complaint. A doctor was called in, he gave a prescription containing arsenic, and it is alleged that the person died of arsenical poisoning. The case for the prosecution is that in addition to the arsenic administered in the prescription ordered by the doctor, other arsenic must have been administered. There is absolutely no proof of the purchase of the arsenic by the first prisoner, or by any person on her behalf or at her request. There is no proof of the possession, by the persons in the house at any time, either before or after the death of Wagner, of any arsenic or any deleterious thing which could have produced the symptoms of which the deceased died. The *post mortem* examination revealed the fact that one-fifteenth of a grain of arsenic was found in the body, and no more, but that of itself, according to the medical authorities, was not sufficient to cause death. I am quite aware that the case for the prosecution is supported by skilled medical evidence that a large quantity of the arsenic must have been administered, and that a large portion of what was administered was got rid of in the vomiting and purging which took place between the time he was taken ill and the time he died. It would be monstrous to suggest that because a small quan-

city was found, therefore, more was not administered, but there is no proof of purchase or administration or possession of any arsenic by the woman at any time whatever. A circumstance that went against her was that she did not carry out the medical man's direction in preserving what came out from the body for the purpose of enabling him to judge as to what was really the matter, and that in the further circumstance that she did not send for him again, as probably she ought to have done. Then there is a circumstance to be taken for what it is worth, that her brother made certain random statements that she poisoned her husband, and she remained quiet. It is quite plain that what animated these persons, however much their sense of righteousness and regard for right might have been offended by the moral relation which existed between the man who has just been discharged and the female prisoner, was a feeling of annoyance and disgust to see a stranger walk away with all the worldly possessions of the deceased man. I cannot help thinking that if the whole of that which has been detailed to you so very fully and with such remarkable accuracy, was proved to the hilt, there is no case to go to the jury. You have heard the learned counsel's opening. You are men of experience and if after hearing the sole facts detailed by the learned counsel you think that this is a matter which ought to be further enquired into, in deference to your judgment the whole of the evidence will be gone into, but my view of the case is that, though it might be a case of the very gravest suspicion, I will but say very gravest—against the female prisoner upon the facts as opened, there is no case worthy of being taken into consideration. The prisoner was acquitted.

ON the authority of a Vellore correspondent, the *Indian Mirror*, the mirror of all religions excepting those of Christ and Mahomed, and the receptacle of all wonders and miracles, says that a mendicant, discreet enough to call himself Mouna or the Silent Swami, has been distributing daily, to hundreds of people, free of charge, medicines for almost all complaints to which flesh is heir to, and radically curing, if not all, many of them. The Swami is more than a Dhwanantwari. "The other day he performed the Panja Agni Yogam in the middle of the Palar, getting himself buried breast-deep." Nor is that all. "To add to this prodigy, he got cow-dung cakes piled in heaps around him, and burnt in rising flames. He remained in this state for 9 hours, from 6 in the morning to 3 in the evening." It is not said what was the effect of the "rising flames" on the body of the performer, or what was his distance from the circle of fires or their burning capacity. He evidently lives or we would not have heard of the miracle. An account of how he escaped or was brought back to life would indeed be welcome. That is a secret which, perhaps, the silent trumpeter of himself, the Mouna Swami cannot be expected to publish. In our younger days we remember to have seen performers holding burning oil in iron vessels on their bald heads. We do not see them now. They have disappeared from Bengal and we are not aware that they exist in any other Province.

THE Chairman and the Engineer to the Calcutta Municipal Corporation have been visiting the wards of the town. After finishing one, the Chairman proposed to go round another, and, finding one of the Commissioners of that ward present, asked him to lead the way from the vantage ground of the dickey of his (the Chairman's) Victoria. Nothing minding, but taking it as a compliment, the Babu looked up to his place of honour. It was occupied by the groom who was beaoned to vacate the high seat. While about to raise himself to the proud height, the too obliging Commissioner was interrupted by a brother Commissioner who, to save him from what he himself considered a doubtful distinction, if not a downright degradation, offered him a lift in his own carriage. The offer was refused with the meek reply there was no harm. It was an honour indeed to lead the great from the foremost place, as in the days of the Mogul Emperors, in an elephant drive, it was a distinctive mark of imperial favour to be allowed to fan the sovereign from the next seat behind his Majesty in the howda. Possibly the Babu remembered that Native Princes in their own territories have been known to drive Viceroy's, and wished he had been allowed the privilege of driving the Chairman through his own ward. In this predicament, the Engineer with high notions of Rajputana dignity, came to the rescue, by asking the "leading" Commissioner to the dog seat in the carriage. Dog or cat, that seat was more exalted. The leading Commissioner felt himself highly flattered; the reproving Commissioner was glad that he had saved a brother from degradation; and the Engineer had the pleasant sensation of making one of his masters happy for an hour, and the drama of the day ended to the satisfaction of all concerned.

SCIENCE can work wonders. The Indian juggler growing a tree bear-

ing flowers and fruit, from the seed in an hour, has been vindicated. His art is no deception. A M. Ragonneau has, after examination, found a natural explanation of the phenomenon. The earth used by the performing Indian is "taken from an ant's nest" which, containing as it does formic acid, has the power of producing rapid growth. Whatever the truth of the explanation, the Indian belief is that the earth is supplied by the red ants' hill and the seed is emerged in acetic acid.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

IN the House of Commons, on May 8, the Transvaal debate came off. Mr. Chamberlain concurred in condemning the policy indicated in the cipher telegrams which have caused so much sensation, but said that men like Mr. Rhodes made the Empire, and his proper place was Africa, where he could best atone for the past. The end, he seemed to mutter, justified the means. It was impossible, he said, to think of a war with the Transvaal for the purpose of remedying the grievances of the Uitlanders, and it was only conceivable in the event of the deliberate breaking of the Convention. The first object of British policy was to preserve British supremacy, which had certainly been threatened, and secondly to establish union between the British and the Dutch. It is untrue, Mr. Chamberlain said, that he thought of recalling Sir Hercules Robinson. He proposed, when the pending trials were concluded, to appoint a committee of both Houses to examine the whole situation. President Kruger, in an interview with the Reuter's agent, said that he was astonished at the official defence of Mr. Cecil Rhodes and the Chartered Company in the House of Commons. He denied the existence of any intrigues between the Transvaal and Germany, and said that the Transvaal wanted to be friends with all. Referring to the late plot against the Transvaal he said that those who engineered it must be punished, otherwise there would be no rest for South Africa. In a despatch from Dr. Leyds, Secretary to the State for the Transvaal, to Sir Hercules Robinson, he says that he cannot believe the newspaper statements that the British Government still shows partiality for Mr. Cecil Rhodes and the Directors of the Chartered Company, but declares that the Chartered Company as now controlled is a source of danger to South Africa. Mr. Chamberlain has telegraphed to Sir Hercules Robinson in reply to President Kruger's complaint of the attitude of Her Majesty's Government. He repudiates the President's inferences regarding the supposed championship of Mr. Cecil Rhodes by Government, also of that of the Chartered Company's directors who will hereafter be proved to have been connected with Dr. Jameson's raid. A letter appears in the *Times* signed by Dr. Jameson and Mr. White denying the receipt of despatch from Mr. Cecil Rhodes ordering the movement on Johannesburg. Sir Jacobus Dewet, British agent in the Transvaal, has resigned. What does this mean?

There is a serious rising of the Hottentots in South-West Africa, and reinforcement of the German troops is necessary for its suppression.

EARL Grey believing the Matabele revolt crushed, the Imperial troops on their way to Bulawayo were stopped at Mafeking. A scouting party routed the Matabele with a heavy loss near Moveni. Mr. Cecil Rhodes was well to the front of the fighting.

AT the Italian Chamber M. Sermonata made a speech in which he rejected all idea of the evacuation of Massowah and said the question of Kassala would be solved in conformity with Italian interests solely, without forgetting friendly ties with Great Britain. The Chamber passed a vote of confidence in the African policy of the Government by a majority of 145. Italy has decided to evacuate Adigrat, and to limit her territory in Erythrea to the line between Marab and Pelssa.

A TELEGRAM from Yokohama states that Japan and Russia are

negotiating for joint action in Corea, the chief points being the King's return to the palace, upon which Japan insists; the disposal of the troops; and the transfer of the Japanese telegraph from Seoul to Fusan.

THE Shah of Persia has telegraphed to the Queen his thanks for her kind message of condolence on his father's death, stating that he will follow in the footsteps of his father and preserve the friendship of Great Britain.

THE court-martial held at Havana has condemned to death the crew of the American Filibustering Schooner *Compeditor*. This has caused considerable excitement in the United States. President Cleveland has informed Spain that the execution of the crew without a civil trial will be regarded as an unfriendly act by the United States Government. A battalion of the United States troops in Florida has been ordered to be held in readiness for service. It is stated at Washington that Spain has consented to defer the executions to enable America to present a case under treaties. In the speech from the Throne at the opening of the Spanish Cortes, administrative and financial reform is promised in Cuba, and correct and friendly conduct of the Washington Government is recognised.

THE India, Burma and Ceylon Exhibition was opened at the Earl's Court on May 9. The Indian exhibits exceed those of last year three times. Over two hundred Natives are employed, and all are freshly imported. The new feature is the Indian printing press. The great feature in the Ceylon section is sixty Chingese craftsmen, besides devil stick dancers, actors, jugglers, and nautch dancers. Several important architectural additions have also been made, the whole forming a grand historical spectacle of India.

CHOLERA is seriously increasing at Alexandria. On May 13, there were 63 attacks and 22 deaths. One death has occurred at Cairo.

IN the House of Commons Lord George Hamilton, replying to a question, said that the Egyptian garrison at Suakin, with the exception of one battalion, would be moved across the desert to the Nile. The question of apportioning the expense of the Indian contingent was, he said, being considered. Mr. Balfour, replying to a question, promised to appoint a day for the discussion of the question of the employment of Indian troops at Suakin. Mr. Curzon, in replying to a question, said it was not intended that the Indian troops should partake in the operations on the Nile, but should only be used in defence of Suakin and its neighbourhood, according to the judgment of Sir Herbert Kitchener. Sir Hicks Beach, replying to a question, assumed that it would be decided in conformity with the precedents that the ordinary expenditure on Indian troops at Suakin would be charged to the Indian Government. The question whether the Egyptian Government would defray any further expense was a matter for consideration. Meanwhile, Colonel Egerton has arrived at Simla to receive instruction concerning the Suakin force. He sails with his staff in the *Warren Hastings* on the 19th inst. Reuter's telegram to the effect that the Indian troops will only garrison at Suakin has been received at Simla with much disappointment. It is considered by high military authorities that it will be a grave error if our best troops are only used for garrison duties, while the Egyptian force is relieved to take the field. The Government of India have asked for eight steamers, and the services of five have already been secured. They are the *Warren Hastings*, the *B. I. S. N. Company's Bhundara*, *Henzada* and *Vadala*, and the *Asiatic Company's Nurani*. The steamers *Knight Companion* and the *P. and O. Peshawar* have been surveyed, and will probably be chartered. The *Vadala* arrived on the 12th with 60,000 bags of sugar. The shed at the jetty, whence the troops embark, is full of cargo, but is being rapidly emptied. Earthwork platforms are being constructed along the railway sidings for detaining horses. The Field Hospital equipment is being got ready at the arsenal. It is understood that all the transports will leave Bombay by Wednesday. The *B. I. S. N. Charissa* which has just been chartered, the *Vadala* and *Nurani* will take the Lancers, the *Warren Hastings* will convey the 28th Punjab Infantry, the *Bhundara* the 35th Sikhs, and the *Henzada* the hospital detachments.

AFTER 5 years' observations, the tidal observatory at Trincomalee has been closed.
